APPENDIX

TO THE

CONGRESSIONAL RECORD.

Kansas Pacific Lands Open to Settlement.

SPEECH

OF

HON. JOHN A. ANDERSON,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 3, 1882,

On the bill (H. R. No. 355) to open certain lands in the State of Kansas to settlement and pre-emption at \$1.25 per acre.

Mr. ANDERSON said:

Mr. CHAIRMAN: This bill enacts as follows:

That the Secretary of the Interior shall forthwith open for settlement and pre-emption all unpatented lands conditionally granted to the said Kansas Pacific Railway Company, and situated in the State of Kansas, at a price not exceeding \$1.25 an acre, to be paid to said company; and the said Secretary is further directed to open for settlement and pre-emption, at a price not exceeding \$1.25 per acre, to be paid to said company, all lands situated in the State of Kansas and patented to the said company under the aforesaid grant which have not been sold or absolutely conveyed by the said company or its assigns under the laws of the State of Kansas.

A detailed statement of the grant made to the Kansas Pacific Company can be found in my remarks on the bill (H. R. No. 345) to compel the payment by it of the cost of surveying its lands. In this discussion I shall only restate such general facts as are necessary to a proper understanding of the points embraced by the present bill.

Of the 4,000,000 acres of land in Kansas the company has taken patent to but 883,772 acres, and, for the purpose of evading taxes, leaves 3,116,228 acres unpatented, by intentionally neglecting to pay the required costs of survey, for the payment of which Government holds the title as security. So that its lands may be divided into two classes: first, those for which patent has issued conveying the right and title to the company; and, second, those in which it has a partial interest, but which are legally the property of the United States, no patent having issued. The granting section of the act of 1862 closes with this expressed condition, (12 Statutes at Large, 489:)

Sec. 3. * * * And all such lands so granted by this section which shall not be sold or disposed of by said company within three years after the entire road shall have been completed shall be subject to settlement and pre-emption, like other lands, at a price not exceeding \$1.25 per acre, to be paid to said company.

It is not pretended that this provision has been in the least modified by subsequent legislation. Hence it became operative October 22, 1875, the whole road having been officially accepted October 22, 1872. Of course this requirement has never been enforced. Had it been, the unpatented lands which the company offers to buyers as worth about fourteen million dollars would to-day be worth less than \$4,000,000. Where such a corporation has at stake a present profit of \$10,000,000, and a prospective profit of perhaps \$100,000,000, it will somehow raise such obstacles as will insure very deliberate inaction by Government.

In this instance it professes to have mortgaged the lands as security for its bonds, and alleges that this mortgaging was such a disposal as is contemplated by the words "sold or disposed of;" and claims, therefore, that the lands are not open to settlement. The first of these mortgages is dated March 1, 1866, the second July 1, 1870, the third August 23, 1871, and a fourth May 1, 1879. The first has been virtually released, leaving the one of July 1, 1870, as the first, and that of August 23, 1871, as the second land-grant mortgage, the instrument so showing on its face. Both of these have been practically wiped out by that of May 1, 1879, to Jay Gould and Russell Sage, for \$30,000,000, when the company issued its \$30,000,000 consolidated first-mortgage bonds. (Report Secretary Interior 1880, volume 2, pages 221, 568.)

A SAMPLE OF THE ALLEGED MORTGAGES.

For the purpose of showing the nature of these alleged mortgages

I extract from the one of July 1, 1870, "to Adolphus Meier and John A. Stewart, trustees," each of whom was a member of the company at the time. After describing the Kansas Pacific Railway Company as the party of the first part it says:

And whereas the said company, under and by virtue of the various acts of the former Territory and present State of Kansas, and also of a certain act of Congress entitled * * * approved July 2, 1862, and the several acts of Congress amendatory thereof and supplemental thereto, has become and is entitled to certain valuable lands in the State of Kansas and Territory of Colorado; and whereas in and by the aforesaid acts of Congress there was granted to the party of the first part, for the purpose of aiding in the construction of said railroad, upon the payment of the costs of surveying, selecting, and conveying the same, every alternate section of land of the United States designated by odd numbers, to the amount of ten sections per mile, on each side of said railroad, on the line thereof, within the limits of twenty miles on each side of said road, * * * and whereas the company has resolved to borrow \$2,000,000 * * * and to that end to execute its bonds secured by a mortgage and conveyance in trust of and upon all the lands of the company unsold at this date, not less than 2,000,000 acres, granted by the several acts of Congress aforesaid.

Now, this indenture witnesseth, that the party of the first part, in consideration of the premises and of \$1 in hand paid, * * * the receipt whereof is hereby acknowledged, and in order to secure the due and punctual payment of the principal and interest of the bonds aforesaid, * * * has granted, bargained, sold, &c., &c., conveyed and confirmed * * * unto the parties of the second part, as trustees as aforesaid, * * * all the right, title, interest, claim or demand whatsoever which the (company) now has, or is entitled to, or may hereafter acquire or become entitled to, of, in or to all those lands * * * granted, or to be granted under or by virtue of said acts, * * * subject, nevertheless, to the provisions of the acts of Congress aforesaid, * * * to have and to hold, all and singular, the lands and premises hereby granted, * * * and all incomes and moneys arising out of or accruing from the sale thereof unto the said parties of the second part * * * as joint tenants, and not as tenants in common, for the uses and purposes in this indenture set forth and declared, and subject to the provisions and requirements of the aforesaid acts of Congress.

Article 5. The (company) shall be at liberty to contract for the sale of any parcel or parcels of said lands * * * at such prices and on such terms * * * as shall be authorized by the trustees or one of them * * * and such sales may be for cash or on time * * * and any of the bonds hereby secured may be received as cash * * * and the balance of such price may be secured by a note of the purchaser * * * reserving the title to the land in said trustees until such notes shall be paid * * * and whenever full payment shall have been made to said trustees, or to the one residing in Saint Louis, of the full price of any parcel of said lands contracted to be sold as aforesaid * * * but in no case before the full payment of such price * * * said trustees, or the one at Saint Louis, shall release such land by indorsement on the deed therefor to be executed by the party of the first part, (company,) and in such case, and in case of any sale or sales of any of said lands made by or for account of said trustees, under or by virtue of the provisions of this indenture, the release aforesaid of said trustees, or of the one of them for the time being resident at Saint Louis, shall in all cases be necessary for the purpose of vesting in the grantee a perfect and complete title to the premises therein described, and for such purpose said release shall be, with the deed of the first party herein, full and ample.

Not a word about a patent from the United States. The company's deed, with the trustee's indorsement, is to be a "perfect and complete title."

EVIDENTLY A SHAM.

In other words this professed mortgage is simply a power of attorney, for the convenience of the company, to enable it to sell lands which at the same time it pretends to have "mortgaged" to an outside and innocent creditor. An instrument that expressly reserves in the company the right to sell the property and expressly empowers it to execute the deed thereto, making that deed, when indorsed by the trustee, a perfect and complete title to a third party, is certainly not such an instrument as the common law holds to be a mortgage, which is, a conveyance of title conditioned upon the non-fulfillment of a contract thereon depending.

A certain number of directors, say eleven, acting for an indefinite number of stockholders, and meeting as a board but three or four times a year, wish to go through such legal motions as will enable them to contend in court that they have disposed of certain property, and so exempt it from attachment; and, while accomplishing this, they at the same time wish not only to mortgage but to offer and sell the property. Accordingly they constitute two of their own number trustees, as "joint tenants, and not as tenants in common," and execute to them, what? an absolute mortgage? No; an alleged "mortgage and conveyance in trust."

So far from vesting the right and title of the lands in these trustees the instrument expressly retains the title in the company and prohibits the trustees from executing a deed, the company alone having the power to make deed to a *bona fide* buyer, and the only power of the trustees, "or of the one at Saint Louis," being to indorse his release of the professed mortgage on that specific tract of land. If ever in the world there has been a mere power of attorney to an agent for the convenience of the principal, this certainly is no more than that. In fact, the restrictions here are more numerous, stringent, and guarded than those of the usual power of attorney. These directors carefully fortified themselves against any possibility of trickery by the trustees, those "joint tenants, and not as tenants in common," who could "release," but could not "execute deed therefor!" When men are themselves practicing roguery they become exceedingly watchful and guarded in their dealings with accomplices. This professed mortgage is the thinnest of shams, the clearest of evasions, and among the oldest of legal dodges, chicaneries, and villainies, and there is not a jury in America that would not so declare.

THE THREE-YEAR PROVISION RECOGNIZED BY THE ALLEGED MORTGAGE.

But even in this alleged mortgage the stipulation is distinctly and repeatedly made that the proposed conveyance of lands is "subject nevertheless to the provisions of the acts of Congress of the United States aforesaid," namely those of 1862 and 1864, "to have and to hold the lands" "subject to the provisions and requirements of the aforementioned act of Congress of the United States." Now the provision that "all such lands so granted by this section which have not been sold or disposed of by said company within three years after the entire road shall have been completed shall be subject to settlement and pre-emption" was an integral and inherent provision of the section which made the grant. It is as absolutely a part of the condition and substance of the grant as are the words "to the amount of ten alternate sections per mile."

THE COMPANY KNEW AND PUBLISHED THE FACT.

The directors knew this fact as well as they did their own names. These two child-like "trustees" knew it far better than they did the rules governing base-ball or marbles. Congress knew it, every settler in Kansas knew it, and everybody everywhere was bound to take knowledge of it as a part of the national law. For many years Judge John P. Devereux, a most estimable gentleman, whose death I sincerely lament, was the official land commissioner of the company who handled and sold the lands. He was the company's agent as to these lands in precisely the same sense that the superintendent was its agent as to the operation of the road. In support of the statement that both the company and the trustees not only knew but for many years conceded the force of this provision, I extract as follows from an official circular issued by him five years after the greater part of the road in Kansas had been built:

LAWRENCE, KANSAS, May 12, 1873.

* * * The road was accepted by the Government as complete about six months ago. In three years from that date the unsold lands will be subject, we suppose, to the pre-emption laws, but we hope and expect to have all our lands sold before that time arrives. All railroad lands sold by this company are sold clear of taxes, with assurance of perfect title when paid for.

JOHN P. DEVEREUX,

Land Commissioner Kansas Pacific and Denver Pacific Railways.

Years after the execution of these professed mortgages the company, through its official agent, publishes broadcast the statement that in 1875, "the unsold lands will be subject, we suppose, to the pre-emption laws, but we hope and expect to have all our lands sold before that time arrives." Can there be any clearer proof that at that date the company itself regarded this trick of the mortgages as neither such a "sale" nor "disposition of" the lands as was contemplated by the act. Judge Devereux well knew that it was not the intention of the company in making its professed mortgages to part with either the ownership or title of its lands, and to vest both in these "trustees." He knew also that this was not the effect of the instrument.

UNDER KANSAS LAWS A MORTGAGE CONVEYS NEITHER TITLE NOR RIGHT OF POSSESSION.

That the effect of an instrument must be determined by the law of the State in which the lands are situated is a well established principle. And even had this sham mortgage been a real mortgage, of the old-fashioned sort, under the laws of Kansas it could not convey either title or right of possession.

In the case of *Chick vs. Willets* the supreme court of Kansas held as follows, (2 Kas. 384:)

At common law, a mortgage was a conveyance with a defeasance, and gave the mortgagee a present right of possession. Upon it, even before the conditions were broken, he might enter peaceably or bring ejectment. If the condition was broken the conveyance became absolute. If the money was paid when due, the estate reverted to the mortgagor; if not so paid the estate was gone from him forever.

In this State the common-law attributes have been wholly set aside. The statute gives the mortgagor the right to the possession, even after the money is due, and confines the remedy of the mortgagee to an ordinary action and sale of the mortgaged premises; thus negating any idea of title in the mortgagee. It is a mere security, although in the form of a conditional conveyance; creating a lien upon the property, but vesting no estate whatever, either before or after condition broken.

The most, therefore, which could fairly be claimed for the alleged mortgage, under the best circumstances, is that it created a lien, not a *jus ad rem*; simply a charge of no greater force than that of an ordinary judgment. But to what did this lien attach, to anything

more than the company's interest in the lands? Did it seize upon the contingent interest of the United States, as well as upon that of the company? Certainly not.

A REMARKABLE DECISION OF THE SUPREME COURT.

Gentlemen desiring to examine the legal points of this subject, excepting the latter one just raised, will find an interesting citation of authorities in 9 Otto, 53-55, *Platt vs. Union Pacific Railroad Company*. This was a Nebraska case appealed to the United States Supreme Court, touching a tract of land which had been patented to that corporation.

Mr. Justice Strong delivered a very remarkable opinion, from which Justices Bradley, Clifford, and Miller dissented in a remarkable sledge-hammer way. Mr. Justice Strong, after a laborious effort that would seem to have been painful in its minute perception of the detailed advantages to the corporation, and in its careful exclusion of the broad rights of Government and of the settlers, rendered a decision of the majority that brought within the scope and intent of the words "sold or disposed of" precisely such a sham mortgage as the one above described, so far as I can see. Conveniently avoiding the last words in the title of the act of 1862, "and for other purposes," the majority held:

1. That these provisions should be so construed as to effect their primary object, which was to furnish aid in and during the construction of the road, and that it cannot be controlled or defeated by the secondary and subordinate purpose of opening to settlement and pre-emption such of the lands as should not be sold or disposed of within the designated period.

2. That the words "or disposed of" are not redundant, nor are they synonymous with "sold," but they contemplate a use of the lands granted different from the sale of them, and that a mortgage of them is such a use.

3. That the mortgage of them executed by the company April 16, 1867, for the purpose of raising money necessary to continue and complete the construction of the road, disposed of them within the meaning of the act, and was authorized thereby.

Now the fact is, so far as the Kansas Pacific Company was concerned, that the money raised with the bonds for which these lands were "mortgaged" was not "necessary to continue and complete the construction of the road." That road was built for less than \$12,000 a mile, not counting its legislation fund, and for each mile the company received \$16,000 in United States thirty-year 6 per cent. bonds. The proceeds of these bonds left a handsome profit after paying for the road; and the proceeds of the company's own bonds, of same amount per mile, were an additional profit, which was still further increased by many more millions of dollars in the shape of these very lands. The only ground on which that decision can stand in the minds of thinking men is that the "primary" object of the act was to enable the company to effect a colossal burglary of public funds and lands, and that in order to effect this primary object the words "disposed of" must be so construed as to make the steal as long, broad, high, and far-reaching as possible. But that is not what the majority proceeded to remark, which was:

4. That the mortgage was an hypothecation of the fee, (!) and not merely of an estate determinable at the expiration of three years from the completion of the road, and the debt it was given to secure not having matured, the lands are not subject to pre-emption. *Sed quare*, whether the remnants that may be unsold when the mortgage debt shall be paid will not then be subject to pre-emption?

Thank God for the *sed quare*! The majority of the court were profoundly non-committal as to whether the remnants that may be unsold after the mortgage debt has been paid will then be subject to pre-emption! That millennial contingency their venerable successors should be free to dispose of when it arose, say in the year 2000. It will not vex the present justices. The Kansas Pacific Company, on May 1, 1879, put up another brace of disinterested trustees, in the persons of Jay Gould and Russell Sage, and slapped another mortgage on the lands, this time for \$30,000,000 I believe, to expire in twenty-nine years, or May 1, 1908. Before that date the trick can be played again, and so on forever.

SOLEMN PROFUNDITY.

But the weightiest chunk of supreme wisdom in this blessed *sed quare* is the "remnants" idea! Just think of designating 3,116,228 acres in Kansas and 1,976,106 acres in Colorado of unpatented land as "remnants!" What the size of the Union Pacific "remnants" may be I do not know; but here are over 5,000,000 of Kansas Pacific acres gravenly pronounced by the Supreme Court as "remnants"—an area of land larger than the State of Massachusetts and nearly as large as Maryland. If such an imperial domain is only a "remnant," what is the supreme judicial notion as to the size of the original piece? I have always had a profound respect for law Latin, chiefly because I neither knew nor cared to know exactly what it meant. But from this day forth I shall do reverence to a "*sed quare*!" This one so fittingly concludes that remarkable utterance of a Supreme Court of the people of the United States!

THE RAILROADS HAPPY.

All of the attorneys of all the land-grant companies in America could not have concocted an "opinion" more gloriously munificent and beneficent to the oppressed and suffering stockholders of those corporations. Somehow it suggests the idea of a refreshing breeze on a sultry day caressing and fanning the perspiring brows of those exhausted toilers on—Wall street!—a breeze perfumed with the fragrance of loving violets, apple blossoms, or honey-suckles, thus sending greeting from the cool woods. It revived the fainting laborers in land-grant bonds; and after the hot sun sank into the West, and

they had entered their humble cottages, in the stillness and sacredness of home, gazing upon their dependent children, they surely must have thanked the Father of all Mercies for that surprising decision of the Supreme Court. I do hope they didn't forget the *sed quare*.

Sad toilers by the sea,
Benedicite!

SLEDGE-HAMMERING.

The dissenting opinion is as follows:

Mr. Justice Bradley, with whom concurred Mr. Justice Clifford and Mr. Justice Miller, dissenting.

I dissent from the judgment of the court in this case. In the third section of the original charter, after granting to the company five alternate sections of public land on each side of the line of railroad to aid in the construction thereof, it was provided that all lands so granted which should not be sold or disposed of by the company within three years after the entire road should have been completed should be subject to settlement and pre-emption like other lands, at a price not exceeding \$1.25 per acre, to be paid to the company. The appellant, after three years had expired, settled upon the land in question and claimed pre-emption of the same, and offered to the company the price specified in the statute. The latter refused to receive the money or to recognize his right, alleging that it had disposed of the lands in 1867 by executing a mortgage for its entire land-grant to secure a loan of \$7,000,000. The question is whether such mortgage is a sale or disposition of the lands within the meaning of the proviso of the third section. I think it is not. In my judgment, Congress had in view such a sale and disposition of the lands as would secure a settlement thereof. The object was to encourage a speedy settlement of the country along the line of road; and hence it was provided, if the company did not so dispose of them, they should be open to settlers at the usual prices, reserving to the company, however, the right to receive the purchase money for the same. If the company, by one sweeping deed of trust or mortgage, could cover the whole domain as with a blanket, and thus prevent a settlement thereon until the lands, by advance of prices, would be out of the reach of actual settlers desirous of occupying and improving them, it seems to me it would entirely defeat the objects of the act.

It is said, however, that if the company could not mortgage the lands they could not make use of them in aid of the construction of the road, the purpose for which they were expressly granted. I do not think this result would by any means follow. The fourth section provides for granting to the company patents for a proportionate part of the lands for every forty miles of railroad which should be completed. As fast, therefore, as the successive forty-mile sections should be completed, it was contemplated by the act that the company should have control of the lands to that extent. This would constantly subject to their use large tracts, which, if disposed of according to the intent of Congress, would have effected a rapid settlement of the adjacent country in all portions of the route which were adapted to cultivation.

The criticism that the words "sold or disposed of" mean something more than "sold," and can only mean a mortgage of the lands, I do not conceive to be just, but rather as sticking in the bark. Reading the whole act together, I think the only fair construction is that which is above suggested.

The objection that the right of pre-emption contended for would have prevented the company from giving a mortgage at all is not tenable. The mortgagees take the mortgage subject to the provisions of the act. It contains a proviso to this express effect. The lands were mortgaged *cum onere*, and the mortgagees, if so stipulated, would be entitled to the purchase-money receivable from settlers. This view of the subject would effectuate justice between all the parties, preserve the true construction of the act, and carry out the policy of Congress.

In view of these considerations I think that the decree should be reversed, and that the appellant, the complainant below, should be declared to be equitably entitled to the land in question.

There is no "sticking in the bark" about that, and likewise no *sed quare*.

DECISION ONLY APPLICABLE TO PATENTED LANDS.

Doubtless this very remarkable decision settles the question as to the force of the mortgage given by the Union Pacific and as touching Nebraska lands. The inference does not necessarily follow, however, that a similar decision would be made upon the mortgages of the Kansas Pacific and respecting Kansas lands. The bill under consideration provides for the opening to settlement "all lands situated in the State of Kansas and patented to the said company which have not been sold or absolutely conveyed by the said company or its assigns under the laws of Kansas." The enactment of this provision would be an amendment of the original section to the extent of explaining more fully the intent of Congress in using the words "disposed of," and whether of effect or not with the Supreme Court would, at least, lay the foundation for a more vigorous judicial contest of a question that is rapidly assuming in the public mind proportions of a magnitude and significance which may presently overthrow the railroad chicaneries. After all, there are several millions of people in America outside of the land-grant corporations; and in due time their power may be so exercised as to secure fair play and common justice.

In the mortgage of May 1, 1879, to Jay Gould and Russell Sage the clause "subject to the provisions of the act of Congress" is omitted, but it professes to convey, as I am advised, "all lands granted to the company, about five million acres, and which will be more fully described from time to time as the same may be selected, surveyed, and patented by the United States to said company." That statement is a square admission that such lands are legally the property of the United States and not of the company; therefore the alleged mortgage cannot attach to the contingent interest of the Government. And I hope that the Legislature of Kansas will appropriate all the money necessary to secure a review of this question by the United States Supreme Court. So much for that class of the granted lands for which patent has been issued.

WHO OWNS THE UNPATENTED LANDS?

And now for the 3,000,000 acres in Kansas alone, to which the company, though offering for sale, contracting to sell, and selling, has no legal title, the right and title thereto never having been vested by issuance of patent.

The legal ownership of such lands must either be in the company

or out of it. It cannot hang midway between the Government and the company, and there is no third party in the case. If such ownership be vested in the company, then it must be able to produce the legal evidence thereof, either by exhibiting a patent or by showing that it has so fulfilled each and all of the conditions of the grant, whether subsequent or precedent, as to be equitably invested thereby with such ownership.

It does not claim to have a patent. It has designedly avoided paying certain required costs for the exact purpose of preventing the issuance of patent, with the preconceived object of evading taxation by showing that the right and title to such lands remained in the Government.

THE COMPANY HAS NOT FULFILLED THE CONDITIONS OF GRANT.

The following decisions of the United States Supreme Court are conclusive on the point that the company has not fulfilled the conditions of the grant and that there yet remains something to be done by it going to the foundation of its right:

KANSAS PACIFIC RAILWAY COMPANY VS. PRESCOTT.

In this case (December, 1872, 16 Wallace, 608) Mr. Justice Miller held:

While we recognize the doctrine heretofore laid down by this court that lands sold by the United States may be taxed before they have parted with the legal title by issuing a patent, it is to be understood as applicable to cases where the right to the patent is complete, and the equitable title is fully vested in the party without anything more to be paid or any act to be done going to the foundation of his right.

The present case does not fall within that principle. Two important acts remain to be done, the failure to do which may wholly defeat the right of the company to a patent for these lands.

The first is the payment of the costs of surveying. It is admitted that this has never been done in the present case. If the company have such an interest in these lands that they can be sold by the State under her power of taxation, then the title is diverted out of the Government without its consent, and the right to recover the money expended in the surveys is defeated. As the Government retains the legal title until the company or some one interested in the same grant or title shall pay these expenses, the State cannot levy taxes on the land, and under such levy sell and make a title which might in any event defeat this right of the Federal Government reserved in the act by which this inchoate grant was made.

Another important and declared purpose of Congress would be equally defeated by the title thus acquired under the tax sale, if it were valid.

It is wisely provided that these lands shall not be used by the company as a monopoly of indefinite duration. The policy of the Government has been for years to encourage settlement on the public land by the pioneers of emigration, and to this end it has passed many laws for their benefit. This policy not only favors the actual settler, but it is to the interest of those who by purchase own adjacent lands, that all of it should be open to settlement and cultivation. Looking to this policy, and to the very large quantity of lands granted by this statute to a single corporation, Congress declared that if the company did not sell these lands within a time limited by the act they should then, without further action of the company, or of Congress, be open to the actual settlers under the same laws which govern the right of pre-emption on Government lands, and at the same price. Any one who has ever lived in a community where large bodies of land are withheld from use, or occupation, or from sale except at exorbitant prices, will recognize the value of this provision. It is made for the public good, as well as for that of the actual settler. To permit these lands to pass under a title derived from the State for taxes would certainly defeat this intent of Congress. It makes no difference in the force of the principle, that the money paid by the settler goes to the company. The lands which the act of Congress declares shall be open to pre-emption and sale are withdrawn from pre-emption and sale by a tax title and possession under it, and it is no answer to say that the company which might have paid the taxes gets the price paid by the settler.

For these reasons we think that though the line of the road had been built and approved by the President, so far as to authorize the company to obtain a patent for this land, if they had paid the cost of survey and the expenses of making the conveyance, yet the neglect to do this, and the contingent right of offering the land to actual settlers at the minimum price asked for its lands by the Government, forbid the State to embarrass these rights by a sale for taxes.

RAILWAY COMPANY VS. McSHANE.

In Union Pacific Railroad Company *vs.* McShane *et al.* (October, 1874, Wallace 22, 451) occurs the following pertinent distinction in the statement of the case:

The court below, after observing that it would not say whether a mortgage of the land was such a "disposition" as would prevent the right of settlement or pre-emption, remarked that in *Railway Company vs. Prescott* the taxes were assessed before any patent was issued, and, in addition, that the cost of surveying had not been paid. The learned judge, in this connection, said:

"I am inclined to consider the true meaning and effect of the provision in question to be this: While the road is being constructed and for a period of three years after the completion of the entire line, the company may sell or dispose of the lands at their own price, and they are subject during this period to no right of settlement or pre-emption. After three years have elapsed the company may still sell or dispose of their lands in good faith, but as to any lands not thus sold or disposed of there is a right on the part of the public to settle upon and pre-empt them in the same manner as if they were a part of the public domain; the price, not exceeding \$1.25 per acre, being payable to the company instead of the Government."

"If this be a correct view of section 3 of the act of 1862, it results that the lands of the company, so far as they are patented, are subject to taxation by the authority of the State, and this privilege reserved in favor of the actual settler, and of which he may never wish to avail himself, which is contingent in its nature and subject to be defeated by a sale of the lands by the company, is not inconsistent with, and will not defeat, the rightful authority of the State to tax the lands."

Mr. Justice Miller, after referring to the Prescott case, held:

No patent had been issued to the company when the taxes were assessed, and the costs of surveying the land had not been paid to the Government by any one. This court reaffirmed the doctrine that lands which had constituted a part of the public domain might be taxed by the States before the Government had parted with the legal title by issuing a patent, but that this could only be done when the right to the patent was complete and the equitable title fully vested in the party, without anything more to be paid or any act to be done going to the foundation of his right; and it said that in that case the United States had a right to retain the patent until the costs of surveying the land had been paid, which had not been done, and that the right of pre-emption in lands unsold by the company within three years after completion of the road would be defeated if a sale for State taxes could be made which would be valid.

This latter ground was not necessary to the judgment of the court, as it rested

as well on the failure to pay the costs of surveying the land. And we are now of opinion, on a fuller argument and more mature consideration, that the proposition is not tenable.

The road was completed and accepted by the President in May, 1869 and these lands have been subject to such pre-emption since three years from that date if this right can be exercised by the settler without further legislation by Congress or action by the Interior Department. We do not now propose to decide whether any such legislation or other action is necessary, or whether any one having the proper qualification has the right to settle on these lands, and, tendering to the company the \$1.25 per acre, enforce his demand for title. It is not known that any such attempt has been made, or ever will be, or that Congress or the Department has taken, or intends to take, any steps to invite or aid in the exercise of this right. It would seem that if it exists it would not be defeated by the issue of the patent to the company, and it may, therefore, remain the undefined and uncertain right, vested in no particular person or persons, which it now is, for an indefinite period of time. The company, meantime, obtains the title, sells the lands when a good offer is made, and exercises all the other acts of full ownership over them, without the liability to pay taxes.

We are of opinion, therefore, that this right confers no exemption from taxation, whether the land be patented or not; and so far as the opinion in the case of *Railway Company vs. Prescott* asserts a different doctrine, it is overruled.

But the proposition that the State cannot tax these lands while the cost of surveying them is unpaid, and the United States retains the legal title, stands upon a different ground.

The act of 1864, section 21, declares that before any of the lands granted by this act shall be conveyed to the company, there shall first be paid into the Treasury of the United States the cost of surveying, selecting, and conveying the same.

That the payment of these costs of surveying the land is a condition precedent to the right to receive the title from the Government can admit of no doubt. Until this is done the equitable title of the company is incomplete. There remains a payment to be made to perfect it. There is something to be done without which the company is not entitled to a patent. The case clearly is not within the rule which authorizes State taxation of lands the title of which is in the United States.

The reason of this rule is also fully applicable to this case. The United States retains the legal title by withholding the patent, for the purpose of securing the payment of these expenses, and it cannot be permitted to the States to defeat or embarrass this right by a sale of the lands for taxes. If such a sale could be made, it must be valid if the land is subject to taxation, and the title would pass to the purchaser. If no such title could pass, then it is because the land is not liable to the tax; and the treasurers of the counties have no right to assess it for that purpose.

But when the United States parts with her title she has parted with the only means which that section of the statute gives for securing the payment of these costs.

It is by retaining the title that the payment of costs of survey is to be enforced. And so far as the right of the State to tax the land is concerned we are of opinion that when the original grant has been perfected by the issue of the patent, the right of the State to tax, like the right of the company to sell the lands, has become perfect.

These decisions settle the fact beyond all dispute that the company has not fulfilled all the conditions of the grant. It has not paid the costs of surveying as required. "Until this is done the equitable title of the company is incomplete. There remains a payment to be made to perfect it. There is something to be done without which the company is not entitled to a patent." Hence, not only the title but the ownership of these unpatented lands remain vested in the United States; that is, these lands are the property of the United States and subject to such laws as the United States may see fit to make.

THE COMPANY CANNOT MORTGAGE GOVERNMENT PROPERTY.

I contend, therefore, that the company can neither sell nor dispose of lands which it does not own, but which are owned by the United States. Mr. Justice Miller says: "We are of opinion that *when* the original grant has been *perfected* by the issue of the patent, the right of the State to tax, *like the right of the company to sell the lands*, has become perfect." Until patent issues the right of the company to sell is inchoate and null. Hence in no possible way can the provision of section 3, declaring lands not sold or disposed of before 1875 open to settlement, be affected by the sham mortgage of the company, because such mortgage, even if absolute, could only attach to the company's interest in the lands, and not a whit to the Government's interest. If the company cannot legally sell such lands, it certainly cannot dispose of them; it has no legal title to be conveyed.

But the United States has enacted that these unsold and undisposed of lands shall be opened to settlement. Whatever may be the case with the company's interest, the Government's interest is subject to this provision; and since the Government is the true owner of unpatented lands it is bound to protect its own citizens, or children rather, in the rights which it assures them as to its interest in these lands. If the company wants to perfect its interest and to exclude that of Government, it can do so by paying costs of survey; but until it does this, every acre of these lands is clearly the property of the United States, and as clearly subject to settlement under section 3. There can be no question, therefore, that the Secretary of the Interior should be directed to open these lands forthwith.

FISH OR CUT BAIT.

This company should be made either to fish or cut bait. For years it has kept its vast domain exempt from its share of taxes, leaving the actual settler to bear the whole public burden. It has in that way saved more than a quarter of a million a year, and it has received many millions in the enhanced value of its land by virtue of this exemption. It has had three decisions of the Supreme Court of its right to this immunity because of the fact that the ownership of its lands was vested in the Government.

By these same decisions, therefore, and because of this very fact, these lands are subject and should at once be opened to settlement and pre-emption at \$1.25, to be paid to the company. That which is good law for the company in enabling it to evade taxation, is equally good law for the Government in opening lands not sold or disposed

of to settlement. The company can take just which horn of that dilemma it likes best. If it be the perfect owner of these unpatented lands let it take patent and pay taxes; if it be not, then the lands are open to pre-emption, and settlers should be at once permitted to go upon them.

American Citizens in British Prisons.

SPEECH

OF

HON. WILLIAM E. ROBINSON,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

January 23 and 26, 1882.

The House having under consideration the resolution reported from the Committee on Foreign Affairs in regard to American citizens in British prisons—

Mr. ROBINSON, of New York, said:

Mr. SPEAKER: A short time since, before the assembling of this Congress, I had the pleasure of visiting this capital and accidentally met the accomplished and polite gentleman who formerly represented Her Majesty the Queen of England here. In our conversation he informed me that he had been very busy. He had been so busy that he hardly got any sleep, and, with a smile on his benevolent face, he said, "I have been dreadfully bothered with your hogs." It will be remembered that at that time some American hogs that had got a bad character for health, and were suspected of trichinosis, had been taken over to England, and the whole British Empire was filled with discussions and protestations on that subject. The wires beneath the Atlantic thrilled and throbbed with British protests against their importation and with American protests against any prohibition of the traffic. At one time I knew that American citizens who had fought for the preservation of your Union, whose blood, spilled upon your battle-fields, had given additional redness to your stripes and a brighter glory to your stars, were thrown into English prisons, with no crime alleged against them, and were treated like felons, and that we could not by any effort get their cases either before the Government or before the people of these United States. And I was led to exclaim, as I parted with Sir Edward Thornton, "Oh, that we only had as much attention and as much protection given to a live American citizen as there are given to a dead Cincinnati hog!" But so it was, sir, that while American diplomacy vindicated the rights of dead animals, our living citizens were languishing in prisons, and we could not get the State Department or any other Department to bring up their cases and have them examined, so that proper protection might be given them.

I have before me a correspondence with the Secretary of State in regard to Mr. D. H. O'Connor, a citizen of our neighboring city of Baltimore. Nothing, so far as I know, has been done in regard to him. I can give you the names of four or five other American citizens who are now, or were recently, confined in these bastiles of British oppression, for whose liberation no proper steps have been taken. One of them, Mr. M. P. Boyton, was arrested and brought before a British jury, tried, and not found guilty, no crime being proved against him, but immediately upon his escape from a British jury the suspension of the *habeas corpus* was brought to bear against him and he was rearrested and held in prison on suspicion.

Now, I have been trying to get the floor here for several weeks in order to bring to the attention of the House the cases of these mourning, sickening, and dying American citizens, imprisoned without crime being alleged against them, and I have been unable to do it until the present time. My worthy friend from New Jersey, [Mr. ROBESON,] whom I do not now see, though he is generally conspicuous enough—

Mr. HAZELTON, (pointing to Mr. ROBESON in his seat.) There he is.

Mr. ROBINSON, of New York. When I asked the floor from you, sir, on one occasion, for only half a minute, in order to pass a resolution commanding the State Department peremptorily to tell us what had become of these American citizens, that gentleman objected. You may remember, Mr. Speaker, that I asked who objected, and I was informed that it was the gentleman from New Jersey.

Two or three minutes after that, as the RECORD will show, the gentleman from New Jersey rose in his place and moved that the House take a recess for ten minutes, for we had nothing to do. I urged that what I proposed was something worth doing, but he insisted on the recess for ten minutes, and it was ordered by the House. When that ten minutes expired, another recess for ten minutes more was moved and carried, I standing here all the while vainly trying to have a hearing for American citizens who had fought for our institutions, and I could not get one minute. That recess expired and another recess for half an hour was moved and carried, the Speaker sitting in his chair, I in my seat, and the gentleman from New Jersey in his. There was an hour thus spent in doing nothing, when I

wanted but one minute, and I could not get it because of the objection of that Representative of New Jersey.

Now, we want bolder action than that which is taken by the Committee on Foreign Affairs, and I am resolved to go further and move an amendment to their report. I believe that will be in order.

Mr. ORTH. I do not yield for that.

Mr. ROBINSON, of New York. I am going to take higher ground than the Committee on Foreign Affairs takes, and I hope I will be sustained by the Chair and by this House. I desire to say that not only have we a right now to interfere in behalf of our American citizens in British prisons, but it is our right and our duty to protest against the cruelties inflicted upon British subjects and members of the British Parliament, elected by the people of Great Britain, whom the British Government has imprisoned.

A gentleman near me shakes his head; I will shake his heart, and I will show him that it is so. I think upon that subject he will take as pretty good authority Lord John Russell, or, if you please, the British Government itself. I do not know whether you, Mr. Speaker, remember the case of the Madiai who were arrested in Tuscany for having committed some alleged crime against the laws of Tuscany. The Tuscan Government imprisoned these Madiai, its own citizens, for alleged crimes committed on its own territory. That I think is as strong as anything I can give you with regard to the members of the British Parliament and others now suffering imprisonment in British jails.

These Madiai were kept some time in prison, and the American people and the English people protested against it. I will read a sentence or two from a very valuable English book, to be found in our Library, called *The Annals of Our Time*, by Mr. Irving. I will read from page 374 of that book.

On the 18th, of January, 1853, Lord John Russell urged upon Sir Henry Bulwer, the English minister, the necessity of remonstrating with the Tuscan Government on the subject of the Madiai. Lord John Russell, speaking for the British Government, says:

As this is a matter affecting a Tuscan subject, it may be said that Her Majesty's Government have no right to interfere. If this means that interference by force of arms would not be justifiable, I confess at once that nothing but the most extreme case would justify such an interference.

Here we have Lord John Russell acknowledging that an extreme case would justify a civilized government interfering not only by expression of opinion but by force of arms to compel another government to liberate its own subjects in prison in its own jails for alleged crimes committed upon its own soil. He says:

I confess at once that nothing but the most extreme case would justify such an interference. But if it be meant that Her Majesty has not the right to point out to a friendly sovereign the arguments which have prevailed in the most civilized nations against the use of the civilized sword to punish religious opinions, I entirely deny the truth of such an allegation.

Here, sir, is the authority of the English Government to the effect that inasmuch as there never has been such tyranny perpetrated upon the face of the earth, tyranny at which the despotism of Russia or Turkey or any other country that we have been accustomed to look upon as despotic, pales into comparative liberty and grows pigmy in comparison with these giant wrongs inflicted by Great Britain upon her own people, to say nothing of our own citizens, we have a right to demand from the British Government the release of those glorious patriots, far more distinguished in honor and in family than Gladstone or Forster. According to Lord John Russell, we have the right to interfere, under the practice of civilized nations, and protest against these men being longer held in prison, and to interfere with arms in this the most extreme case of despotism ever known among civilized nations.

Having thus referred to what I regard as a pretty strong precedent in favor of our interfering in favor of England's own subjects suffering unjust imprisonment I shall next refer to the case of Theodore of Abyssinia as a precedent for our guidance in case of the unjust imprisonment of our citizens by the English Government. King Theodore had taken it into his head to arrest some Englishmen traveling in Abyssinia, and to throw them into prison, for some alleged crime or misconduct. The English Government protested, insisting on her right to interfere for the release of her subjects. It is recorded in the book I have before me, from which I have already quoted, Irving's *Annals of our Time*, that Sir Robert Napier was sent out to Abyssinia with an armed force to liberate those prisoners. In consequence of the difficulties of transportation his cannon were mounted on elephants' backs; and amid the roar of English artillery and by the force of English arms those English prisoners were rescued from the grasp of a foreign power; the capital of Abyssinia was laid in ashes; and the king of the empire killed. I do not ask any more in our case now than that we do the same thing. [Laughter.] That is a good precedent set by England. And if there is any respect in this House for American citizenship—if there are any ears that can hear the groans of our imprisoned citizens above the clinking of crystal goblets and foaming beakers by which the hearing of the representatives of Government is deadened—if we have ears to hear the groans of our own citizens above the din of fashionable frivolity here, I ask no more than that we follow the example of England—that we send over force enough to take our citizens out of British bastiles in which they are unjustly detained.

Admiral Porter is idle here at the head of our Navy; General Grant,

although now out of the Army, can be called into the service again. Sherman is a pretty good general, and so is Sheridan. Let us send these men over supported by the whole power of our Navy and the thunder of American cannon, and take our citizens from the bastiles in which they are suffering. If in getting them out the city of London goes to ashes and the monarch or the ministry are slain, we shall be doing only what England has done in a less provoking and flagrant case.

Mr. HAZELTON. May I ask the gentleman the names of those American citizens, or some of them?

Mr. ROBINSON, of New York. It would take me a little out of the order of my remarks if I should answer now. If the gentleman from Wisconsin will allow me, I will answer in a few minutes.

Mr. HAZELTON. Is Parnell one of them?

Mr. ROBINSON, of New York. One of our citizens?

Mr. HAZELTON. Yes.

Mr. ROBINSON, of New York. No, sir; Mr. Parnell is not one of our citizens; but he has many claims to be so recognized and so honored. He is the son of one of the noblest women in this country. He is the grandson of our noblest American commodore, who, in a midnight fight with two British men-of-war, brought down that blood-stained flag which was so shamefully hoisted and saluted a few weeks since at Yorktown. That is the answer I give to the gentleman's question. Charles Stewart Parnell, the son of a noble American mother, the grandson of Charles Stewart, "Old Ironsides," is lying in jail; and we ought to adopt him as George Washington at one time was adopted or naturalized by an Irish society in Philadelphia as an Irishman. Certainly it ought not to take much time to adopt and naturalize the grandson of "Old Ironsides," of Pennsylvania, and then make instant demand for his release. Indeed, I think he is an American citizen. This House made him a quasi or inchoate member of this House, and listened to his speech upon this floor; and all persons acknowledged as members of this House must be American citizens.

But, Mr. Speaker, if I allow myself to get scattered in this way, I shall never be able to get through with what I have to say. [Laughter.] But I hope I have fully enough answered the gentleman's question.

Let me continue with the case of Theodore of Abyssinia. Here is the authority in my hand on that case. The city of Magdala was reduced to ashes, and King Theodore was killed. Some say he killed himself, but I will not go into that. He was killed, however, and I suppose it should satisfy the American people if the tyrant who insults their citizenship ceases to exist.

I leave that now, as I have not time to dwell upon it further, and recall the memory of Daniel Webster. I knew him well here, and often had the honor of his company. It is now nearly forty years since I took my seat in this House of Representatives when it sat in another Hall, and I think I am therefore the oldest member of the House. To be sure I took my seat as a correspondent and not as a member, and unfortunately I got expelled from that seat in that other House on an Ohio subject connected with sausages. [Laughter.] This Ohio pork, dead or alive, is never quiet. It is always making trouble and creating a noise, though the market reports sometimes say "pork is quiet." It divided the House upon me, and gave me the outside, but I was soon afterward restored to my seat on motion of Mr. Winthrop, of Massachusetts.

Well, the mention of Mr. Webster recalls his ideas on the right of the American people to sympathize with the subjects of other governments struggling for freedom. Hungary, in 1848, revolted against Austria. Kossuth and his companions tried to get up a fight far beyond anything in which Charles Stewart Parnell and his fellow-prisoners are engaged. What did our Government do then for Hungary, and what should we do now for people similarly situated? Hungary resisted the Austrian rule, but our Government, at the head of which was the old hero of Buena Vista, sent out Dudley Mann to Hungary, right inside the dominions of Austria, to take cognizance of what was going on and see how soon the American Republic could recognize the independence of Hungary and take sides with her against her oppressor. Mr. Hulsemann, the Austrian minister at Washington, protested that it was against the law of nations and declared this Dudley Mann had been sent over for the purpose of "egging on" this rebellion against the Austrian power. He wrote a very serious letter of protest to the Secretary of State, who then was Mr. Webster, Mr. Clayton having gone out on the death of General Taylor and the new administration of Mr. Fillmore having come in. Mr. Webster replied to this protest of Mr. Hulsemann, and I have only time to show what the American doctrine as laid down by that illustrious statesman of Massachusetts was. I want Massachusetts men now on this floor to draw their inspiration from him. He lays down the American doctrine in this way:

They—

Referring to the United States—

cannot, however, fail to cherish always a lively interest in the fortunes of nations struggling for institutions like their own.

In another paragraph he says:

But when the people of the United States behold the people of foreign countries without any such interference spontaneously moving toward the adoption of institutions like their own, it surely cannot be expected of them to remain wholly indifferent spectators.

Mr. Hulsemann had complained that—

The object of the President is to obtain information in regard to Hungary and her resources and prospects, with a view to an early recognition of her independence and the formation of commercial relations with her.

Mr. Webster replies fully to Mr. Hulsemann's complaint, and in conclusion says:

Those questions will be discussed when they arise, and Mr. Hulsemann and the cabinet at Vienna may rest assured that in the mean time, while performing with strict and exact fidelity all their neutral duties, nothing will deter either the Government or the people of the United States from exercising at their own discretion the rights belonging to them as an independent nation and of forming and expressing their own opinions freely and at all times upon the great political events which may transpire among the civilized nations of the earth.

That is all we ask here, that we take notice of what is transpiring among the civilized nations of the earth, and in that nation which has proved itself the most uncivilized to do what Mr. Webster declared we should always do. It was in this correspondence that Mr. Webster remarked that Austria was but a "small patch."

But I pass from Webster to Marcy. Oh, for one hour of Daniel Webster or William L. Marcy in these degenerate days at Washington!

Following from this Hungarian emeute came Kossuth and others to the United States. They were encouraged by the United States and by England. They came over here, and Kossuth was received by Congress. Some of his followers remained and others returned home. One, Martin Koszta, declared his intention to become a citizen of the United States, and then returned, as many of our naturalized American citizens have done and are still doing.

There was at that time a glorious hero of that glorious State of South Carolina lying with his little United States sloop of war, the Saint Louis, in the bay of Smyrna; and this Martin Koszta was arrested by the Austrian authorities at Smyrna and taken on board an Austrian man-of-war, the Huzzar. Captain D. N. Ingraham—forever honored be his name—wrote a brief note to the commander of that Austrian brig, demanding the immediate release of Koszta, and wrote a letter afterward to the Secretary of the Navy, stating what he had done. His action was approved by the Secretary of the Navy, then Hon. John C. Dobbin, of North Carolina, and by our Government.

Immediately upon the fact of this arrest coming to the knowledge of Captain Ingraham in the Saint Louis he drew his sloop of war up within a half cable's length of the Austrian man-of-war, loaded his guns, and got ready for action, and demanded the release of this American incomplete citizen. The result was that Martin Koszta was delivered from imprisonment and from death. The effect of this action was to teach foreign nations that we intended to demand that they should respect our adopted citizens. He was not a citizen of the United States; he had simply declared his intention of becoming one.

Now, Mr. Speaker, compare that, if you please, with the conduct of our Government at the present time. I hold in my hand the correspondence sent some time ago to the Senate with regard to the imprisonment of one of our citizens, to wit, Michael P. Boyton, a brother, I believe, of the great American swimmer of that name. What are the facts in that case? He had a passport from William H. Seward, setting forth the fact that he was an American citizen. He showed that he had been engaged in fighting for the Union in the recent war, which secured for him the right of citizenship; and yet, sir, would you believe it, our Government here and our representatives there at the court of Great Britain went to work and managed to proclaim the face of our great seal of State to be a lie! They said that he was not a citizen, although he had his passport certifying under the seal of the State Department that he was a citizen, and then like cowards they permitted Michael P. Boyton to be, on mere suspicion, cast into prison, where he lingered for about twelve months, and finally fell sick and lost his eyesight; and I do not know where he is now, still in prison or wandering around, an American citizen without any protection, to find some place where he can shield himself from the indignity which was heaped upon him, until he is buried in some strange land in an unknown grave.

In this case the Secretary of State took the ground that inasmuch as he had not completed his citizenship he could not look for any aid from the United States.

If Boyton could not point to the fact that he was born of American parentage, he could and did claim that he had fought in the late war. He fought through that war, Mr. Speaker, and the House of Representatives and the Congress of the United States have declared that any man doing so for one year should be a citizen and have all the securities and rights that belong to a citizen, and it was upon the strength of that declaration and of that fact that he was entitled to the protection of the Government. But although he had fought for the country, simply because he did not go into court and complete his application he was denied protection. The whole correspondence is here, but I shall not stop now to read it. It is rather sickening to read how our State Department and our minister and consul managed to prove the United States seal a fraud and the promise of Congress to recognize her soldiers as citizens "a mockery, a delusion, and a snare," for which they should all have been impeached. Oh, that we had some modern Marcy and a second Ingraham to vindicate the rights of American citizens!

I now wish to call attention to the law of July 27, 1868, which was

passed in order to secure the rights of American citizens. In 1867 I came here as a member of this House and managed to bring this subject before Congress and the country. That movement resulted in the passage of a bill through both Houses of Congress, which was signed by the President, securing the rights of American citizens traveling abroad. It finally passed both houses of the British Parliament and was signed by the Queen. It passed the legislative department of the German Empire and was signed by the Emperor. This law of 1868 provided for the first time in the history of the American Government that American naturalized citizens should stand on the ground of equal protection with native-born citizens. That law provided that if an American citizen was arrested abroad the President of the United States should demand his release and would proceed to have the citizen rescued in all possible ways short of an absolute declaration of war, that being exclusively the prerogative of Congress. In this House, Mr. Speaker, that bill passed with only five dissenting votes out of the whole body, providing that if any American citizens were unlawfully detained by any foreign government we would make reclamation by seizing and imprisoning the first subject of that power we could lay our hands on. It provided that we would take subjects of that government as hostages, citizen for citizen, and I think it is mentioned somewhere in the correspondence of Charles Dickens, then in this country, that he was afraid to come to Washington to deliver a lecture for fear that he would be the first one arrested.

Afterward the bill went to the Senate where, by the conservatism of that illustrious statesman Mr. Sumner, and others, it was modified in some particulars, so that a demand for the release of the citizen so arrested could be made, and all steps taken short of a declaration of war to secure his release. That law is still living on our statute-books, and yet our Government seems to have forgotten or ignored it. Let us request the President to see that it is applied in behalf of our citizens now neglected and abandoned to the cruelty of British bastilles.

I claim the credit of the passage of that act which has changed the international law of the world. Mr. Conness, then Senator from California, deserves the credit of its passage through the Senate.

Now, sir, if my friends around me do not believe in the authorities I have quoted, and still, notwithstanding the revision of the old version, believe in the Holy Scriptures, there is such a personage mentioned as the good Samaritan. There was a stranger who fell among thieves. He was robbed and beaten. One man came along and passed him by; another came and passed him by; but nobody did anything to relieve him till finally the good Samaritan came along and went to his relief and comforted him. If gentlemen will not take the authority of Lord John Russell and others I have quoted, might they not take the example of the good Samaritan? Ireland is robbed and beaten and fallen into the hands of thieves and robbers. But if we, as good Samaritans, should interfere for a man fallen among thieves, what should we do for a lovely woman in similar circumstances?

In painting and poetry England is represented as a gross and stalwart man, Ireland as a beautiful woman.

Here we have in the nineteenth century a big bully of a man standing over a defenseless woman and trampling upon her. You and I, going home to our residences, and seeing a man doing that, even if we thought we would get licked in the encounter, would not hesitate to take the ruffian by the throat. That is what is going on now. John Bull has this lovely woman down trampling her in the mud, and we look on and have not heart and manhood enough to assist her. I look around and see many here that have vindicated their bravery on the battle-field, who have shown they have courage in their hearts and warm blood in their veins, who would fight to the shedding of the last drop of their blood for a woman in that position. And yet we have not the manhood to interfere in this case!

There should be an international law to prevent cruelty to men and animals. We see a man abusing his horse or his dog, and Mr. Bergh interferes, and why should not nations interfere when others outrage humanity by cruelty to their subjects? In the latter case we all seem to lose our manhood and to become indifferent—in fact, ice-Berghs.

Here is an extract from the Boston Pilot, of the 14th of this month, giving an account of an interview with Benjamin F. Butler, the distinguished lawyer and statesman of Massachusetts. It will inform the gentleman from Wisconsin and others who some of the prisoners are and on what false pretenses they are held:

In the Pilot of November 19 last appeared a letter from Mr. James Redpath, headed "American citizens in Irish jails." It treated of the arrest and imprisonment in Ireland, under the coercion act, of four American citizens, namely: Messrs. Michael Boyton, Henry O'Mahony, J. H. Walsh, and D. McSweeney. Messrs. O'Mahony and Sweeney presented their cases to Mr. James Russell Lowell, United States minister at London, asking his official intervention to procure them a speedy trial or liberation from imprisonment, as they had not committed a breach of any constitutional law which could justify their arrest and detention. To this request Minister Lowell, while acknowledging the legality of their title to citizenship, replied in effect that England had a right to arrest all persons domiciled in the proclaimed districts, and that it was "manifestly entirely futile to claim that naturalized citizens of the United States should be exempt from its operations."

This decision of our minister to England has caused great surprise and indignation to naturalized citizens and others throughout the United States. It is apparent from the following clear exposition of international law by one of America's most eminent lawyers—General B. F. Butler, of Massachusetts—that Mr. Lowell has taken an utterly erroneous view both of the rights of American citizens and of international law.

In order to place this matter thoroughly before our readers, a member of the

Pilot staff interviewed General Butler last week, when the following opinions were expressed by him on the subject:

Reporter.—“General, have you read the letters of Minister Lowell upon the rights of American citizens in Ireland and the duty of the American Government toward those citizens?”

General Butler.—“I have read Mr. Lowell's letters with some care, as the grounds taken by him are of the utmost importance to every American citizen who finds himself outside of the territorial limits of his own country. I understand Mr. Lowell's proposition to be this:

“First. That in law the action of a government toward its own citizens, however unjust, arbitrary, or oppressive it may be, must apply in the same degree to any American citizen who happens to be within the territorial limits of such government, either domiciled or upon business or pleasure.

“Second. That if such citizen is deprived of his liberty or property by such arbitrary law or action of the government, it is not the duty of the United States Government to interfere in any way, diplomatically or otherwise, for his protection or for redress for the wrongs done to him, and that in such case the appeal only is to be made to the ‘courtesy’ of the government for redress upon the ground of mistake or misapprehension.

“Such, in my opinion, are not the principles of international law applicable to the case supposed. Mr. Lowell says in his letter that the coercion law in Ireland, so called, is an exceptional and arbitrary measure. Of course he means to say by ‘exceptional’ that it applies to all Irish subjects of Great Britain only. Now, I claim it to be public law that an American citizen in a foreign country is entitled to the highest rights of any citizen in that country at least, and if he is not afforded all the rights and protection of the laws and redress given by law to any class of citizens of that country, his being made an exception by which he is exposed to arbitrary arrest, the despoilment of his property, and deprivation of his liberty is not only a cause of interference of his own government, but a cause of complaint against the government so maltreating one of the citizens of another government, and that the whole power of that government should be brought to bear to restore the rights and redress the wrongs of its citizens.”

There is another American prisoner in British jails from our neighboring city of Baltimore, to whom the resolution offered by my friend Mr. Cox this morning, which should have embraced all, applies. His name is D. H. O'Connor, and his brother applied to the Secretary of State for his protection. I find a letter from Secretary Blaine in the Sunday Morning, a paper published in Baltimore, on the 4th of last month, in which he states that the papers before him showed that Mr. O'Connor had been naturalized in September, 1875, and had been recently arrested on suspicion under the British act of Parliament known as the peace preservation act, and says in effect:

That England had a right to arrest all persons domiciled in a proclaimed district, and that it was manifestly entirely futile to claim that American citizens should be exempt from its operations.

Did any man ever hear such nonsense? Why, sir, suppose you go over to England to-morrow and England does not like you because you were once in that chair and therefore represented America, and she proclaims the district in which you land—for they can do that at a moment's warning—and put you into prison with other American citizens whose claims for protection are as good as yours or mine; would you be satisfied if this House let you be there a year without doing anything? I tell you that is what they have done. They proclaim the district, take hold of an American citizen, making no charge of crime against him, put him in prison, and keep him there as long as they please, and after keeping him for three, or six, or twelve months, they send him a polite letter and say, “You are detained for three months longer.” I should like to see this treatment given to our Secretary of State, should he visit Great Britain, and perhaps the State Department would modify or change its views.

There is still another American citizen, Mr. Hart, of Lawrence, in Massachusetts, who was arrested after midnight on the 3d of this month and sent to prison on suspicion. He had committed no crime. The poor fellow despairs of any protection of his American citizenship, and in a letter dated January 6, 1882, says:

The American people boast very much about their Republic and great men, but when that Government allows her citizens to be thrown into British prisons without getting any kind of a trial, I think your great men and fine Republic cannot say a great deal for themselves.

Mr. Butler, in the review from which I have quoted, refers to the case of Martin Koszta, already noticed, and adds:

Not only that, other nations, notably Great Britain and France, have asserted these principles even in time of war. Great Britain called upon this Government to provide by treaty stipulations for a commission to redress all the wrongs done British subjects during the late rebellion domiciled in our territory, and commissions did adjudicate many thousands of dollars in favor of British subjects who made claim that they were injured in their persons and property by the action of the United States officers in carrying on the war, and that too when they were domiciled in garrisoned cities where martial law prevailed. A commission for a similar purpose is now sitting at Washington, giving redress to French citizens who claim that they were so injured. These claims are made as a matter of right by their respective governments, and are held to by this Government as a matter of right. In my opinion it is not only the right of the citizen but the duty of the Government, if he is by an exceptional arbitrary law or act of a foreign government despoiled of his property or his liberty, to use the most effective means possible to have its citizen liberated at once or tried for any supposed offense by the ordinary tribunals of that country, and that the case against him must be heard, at least to be satisfactory to this Government, by the highest tribunal to which any citizen of that country can appeal.

The English Government may pass a law, because Parliament is omnipotent, to arrest and imprison its own subjects without cause and keep them imprisoned without being brought to trial, and the only redress to the British subject may be in revolution. But applying that law to an American citizen ought to leave him in no such predicament. Our Government ought to interfere for his protection and for the redress for the wrongs done to its citizens.

Now, sir, can you tell me how many millions of dollars we have recently given to keep up our diplomatic intercourse with European nations? Can you tell me anything our ministers to Great Britain have done over there that was not disgraceful for the money they have spent? Can you give me the name of one American citizen who has been vindicated there? Can you tell me of one honest five

minutes' work done by the representatives of American principles in all our legations to Europe? On the contrary, our representatives there have been taking lessons in the school of monarchy. They have been learning the ways and tricks of despots and aristocrats, and have been bringing them over here, inoculating our system and poisoning our blood with political pyæmia, which will kill us beyond the power of any of the doctors here even with their \$100,000 bills to save us. The wounds are ghastly and the pus is not laudable. We are going to the devil unless we stop this, [great laughter,] if we are not already well on in our journey.

I read from the papers a short time ago of an American minister drawing \$12,000 a year, or more, and I never heard of him doing anything but this.

Mr. McCOOK. I ask unanimous consent that my colleague's time be extended.

The SPEAKER *pro tempore*, (Mr. DUNNELL in the chair.) The gentleman's time has not expired.

Mr. ROBINSON, of New York. I am very much obliged to my distinguished and gallant friend from New York [Mr. McCook] and to the House, and I shall not abuse the kindness. If I see the least impatience I will stop; but I understand I shall not have to confine myself to the limited time.

I was saying that I read of the grand achievement of this our minister, and it is the only thing I really have read for the last five years that an American minister did for his pay. He appeared in the crowded streets of a great European city from time to time. I will not mention any name, because personally I really like him, and I do not want to say a word against him. He appeared on horseback, and about twenty or thirty paces behind him, “be the same more or less,” he had a mounted “tiger,” or lackey, gorgeously dressed, I presume, in yellow plush breeches, top boots and a scarlet jacket, and he was riding through the streets of that crowded city, and the people must have cried out, “Look at the queer republicanism of this representative of the great American Republic; look at his breeches, and his jacket; they are utterly too, too.” [Laughter.]

Now, if we have nothing else for our ministers abroad to do, I am in favor of calling them home and applying the millions they cost us to some better purpose, and if we can give exit to the foreign representatives here, let them go home too. I do not believe that when a Secretary of State, however good and democratic Republican he may have been—and by the way the present Secretary of State and the late Secretary of State were both members of the Congress in either House that passed the bill which in its incipient stages provided that we should seize an Englishman, whether Charles Dickens or any one else, for every American citizen imprisoned abroad—becomes involved in the mazes of European aristocracy here, amid the music of clinking crystal, foaming with untaxed champagne from France, and smoking untaxed cigars from Cuba, moving in the mazes of the dance, and in the blaze of the beauty of Washington society, which has always been superb, and where eyes sparkle brighter than diamonds, and smiles are sweeter than the haggard looks of American prisoners praying for relief from unjust imprisonment, he is in a fit state of mind to defend our citizens. What chance for justice has some poor fellow who fought at Antietam, or was wounded at Gettysburg, to have his prayer for justice and protection heard or answered when our officials get mixed with the representatives of the foreign government who hold him in prison, in such social happiness?

But if the folly and uselessness of our diplomats abroad were all that our citizens have to complain of we might blush and bear it, but it has been hinted that some of our representatives abroad have acted as volunteer spies and constables of the despots to which they are accredited. I shall make no charge myself, but I fear some of our citizens have got arrested through information from our representatives. I protest against making heavy appropriations for any such purpose. I take the following extract from the Boston Pilot of the 21st instant. Can it be possible that some of the contingent funds or secret-service money which we are called upon to vote here goes to any such base uses?

THE BRITISH SECRET SERVICE.

The composition of the British secret service is cosmopolitan. These agents form a part of the diplomatic organization of every British embassy, and are surrounded by a certain freemasonry recognized only by themselves. The minister at Washington is the official head of the corps in this country and Canada, and not less than two hundred persons are retained in its service in the United States and the Dominion. It employs whomsoever it finds necessary for its purposes, although the persons whose services are temporarily used are often in utter ignorance of the true aim and motives of those who pay them.

By means of its secret servants the English Government is informed of the names of the leading officers of every land league in the United States and of every secret organization antagonistic to British interests. Considering the great personal risk involved in the pursuit of this unenviable calling the salaries are not only large, but liberal pensions are awarded for long service, which, if life be lost or injury sustained, are extended to the widows of the members. Should events in Ireland develop into civil war—which contingency, however, is certainly not probable at present—it would open up a keen controversy if some member of Congress of Irish proclivities were to make a point of ascertaining the nature and extent of the assistance which the secret service employés of Great Britain received from the Federal authorities.

Now, in order that we may have some authority for interfering in this business, to show that it is our duty, whether as good Samaritans or followers of the example of Lord John Russell and Daniel Webster or Captain Ingraham, I call attention to the terrible tyranny against

which I am protesting. Here is an extract from a letter of Henry George, of California. My gallant friend from California [Mr. Rosecrans] probably knows him. Mr. George is an American citizen; there is no Irish about him. Here is what this American author says in *The Irish World*, after visiting Ireland to satisfy himself of the real state of affairs in that country:

Our fathers had a very vivid recollection of British tyranny and a very thorough contempt and hatred for it, but for some time past the common belief of Americans has been that personal liberty is really as secure under British institutions as under our own; that the English monarchy had, in fact, become a republic in all save the name. As to England this may be measurably true, but as to Ireland nothing could be more erroneous. There is to-day no country in the world making the slightest pretense to civilization where the fundamental principles of popular right are so flagrantly outraged, or rather so utterly ignored; where the government is such a reckless, conscienceless, irritating tyranny.

Imagine a government such as I have described wielded in the interests of a privileged class infuriated with the fear of losing the power of drawing immense incomes from the toil of others. Imagine all constitutional rights suspended, and the whole country at the mercy of an absolute dictatorship, backed by 50,000 bayonets in the hands of foreign troops—a dictatorship for which nothing is too arbitrary and nothing too mean. Imagine elected members of the highest legislative body, the trusted leaders of a political party that embraces nine-tenths of the people, lying in jail, and treated with indignities to which convicted felons in civilized countries are not subjected. Imagine the most respected and public-spirited men in their respective localities dragged off daily to prison without charge or inquiry, upon *lettres de cachet* issued by a governmental underling at the suggestion of some landlord or police inspector. Imagine a country where public meetings to discuss public questions cannot be held, where even the meetings of ladies are burst in upon and dispersed by policemen; where the newspaper editor must scan his proofs closely lest he may find himself the next day under lock and key; where men of the highest standing fear to talk of public affairs save with bated breath and in secure places; when they tell you that their every movement is watched by detectives, and their letters opened and read in the post-office, and warn you that you are watched as closely. Imagine a country where you hear of constables cutting to pieces with thrusts of their sword-bayonets young girls who are fleeing from them in terror; where the proprietor of such a hotel as the Astor or Metropolitan of New York or the Lick House of San Francisco will show you the bruises on his face inflicted in his own house by policemen who rushed in and beat him because, with an impulse of common humanity, he had exclaimed when he saw them kicking a poor boy about the streets! Let any American, if he can, imagine a country such as this, and he will get some idea of the condition of Ireland to-day. It is a reign of terror.

Yet men, calling themselves Americans, saluted the flag which represented these acts of oppression, and the world looked on with astonishment that a free republic should pay such homage to a shameless despotism.

I am going to ask this House to say that they did not join in that disgrace. I am going to ask this House to say whether it was done in a moment of gush or folly or aestheticism, [laughter,] or whatever it was, that led our people to salute that flag at that time—that it was not done with the sanction of the people's chosen Representatives.

And if there is here to-day a Representative from any district in this country who will rise and tell me that in the next campaign he will march through his district holding up the English flag, and give me the opportunity to follow him with the American flag, I will canvass the district and see who will be returned.

Here is what the New York Herald says of government under the English flag. It is from an editorial of the 30th of October, a few days after we saluted it at Yorktown:

The methods by which Ireland is governed are methods which are familiar in Russia. They are the methods of Louis Napoleon, and they jar upon every lover of liberty and order. Ireland is held by England as Russia held Poland—that is to say, by a large body of armed men. The principle of liberty is so deeply grounded in the English nature that when this temporary alarm or panic as to the purposes of the Irish tenantry is over there will be a sober second thought. Mr. Gladstone, so long as he appeals to the Jingo element of the hour, will have a noisy support in England, and the large centers of population, where any policy which is vulgar or meretricious will excite public applause.

It will be difficult to explain to the great body of the English people outside of London why it should be necessary, in the nineteenth century, for a liberal government to adopt the policy of a Bonaparte in dealing with a proud, intelligent, and independent people.

And these are the methods which the United States approve by saluting the flag under which they are perpetrated.

In another editorial, the following day, October 31, 1881, the Herald says:

What the world sees is that in free England—the England of Magna Charta—liberty, free press, free speech, and the right of petition—it is possible to employ the forms of government made familiar by Russian Czars and Louis Napoleon. The world sees a liberal government violate every right consecrated to freemen. Members of Parliament are imprisoned, women are arrested, priests are taken from the altar, meetings are suppressed, the press is silenced, the right to bear arms is denied, the *habeas corpus* is suspended, martial law is proclaimed, trial by jury is denied to men charged with violations of law.

And free America at the centennial celebration of her own freedom salutes the flag which waves over a despotism where every right consecrated to freemen is violated; where members of Parliament, ministers of the Gospel, and women are rudely arrested without charge of crime; meetings suppressed, the press silenced, *habeas corpus* suspended, martial law proclaimed, and trial by jury denied. But shut your eyes and ears and salute the flag which at this very time is perpetrating these outrages on its own subjects and on our citizens.

I call attention next to an extract from Mr. Cowan, an English editor, and a member of the English Parliament, in which he describes the tyranny and tergiversation of Mr. Gladstone. I copy from a London telegram in the New York Herald of October 22, 1881, the second day after our salute of the English flag:

Mr. Cowan, in an editorial in the Newcastle Chronicle, says: "Not so many years ago Mr. Gladstone wrote as follows: 'The prisoners in the Kingdom of Naples were

arrested and imprisoned without due legal process; were, in vast proportion, not tried at all, and when they were tried were so largely by exceptional and not regular tribunals. When they were condemned they were condemned not by the free verdict of a popular body, but by the sentences of judges dependent on the government for their bread—a government, moreover, whose power rested on a flagrant breach of the written legal constitution of the country.' The Prime Minister, in his time, has played many parts, but even those familiar with his gyrations were not, perhaps, aware of the rapid transformation of his opinion on the treatment of political prisoners. The reproduction of these extracts from one of his letters to the late Mr. Butt demonstrates, it is true, that the men for whom he pleaded years ago were strangers at a distance, whereas those he now imprisons are fellow-countrymen and near. The distinction may reconcile the difference with which the cases are treated to the subtle and versatile intellect of Mr. Gladstone, but to plain men it is not so apparent."

Mr. Labouchère is also an English member of Parliament and an English editor. I copy from the Herald of November 14, 1881:

Mr. Labouchère's comments on the Irish question are attracting much attention in England. "Let us suppose," he says, "that the imperial Parliament sat in Dublin and that we English were always outvoted in it by an Irish majority; that Mr. Parnell resided in London as English secretary, and Mr. Biggar as English viceroy, both driving up and down the streets with an armed escort; that almost all our land was held by Irish landlords; that the magistrates were appointed by Mr. Parnell and Mr. Biggar; that an armed constabulary were at their command in each English county and that an army of 50,000 Irishmen were distributed in our great towns; that Mr. Gladstone, Mr. Bright, and Mr. Chamberlain were in prison on 'reasonable suspicion' of being opposed to this state of things, and that all meetings to protest against it and to claim the right of deciding some purely English question according to our own views were broken up by the police and military. Most assuredly we should be ungrateful for these manifold blessings, and although we might believe that Mr. Biggar, Mr. Parnell, and the Irish majority in the Dublin Parliament were actuated by the best of intentions toward us, we should not fall down on our knees and thank them. Yet, *mutatis mutandis*, we are surprised at the Irish not doing this."

Good for that Englishman. I love an Englishman as well as I do an Irishman, and almost as well as I do an American, if he is the right kind of a man; if he loves republicanism and faithfully forswears all allegiance to England and its Queen and flag.

There are four born Englishmen upon this floor. They are here as representatives of their respective districts, and every man of them I believe (though I have not conferred with them) will stand by me and take as ultra ground as I do. We have twenty naturalized citizens on this floor—four Irishmen, four Englishmen, four Germans, I believe, some Scotchmen, and so on—all having solemnly forsworn allegiance to their sovereigns; all blended together in the amalgam of American citizenship; all willing to die for the "Stars and Stripes," and equally willing, I doubt not, to march to the bastiles where our citizens are imprisoned and pull them down. But I think the parties saluting the English flag at Yorktown are the only persons in the world who would fall down on their knees and thank the English Government for the perpetration of such offenses against the enlightened sentiments of mankind as Mr. Labouchère describes.

Why should not Americans sympathize with the Irish people? I need not speak to men on this floor of the feeling of affection in Ireland toward America. I need not recall the glorious example of American sympathy with Charles Stewart Parnell when on this floor and he was made a member of this House. [Laughter.] He addressed this House when it was in session as a House, and he could not have done so unless he was a member of it somehow. You gentlemen who were here remember the circumstance. I was not here.

Let me read the language in which an American of Americans, a young lady from Hartford, traveling in Europe, describes the state of Ireland and the enthusiastic love of the Irish people for America. It is an extract from a private letter, printed in the Hartford Times, to her mother, and was not intended for publication:

Ireland is a far more beautiful country than I supposed; but you at home have no idea, though hearing much about it, of the oppressions and poor condition of the Irish peasants, and I may say of the Irish people generally. I noticed it the moment I placed my foot on Irish soil, and all through Ireland I was indignant and excited over the scenes of want and misery we saw. It is terrible. But, oh! how the Irish people love America. It is touching to see these peasants and hear them talk. All—guides, men and women, waiters, farmers, and people traveling on the cars—all look to America as we look to Heaven.

This honest American young lady feels indignant, but the party at Yorktown are quite the contrary. They were jubilant and salutatory.

These are the people whom we see suffering without extending to them a single word of sympathy such as Daniel Webster was willing to extend to other peoples when they were struggling to establish institutions similar to our own. I need not dwell upon the hospitality of the Irish people toward Americans. Why, sir, I was one of a party traveling through that country who were caught in a terrible storm; and the peasant women went into their bed-rooms, took their blankets from their beds, and gave them to the American ladies to shelter them on their way home; and they never asked whether those blankets would ever be returned.

Coming still nearer home, I quote from the Brooklyn Eagle of March 9, 1881, the following note from the Rev. Dr. Talmage. His Tabernacle is in my district, where he thunders forth his eloquence. I quote from him because he is good authority for me. I admire him as the man of the age; I represent his church. Mr. Beecher also lives in my district. [Laughter.]

BROOKLYN, March 8, 1881.

GENTLEMEN: Engagement to be at another meeting will hinder my accepting your invitation to speak at the Academy at your assembly in honor of Robert Emmet.

Just as bad a fellow as Parnell is.

The pronunciation of his name makes my heart beat like a war-drum.

He would make a first rate chaplain for a regiment in the Army that this House will authorize to go over and bring home our American citizens. [Laughter.]

His dying speech will not cease its reverberation till the last oppression in all the earth has ceased. Let others cipher out the particulars. I give as my opinion that Ireland will yet be as independent of all other governments as is the United States. How? When? I leave that to Omnipotence. I am neither monarchist nor communist, but if it be communism to hate the theory that a comparative few have a right to gather up the resources of the world, and crowd others off into squalor and wretchedness, giving them no chance for this world or the next, then I am a communist. Every industrious and virtuous citizen has a right to a livelihood in Ireland and everywhere else. By the throne of the eternal God I assert it, that truth and liberty and justice shall yet be triumphant over all their foes! Give my salutation to the meeting, and tell them to pitch their tents toward the sunrise.

Yours, &c.,

T. DEWITT TARMAGE.

That is the American doctrine talked in my district; but no sunrise of freedom will ever shine in circles controlled by those who salute and worship the English flag, which this day and hour of the nineteenth century represents the most flagrant despotism on earth.

Sir, I see before me the benevolent countenance of my friend from the Aroostook district of Maine, [Mr. LADD.] I read with great pleasure a few evenings since a speech which he delivered in Portland, Maine, on a recent visit home, in which he urged his people to stand out against the illegal power domineering over these prisoners, and to cherish and protect these United States as the grand camping-ground of freedom's army. I see also before me the gentleman from Texas, coming from the Nueces, [Mr. UPSON.] In all the generous sympathy of American citizenship between the Aroostook and the Nueces, every true American heart is burning and throbbing and longing for the time when we can help Ireland to achieve her independence, as we achieved ours by her help and French assistance. I also see before me my colleague from Brooklyn, [Mr. J. HYATT SMITH.] I know I shall have his support.

I was going to say that as a general thing the organs of the two old parties do not seem to sympathize heartily with republicanism in Europe. They are rather "offish." But one class of newspapers is always true to it, and I love them for it. You cannot find an anti-monopoly paper throughout the country that is not heartily in accord with the position I am taking to-day. The others are wary; they hold back; there are monopolies behind them, and wealth and "too-too"-ism. Down from the utterly cometh "the too-too." These mingled influences operate on the old parties; and the poor democrat or republican of American or of European countries has no kind of chance for justice or protection from them.

This measure now before the House comes from petitions presented by constituents of these two gentlemen from Maine and Texas, the two extremes of our Union. And it gives an additional zest to the speech of the gentleman from Maine when I recognize just above him in the gallery one who is the light and glory of his happy home, and a living relative of the illustrious Ingraham, who so nobly vindicated American citizenship, even when imperfect, by his conduct in the Koszta case in the harbor of Smyrna. Captain Duncan N. Ingraham, born in South Carolina just eighty years ago, entering the Navy seventy years ago, made captain in 1855, and still living near Charleston, is a relative of the Ingrahams of Portland, Maine.

I refer to the independent press to introduce an extract from a paper published in this city, the National View of October 22, 1881, published two days after, but written before the disgraceful salute of the tyrant flag at Yorktown, which says:

We can think of nothing more selfish, nothing more intensely cowardly, than the attitude of the United States to-day toward each and every struggling people, each incipient revolution. At Yorktown this week the notables are celebrating a victory and offering plaudits to the descendants of men who aided us in our extremity. What soul beyond herself have the Americans ever aided one step toward victory?

Not one; nay, her press, her Cabinet officers, her President hasten to assure every despot whose people rise against him that America is neutral and has no sympathy with sedition or revolutionists. It is as cowardly a position as any self-seeking government could hold, that of saying, "We have obtained a freedom for ourselves which we deify; get it you, if you can, but we will never help you to it." It is not enough to say, "Come to America and be free!" They have a right to be free at home. It is good neither for America nor for them that they should be forced to tear themselves from home and native soil to obtain freedom. They have a right to freedom on the soil to which they were born, and Charles Stewart Parnell is right when he demands it for Ireland; he is right to fight the oppressors to their teeth; he has a right to the active sympathy of every man in America, and were we not a nation of snobs and pretenders he would have something else from America; he would have such assistance as Lafayette and France gave to us; he would through his prison bars hear the "good cheer, brother!" across the Atlantic, and Ireland in her desolation would know that her sons who vote in America could fight on the soil which gave them birth.

All honor to Parnell so long as he fights in the interests of his people, a people whose blood and bruises are never for a moment eased of their aching. The slim young Irishman in his prison cell should be mightier than a giant free, and every land-leaguer of Ireland should be made to feel that, in the United States, the home of their brothers and their children, ten times ten thousand hearts are beating in sympathy for them and Ireland.

What would the editor have said if he had known that while he was writing this extract they were saluting the English flag?

These extracts upon the present state of Ireland and our duty toward her are only repetitions of the old story. If we go back for five or seven hundred years of her history we shall always find the unfeeling oppressor and the helpless sufferer. Sir John Davis, who, I think, was the attorney-general under James the First, says that if Satan had adopted the same system of government for his dominion that the English gave to Ireland he would long since have depop-

ulated his empire! If you wish to read the saddest story of suffering and wrong ever written, read Daniel O'Connell's brief history of Ireland; if you want to study the diabolism of statesmanship, read the doings of Castlereagh and Cernwallis in Ireland. The latter, after his surrender at Yorktown, was appointed lord-lieutenant of Ireland, and he seemed to take pleasure in oppressing a nation that had given to America Generals Knox and Wayne and Morgan who had fought and foiled him on many a battle-field. Richard Cobden, the illustrious commoner of the English Parliament, in his political writings, (volume 1, page 734,) after quoting Henry D. Inglis as asserting that the state of Ireland under British rule "was a reproach to any civilized and Christian country," says:

We shall search the volumes of the most accredited travelers in Russia, Turkey, or India and find no description of a people that is not enviable in comparison with the state of millions of our fellow-subjects in Ireland.

One more authority I shall quote on the state of Ireland and the duty of all lovers of liberty to aid her. It is that of Lady Wilde, of Ireland. It is a curious fact that whenever England wants anything well done, whether it be to illustrate her statesmanship, her bravery, or her oratory, she has to send to Ireland for a Burke, a Sheridan, or a Wellington. And here we have the representative and head of English aestheticism, an Irish boy. Oscar Wilde is a native of Ireland and the son of the most enthusiastic of Irish revolutionists. When in 1848 an Irish patriot of that period was on trial which resulted in conviction for writing seditious articles in the press of young Ireland, and when a powerful revolutionary article headed "*Jaica est alea*" was quoted to secure his conviction, Lady Wilde rose in the gallery of the court-house and proclaimed herself its author. I hold in my hand a book which I have brought from the Congressional Library, published by Duffy in Dublin, in 1864, entitled *Poems by Speranza*, for such was the *nomme de plume* of the wife of Sir William Wilde, a noted oculist of Dublin. It is dedicated, "To my sons Willie and Oscar Wilde." On the dedication page she has printed this quotation:

I made them, indeed,
Speak plain the word *country*. I taught them, no doubt,
That a country's a thing men should die for at need.

Where Willie is and whether he speaks plain for his country and is ready to die for her, I know not; but Oscar is here, the representative of English aesthetics. It must have been perfectly stunning to see this young Irishman, whose leg, the newspapers tell us, is a poem, led into the midst of Washington society in knee-breeches, and pumps by my aesthetic friend from New Jersey, [Mr. ROBESON]—how dressed we are not told. Had my friend from New Jersey known that he was any way Irish I rather think he would have objected to his immediate consideration by the house.

Now, this fashionable craze is nothing new under the sun. We are informed by Holy Writ that Balaam had an aesthete. If he failed in a supply of long hair he made up for it in length of ears, for we are told that he was made to utter! and what he uttered I have no doubt was as sensible as anything said in the fashionable circles of England and her admirers all over the world, whose representative this long-legged and long-haired Wilde young Irishman is.

Now, let us see what this noble mother of this young Irishman has to say of Ireland. In one of her poems she exclaims:

Call from the hills our own Irish eagle;
Spread its broad plumes on "the Green" of old
With a sunrise blaze, as a mantle regal,
Turning the dusk-brown wings to gold—
Symbol and flag be it there unrolled.

Irish daring by land and river,
Irish wealth from mountain and mine,
Irish courage—strong to deliver,
Irish love as strong to combine
Separate cords in one strain sublime.

But it was in her poem entitled "The Year of Revolutions" that she seemed to breathe her burning soul into the lines of encouragement and hope which she dedicates to the Irish patriots struggling to throw off the English yoke:

Lift up your pale faces, ye children of sorrow;
The night passes on to a glorious morrow.
Hark! hear you not, sounding glad liberty's psalm
From the Alps to the isles of the tideless Aegean,
And the rhythmical march of the gathering nations,
And the crashing of thrones 'neath their fierce exultations,
And the cry of humanity cleaving the ether,
With hymns of the conquering rising together!
God, Liberty, Truth! How they burn heart and brain!
These words, shall they burn, shall they waken in vain!

No! Soul answers soul, steel flashes on steel,
And land wakens land with a grand thunder-peal.
Shall we, oh my brothers! but weep, pray, and groan,
When France reads her rights by the flames of a throne?
Shall we fear and falter to join the grand chorus,
When Europe has trod the dark pathway before us?
Oh, courage! and we, too, will trample them down,
The minions of power, the serfs of a crown.
Oh, courage! but courage, if once to the winds
Ye fling freedom's banner, no tyranny binds!

We'll conquer! we'll conquer! no tears for the dying;
The portals to heaven be the field where they're lying.
We'll conquer! we'll conquer! no tears for the slain;
God's angels will smile on their death-hour of pain.

On! on in your masses, dense, resolute, strong,
To war against treason, oppression, and wrong!
On! on with your chieftains, and him we adore most
Who strikes with the bravest and leads with the foremost,
Who brings the proud light of a name great in story
To guide us through danger, unconquered, to glory!

With faith like the Hebrew's we'll cross the Red Sea,
God, smite down the Pharaohs—our trust is in Thee!
Be it blood of the tyrant, or blood of the slave,
We'll cross it to freedom or find there a grave,
Lo! a throne for each worker, a crown for each brow,
The palm for each martyr that dies for us now,
Spite the flash of their muskets, the roar of their cannon,
The assassins of freedom shall lower their pennon,
For the will of a nation what foe dare withstand?
Then patriots, heroes, strike! God for our land!

Our fathers lowered the assassins' pennon at Yorktown, but it was raised again.

I might make many extracts from able articles in the New York Sun and other American papers. I might quote from the speeches of many American statesmen, governors of States, and among them Governor Long, of Massachusetts, who have spoken and presided at American meetings held to sympathize with and sustain Mr. Parnell and his Irish disciples of George Washington. I might quote from that illustrious and eloquent and venerable American statesman of Massachusetts, Wendell Phillips, who says that in this struggle of Gladstone and the flag we saluted at Yorktown over Ireland "England's success would be the eclipse of civilization."

If the success of England is the eclipse of civilization, by what crime shall we call the saluting of her flag?

I might quote the opinions of William E. Gladstone in denouncing the treatment of Neapolitan prisoners, but since he himself has out-Bombed Bomba and inflicted upon the subjects of his own government tyrannies and cruelties which outshine in crimson guilt the cruelties of all time, it is of little importance what opinions on civilized statesmanship he ever did or ever may entertain.

But there is one grand American character whose example I must not fail to mention. I refer to Horace Greeley, the founder of the New York Tribune. In 1848 he was a member of the Irish directory, with Charles O'Connor, Robert Emmet, and John McKeon, the present district attorney of New York. Mr. Greeley helped to raise hundreds of thousands of dollars (\$500 from Archbishop Hughes) to buy arms and send aid to the Irish revolutionists of that day; and if the present editor of that paper is not in favor of Ireland now in her less revolutionary struggle against England, it only shows the degeneracy of the times and the decadence of American sympathy for universal freedom.

Sir, when I read about the preparations for the celebration of the centenary of Cornwallis's surrender and the pulling down of the English flag at Yorktown I thought of the gladness with which all peoples in other lands struggling for freedom would look to that occasion for hope and encouragement. But when I read the letter of the Secretary of State dated July 30, 1881, and published in the New York Herald of August 14, 1881, I saw that it was to be a farce, and that monarchy, not republicanism, was there to receive its apotheosis. This letter was dated four weeks and published six weeks after the fatal attack upon the President. Here it is:

DEPARTMENT OF STATE,
Washington, D. C., July 30, 1881.

SIR: During the darkest period of the Revolutionary War a German soldier of character and distinction tendered his sword in aid of American independence—Frederic William Augustus, Baron Steuben, joined Washington at Valley Forge in the memorable and disastrous winter of 1778. He attested the sincerity of his attachment to the patriot cause by espousing it when its fortunes were adverse, its prospects gloomy, and its hopes, but for the intense zeal of the people, well-nigh crushed. The Baron Steuben was received by Washington with the most cordial welcome, and immediately placed on duty as inspector-general of the army. A detailed history of his military career in America would form an epitome of the Revolutionary struggle. He had served in the Seven Years' War on the staff of the Great Frederic, and had acquired in the campaigns of that master of military science the skill and the experience so much needed by the untrained soldiers of the Continental army. The drill and discipline and effective organization which under the commanding patronage of Washington were at once imparted to the American army by the zeal and diligence of Steuben transformed the volunteers and raw levies into veterans, who successfully met the British regulars in all the campaigns of the prolonged contest. The final surrender of the British army under Lord Cornwallis occurred at Yorktown, Virginia, on the 19th day of October, 1781. Baron Steuben bore a most conspicuous part in the arduous campaign which ended so auspiciously for the Continental army, and it fell to his lot to receive the first official notification of the proposed capitulation and to bear it to the illustrious commander-in-chief. The centennial of that great event in American history is to be celebrated with appropriate observances and ceremonies on the approaching anniversary. I am directed by the President to tender through you an invitation to the representatives of Baron Steuben's family in Germany to attend the celebration as guests of the Government of the United States. You will communicate the invitation through the imperial minister of foreign affairs, and will express to him the very earnest desire of this Government that it shall be accepted.

Those who come as representatives of Baron Steuben will be assured in our day of peace and prosperity of as warm a welcome as was given to their illustrious kinsman in the dark days of adversity and war. They will be the honored guests of fifty millions of Americans, a vast number of whom have German blood in their veins and constitute one of the most worthy and valuable elements that make up the strength of the Republic. Intensely devoted with patriotic fidelity to America, they yet retain and cherish and transmit the most affectionate memories of fatherland. To these the visit of Baron Steuben's relatives will have something of the revival of family ties, while to all Americans, of whatever origin, the presence of German guests will afford fitting opportunity of testifying their respect for that great country within whose limits are included so much of human grandeur and human progress.

I am, sir, your obedient servant,

ANDREW D. WHITE, Esq., &c., Berlin.

JAMES G. BLAINE.

On reading this letter this proposition to run the country in debt without the consent of Congress, to bring over descendants representing the Hessians of our Revolution, whom our Baron Steuben had disowned in his will because of their bad treatment of himself for espousing the cause of Washington, who had no right to represent our German fellow-citizens here who had forsworn all allegiance to the kaisers and Bismarcks to whose tyranny their swords are dedicated, and thinking that there were others more worthy of being invited, I wrote and published in the Brooklyn Eagle of August 21, 1881, the following letter, which should have been written by James G. Blaine, and which I think is worthy of being quoted here for general information:

A LETTER WITH A POSTSCRIPT.

DEPARTMENT OF STATE,
Washington, D. C., July 30, 1881.

SIR: During the darkest hours of our early struggle for independence, before it was known whether an undisciplined body of patriots could make a successful stand against the veteran troops of England, an Irish soldier of character and distinction tendered his sword in aid of American independence—Richard Montgomery joined the army of Washington in the memorable and disastrous winter of 1775. He attested the sincerity of his attachment to the patriot cause by espousing it when its fortunes were doubtful, its prospects gloomy, and its hopes, but for the intense zeal of the people, well-nigh desperate. Montgomery was received by Washington with the most cordial welcome and immediately placed on duty by that illustrious chief as commander of the northern division of the Continental army. A detailed history of his military career would form an epitome of our early Revolutionary struggle, and with that of his illustrious countryman, John Stark, worthily occupies the most conspicuous pages of the first volume of Sparks's American Biography. He had served in the war against France under Amherst and his famous countryman, Wolfe, and had acquired in the campaign against Louisbourg, Ticonderoga, Quebec, and Havana the skill and experience so much needed by the untrained soldiers of the Continental army. The drill and discipline and effective organization which were at once imparted to the American army by the zeal and diligence of Montgomery transformed the volunteers and raw levies into veterans who successfully met the British regulars in all the subsequent campaigns of the long contest. The final surrender of the British army under Lord Cornwallis occurred at Yorktown, Virginia, on the 19th day of October, 1781. Though Montgomery had fallen at Quebec, the brave officers and men whom he had educated and disciplined bore a most conspicuous part in the arduous campaign which ended so auspiciously for the Continental army. It was Anthony Wayne, the son of an Irishman, who served so gallantly in Montgomery's retreating army, that opened on the 6th of October, 1781, the first parallel at the investment of Yorktown. It was he who commanded when, on the 11th, the second parallel was opened, and it was he who, on the 14th, after dark, most gallantly sustained Lafayette in the attack on the two detached redoubts. The centennial of that great event in American history is to be celebrated with appropriate observances and ceremonies on the approaching anniversary. I am directed by the President to tender, through you, an invitation to the representatives of Richard Montgomery's family in Ireland to attend the celebration as guests of the Government of the United States. You will communicate the invitation through the English secretary of state for foreign affairs, and will express to him the very earnest desire of this Government that it shall be accepted. Those who come as representatives of Richard Montgomery will be assured, in our day of peace and prosperity, of as warm a welcome as was given to their illustrious kinsman in the dark days of adversity and war. They will be the honored guests of fifty millions of Americans, a vast majority of whom have, as I have, Irish blood in their veins, and constitute the most worthy and valuable elements that make up the strength of the Republic, eight of our Congressmen, four in the House and four in the Senate, being native Irishmen, and a majority of both Houses, with the Vice-President, of Irish descent. Intensely devoted with patriotic fidelity to America, they yet retain and cherish and transmit the most affectionate memories of the dear old Emerald Isle. To these the visit of Montgomery's relatives, or of his brothers, Alexander and John; or of his sister, who married Lord Ranelagh, (and had two sons, Charles and Thomas,) will have something of the revival of family ties, while to all Americans, of whatever origin, the presence of Irish guests will afford fitting opportunity of testifying their respect for that noble island within whose limits are included so much of American sympathies for the island of saints and sages, of orators, poets, and patriots, and of devoted friends of the United States.

I am, sir, your obedient servant,

JAMES B. GLAINE.

JAMES RUSSELL LOWELL, Esq., &c., London.

POSTSCRIPT.—I am likewise directed to suggest that you also inquire for the representatives now living in Ireland of the following Irishmen, who dedicated their hearts and swords to the independence which was won at Yorktown: John Barry, a native of Ireland, the first commodore of the American Navy, appointed by Washington.

Ephraim Blaine, a native of Ireland, a quartermaster in Washington's army, from whom I am proud to trace my pedigree.

Richard Butler, a native of Ireland, one of the five brothers who rendered distinguished services to Washington's army.

John Dunlap, a native of Ireland, a brave officer under Washington, and publisher of the first daily paper in the United States; also the first printer and publisher of the Declaration of Independence. In 1780 he subscribed \$20,000 to supply Washington's army with provisions.

George Ewing, a brave soldier in Washington's army, of a distinguished Irish family, resident in Cumberland County, New Jersey. He was an officer in the New Jersey line, and fought at Germantown and Brandywine, and spent the terrible winter of 1777 with Washington, at Valley Forge. His son was Thomas Ewing, of Ohio, Senator of the United States and member of President Harrison's and President Taylor's Cabinets. His grand-daughter is the wife of General Sherman, the head of our Army, and my own cousin.

John Gibson, a native of Ireland, a renowned Indian fighter and major-general in our Army. His brother George penetrated the forests from Pittsburgh to New Orleans to supply Washington with powder from the latter city, then under Spanish rule. He fought in all our battles with England from Trenton to Yorktown. His men were rifle sharpshooters and were known as "Gibson's Lambs." This George's son George was Commissary-General of the United States Army for forty years, and his son, John B. Gibson, was chief-justice of Pennsylvania for twenty-five years, whom Jeremiah S. Black, another son of Ireland, describes as "the most illustrious judge of his time."

James Graham, who commanded in fifteen battles in our war with England before he was twenty-three years of age. The youngest of his twelve children, whose mother was the daughter of John Davidson, another Irishman, who signed the Mecklenburgh declaration of independence, was William A. Graham, a member of President Taylor's Cabinet and a candidate for Vice-President on the ticket with Winfield Scott.

Edward Hand, Washington's favorite adjutant-general, a native of Ireland. John Hezlett, a native of Ireland, who fell with Mercer at Princeton, and whose son was governor of Delaware.

William Irvine, a native of Ireland, who fought with Wayne under General Thompson (both Irish) in Canada, commanded the advance troops at Monmouth.

stormed Stony Point with "Mad Anthony," and was trusted and praised by Washington everywhere.

Henry Knox, major-general, and Washington's chief of artillery, and also Secretary of War and of the Navy in Washington's Cabinet.

Andrew Lewis, who was born in Ireland, but had to fly with his father, John, who shot an Irish landlord for evicting himself and family from their home. This John who slew his Irish landlord had five sons, all of whom distinguished themselves in our war with England. When Washington assumed command of our army he requested that Andrew Lewis should be made one of his major-generals.

Andrew McClary, the giant patriot, a major commanding at Bunker Hill, where he fell.

David Porter, a naval officer of merit in the war of the Revolution, father of David Porter, whose career was "a blaze of heroism," and grandfather of Admiral David D. Porter, the head of our Navy, who will have charge of the naval display at Yorktown.

Stephen Moylan, brother of the Catholic bishop of Cork, one of Washington's favorite generals, and one of five brothers who fought in our Revolutionary army.

Daniel Morgan, a native of Ireland, who won the victory of the Cowpens over Tarleton, helped to defeat Burgoyne, and fought under Montgomery at Quebec.

Andrew Pickens, who fought at the Cowpens and elsewhere, and whose sons and grandson were governors of South Carolina.

Jerry O'Brien, who fought and won our first sea fight with the British.

John Rodgers, whose father came from Ireland and served in the Revolutionary War and gave to this country one of its most illustrious families of naval heroes.

John Stark who fought and won the battle of Bennington.

John Sullivan, one of Washington's favorite generals.

There are also some of the most illustrious heroes of our second war with England who were born in Ireland or of Irish parents, whose descendants or relatives, if living, should be welcome guests at our Centennial. Andrew Jackson and Alexander Macomb, in our Army; Stephen Decatur, David Porter, John Rodgers, Johnston Blakeley, Thomas McDonough, Oliver H. Perry, and Charles Stewart, in our Navy. If there are any of the families of these heroic Irishmen and sons of Irishmen, who served this country so well, now resident in Ireland, a warm welcome is tendered them, and particularly to the grandson of our gallant commodore, "Old Ironsides," Charles Stewart Parnell.

I need not tell you in what part of Ireland to look for the families of these illustrious friends of America, for every American should be familiar with the subject, but I may say that Convoys Castle, near Raphoe, in the county of Donegal, is the birthplace of Montgomery, and is still in possession of his family. John Barry was born at a place called Taumshane, in the county of Wexford. The Butlers were from Drogheda, John Dunlap was born in Strabane. Edward Hand was born at Clyduff, in Kings County. Hazlett was from Coleraine, and a gentleman of his name and family is now a magistrate there. General Irvine was born near Enniskillen. About nine miles north of Enniskillen is the village of Irvines-town, and the family seat of the Irvines is called Rockfield. General Irvine's grandson, William A. Irvine, who is proud of his Irish ancestry, is living in Warren County, Pennsylvania, at a place called Irvine. The Moylans were born in Cork. General Morgan was born at the Cross of Ballinascreen, which the English barbarously call Draperstown, after a London company who possessed themselves of a large portion of land in Derry, which the English also barbarously call Londonderry. John Stark was from Derry, John Sullivan from Limerick. Stephen Decatur's Irish mother's name was Pine. Captain Johnston Blakeley was born at Seaford, in the County of Down. Charles Stewart's father was from Belfast, his mother from Dublin. His grandson, Charles Stewart Parnell, lives in Wicklow, and another has property in Armagh. General Jackson was from Carrickfergus.

It is probable that our minister and consuls in Great Britain might be more profitably employed in collecting information of the homes and families of these illustrious friends of America than they are at present in trying to find excuse for our ancient enemy in keeping our citizens in prison without any charges specified against them.

It has not escaped the notice of the Department that recently a young clergyman, named Thomson, was ordered at Maghera, in the county of Derry, Ireland, and that probably he is a relative of Charles Thomson, our illustrious and venerable Secretary of the Continental Congress, who was a native of that village, and who was the most determined foe of England in our Revolutionary struggle. If any of his family are still living in Ireland, it is no more than what our people owe to this, perhaps, the purest patriot of our Revolutionary days, that a national vessel should be put at their service to make us a visit. This would be more worthy employment for our Navy than that to which it has of late been dedicated or desecrated.

That was a grand spectacle for America and Ireland at Yorktown, the 19th day of October, 1781, when Cornwallis surrendered to Washington. The American Army was drawn up on the right side of the road leading from Yorktown to Hampton, and the French army on the left. Their lines extended more than a mile in length—Washington, on his white charger, at the head of the American column, and the princely Rochambeau, on his splendid bay, was at the head of our faithful allies, the French. A vast concourse of people assembled to witness the ceremony. The vanquished British troops marched slowly between the columns of the allied armies. All were anxious to look upon Cornwallis, whose march through the Southern States had been one of cruelty and plunder, almost as cruel as his subsequent career in Ireland as lord-lieutenant. But he pleaded illness, and sent General O'Hara to deliver his sword. Twenty-eight British regiments were to deliver their colors. Twenty-eight British captains, each with a flag in a case, were drawn up in line. Opposite to them twenty-eight American sergeants were stationed to receive the colors. Colonel Alexander Hamilton, a foreign-born citizen of the young Republic, was the officer of the day. And amid these magnificent surroundings, and in this august presence, these twenty-eight flags of the grand British army were surrendered to America, and the young ensign who received them was an Irish-American boy of eighteen years of age, Robert Wilson, a nephew of Captain Gregg, of the Irish Londonderry colony of New Hampshire, partially transplanted in New York. It was meet and proper that one kindred in blood to Stark and Wayne and Knox should be selected to receive the spoils of the vanquished enemy whom these Irish-American generals had so bravely fought and conquered on many a hotly contested field.

That was a grand midnight scene for America and Ireland when young Lieutenant-Colonel Tilghman, of Maryland, Washington's aid, rode from Yorktown to Philadelphia with Washington's announcement to Congress of Cornwallis's surrender. Riding express and galloping into the city at midnight he reached High street, near Second, where Thomas McKean resided, the Irish-American president of the Continental Congress, whom with violent knocking he roused from sleep to receive the glad tidings. The Irish-American watchman announced the dying hours: "Half-past twelve o'clock and Cornwallis is taken!" That Irish-American city started from its slumbers, and lights flitted through the houses like a crescent illumination. The old State-house bell of liberty flung out its treble notes to the crisp October morning air, and the hoarse cannon thundered forth their double bass in reply. The Irish-American Congress came early together, and Charles Thomson, the venerable Irish-American secretary of Congress, read with clear and inspired voice the letter from Washington announcing the surrender of Cornwallis and his army to the Irish-American and French troops.

That, in fine, was a grand day for America and Ireland, Sunday, the 25th of November, 1783, when General Washington and Irish-American George Clinton, general and governor of the State of New York, with their suites, rode four abreast into the city which the conquered British had just evacuated, followed by Irish-American General Henry Knox and other officers of the army eight abreast. The

governor gave a public dinner to the distinguished company, and the next day entertained at dinner the French ambassador, the Chevalier de la Luzerne, followed next evening at Bowling Green by the most brilliant display of fireworks ever before seen on this continent. On Tuesday, December 4, the principal officers of the army assembled at Francis's tavern to take a final leave of their beloved chief. Filling his glass, he turned to them and said: "With a heart full of love and gratitude, I now take leave of you. I most devoutly wish that your latter days may be as prosperous and happy as your former ones have been glorious and honorable." Having drunk, he added: "I cannot come to each of you to take my leave, but should be obliged to you if each of you will come and take me by the hand." General Knox, his Irish chief of artillery, sat next him. Washington, in tears, grasped his hand, embraced, and kissed him. With similar emotions and signs of love he took leave of each succeeding officer. He passed through the corps of light infantry to White Hall, followed by the whole company, and entering the waiting barge, waved his hat and passed to Paulus Hook, and thence to Annapolis, to surrender his commission to Congress.

The statue of George III in Bowling Green had been overthrown. The British flag which had been nailed to the staff was torn down, and the American flag, worked by the fair hands of an Irish-American lady, was run up in its place, and so the volume of the Revolutionary war was closed, on which was written many a brilliant page by the brightest swords that Ireland ever unsheathed in the cause of freedom. Her sons will be ever welcome while we enjoy the liberties which their blood and bravery gave us.

J. B. G., (RICHELIEU.)

Little did I think, sir, when I wrote that half-serious letter that anybody would dare to suggest the saluting of the English flag at Yorktown, where a hundred years ago George Washington caused twenty-eight of them to be struck to the American flag. I regret this salute in every way. It was needless, it was unnecessary. It was insulting to other friendly nations whose flag we did not salute. It encouraged England to rivet the chains tighter on the country that gave us Knox and Wayne. We lent England the power to drive her dagger to the heart of Irish freedom, and as she drew the reeking and gory blade from her quivering heart, Gladstone, holding it up in the sun of the nineteenth century, nodded to Columbia and the blood-stained flag was saluted by the young Republic of the West. "Surely an enemy hath done this." Why was it done? Half a million or more of the crushed victims of English oppression are coming here every year. You admit them to citizenship, but before you permit them to enter the temple of liberty you swear them twice on the Holy Evangelists to renounce all allegiance to their sovereign. To each of them coming from British dominions you put the binding oath, "you do solemnly forswear all allegiances to all princes and potentates whatsoever, particularly the Queen of Great Britain and Ireland, so help you God." There are more than two-thirds of the American people who, or whose fathers since 1790, you compelled to take that oath. Do you expect those who took it to perjure themselves by showing such allegiance to the Queen as the saluting of her flag implies? Would you trust the sincerity of a man who had pledged himself against drink if you found him every morning smelling the cork or kissing the neck of the forsworn bottle? The author of the Star-Spangled Banner strained his eyes through the smoke and darkness that brooded over the Chesapeake to see if that Star-Spangled Banner had gone down and the English flag had gone up amid such a roar of cannon. Many of us more recently strained our eyes a little lower down on that Chesapeake and anxiously heard the salute and saw the smoke that for a moment enwrapped everything within its folds, and inquired if that band who so ruthlessly swore that we should have neither home nor country, but whose blood had "washed out their foul footsteps' pollution," had regained possession of the Chesapeake. The smoke of the salute lifted itself lazily from the water, and there were the old tyrant flag and the foul footsteps of its worshippers.

But the present from the Queen! Well, I have no ill-will to the Queen, though you compelled me twice to forswear her. I doubt not she has still a woman's heart, but she would have paid us a higher compliment if she had somewhat abated the severity of her despotism over her own subjects and had released our American prisoners. Our Constitution says that no person holding office under our Constitution shall receive without the consent of Congress any present of any kind whatever from any monarch. Who did receive this present? Whoever it was he violated our Constitution and deserved impeachment. But should this wreath of flowers quench our love of freedom and blind us to the hideousness of tyranny? A family is watching its dead, and next door a burglary is to be committed. Must a wreath of flowers silence all objections to the burglary? Shall the faithful watch-dog silence his barking for a bone? The blackest burglary ever perpetrated on a people was committed by England on the liberties of Ireland at the very time, I believe the very day, when this flower or bone was flung to us to silence our protest. "Is thy servant a dog, that he should do this thing?" Let us hereafter, when we have a dead President, give notice to all monarchs and despots "Please omit sending flowers."

A poor widow, who had given her husband and sons to save the Union in the recent war, on the day appointed for President Garfield's funeral, hung upon the only window of her desolate room a piece of faded crape which she had worn on her bonnet since her loved ones fell. That weed of the widow's woe was more worthy of the first place in that funeral pageant than any wreath flung from the hand of any oppressor of a people.

And yet one would think from the action of some English snobs that this wreath had bought us over to monarchy. One of them, named Cheyne, I think, came over to New York to induce Americans to subscribe some hundred and eighty thousand dollars to enable him to reach the north pole by balloons. He lectured at Chickering Hall

and gave stereoscopic views of his balloons and the regions over which he proposed to float them. At the close he gave a view of Britannia putting a royal crown upon our dead President. Now, I understand that a Mr. Symmes, some fifty years ago, tried to prove that the earth was a hollow sphere, and that at the north pole there was a great opening, into which an entrance might be made, and I remember it being called "Symmes's Hole." Now, if Mr. Cheyne can construct balloons large enough to carry all the worshipers of English despotism and of her flag in this country, and all who would crown our Presidents, and float them into Symmes's Hole I shall vote for an appropriation of the \$180,000 for that purpose. I believe there is a kind of trade-wind into that cavity which will prevent his return.

I do not mean to say anything against our President or our then Secretary of State for this foolish salute of England's flag. I think it was done in a moment of "gush." I do not think that either of them thought of the objection in our Constitution, or of the sanction their actions would give to the despotism then so flagrant in Ireland. I do not think Mr. Blaine had any more sincere friend than myself when he was announced as Secretary of State. I was glad to believe that his diplomacy would be aggressively American.

As for the President, I should be sorry to say a word against him. I have been intimately acquainted with every President since Monroe, save Jackson, who was not much in Washington in my time. My respect for the present President is stronger than for any of all the fourteen whom I knew. When President Garfield was shot and there were half-hidden attacks upon the Vice-President, I published a letter in the Brooklyn Eagle defending him, and when President Garfield died I spoke at the great meeting in Dr. Talmage's tabernacle and took the ground that much as the country esteemed Garfield they would find President Arthur as good as he. My language, as reported in the Brooklyn Eagle, was:

General Arthur is in no way inferior to General Garfield, either in education or patriotism. He is the worthy son of a distinguished American clergyman, a worthy graduate of an American college.

His Irish origin did not lessen him in my estimation. I felt proud that the son of an Irishman from my own immediate neighborhood would make one of the best, as he was the finest looking President that ever sat in the chair of Washington. I sincerely wish that he had not participated in the salute of the English flag, and I think he will regret it and I can forgive him. We have 50,000,000 people, and I do not think 1,000,000 would have approved of it at the moment when England was tyrannically and without excuse depriving her own subjects and our citizens of their liberty. This I know, that no man can be elected to any office in this country who approves of that salute unless Americans forget their history. If you run up again the flag which in 1776 your fathers pulled down, and in 1782 buried at Yorktown, you must revolutionize long-settled American sentiments. The gush of a few snobs is but the floating bubbles on the great current—a puff of wind inflates or bursts them, but the vast volume of our river is democratic, republican, and anti-monarchical, and is resistless in its flow. The American people may tolerate a folly for awhile, but when roused it will make short work of it in its wrath.

Now, then, what I want done is to demand the speedy release of any American citizen held in British prisons without crime alleged against them. Let no lying scribbler say that I advocate the idea that an American citizen can commit crime in any foreign country with impunity; but I do say that if crime is alleged against him he shall have a speedy trial, and if no crime is alleged he must instantly go free; that we extend our sympathy to the prisoners who are not our citizens, but suffering imprisonment on mere suspicion—this has been frequently done by this House, and never more deservedly than now; that we disapprove of the salute of the English flag while the English Government was depriving its own subjects and our citizens of their liberty. Are not these three propositions reasonable?

And now, sir, let me say a few words in conclusion which may not meet the approval of many of my best friends, but which do command the approval of my own conscience.

In the better days of this Republic the name of Ireland was held in the highest honor by our distinguished statesmen. Washington, as I have already said, sought admission to an Irish society in Philadelphia, the constitution of which confined its membership to Irishmen and their sons, and its members naturalized him into their fraternity and he joined in their festivities on Saint Patrick's day. He had boasted that he chose Saint Patrick's day in 1776 as the proper time to drive the English out of Boston into the sea, and Congress consecrated that date by putting it on the medal struck to commemorate the achievement. He was an enthusiastic hater of England and lover of Ireland and her gallant sons who stood so close and thick around him, and he expressed the hope, which now seems somewhat doubtful, that America would never forget her debt of gratitude to Ireland.

In later days I had the pleasure of knowing intimately Calhoun, Clay, Webster, Benton, Douglas, Seward, and Greeley, and I know they were all proud to be known as friends of Ireland. Mr. Clay, in presenting a petition to the Senate for me, forty years ago, when I was in college, on the subject of American citizenship, advocated the use of American cannon to rescue any naturalized American citizen that might be imprisoned in Great Britain. Horace Greeley collected

money, purchased arms, and organized American forces to invade Ireland in supporting Smith O'Brien and John Mitchell in their efforts to establish an Irish republic. John Quincy Adams, of Massachusetts, with whom I have walked a hundred times, leaning on my arm, down the hill from this Capitol, was practically an Irish Fenian, and in a letter from him, now in my possession, he quoted a couplet from a poem which he had written on Ireland as long as "Byron's Child Harold," which reads thus:

Soon, soon, may come the day, as come it must,
When Erin's falchion shall be Erin's trust.

At that time everything Irish was honored, and everything English, whether it was British gold or British opinions, was held in contempt. There seems to be a change in this respect here and now. Some of my most disinterested friends begged of me to avoid mentioning Ireland. I would be a coward if I complied with their request now. I do not forget their kindly advice, nor do I fail to appreciate their prudent warnings. I have no doubt that I might be more kindly received in Washington society and secure more political attention if I ignored Ireland and joined in the English craze which seems mysteriously to have infected the more aristocratic and wealthy circles of society here.

Now, when I am on the subject, I might as well finish what I have to say on Ireland. It may not be necessary for me to refer to her again; I have other matters which I wish to attend to; I have many poor soldiers and widows and children of soldiers suffering from delay in getting pensions which they so dearly earned, and I intend to devote most of my time to them, to do what I can for them, though I shall not be able to accomplish for them all I desire. There are also questions of finance, cheap postage, internal improvements, and other public measures, not perchance so important as the prompt vindication of American citizenship, to which it is my duty, as it shall be my pleasure, to devote what time and service I may have at my command.

But what has Ireland done that it should be considered "treason to love her and death to defend?" Let us see what she is and what she has done. More than two-thirds of the people of the United States have Irish blood in their veins, inherited either by maternal or paternal ancestors. There is perhaps no man living who has known more of the public men of this country and has devoted more time to the study of their origin than myself, and I remember no prominent man in this country who did not, after fully recalling his ancestry, acknowledge that he had inherited more or less of Irish blood. I think more than one-half of the people of New England at the time of the revolution had more or less of Irish blood. The Plymouth colony from England came to Massachusetts in one ship, and most of them died in a few months, leaving no children. An Irish colony came to Massachusetts in five ships. I could enumerate dozens of them who lived to be eighty and ninety years of age, and left each from fifteen to twenty-one children, now increased to one or two thousand descendants from each.

I call the attention of the House to one Irishman and his descendants in this country, from which we may judge of the composition of the American people.

John Preston, of Derry, and Elizabeth Patton, his wife, from Donegal, with their five children, one son and four daughters, all born in Ireland, came to this country in 1740 and settled in Virginia, and from him were descended four or five governors of old Virginia; four or five Cabinet ministers of different Administrations, from Jefferson's to Lincoln's, two United States ministers to France and Spain, one Vice-President of the United States, two candidates for Vice-President on the regular Democratic ticket with Horatio Seymour and Horace Greeley, several eminent doctors of divinity, presidents and professors of colleges, distinguished editors, fifteen or twenty members of this House, fifteen Senators of the United States, and over one hundred of the most gallant officers, several of them major-generals, that fought and fell on both sides in the recent war. Among these descendants were Major-General Francis P. Blair, Postmaster-General Montgomery Blair, Attorney-General John Breckenridge, Vice-President John C. Breckinridge, Senator B. Gratz Brown, Senator and United States Minister James Brown, Governor Floyd, Congressman Thomas F. Marshall, Governor James McDowell, Governor James Patton Preston, Major-General William Preston, Senator William C. Preston, of South Carolina, Secretary of the Navy William B. Preston, Mrs. General Frémont, Colonel Peter A. Porter, General Edward C. Carrington, United States attorney for the District of Columbia, Mrs. Senator Wade Hampton, Mrs. Albert Sidney Johnston, Mrs. Senator John W. Johnston, Mrs. Senator Thomas Hart Benton, Mrs. Robert Wickliffe, of Kentucky, and my distinguished and gallant friend, the Representative in this House of the First District of Louisiana, and already elected by a unanimous vote as Senator from that State on the expiration of his present term here. All these and hundreds more of distinguished Americans, intermarrying with the families of Washington, Patrick Henry, and Henry Clay, and all descended from one of thousands of Irish emigrants landing here half a century before the Revolution, gave bravery and beauty, manhood and wisdom to the American people.

An Irishman from Limerick settled in Maine, called his new home in America by the name of his native place, married an Irish girl that came on the same ship with him. He gave two sons to the service of his country, one John Sullivan, a favorite general of Washington,

and another James Sullivan, governor of Massachusetts, and from them a number of Massachusetts' most distinguished scholars and citizens are descended.

Another Irishman, Ephraim Brevard, settled in North Carolina, married an Irish girl named McNitt, who came over with him, and their son, Dr. Ephraim Brevard, was the author of the Mecklenberg declaration of independence, that preceded Jefferson's by over a year, in pledging their lives, fortunes, and sacred honor for the independence of the colonies.

Can the descendants of these men stand by now unmoved while Ireland is struggling for what they achieved for America?

Sir, that little society of Philadelphia, called "The Friendly Sons of Saint Patrick," gave Washington more generals than all the descendants of the Plymouth colony. The great generals that New England gave to Washington—John Sullivan, John Stark, and Henry Knox—were all Irish; and am I, an American Congressman, standing in the Capitol of a country whose independence was won by such conspicuous services of Irishmen, afraid to say a kind word for Ireland through fear of the toadies of England, who thirsted for the blood of Washington and gloried in the smoke of this Capitol's burning?

Look at the records of our revolution. Were it not for the Irish soldiers under Washington we should have had no Yorktown and no Congress. Read the names of the Irish signers of the Declaration of Independence; of the generals in our war of independence: John Armstrong, father and son, the latter the grandfather of the present John Jacob Astor; Richard Butler, one of the five brothers serving in our Revolution; John Gibson and his brother, George, giving us three generations of gallant George Gibsons; Joseph Graham, Edward Hand, William Irvine, Henry Knox, Andrew Lewis, whose father before he left Ireland killed a landlord; Richard Montgomery, Stephen Moylan, of Moylan's Dragoons, one of the five brothers of the Catholic Bishop of Cork; Andrew Porter, Joseph Reed, the most trusted and intimate of Washington's generals; John Sullivan, William Thompson, and Anthony Wayne. You wanted a victory at Bennington, and Ireland sent you General Stark to win it; you wanted a Southern Bennington, and Ireland sent you Daniel Morgan to fight it at Cowpens; you wanted to conquer at King's Mountain, and Ireland sent you General William Campbell; you wanted to take Stony Point, and Ireland sent you Mad Anthony Wayne. Washington wanted a man to stay the tide of disaster which Lee's misconduct had caused at Monmouth, and appealed to Colonel Ramsey with his regiment of Pennsylvania Irish, and asked him if he could check the English onset for ten minutes till he could reform his disordered line. The reply of that gallant Irishman was, "I will try." He gained the time required, fighting in view of both armies, where he fell covered with wounds, but Monmouth was saved—Monmouth, whose salvation hung on devoted Ramsey, and afterward on the unerring rifles of Hand, the charge of Moylan's Dragoons, the roar of Knox's artillery, and the flashing foam of Wayne's bayonets. Is there a recreant American here to-day who would dare to say that we should not sympathize with and succor Ireland, the land that gave us Ramsey, Knox, and Wayne, if her Monmouth were approaching? If there is a man or woman in this capital who blames an American Congressman for saying a kind word for the country that gave us this succor when England was trying to arrest and hang the Parnell of that period, I do not ask their friendship. If there be a man in my district who fears or is ashamed to speak for the country that gave us all these generals in our need, I do not want to secure his friendship or his vote.

The same story I could tell of the second as of the first war. It was Ireland that gave us Macomb and Porter and Coffey and Jackson. It was she who gave us in the war with Mexico Shields and Bennet Riley and the Butlers of Kentucky and South Carolina. It was she who furnished in the late war Stonewall Jackson and Patrick Cleburne and Albert Sidney Johnston, and Reynolds who fell at Gettysburgh, and Patterson, Corcoran, Meagher, Mulligan, and Fitz-John Porter, and countless others, including the hundred heroes descended from John Preston of Ireland.

What is our Army to-day? The great majority of it of Irish blood, officers and men, from its Lieutenant-General to its rank and file.

Look to the Navy. The O'Briens fighting our first naval engagement, which Cooper designates the Lexington of the seas; Commodores Barry, Rodgers, Porter, Decatur, Perry, Bleakly, McDonough, and Stewart, (Charles Stewart Parnell's grandfather,) all Irish. Its present head, the third distinguished David Porter, all Irish, whose bravery has given it eclat, and its Vice-Admiral a native of Ireland.

Our pulpit, Irish by a vast majority of its illustrious ministers. The half dozen distinguished clergymen upon whom Washington relied for advice and help, Rodgers, of New York; McWhorter, of New York; Caldwell of Elizabethton, who was hunted by England from his burning church, his refuge in the Jersey hills burned over his children's head, and his wife butchered in its blazing ruins, (another reason for saluting its flag;) Duffield, of Philadelphia, who was arrested for sedition in preaching to his Irish congregation; and Patrick Alison, of Baltimore, all Irish Presbyterians; and the eminent and saintly Carroll, Catholic bishop of Baltimore, trusted and beloved by Washington.

The press to-day is Irish, as it was in Revolutionary times. Dunlap, of the Friendly Sons of Saint Patrick, the editor of the first daily

paper published in the country; and of the present day the Tribune, founded by Horace Greeley, who was Irish, and the Herald, owned by James Gordon Bennett, who is half Irish and half Scotch, the better half Irish.

The stage adorned by the genius of Barney Williams, William R. Blake, Brougham, Boucicault, Wallack, Florence, Barrett, and McCullough. Congress, four native Irishmen in each House, one of them rich enough to buy an acre of English squires and lords; three-quarters of the members of each house of Irish descent—BAYARD, BUTLER, GORMAN, HAMPTON, HAWLEY, JOHNSTON, LOGAN, and others in the Senate; CROWLEY, CURTIN, GIBSON, KELLEY, MCCOOK, REAGAN, ROSECRANS, STEPHENS, and others in the House; both chaplains, I think, Irish; one of the candidates for Speaker a native of Ireland; the chiefs of official reporters of both Houses—the most accomplished in the world—of Irish descent, and, unless the New York Sun is mistaken, the Speaker himself the grandson of an Irishman. And, to crown all, the present President of the United States the son of an Irishman just long enough from Ireland to render his son eligible to the Presidency. Surely, sir, it does not require much courage in these surroundings to declare one's self an Irishman.

I might as well confess that I love Ireland, more, I think, for her brilliant service to this country than for her wonderful history at home. My devotion extends through many years. I was early imbued with the idea of Moore's poetry that Ireland was a young lady worthy of a most devoted lover's love. I have loved her in my younger and maturer years, and now, on the downhill of life, I still love her with the devotion of youth, and I cannot change.

In a corner of my heart, which nobody can see,
Two eyes of Irish blue are ever looking down on me.

In darkness they lighten my sorrows, in trouble they console me. If they look bright my heart is gay; if they are sad my soul is in sorrow.

Without further remarks I submit the following as an amendment or substitute to the resolution reported from the committee:

Resolved, That the President of the United States is hereby respectfully requested, if any American citizen be now detained in any British prison without any crime alleged in due legal form against him, forthwith to make the demand for his release under the law of July 27, 1868, which passed both Houses of Congress by a nearly unanimous vote, including the late and present Secretary of State.

Resolved, That this House extends its sympathy to Charles Stewart Parnell, John Dillon, Michael Davitt, and other illustrious patriots now suffering unheard-of wrongs and illegal imprisonment in British bastilles, for no other crime than imitating the example of Hancock, Jefferson, and Washington.

Resolved, That while the Government of England was depriving its subjects and our citizens of their rights and liberties, the saluting of its flag at Yorktown was not pleasing to the friends of democratic republicanism, and does not meet the approval of this House.

American Citizens in British Prisons.

SPEECH

OF

HON. A. A. HARDENBERGH,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 26, 1882,

On the resolution reported from the Committee on Foreign Affairs in regard to American citizens in British prisons.

Mr. HARDENBERGH said:

Mr. SPEAKER: For more than seven long weeks, since the first Monday of December, the Congress of the United States has been in session. Beyond the struggles for position and the utterances of those who had been disappointed in the allotments which were made, but little has practically been done except in clothing with authority the resolution of my friend from New York [Mr. HEWITT] reciting the obligations due from the youngest of republics to the eldest of the nations for its magnificent gift illustrative of the earliest civilization, and which now stands in the Central Park of our metropolitan city, arresting with wonder and with awe the attention of visitors from every State and every clime. To-day for the first time the duties of legislation give voice to the sentiments which well up in the heart in response to the resolutions of my friend from the Brooklyn district, in ascertainment of the reasons why those who claimed to be citizens of the United States were still confined in England's dungeons, without remonstrance from our Government and without a trial to ascertain the causes of their detention.

The story so oft repeated is again before us, and the woes of a race again commanding our attention, which for more than seven long centuries have been pressed upon the world's attention and commanded a world's respect. So intimately have the interests of this race been associated with our own; so wonderful have been their achievements in every struggle for liberty in other lands; so large a proportion do they bear to those who, fleeing from the despotisms of other lands, have found protection in our own; so often have they

exhibited their heroic daring on the land and on the sea in the contests which have written for us our title to a world's respect, that we may well give pause for an hour here in this audience chamber of the nation, and listen to words of sympathy expressed for that people which, contributing to the wealth and genius of all others, rests today beneath the yoke of a despotic bondage more galling than civilization has ever witnessed, and more oppressive than civilization has ever permitted since, on the fields where liberty found its earliest triumphs, the final disenthralment of every race was forever assured. No matter to what climate they may by their fate have been condemned, no matter by what institutions they may have been nurtured or brought up, no matter what adverse or propitious influences may have attended their lives, the song of the harp is an eternal poem and the light of the green isle brings perpetual day. Upon the pavements of the sea, engraven in characters of living light, may yet be recorded the ultimate triumph of those principles which released two nations from the domination of a conquering race. One is the elder-born, whose sons have fought their way to freedom, and one that people who so often have received our sympathy with the resolve and in the hope that ere another lustrum shall be added to the nations she will triumphantly have been redeemed from bondage to liberty. Yet it is not for this, Mr. Speaker, we are legislating to-day. The resolutions of my friend from New York but gave expression to sentiments that found a lodgment in every breast, and now that they come to us sanctioned by the Committee on Foreign Affairs, we may at least give earnest expression to our thoughts ere, clothed with the authority and indorsement of American Representatives, it passes to the executive department to find its answer and its action.

Sir, it is a significant fact that the agitation in Ireland derives much of its force from the efforts of those who have been educated in our own country, and who have lent their aid in building up a free government at home. Let what will be said of the dangers, the excesses, the leveling tendencies of our democratic governments, there is enough in the last census to show that sovereignty submitted to the people means wealth, power, prosperity, the rapid development of natural resources, the progress in science and the arts, educational advantages, the unobstructed opportunity for each man to grasp his own fate, subject always to an overruling Providence; and, above all, it means the growth of a nation with the will and the ability to maintain itself in undivided integrity, not a single star obscured, not a single stripe erased, and a nation that can assert its own dignity and command the respect of the powers and potentates who rule the world. Mr. Speaker, when my friend from the Brooklyn district sought to gain the ear of the House, and urged his arguments with a zeal intensified by the recollections of the sufferings of the land which gave him birth, as he pleaded for the majesty of the voice of the land which gave him adoption, I did not wonder that Representatives gathered around him, charmed with his earnestness and the force of his expressions, and re-enforced by the siren tones of the great traveler, the member from New York, whose well-worn compass has so often pointed in their own lands moslems to their shrine, and democracy here to their high trusts in these halls of legislation, and assured us of our duty.

The question of the hour is simply this, and it is one which belongs to no party, sect, or creed, but addresses itself simply to our duty. The contest which has been waging in Ireland will ever be waged until her centuried wrongs shall find redress, and it is because of this we will have ever present with us this overshadowing question. We invite to the cultivation of our vast domain and promise the protection of our laws to the oppressed of every clime. It is at once our glory and our pride. What wonder then if at times we lend a listening ear to the utterances of sorrow expressed for the loved ones at home who are not permitted to venture upon the ocean's billows to find that rest their children have found. Virtue should be a controlling principle in all republics. Without its modifying, restraining influence to counteract the turbulence and excitement of licentiousness, no hope could be indulged of the perpetuity of institutions conducted as those under which we live. It often exhibits itself under phases of astonishing variety—sometimes in a wide field of excessive benevolence, and again in a sympathy with other nations whose misfortunes have touched upon a kindred feeling in the history of their wrongs.

We have not turned loathingly away from scenes of wretchedness and misery in the midst of smiling fields, rich meadows, and a genial climate, but in the full and complete enjoyment of all these we have sent assistance to another land around whose memory hangs a cluster of illustrious names; and in the day of her deep distress, when her cries of agony have reached our ears, have given of our pittance to assuage the sorrows a relentless fate had cast upon her soil. The winds of heaven had borne upon their wings their supplicating voice, entreating an intelligent people by the remembrance of her poet bards, her orators, and her statesmen, who have shed imperishable renown not only on her own escutcheon but on the lists of the world's great heroes, to lend their aid to stop the ravages and the fearful desolations of grim-visaged and merciless poverty. Surely, it was at such a moment when the sea was freighted with her merchandise of mercy to bind up the broken heart, and when from every city in the land came forth contributions for a distant country as the universal expression of a nation's sympathies with a nation's woes. Here our

duty has been performed at least, and we have been blessed with their benedictions.

The resolutions of my friend from New York seek to illustrate the fact that Michael P. Boyton was arrested and brought before a British jury, tried and found "not guilty," no crime being proved against him. But immediately upon his escape from a British jury the suspension of the *habeas corpus* was brought to bear against him, and he was rearrested and held in prison on suspicion.

An American seeking to be naturalized dies. His son enters the armies of the Republic, and on many a hotly contested field bares his bosom to the iron hail of war. He has been a soldier in the army of liberty. In the records of its history his name will be written. The diadems of earth cannot erase it; the aspirations of freedom will never permit it. Yet this man is in a British bastille, asking the protection of his country and of her flag for which he fought. Is he right in thus doing? How far has he offended? The safety of his own country secured, he revisits his ancestral home, bound to it by the ties of kindred and of sympathy. The crusader for liberty in his inquiries for the welfare of the home of his progenitors, without, as I understand it, an overt act against England's law, becomes the inmate of an English prison, and is thus at once a freeman and a felon, his nationality despised, his country's flag dishonored, and his citizenship rendered a by-word and a reproach. Is this the augury of the institutions of freedom? Are these the principles derived from Magna Charta? Has our nation no moral power at least to require an explanation? Do we despair of its exertion, as all sections of our vast domain now blend in common sympathy, and we give decoration to the graves of our soldier dead who fought that this nation might live forever united, and we press forward to the consummation of a still more glorious future? For all that has been won we must find respect, not only at home but abroad; wherever the citizen of our Union may travel the banner of that Union should yield him its protection.

Mr. Speaker, when the Roman chieftain had returned from the field of Cunna, where the flower of his army had been swept away by the Carthaginian host, he had reason to fear his country's vengeance because the battle-field was lost; yet that he despaired not of the republic endkindled the fires anew upon the altars of Roman patriotism and prompted for him a conqueror's ovation. If in the heroic ages of the world such sentiments found vindication, how much greater vindication should they find in this acknowledged heroic age of freedom?

Sir, if this man under our laws was a citizen, as I think of right he was, by reason of his declaration of intention and the part taken by him in the struggles for freedom, then, in the name of that freedom we worship, let our voice be expressed for his protection, and require that England's bastilles shall not be the recipients of American citizens. If any error has been committed, let our people know in what that error consists.

We seek no appeal to popular prejudice; but we do seek to know why American subjects are subject to English law. We are ever ready by the voices of our States, as expressed through their Legislatures, to give words of succor to the oppressed of earth. It was my first duty as a member of this Congress to present with my colleagues resolutions passed by the Legislature of New Jersey expressing their sympathy for that gallant race in Africa, descendants of the Hollanders, who were struggling to assert their rights of freedom.

In my boyhood's days I well remember the greetings yielded to the gallant Ingraham, who snatched from an Austrian man-of-war the citizen who had declared his intention, and had gone forth upon a visit to a foreign land; and when seized by despots sought protection beneath his country's flag. I have seen the streets of New York crowded with its hundreds of thousands of people to receive with ovations, greater than ever granted to the heroes of antiquity, the Hungarian exile to whom even the Turk gave his protection and offered his country as an asylum, refusing to surrender him to despotic power, and gracefully yielded him to the protection of the banner with its stripes and stars.

I have seen England in the days of her power and our weakness demand from us the surrender of our citizens, an act that never should be effaced from our national recollection. Her flag protects her people, and it is her boast that her morning drum beats around the world. Dare not a republic founded upon the principles of liberty find succor for one who on its fields of valor won an honorable distinction by a long and faithful service?

Mr. Speaker, I am aware our utterances here should be dignified and calm. We are to speak not as partisans, not as politicians, but as representatives of the living, active thoughts, wishes, and purposes of the constituencies by whom we have been commissioned here. For my own people I may avow there are many among them who feel an engrossing interest in the story of Ireland's wrongs, and as incidental to that, the release from imprisonment upon its soil of an American citizen whose only crime has been that he gave expression to his sympathies for the land of his progenitors. If in this he has committed a crime then am I a criminal, though beyond the reach of her law. That land is the home of my race, my lineage, my family. It cannot be that these gross wrongs shall remain unrequited. Shall England's Queen, in mournful sympathy, which drew a world's applause, entwine a garland to decorate the tomb of the great Repub-

lie's President, a victim to cruel assassination, and yet permit her ministers of state to bolt and bar in dungeons grim a soldier who fought to give that Republic life? It is a strange and melancholy enigma in this era of our civilization. May we not find its solution in the mild yet earnest expression of executive power and our hope in the firm maintenance of authority which gives strength to our belief in the sure and steady growth of such principles as without the bayonet and the sword shall conduct the world at last to freedom and to virtue?

"Shall we pay the debt, or perpetuate it as the basis of a moneyed aristocracy and banking oligarchy?"

A review of the President's policy and of the recommendations of the Secretary of the Treasury and the Comptroller of the Currency.

SPEECH

OF

HON. THOMPSON H. MURCH,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 26, 1882.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. No. 976) to provide for the payment of the interest-bearing debt of the United States—

Mr. MURCH said:

Mr. Chairman: The extraordinary position assumed by the gentleman who at present occupies the position of Comptroller of the Currency in the Treasury, in his report or plea for the rechartering of the national banks, imposes on me the duty, as the Representative of an intelligent and patriotic constituency, of presenting to the House and to the country some of the more cogent reasons why this Congress should repudiate and condemn the unauthorized, untimely, and ill-considered special pleading of one of the subordinate executive officers connected with the Treasury Department, in which that official advocates and urges with the zeal of an attorney certain legislation in the interest of a small, rich, and highly privileged class, and, as I believe, against the interests of the people of this country at large.

It was deplorable enough, Mr. Chairman, for those who have given to these financial questions that close, constant, and extensive consideration which has marked the acts and utterances of some of the gentlemen upon this floor to learn from the report of the Secretary of the Treasury and from the President, in his annual message, the extent of the influence of the national banking monopoly upon the judgments of men of the general clearness of judgment and integrity of purpose of the President and Secretary of the Treasury, in inducing them to recommend what I, with others on this floor, clearly discern to be errors in our financial policy of a grave and even disastrous character, if carried out.

But, sir, it was still worse when the Comptroller of the Currency came into the arena as the special advocate of the Bankers' Association, or of its interests, and assumed to shape the policy that should carry out the errors of the President's message.

It is therefore to point out some of these evils that I thus earnestly deprecate such action as well as protest against the impolicy which inspires and the monopoly which sustains the financial views thus presented by the President and the Treasury Department, that I shall ask the attention of the House for a few minutes on this occasion.

For the purpose of these remarks it will be necessary to review together, in some respects, the utterances of the three officials to whom I have alluded. The President has recommended in his message a number of measures involving the most careful consideration of Congress from a financial point of view; and these recommendations taken together involve a most contradictory and impossible policy of financial legislation, so far as the conflicting measures thus recommended are concerned, and so far as the same relate to the welfare and prosperity of the people at large. Among these recommendations the following are those which recommend an increased expenditure of unusual proportions, namely:

1. An increase of the Army to the extent of 5,000 enlisted men.
2. An increase of appropriations on account of Indians.
3. An increase in the Engineer Battalion of the Army.
4. The improvement of the South Pass of the Mississippi River.
5. A free bridge across the Potomac at Georgetown.
6. The early completion of the north wing of the War Department building.

7. The appropriation of \$235,000,000 of the \$250,000,000 recommended by the Commissioner of Pensions to meet pension claims.

8. "Every consideration of national safety, economy, and honor imperatively demands a thorough rehabilitation of our Navy. With a full appreciation of the fact that compliance with the suggestions

of the head of that Department and of the advisory board must involve a large expenditure of public moneys, I earnestly recommend such appropriations as will accomplish an end which seems to me so desirable."

9. That 250 clerks be added to the 675 clerks of the Pension Office—mostly of a high grade—for adjudicating the claims.

10. That Congress provide for the improvement of navigation of the Mississippi River by removing obstructions from its channel.

11. That \$25,000 a year be appropriated to execute section 1753 of the Revised Statutes.

12. That the Library of Congress have a new and separate building.

13. The reclamation and improvement of river front and flats of the Potomac at Washington and the improvement of the park about the Washington Monument.

14. The President also calls attention to a deficit of \$16,305,873.47 in the sinking fund of last year, and recommends that an estimated amount of \$130,000,000 be appropriated or devoted to the sinking fund next year.

These items, at a computation based upon previous official reports and recommendations, would amount to over \$500,000,000; but upon a careful computation which I have revised so as to place the demands of these extraordinary items of expense within the limits of their real requirements, they will amount to not less than \$410,105,873, which vast sum will be exclusive of the ordinary expenditures, of interest, and of payment of the debt.

As to the necessity and entire propriety of this remarkably extraordinary expenditure thus recommended, it is not my purpose to make any inquiries or criticisms at this time. But it is proper that I should say that very much of this vast sum is of unquestionable necessity, and that our people should be warned that notwithstanding the President has given us the rosy prospect and estimate of a payment of our national debt in ten years if we apply our surplus revenues at the present rates to its extinguishment, still he has opened the door but partially upon the enormous extent of a new era of public expenditures which shows us how futile so flattering a hope must be to statesmen who seriously contemplate the future schemes that grow out of our national development, and the need of securing and protecting our national interests at home and abroad.

We should see to it, therefore, as a matter of prudence, that we finish so far as we can the work in hand before commencing other vast jobs that will involve us in further debt. But the President, in this same message, instead of recommending to the consideration of Congress measures for meeting these enormous extra outlays, recommends measures which will seriously impair our ability to either continue our present financial policy and reduction of the debt or to conduct the business of the country as readily, conveniently, and economically as at present.

The President thus recommends the abolition of the tax on banks in strong terms, which amounted last year to a revenue of \$8,493,552; the abolition of the tax of stamps on proprietary medicines, cards, checks, watches, &c., which yielded \$7,375,255.72; the abolition of the law requiring a coinage of \$2,000,000 a month of silver dollars, which yielded a great share of the item of \$3,468,485.61 of last year's profits on our coinage, besides wiping out of our currency a regular annual increase in silver coin of \$24,000,000. He also recommends the abolition of the law authorizing the issue of silver certificates, and the retirement from our currency of the \$66,000,000 of these certificates now so conveniently and constantly used in public and private transactions; besides his recommendation or official recognition of the fact that the theoretical \$15,000,000 of fractional currency, so long carried in the Treasurer's reports, should be dropped from future consideration, as lost from the volume of our currency.

These recommendations would decrease our revenues \$16,000,000 to \$18,000,000 a year and decrease our coin and currency \$105,000,000.

Certainly such remarkably divergent recommendations are difficult, if not impossible, to reconcile with each other, or with the sentiments and interests of the people as those sentiments and interests are understood and represented by those on this floor who represent the masses rather than special and privileged classes.

But the Comptroller of the Currency and the Secretary of the Treasury seem to afford the explanation of this remarkable policy of increasing our expenses while decreasing our resources and revenues; and so clearly are the peculiar errors of this policy shown and its dangerous results portrayed by the able, patriotic, unselfish, and eminent Peter Cooper, esq., of New York, in his recent "Review of Comptroller Knox's Report," that I adopt the following portion of that lucid and forcible paper as a part of my argument in favor of the bill introduced by the gentleman from Missouri, [Mr. HASELTINE,] (H. R. No. 976) "to provide for the payment of the interest-bearing debt of the United States," and to advocate which bill I have deemed it proper to criticize the President's policy, it being that of the Secretary of the Treasury, the Comptroller of the Currency, and the national banks, as contrasted with the people's policy as embodied in the bill under consideration. Mr. Cooper says:

Comptroller Knox informs us that there were on the 1st day of October, 1881, 2,132 national banks in the country.

That these banks have in—

Capital stock	\$463,821,985
Surplus funds	128,140,618
Undivided profits	50,372,191
Individual deposits	1,970,997,531

They have also—
 National bank notes amounting to \$362,000,000
 United States deposits 8,476,600
 Deposits of United States disbursing officers 3,631,803
 Dividends unpaid 3,835,927

The question arises: How is this amount of money being used, and of what advantage is it to the banks? The Comptroller informs us that they have \$419,847,950 of this money invested in United States bonds, which, of course, are not taxable. They have \$61,896,703 invested in other stocks and bonds, making a total of \$481,744,653 invested in bonds and stocks, which is \$16,992,668 more than their entire capital stock.

They have out in loans and discounts \$1,169,022,303, on which they are allowed to charge from 6 to 24 per cent. per annum interest, payable quarterly, according to the State in which they are located. This is more than two and a half times the amount of their capital stock.

Their bonds and stocks and their loans and discounts may be considered as so much active capital, from which they are realizing a constant profit. They hold in specie \$114,334,736; in legal tenders, \$53,158,441 of literally dead capital. The total resources of these banks amount to \$2,358,387,391.

There were eighty-six new banks organized during the year ending November 1, 1881, with an aggregate capital of \$9,651,050. These banks received circulating notes amounting to \$5,233,580. The Comptroller tells us that this is the largest number of banks organized in any year since 1872. From the establishment of the system to November 1 last, three hundred and forty banks went into voluntary liquidation, and eighty-six have been placed in the hands of receivers. The estimated losses to creditors from the failure of national banks during the eighteen years since they were established, amounts to \$6,240,000, which is doubtless far less than the losses sustained in any other kind of business, using anywhere near that amount of capital. The failures that have occurred have not been through any fault of the system on which the banks are founded, but from bad management on the part of the officers of the banks. The comparative few failures among national banks as compared to the same amount of capital employed in other pursuits is an evidence of the great profitability of the system to those engaged in it.

The great losses, however, which the people sustain through the agency of banks does not come so much through the banks that fail, as through those that do not fail. The business interest of the country suffers far more from the inflation and contraction of currency than it does from the failure of banks and loss of notes.

These losses occur through bank currency that is not a legal tender for debts, but is redeemable in coin or other legal tender, which currency, after being made the basis of contracts is withdrawn from circulation, thus forcing debtors to pay their obligations in other money than that in which the debt was contracted.

On the other hand, the profits arising to those engaged in banking business does not depend entirely upon the dividends semi-annually declared upon their capital stock. Enormous profits are secured by taking advantage of the increase and decrease of prices of property, which is brought about by inflating and contracting the volume of currency.

The Comptroller informs us that between January 1, 1882, and February, 25, 1883, the charters of three hundred and ninety-three banks will expire. These banks have a capital of ninety-two millions, and a circulation of about sixty-eight millions of dollars. From June 1884 to 1891, the charters of one thousand and eighty banks, having \$280,871,965 of capital, and \$192,581,085 of circulation, will expire. About two hundred and forty-three million dollars of the bonds held by the Treasury as security for the circulating notes of the national banks are the 3½ percents. It is very apparent that a desperate effort is being made by the present Congress not only to extend the charters of these banks, but to refund the 3½ percents into 3 per cent. bonds, that will have a definite time to run. The legislation sought in this direction will be entirely in the interest of the bankers. Already a large portion of the time of the session has been taken up in discussing ex-Secretary Sherman's 3 per cent. refunding bill.

The question now arises, should these banks have their charters extended, and should the 3½ percents be refunded and the taxes on bank circulation be reduced for the especial benefit of bankers.

Comptroller Knox, in his report, discusses the question of renewing the charters at considerable length. He says:

"The principal reason urged by those who favor a discontinuance of the national banking system is that money can be saved by authorizing the Government to furnish circulation to the country. In other words, that the profits to the banks upon circulation is excessive."

The Comptroller then furnishes figures and attempts to show—

"That the profit on bank circulation cannot now at least be said to be excessive." He is very careful, however, not to mention the source from which bankers can derive their largest profit and wherein lies their greatest power for good or evil; that of increasing and diminishing the volume of money, and by that means inflating and contracting prices. This dangerous power is inherent in all systems of bank currency not regulated by law. The old State banking system, in operation before the present national banks were organized, afforded a perpetual scheme for inflating the currency, and thus increasing the prices of all kinds of property and making business prosperous, and then contracting the currency, decreasing prices and bankrupting our merchants and business men, bringing on panics and widespread business disaster. So common and so regular had this condition of things become that a panic once in ten years was considered unavoidable.

Since the war the business men of the country have been forced through the panic of 1873, and the few years of disastrous consequences following the legislation obtained through the agency of bankers, which forced a contraction and destruction of the Government currency that was put in circulation during the war.

The finance reports show that about one billion two hundred million dollars of Government obligations in circulation when the war closed, for all of which the people had given their labor and property as a full equivalent in value, was in two or three years' time thereafter taken out of circulation and converted into 5-20 6 per cent. gold bonds, thus increasing the demand for gold upon the Government to the extent of over \$60,000,000 annually to pay the interest. Among the currency obligations that had become the people's money, and on which their business was largely based, was \$830,000,000 of 7.3 notes and \$218,000,000 of compound-interest notes, and one and two year notes, certificates of indebtedness, &c., sufficient to make up the amount here mentioned.

Following the withdrawal of these currency notes a systematic war was made by banks upon legal-tender notes; and from one to four millions a month was taken from circulation and destroyed, until their volume was reduced from \$450,000,000 to \$356,000,000 when the panic came on. The panic became so disastrous as to threaten the entire prostration of business, and in order to prevent this, President Grant's administration was compelled to reissue \$26,000,000 of the legal-tenders to relieve the pressure. No sooner was a temporary relief brought about by the reissue of the currency destroyed, than Mr. Sherman secured the passage by Congress of his resumption bill, the object of which was to force all the debtors of the country who had contracted debts in paper currency to pay those debts in gold coin. A bill was passed demonetizing silver, and to resume specie payments, and by this means legal-tender notes were gradually to be destroyed, and bank notes issued to be put in their places, and all debts made legally payable in gold.

These legislative enactments by which the debtors of the country were bankrupted and stripped of their money and property for the benefit of money-lenders were engineered by banks for the purpose of getting rid of Government notes and to give them the entire control of the volume of currency, thus enabling them to carry on their schemes of inflation and contraction as a perpetual liar-loom to their institutions.

The President, the United States Treasurer, the Comptroller, and other execu-

tive officers, and the majority of both Houses of Congress aided these schemes, and the banks are now attempting through these parties to secure a recharter of their corporations, and to perpetuate the public debt in their interests.

The Comptroller goes into an elaborate defense of the national banks in his last report. He becomes a sort of an attorney for an extension of their charters and to relieve them from taxation.

After attempting to show that the profit on their circulation is very small, he says:

"The proportion of taxation, national and State, imposed upon the banks has been shown to be greater than that upon any other moneyed capital, being in the aggregate equal to an average of 4 per cent. upon the amount of their issues."

On page 56 of the Comptroller's report, after giving a table containing a statement of the amount of taxes, national and State, paid by the national banks from 1866 to 1880, the Comptroller says:

"These statistics show that during the fifteen years covered by this table the average amount annually paid by the national banks to the States and to the United States was \$16,589,199, or more than 3½ per cent. upon their capital stock; during the last year given the total paid was \$15,994,925, or more than 4 per cent. upon the amount of the average circulation of the banks then in operation."

These statements are calculated to mislead the public in regard to bank taxation. It leaves the impression on the minds of the readers that the banks are excessively taxed, because they pay 3½ per cent. on their capital, or 4 on the average amount of their circulation. As their circulating notes are used as currency, they are just as much actual capital as the original capital invested in bonds. Instead of saying the banks pay 4 per cent. on their circulation, we should estimate what the rate would be on both circulation and capital, which is less than 2 per cent.

Instead of calling their tax 3½ per cent. on \$463,821,985 of capital, or 4 per cent. on \$362,000,000 of note circulation, we should see what it would be on \$825,821,985 of their combined capital and circulation. Nor is this all, for in reality we should add to their capital and circulation the amount of their deposits also, which would make an aggregate of \$1,908,928,619. They have the use of these deposits about the same as they do of their capital, and it is practically so much capital for their use.

The Comptroller informs us that the banks have invested in bonds and stocks \$480,714,553, and they have loans and discounts amounting to \$1,169,032,303. If we add these two items, we find they have invested \$1,649,736,856, on which they pay an annual tax of a little over \$15,000,000, which is less than two-thirds of 1 per cent.

He should go still further than this, for the Comptroller tells us that—

"Under the law requiring the national banks to carry to surplus before declaring dividends a certain proportion of their earnings, the national banks of the country have accumulated a fund, in addition to their capital, which now amounts to \$128,140,618. This surplus is not infringed upon, except in case of extraordinary losses, such as cannot be paid from the current earnings of the bank, and consequently forms with the capital the working fund of the bank."

If this surplus is a part of the working fund of the banks, as the Comptroller says, why should it not also be taxed as much as any property in the nation? If we add the surplus to the capital, the circulating notes, and the deposits, it makes a fund of \$2,037,068,727 in the hands of these bankers, on which they pay an annual tax of a little over \$15,000,000, which is less than the half of 1 per cent. on the funds in their hands.

And yet the Comptroller, the Secretary of the Treasury, the President, and Congress are attempting to relieve them from a part of the tax they are now paying. A part of the Comptroller's report is devoted to a defense of the national banking system, to an extension of their charters, and to relieving them from taxation. What other class of the community pay so small a tax in proportion to their means or make so large profits as the bankers? We know of none, except it be some of the leading railroad corporations.

Between the railroad and the bank corporations the property produced by the masses of the people is being absorbed at a rapid rate. They levy contributions upon the currency and transportation of the products of the country that absorbs the largest share of the wealth produced, and yet they are taxed the least. But the efforts being made to remove the tax from bank circulation and deposits are not because the banks feel the tax oppressive, but because they want all restrictions to the increase of their currency removed. If the tax was removed from their circulation they could double the volume of their notes and suffer no loss, even if the money lay idle in their safes. But with a tax of 3½ or 4 per cent., as stated by the Comptroller, it is not profitable to increase their circulation, unless they can find active use for their money. It is the power to inflate and contract the volume of currency free from taxes they care the most for. The bankers, many of them, make more money outside of their banks than they do inside. This is done by controlling the volume of currency, and thus regulating the prices of property, of which they take due advantage. But the profits inside are far greater than the profits of the banks or Comptroller Knox would have the people think they were.

The Comptroller informs us that the surplus now accumulated under the law requiring "a certain portion of their earnings" to be laid aside as a surplus is \$128,140,618. And what is that "certain portion," as defined by the law, that is to be thus used? Let the act itself state.

Section 33 of the act organizing the national banks reads as follows: "And be it further enacted, That the directors of any association may, semi-annually, each year declare a dividend of so much of the net profits of the association, as they shall judge expedient; but each association shall, before the declaration of a dividend, carry one-tenth part of its net profits of the preceding half year to the surplus fund until the same shall amount to 20 per cent. of its capital stock."

Now if \$128,140,618 is 10 per cent. of their net profits, the entire profits would be ten times that, or \$1,281,406,180. If we allow an annual average of \$450,000,000 for eighteen years for their capital, we find they have made about 16 per cent. on their entire capital according to their own showing. But they have laid aside a surplus of more than 20 per cent. of their capital stock from one-tenth of their earnings, which is an evidence that \$128,140,618 is far less than one-tenth of their net earnings.

The annual reports prepared for the public by the banks, giving a statement of their dividends, &c., are many of them cooked up for the occasion. The facts cannot be denied that the bankers are, as a class, the richest men in the nation, and are only exceeded in their enormous wealth by a few railroad managers. That the banks would flood the country with their notes and resort to extensive inflation and contraction is clearly indicated by statements made both by Comptroller Knox and by United States Treasurer Gillfillan. Mr. Knox, on page 64 of his last report, says:

"The amount of circulation issued to national banks for the year ending November 1, 1881, was \$30,979,630, including \$5,233,580 issued to banks organized during the year. The amount retired during the year was \$14,075,054, and the actual increase for the same period was, therefore, \$16,904,576, making the total on November 1 \$359,422,738, which is the largest amount outstanding at any one time."

Since November 1, 1881, about three million dollars more have been added to the circulation of the banks. Now, if the banks will inflate their currency \$16,904,576 in one year, when they pay a tax, as the Comptroller states, of 4 per cent. on their circulation, what would they not do in the way of inflation, provided the tax was taken off? We are not left in doubt as to what they would do, for United States Treasurer Gillfillan, in the financial reports for 1880, tells us just how the banks now manage in this regard. He says:

"In January and February, 1875, a certain bank retired its circulation from \$308,490 to \$45,000 by deposits of legal-tender notes. Between September 26, 1876, and May 26, 1877, and before that deposit was exhausted it increased its circulation to \$450,000. Between August 14 and September 10, 1877, it again reduced its circulation to \$45,000. On September 19, 1877, nine days after completing the deposits for this reduction,

it again began to take out additional circulation, although \$42,550 of prior deposits remained in the Treasury, and by the 20th of that month its circulation had again been increased to \$450,000. July 22, 1872, its circulation had again been increased to \$450,000. July 22, 1878, it for the third time reduced its circulation to \$45,000, and in August and September, 1879, again increased it to \$450,000, at which it now remains, the balance of its former legal-tender deposit then in the Treasury being \$112,615. From January 13, 1875, to the date of this report, \$778,275 of its notes have been redeemed, of which only \$40,700 were redeemed at the expense of the bank, although, during more than one-third of that period it had outstanding and was deriving the benefit from the full amount of circulation which its capital authorized. The only assessments which have been made on the bank for the expense of redeeming its notes were \$24.14 in 1875, and \$4.39 in 1878. At one time there were in actual circulation \$852,550 of its notes, although the highest amount ever borne on its books was \$450,000.

The Treasurer informs us that other banks have been increasing and decreasing their circulation in a similar manner. Now, in what situation does such a condition of currency place the business of the country, we ask? A stable currency is one of the essential elements of stability and prosperity to business enterprises. A fluctuating volume of currency is one of the worst devices ever discovered to enable the manipulators of that currency to bankrupt business men and defraud the producing classes of the country.

In strong contrast to this fluctuating bank currency stands the legal-tender notes, the volume of which has only changed under the grinding force of laws enacted by bankers especially for the purpose. Since May 31, 1878, the volume of Government currency has been invariable, and it will so remain until some law is passed either to increase or decrease that volume.

The banks, on the contrary, inserted a clause in the resumption act, giving them the power to increase their circulation to more than five times its present volume, or to within 10 per cent. of the entire bonded debt, and under existing laws, also, they can retire the entire amount of their circulation at their pleasure. In February, 1881, in order to defeat a bill passed by Congress depriving them of the power to thus suddenly contract and expand their circulation, they retired about eighteen million dollars of their notes in a few days' time. We all know the disastrous effects caused by that act. Had not the Secretary of the Treasury come to the rescue and put legal tenders in circulation by the millions in exchange for bonds, wide-spread business disaster would have followed. The business interest of this country must not be left at the mercy of men who would thus abuse the power placed in their hands. These banks should be deprived of the power they now hold over the volume of currency.

The facts and figures here given are mainly taken from the reports of the officers of the Government, and therefore they cannot be ignored nor set aside by the members of Congress. It will not do, either, for the present legislators to reject them. The men now in Congress have it in their power to strangle this monopoly that is sucking the life-blood out of the people. Many of these banks have now about exhausted their legal chartered existence given to them by ignorant and corrupt legislators, and the verdict of the people is—let them die. This Congress should pass an act forever prohibiting the organizing or rechartering of banks of issue. A general law authorizing banks of deposit and discount, by which the money of the people shall be made secure, is desirable. But no bank should be allowed to issue currency or to control its volume. Why should the Government create money and give it to the rich bankers for nothing? The legal-tender notes were issued in exchange for labor and property given to the Government by the people who received them. The bankers have given nothing of value to the Government for the \$362,000,000 of currency they have received.

The amendment to Senator SHERMAN's bill, offered by Senator PLUMB, of Kansas, contains some of the best features in reference to the currency and public debt of any bill yet presented that we have seen. It could be improved by making the coin certificates and notes it provides for issuing a legal tender for all debts, public and private. Senator PLUMB's bill, or one similar, should certainly be passed by this Congress.

As suggested in my letter to Senator BECK, if Congress was to pass a bill to issue \$362,000,000 of legal-tender Treasury notes, to take the place of the present bank currency, it could provide the labor and material to build and equip two lines of railroads from the Atlantic to the Pacific Ocean, and place fifty first-class iron steamers on the ocean, thus providing cheap transportation both for our national and international commerce; and it would leave the currency in a far better condition than it is now in.

Is the present Congress wise enough to see, appreciate, and inaugurate these great reforms in our currency? We ardently hope and trust that it is and will.

This bill, Mr. Chairman, proposes to keep open the option and control of the United States Government over the payment of its national debt, in the interest of the whole people, and appropriates the worse than idle money in the Treasury for this purpose, besides providing for the conversion of the remainder of the debt into non-interest-bearing notes of the Treasury to be a legal tender in the extinguishment of this debt and the establishment of a safe and popular currency.

Even with such an addition to the volume of our currency we would not have an amount, either per capita or in gross, equal to that in use in this country in 1865-'66; and the people, thus freed from burdens and provided with the means of promoting enterprise, would take new and mighty strides in material progress and power under so wise and benign a policy.

In this connection I beg leave to quote again from the philanthropic sage and financier whose name I have just used, in his trenchant and able letter to Secretary Folger, as illustrating my position on this question. Mr. Cooper says, among other things:

Your report informs us that all but \$250,000 of the silver coin in the Treasury is already covered by these silver certificates, and that the currency in circulation has been increased to the extent of \$66,000,000 by the issue of these certificates. Can you now withdraw these certificates without contracting the currency that amount? Do you think it would be a safe experiment to contract the circulating medium \$66,000,000? You say the "circulation of \$66,000,000 of silver certificates seemed an *inexpedient addition to the paper currency*." Do you think that after having put them in circulation, and business operations had been based upon them, prices increased as a result of such inflation, and debts contracted on them, that it would be a just and safe experiment now to take this currency away and leave that much less money in circulation? Would the business men be satisfied to use silver coin in place of certificates that they prefer to gold coin?

You intimate that the national banks under existing laws might, if they were disposed, "cause a serious contraction of the currency and grave embarrassments to business" by retiring their circulating notes, and refer to the results of such transactions at the time of the passage of the refunding bill by the last Congress. If such serious consequences and grave embarrassments to business followed the contraction of only \$18,000,000 of bank notes last spring, what would be the result of the withdrawal of \$66,000,000 of silver certificates?

You say that "there need be no apprehension of a too limited paper circulation, for the national banks are ready to issue their notes in such quantities as the laws of trade demand, and as security therefor the Government holds its own bonds."

It is very evident that the banks would gladly issue their notes in any quantities to be required as money, and therein lies the danger. The silver certificates are based on their full value in coin in the Treasury, but what assurances have you that the banks would be able to redeem the increased volume of their notes in coin. Basing a bank currency that is not a legal tender on Government bonds does not protect the business community from the effects of a dangerous inflation or from bank suspension and panics afterward. The bill holder might be secured, but business men would not be protected against a sudden contraction of the currency which might make the depositors unsafe.

Again, you question the constitutional right to issue legal-tender notes in times of peace, and suggest that these notes be deprived of their legal-tender quality.

It seems to me that in making such a suggestion you could not have a just appreciation of the value of these notes to the people, or realize to what extent that value is enhanced by their legal-tender quality.

You admit, however, that legal-tender notes "are without doubt a convenient and safe currency for the people, and that it is for the profit of the Government to continue their circulation," and yet you advise taking from them one of their most valuable qualities. Do you not know that by depriving these notes of their legal-tender function you would diminish the volume of legal debt-paying money to the extent of \$46,862,000 at once? Have you considered what would be the effect of such a course upon the debtors? If your policy was carried out, it would practically force every debtor in the country to meet his obligations in gold coin; and, although those debts have been contracted in legal notes, in silver certificates and in silver coin, you now advise Congress to withdraw the silver certificates, to remove the legal-tender quality of the Treasury notes, and to stop the coining of silver dollars. I trust Congress will be too wise and too just to heed such advice as this, for if they legislate to carry out your suggestions they would inevitably bring upon the country one of the most widespread and long-continued panics ever known in the history of this country; a panic that would involve the business men in bankruptcy and inaugurate a revolution among the laboring classes.

Has not the Supreme Court repeatedly decided that the issue of legal-tender notes by the Government was a constitutional measure, and as these notes are now, as you say, "a convenient and safe currency" and "a profit to the Government," and are preferred to either gold or silver coin by the business men of the nation, and for twenty years have thus been used, would it not be financial suicide to attempt either to remove their legal-tender quality or to withdraw them from circulation? Are they not in fact the only stable currency we have? For the last three and a half years their volume has been fixed and uniform. That volume can only be changed by act of Congress, and after the most mature deliberation, while the currency of the banks is fluctuating enormously at the pleasure of bank officers. Your report even admits that the banks by retiring their circulation "might cause a serious contraction of the currency and grave embarrassments in business," and you advise as a remedy that they simply be required to give previous notice of their intention to retire their circulation; but will your suggestions in that regard remedy the evils of contraction or of inflation?

The banks now hold the power of almost unlimited inflation and contraction, which power they are using to their own advantage, and there will be no stability or safety in business until that power is taken from them.

The constitutional right to coin money, to make legal tenders, and to issue currency rests in Congress alone, and the people will never secure justice between debtors and creditors, until, as Thomas Jefferson said, "bank paper is suppressed, and the function of issuing currency is restored to the Government to whom it belongs," and all currency, whether coin or paper, is made a legal tender for debt.

Again, I cannot but regard your suggestion to stop the coining of silver as exceedingly unwise. From your own statements it appears that nearly all the silver dollars now in the Treasury are covered by silver certificates, and these certificates have been issued on a deposit of an equivalent in gold coin, showing conclusively that certificates which you intimate are "redeemable in silver dollars worth but eighty-eight cents in gold" are preferred by the people for business uses to gold coin.

Mr. John Thompson, of the Chase National Bank, has declared that: "The sooner silver and silver certificates constitute the major part of our money the farther off will be a panic and a revolution."

Instead of withdrawing silver certificates, the Government should issue certificates covering all of the gold and silver coin and bullion that the people choose to deposit with the Government. If this was done, and bank notes withdrawn, and legal-tender notes were made interchangeable with gold and silver coin and certificates, we should for once get a sound currency; one that could not be inflated and contracted at the option of bank presidents, and one that would be impartial in adjusting claims between debtors and creditors.

Your suggestion, too, that the bonds be all paid in gold coin values, might well be regarded as not only unwise but unjust to the American people, who have the bonds to pay. You must not forget that most of the original bonds were issued when both gold and silver coin, and Treasury notes were the lawful money of the country, and that the original purchaser only paid thirty-eight cents on the dollar in coin for some of them, and that a large majority of those bonds were sold at less than sixty-two cents on the dollar, in coin. Those bonds, many of them, were paid for in Treasury notes, and were redeemable in those notes as well as coin. Where is the justice, I ask, in compelling the people now to pay all these bonds in gold? Have the people no rights that are to be respected in this matter? Must the Treasury Department of the Government be run in the interests of a few thousand bondholders and bankers, and in a way that would bankrupt the business men of the nation, and throw the working classes into idleness? Have the 50,000,000 of people no rights to be looked after and protected by the Government? Justice to all parties demands that both the principal and interest of the public debt should be paid in the same kind and volume of money as was in circulation when these bonds were placed on the market.

If England and Germany are disposed to pass laws permitting bankers, bondholders and money-lenders to extort money unjustly from the business men and working classes, by making all debts payable in gold coin, does it follow that the United States should do the same? When you talk about a standard of value, you should remember that since 1862 gold, silver, and legal-tender notes have all been standards of value in this country, except for the period between 1873 and 1878, when silver was demonetized in the interest of the bondholders and money-lenders, and the Government was making every effort possible to destroy the legal-tender notes.

During these years the nation was in a deluge of panics and bankruptcies, and relief did not come until silver was remonetized and the destruction of greenbacks was stopped.

Do you wish to see a return of such times? If so, let your suggestions in regard to the currency be carried out, and you soon will see a return.

The removal of the tax on bank deposits is also a question of doubtful value. According to the late report of the Comptroller of the Currency, the aggregate deposits are about \$1,083,000,000 in the national banks. This money belongs to the people, and the banks get the use of most of it for nothing, and they have the interest derived from loaning it back to the people. Their loans and discounts amount to \$1,469,922,303. Their capital stock is only about \$463,821,000 and nearly \$400,000,000 of this is invested in United States bonds that are exempt from taxation.

They have given to them by the Government, without cost, \$362,000,000 of bank-notes, which they loan as money. They pay no tax on their bonds, they get their deposits and notes for nothing, and pay only the half of 1 per cent. tax on the notes, and as much more on their deposits. Although among the richest corporations in the nation and taxed the least, and they get money for nothing, the bankers are about the only parties who complain of excessive taxation.

There is another suggestion or two in your report that it seems to me would be very inexpedient to have adopted, and that is to modify the tariff, reduce the revenues, and defer the payment of the public debt.

As you very correctly say, "the business of the country so thrives as to endure the onerous taxation and yet grow in volume and in profits, and still yield the Government a surplus over its needs." If the country is thus prosperous, and nobody complains of taxation but the bankers, and there is so large a surplus as to "embarrass the Government to dispose of it," why ask the next generation to pay the public debt? Why not apply every dollar of these surplus funds to pay the 3½ per cent. bonds, and in three years have them all canceled, and have the money now invested in them put into business to employ labor, where it will bear its portion of taxation and contribute further to the increased and permanent prosperity of the country?

I am aware that \$242,000,000 of these 3½ per cent. bonds are held as security for bank circulation, and there is where the principle source of trouble arises; but if you had simply suggested to Congress to pass an act to provide for issuing legal-tender notes to take the place of any retired bank-notes, you would not only have prevented any contraction of the paper currency, but greatly facilitated the rapid cancellation of the remainder of the public debt, and settled all difficulties about the currency.

When the 3½ per cent. bonds are all paid, would it not have been a wise suggestion to have made to have Congress provide for investing the surplus revenue sufficient to offset the balance of the bonded debt, so that to all intents and purposes it would be all paid within the next few years?

The present revenues of the Government with judicious management are sufficient to practically cancel the entire public debt in seven or eight years. It seems to me, from reading your report, that these financial questions have not received as careful consideration at your hands as they should have received, and that you have looked at them from the stand-point of the banker, the bondholder, and the money-lender, and not from that of the masses of the laboring people, who create the wealth of the nation and have its debts to pay.

I think it would be a sounder financial policy to reverse the legislation you have advised.

Instead of withdrawing the coin certificates, issue others on all the gold and silver coin and bullion that is presented to be exchanged for them, and have those certificates redeemable in either gold or silver coin or legal-tender notes.

Instead of stopping the coinage of silver dollars make its coinage unlimited.

Instead of withdrawing the legal-tender quality of the greenbacks and issuing the paper currency for the banks only, retire all bank currency and issue an equal volume of legal-tender notes to take its place.

Instead of taking the tax off the bank deposits put more on their circulating notes and tax them out of existence.

Instead of reducing the revenues so as to get rid of paying the bonds, let the revenues increase, and pay the bonds off as soon as possible.

Instead of forcing the next generation to pay a part of the public debt, let it be all paid by this generation, and as soon as the revenues of the Government will permit. Debts are a bad legacy to leave posterity.

Instead of contracting the currency and ruining business men and forcing laborers into idleness, let the volume gradually increase per capita as the population and business increases, and thus secure to our country a currency as uniform in its measuring power as the yard-stick or pound-weight, and by this means keep up the tide of prosperity that is now spreading so beneficially over the country.

Let the legislation be for the benefit of the people who create the wealth of the nation, and not solely for those who absorb that wealth by monopolizing the currency.

I see that Senator SHERMAN, who for four years was in control of the Treasury Department, has submitted a bill to Congress to refund the 3½ per cents into 3 per cent. bonds, payable after five years. The sole object of this bill is to help the banks out of their present difficulty and aid them to fasten the debt on the people. They must now purchase 4 or 4½ per cent. bonds at a premium or retire their circulation, or new bonds must be provided for investment to secure circulation. All through Mr. SHERMAN's administration of the Treasury Department he managed the finances of the Government as much as possible in the interests of the bankers, and, now he has become a Senator, he is at work for them again.

From statements made both in your report and in previous reports of Mr. SHERMAN, of the probable amount of surplus revenue, it is evident the 3½ per cent. bonds can be paid in less than four years. Why put them where they cannot be paid then? Why not manage the Treasury for once in the interest of the people and not for bankers solely?

My attention was called to the dangerous power banks hold and the widespread ruin they can bring upon the country by inflation and contraction fifty years ago, through a knowledge of the maladministration of the Second United States Bank. That bank, we are told, paid \$1,500,000 for its charter. It had a capital of \$38,000,000, with the privilege of issuing four dollars of currency to one dollar of capital. It was so recklessly managed that, with \$40,000,000 loaned on its promises to pay coin, it only had \$300,000 in coin to its \$40,000,000 of debt. When this fact was discovered, the president of the bank had to leave the country to save his life.

Benton, in his *Thirty Years' History of Congress*, declared that the managers of that bank expended \$3,000,000 in bribing Senators and Members of Congress and editors to obtain a recharter. I trust that no such charges will ever be brought against the present Congress for efforts to secure an extension of the charter and franchises of the present national banks, institutions fully as dangerous as the old United States Bank. The national banks have a dangerous power placed in their hands under the best of managers. By increasing the volume of their notes, loans, and discounts, they can inflate prices, encourage speculation and extravagant living, and by contracting their notes and curtailing discounts they can lower prices and bankrupt business men. Taking advantage of this power, they can sell while prices are high and buy when they are low, and by these means they can make fortunes for themselves and friends.

By having this power the prosperity and adversity of the country is practically placed in their hands. The power to issue currency should be taken away from the banks and placed in the hands of Congress. When this is done, and we have a uniform volume of paper currency issued by the Government for the benefit of the people, we shall have continued and uniform prosperity in all parts of our common country that will prepare the way for securing justice among all classes of citizens.

Hoping that you will give careful consideration to these subjects, I am, respectfully yours,

PETER COOPER.

Nor can I, Mr. Chairman, quit this important subject without referring to the language of the President, in his recommendation of the retirement of the silver certificates and the stoppage of the compulsory coinage of silver dollars.

The President says:

I approve of the recommendation of the Secretary of the Treasury, that provision be made for the early retirement of silver certificates, and that the act requiring their issue be repealed. They were issued in pursuance of the policy of the Government to maintain silver at or near the gold standard, and were accordingly made receivable for all customs, taxes, and public dues.

I ask the President, I ask Congress, if there is any recorded, recog-

nized, or authoritative change of the policy of this Government in regard to silver and the bimetallic standard? The President's words imply either an abandonment of that policy, still young, or the fact that some newer one has been adopted. Clearly Congress will have to be consulted and the people informed of any change from our present policy in this regard, for I take it, sir, that never again will be repeated in this Congress or by executive dictum the dark-closet and star-chamber edicts or legislation by which the people were unwittingly robbed for years of their silver coinage. Such a change of policy as the President indicates can never be brought about by inference or implication.

The President also adds that the silver certificates "are an unnecessary addition to the paper currency, a sufficient amount of which may be readily supplied by the national banks." No more readily than as now, nor so easily and cheaply; besides, to those who prefer a coin basis the silver certificate has the advantage of this circumstance, while the national bank note has no coin basis whatever.

No, Mr. Chairman, the public are aroused on these matters; they are not asking for any reduction of taxation; they do not cry for the perpetuation of our debt; they do not ask a decrease in our currency; they want the debt paid; they want the national banking incubus taken off our prosperity, and demand that in no case shall our Government seek to continue a paternal scheme for the continuation of a national interest-bearing debt, represented by untaxed bonds, as a refuge for the idle or worse than idle capital of the privileged classes to hide their surplus wealth in when it has accumulated beyond their industry or ability to manage in legitimate and ordinary business enterprises and channels.

The question, therefore, before us is, shall we pay the debt or perpetuate it as the basis of a moneyed aristocracy and banking oligarchy?

Chinese Immigration.

SPEECH

OF

HON. JOSEPH H. BURROWS,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. BURROWS, of Missouri, said:

Mr. SPEAKER: For the first time in the history of this nation we are called upon to enact laws looking to the suppression or prevention of immigration from a particular section or country. A hundred years ago such a proposition or idea would have looked like, and have been so regarded, the very height of foolishness. Have we then, indeed, in so incredible a short space of time (in the life of a nation) become so great, our population so dense, our ability to provide for, govern, and subside so limited or nearly exhausted that, like the castaways upon some lonely island in mid-ocean, we are casting about us to discover upon what we are to subsist, or the more direful extremity, preparing to cast lots to decide who shall die first to satisfy the cravings of hunger? No, no; nothing of this kind is dreamed of, or even anticipated, by the most fertile imagination.

God, in His goodness, has been bounteous to America and Americans, locking up in her fertile hills and rich valleys and enriching the alluvial soil of her broad and almost boundless prairies, filling the very bowels of the earth with coal, iron, and the precious metals, uplifting her forests and laying her rivers from zone to zone, giving us as a nation a far greater variety of soil, products, and climate than that enjoyed by any other nation under the sun. All this we feel and fully enjoy, and this day we are entitled to the proud distinction of being the granary of the world. No other nation, old or young, has a greater surplus for exportation of the substantial or necessities of life than the United States of America, and still, with all this, our capabilities and possibilities are scarcely conceived of and nowhere realized. We have but just rounded to, after our first centennial voyage, while England, France, Spain, and I believe others of our European rivals are more than a thousand years old; the magnitude of our own greatness but just begins to dawn upon us. The application of steam and electricity are working wonders when supported by our wonderful and unsurpassed natural advantages. We are amazed at the rapidity with which we move and with which we pass and have passed nations of the Old World that had grown to manhood ere we were born. In the midst of this grand career we ask ourselves the question, Shall any be prohibited from leaving the land of bondage and oppression to find a home in the land of freedom and liberty? Shall we put up barriers and restrictions so that those who can and would come shall not be permitted?

Once it was said "America, proud, happy, thrice happy America,

the home of the oppressed and the asylum of the emigrant, where the citizen of every clime and the child of every creed may roam free and untrammelled as the wild winds of heaven—cold must be the heart that thrills not at the name of America." So say we all; and this day and forever we stretch out our arms to the nations of earth and we invite them to come and find a home and become citizens among us. But here the curtain falls, the scene changes, and we are compelled to present the opposite side of the picture. This unbounded generosity and cosmopolitan liberality upon our part toward the world is rejected by a certain nation and people. Old, it is very true, as a nation but great only in the magnitude of her domain and the number of her subjects. I refer of course to China and to the vast millions of her inhabitants. She furnishes less of our foreign population in proportion to her numbers than any other nation on the globe with whom we trade and do business, and of the one hundred and odd thousand who are here now none, comparatively speaking, become citizens. They do not come here for that purpose. They have no sympathy with our civilization or Government.

The Government of China is imperial in form and practice, corrupt and despotic; the chasm between the rulers and the common people is deep, dark, and wide; the rich are very rich, the poor are in the most debased, dejected, and pinching poverty; and this condition of things has been unchanged for centuries. To the majority life is an unchanged agony, and men and women are sold as chattels and become slaves for life, and no escape except by death. And the price paid is so small as to give no appreciation of human life, and these poor, miserable creatures are often beaten to death for trivial offenses. Infants are left exposed and die from starvation, and no punishment follows. The history of China is sickening and revolting, and it would be but reasonable to suppose that of all people upon the face of the earth, these would be the ones most likely to appreciate the blessings of freedom and liberty, and that when these cruel manacles of slavery were broken they would bound into a new life and at once begin a new career of rapid and progressive development. But what are the facts? History attests that wherever the Chinese have gone they have taken their habits, methods, and civilization with them, and history does not record an exception to this rule. They seem to be as changeless and unalterably fixed as the laws of the Medes and Persians. What a striking contrast to the millions that come to our shores from all other parts of the civilized world, who soon adopt our modes and manners of life, keep step to our new civilization, and are soon absorbed in the mass of humanity with which they are surrounded.

The Chinese alone are an exception. American life and influences are powerless to move or change this peculiar race, who seem to be cast in the form, feature, habit, manners, and costume of their ancestral fathers before them. Thus materially fixed they come here not as freemen, but as serfs or slaves, live and die, and their bones are sent back to their native country. That they are a disturbing element in society all parties, sects, and creeds on the Pacific slope attest. There is no politics in this question. The high-toned Republican and Democrat occupy a common platform beside the "sand-lotter" and labor reformer. As a proof of this, let us take the election returns for 1879 upon this separate proposition of Chinese immigration for California and Nevada, and we find 161,897 voting to restrict, or against, and 1,066 in favor. These 163,000 voters represent nearly 900,000 inhabitants who, for more than a fourth of a century, have beheld the workings and effect of coolie importation; and what question that is to add to or take from their wealth, prosperity, and progressive development is possible or probable to receive so unanimous a verdict? I confess my mind is unable to frame or even conjecture such an issue.

The States east of the Rocky Mountains are in no condition to enter into and fully approximate the evil resulting from the importation of these Mongolian slaves, but the people of California, Nevada, and a few special localities, who have been brought face to face with the workings of this system, are surely more competent to sit in judgment and give us their verdict as to the result, both present and prospective, for it is only by the past and present that we may forecast the future. If, therefore, the experience of California, Nevada, and other communities where these heterogeneous people have lived and now live, has proven very unsatisfactory and with no prospect of improvement, had we not best be guided by their experience, and, taking "time by the forelock," pluck up this evil before it becomes more formidable and difficult to control.

Mr. Speaker, the gentleman from Kentucky, in his able and comprehensive speech yesterday, in alluding to the platforms of the political parties of this country, was kind enough to mention and place in the proper attitude the declaration of the Greenback Labor party upon the Chinese labor problem; and not only upon this particular phase of the labor question has the National party published its faith to the world, but upon this vital issue in its broadest and most general sense, and I will take the liberty to incorporate in my remarks the preamble to the platform of the National Greenback Labor party, adopted at Chicago in 1880, and the third and fourth resolutions of the same:

Platform adopted by the National Greenback Labor convention at Chicago.
Civil government should guarantee the divine right of every laborer to the results of his toil, thus enabling the producers of wealth to provide themselves with the

means for physical comfort and the facilities for mental, social, and moral culture; and we condemn as unworthy of our civilization the barbarism which imposes upon the wealth-producers a state of perpetual drudgery as the price of bare animal existence. Notwithstanding the enormous increase of productive power, the universal introduction of labor-saving machinery, and the discovery of new agents for the increase of wealth, the task of the laborer is scarcely lightened, the hours of toil are but little shortened, and few producers are lifted from poverty into comfort and pecuniary independence. The associated monopolies, the international syndicates, and other income classes demand dear money and cheap labor; a "strong government," and hence a weak people.

3. That labor should be so protected by national and State authority as to equalize its burdens and to insure a just distribution of its results. The eight-hour law of Congress should be enforced, the sanitary condition of industrial establishments placed under rigid control, the competition of convict contract labor abolished, a bureau of labor statistics established, factories, mines, and workshops inspected, the employment of children under fourteen years of age forbidden, and wages paid in cash.

4. Slavery being simply cheap labor, and cheap labor being simply slavery, the importation and presence of Chinese serfs necessarily tends to brutalize and degrade American labor; therefore immediate steps should be taken to abrogate the Burlingame treaty.

Mr. Speaker, there is no ambiguity in these resolutions, no uncertain sound; each resolution is a full, clear-cut declaration. As a party, one of the cardinal principles and pillars of support is the protection of labor. We believe with the great and good Lincoln, "that labor being prior to is superior to capital, as capital could not have existed without it." Labor should be encouraged, ennobled, protected, and justly rewarded. The individual who by the sweat of his face earns his bread should be regarded as one of nature's noblemen, and but obeying the divine command. We, as a nation, cannot be said to promote and encourage this labor when we permit Chinese labor-slaves to be imported and introduced into this Republic and sold by their masters as they now are. We should not permit the exportation of felons, professional beggars, stolen children, vagrants—the very dregs and wrecks of despotism from Asiatic or European countries—and thus bring their debased humanity and cast them upon us, and thereby relieving their decaying society from a terrible influence and at the same time infest ours with the same.

This has gone on too long already, and we are beginning to reap the results—disorder, strikes, riot, and bloodshed—requiring a large increase in the police force, caused by an unhealthy, feverish excitement keeping the large cities and towns on the Pacific slope ripe for riot at all times, and especially when business enterprise and improvement are restricted and crippled by stringency in financial depression, shortage in crops, or any of the many causes that are liable to sweep over a country from time to time.

Mr. Speaker, I would not prohibit the immigration of Chinese solely on the ground of their failure to adopt our manners and customs and of entering into our new civilization, nor yet for the simplicity and frugality of their manner of living. If chop-sticks, with a little rice and tea and a pipe of opium, will satisfy the demands of his being, I should not object. But, Mr. Speaker, after he enjoys, or could enjoy, all that we enjoy, he refuses to renounce his allegiance to the mother country, and when war or invasion comes upon us they sink behind their foreign allegiance and would see our country dismembered and destroyed ere they would strike a blow. They come to enjoy the fruit and benefits of good government, but not to help make it, improve it, or preserve it. I shall therefore vote for the bill.

Public Building at Louisville, Kentucky.

SPEECH OF

HON. ALBERT S. WILLIS,

OF KENTUCKY.

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 24, 1882,

On the bill (H. R. No. 521) for the construction of a public building at Louisville, Kentucky.

Mr. WILLIS said:

Mr. SPEAKER: During the present Congress I introduced a bill (H. R. No. 521) calling for the construction of a building at Louisville, Kentucky, commensurate with the needs of its public business. The Committee on Public Buildings and Grounds have unanimously reported back and recommended the passage of a substitute for the bill, (H. R. No. 3846,) which is now upon the Calendar, to be voted upon when reached. A similar bill for a larger amount received the approbation of the committee in the last Congress, but under our system of rules, which seem to have been framed to prevent rather than to secure legislation, it never came to a vote. In support of that bill I presented certain statements with accompanying data. Some few of the facts then stated I now, but in a revised form,

again lay before the House, so that any gentleman desiring it may have ample time and opportunity for investigating their truth and applicability.

WHAT FACTS SHALL CONTROL THE CONSTRUCTION OF PUBLIC BUILDINGS.

To determine the location, the value, and the character of the public buildings in the United States involves a most delicate and difficult duty. Appreciating this, the Committee on Public Buildings and Grounds of the last Congress required a statement in writing "showing the amount of revenue received from all sources whatever, the post-office statistics, business of the United States courts, internal-revenue receipts, &c., at the city or town where the public building was proposed to be erected."

The committee evidently thought that by ascertaining the amount of internal revenue, the amount of postal receipts, and the amount of receipts from customs, the total amount of public business transacted at any point would be approximately known, and a rule thus established which would be just and uniform in its application and results. That this conclusion of the committee is correct can be demonstrated by reference to the official reports of the Government.

SOURCES OF GOVERNMENT REVENUE.

From the last annual report of the Secretary of the Treasury it appears that the ordinary revenues of the United States from all sources for the fiscal year ended June 30, 1881, were \$360,782,292. The whole of this, except \$27,358,231, is made up of two items, to wit, customs, from which the receipts during the last year were \$198,159,676, and internal revenue, from which the receipts were \$135,264,385. In other words, from these two sources of customs and internal revenue there was collected last year the sum of \$333,424,061, which is eleven-twelfths of all the receipts that are paid to the Government at the various cities where buildings are owned or rented for public use. Therefore, by ascertaining the amount paid into the Treasury from these two sources we have a criterion, so far as receipts of money are concerned, for the establishment of public buildings.

Another and very important branch of the public service which involves much business and whose gross receipts are quite large is the Post-Office Department. As its expenses are greater than its receipts, it yields no revenue and is not included in the report of the Secretary of the Treasury. These three sources—internal revenue, postal receipts, and customs dues—when aggregated show the amount of public business at any given point, and furnish the principal if not the only rule for determining the necessity and character of its public buildings. Of course there are exceptional features in the claims of some cities, such as the existence of a United States court, pension agency, &c. But after careful review of the subject, I submit that the rule just stated is a fair and just one when applied to the whole country. Desiring, therefore, to obtain this information, I sent letters to the heads of Departments having control of these subjects, and obtained answers, of which the following will serve as an illustration:

OFFICE OF THE AUDITOR OF THE TREASURY FOR THE POST-OFFICE DEPARTMENT. Washington, January 25, 1882.

SIR: In compliance with your request of the 19th instant, referred to this office by the honorable First Assistant Postmaster-General, I have the honor to transmit a statement of the gross receipts at certain post-offices named by you for the fiscal year ended June 30, 1881.

Very respectfully,

J. H. ELA, Auditor.

Hon. ALBERT S. WILLIS, House of Representatives.

Similar answers from the Secretary of the Treasury and from the Commissioner of Internal Revenue were received.

The official data thus furnished show the amount of internal revenue, the postal receipts, and customs dues paid at the city of Louisville, to which the bill I have introduced refers. In addition to this I have prepared a tabular statement of all the cities in the United States where public buildings are located. This table, which I append, gives first the population of these cities, as shown by the census of 1880. The second column of the table gives the amount of public business. The "amount" is made up of three items, internal revenue, postal, and customs receipts, thus:

New York:	
Internal revenue.....	\$9,135,201
Postal.....	3,791,446
Customs.....	138,908,562
Total.....	151,835,209

In the same way the total amount of public business at each city, as given in this column, has been ascertained. The third column of the table is taken from the Supervising Architect's report for 1881, and shows the total value of public buildings now at those points. The amounts given exhibit the total cost of work, including alterations and repairs and cost of site, together with appropriations, to June 30, 1881. The value of only those buildings are given which are common to all cities; any other estimate would be unfair. The fourth column of the table shows what the city of Louisville would be entitled to if Congress gave to it public buildings in the same ratio to the amount of its public business as has been allowed to other cities in the Union.

Comparative table.

Cities.	Population.	Amount of the yearly public business.	Value public buildings, &c., to date.	Ratio expended.
New York.....	1,206,590	\$151,835,210	\$10,846,311	\$268,361
Boston.....	362,535	23,928,848	6,499,550	1,020,247
Philadelphia.....	846,984	15,096,675	5,512,816	1,371,532
Chicago.....	503,304	13,950,077	6,223,431	1,682,756
Cincinnati.....	255,708	13,691,039	4,789,860	1,078,977
San Francisco.....	233,956	10,040,284	1,688,978	631,818
Saint Louis.....	350,522	7,407,671	5,514,853	2,796,187
Baltimore.....	332,190	5,791,287	1,707,591	1,107,464
Newark, N. J.....	135,400	4,376,438	185,216	158,864
Louisville, Ky.....	123,645	3,755,900	375,061

ANALYSIS OF THE ABOVE TABLE.

The tabular statement just given, comprising one hundred and four cities, includes all the places reported by the Supervising Architect where the Government owns custom-houses or post-offices. An analysis of the facts presented by it discloses some unique and interesting results. The names of the cities are ranged in order according to amount of public business annually transacted. New York stands first, and Louisville is ninth in the list. Nineteen of the one hundred and four cities, it will be seen, do a public business which, as compared with Louisville, would give that city buildings valued at between one and two millions of dollars, or averaging the amount it would be \$1,388,805. Seven, Saint Louis, Albany, Providence, Portsmouth, Atlanta, Wilmington, North Carolina, and Topeka have a public business which would give Louisville between two and three millions of dollars, or an average of \$2,411,553. Seven cities, Saint Paul, Utica, Des Moines, New Haven, New Bedford, Salem, and Saint Augustine, give Louisville between three and four millions, or an average of \$3,618,553. Three cities, New Orleans, Evansville, and Grand Rapids, would give Louisville between four and five millions, or an average of \$4,201,356. Five cities, Portland, (Maine,) Mobile, Little Rock, Austin, and Bath, would give it between five and six millions, or an average of \$5,531,416. Three cities, Madison, Jersey City, and Newport, would give Louisville between six and eight millions, or an average of \$6,610,911. Only eight cities of the whole list—New York, Milwaukee, Newark, Covington, Galveston, Danville, (Virginia,) Petersburg, and Newburyport—would give Louisville for public buildings, an amount less than half a million. None of these eight cities, except New York and Milwaukee, have a pension agency; the average population of five of them is less than one-seventh of that of Louisville, and in other respects, as I shall presently show, they are distinguishable.

I have thus given the status of Louisville as compared with fifty-two cities, which is one-half of the whole number where public buildings are now located. As to the remaining one-half of the list, if the public buildings of Louisville, as elsewhere, were proportioned to the amount of business done, their value would range from eight to five hundred millions of dollars! In other words, if the same ratio had been observed at Louisville as at six-sevenths of the cities in the United States, it would now have public buildings costing from one to five hundred millions of dollars, or averaging the whole list, Louisville would upon the same basis be entitled to an appropriation of over sixty-three millions of dollars!

It must be borne in mind that at a large number of the cities contained in the table the buildings are yet in process of erection, and their ultimate cost is not stated. This is the case in seven of the eight cities which precede Louisville in the list.

Can any city in the United States, Mr. Speaker, make out a stronger case than this? The mere statement of the figures is, I submit, a conclusive argument in favor of the bill which I have introduced. This statement is based upon the official data contained in the reports of the last fiscal year. Highly favorable as it is to the city whose interests I advocate I will now proceed to show that it is an

UNDERESTIMATE OF THE FACTS,

and that the total public business of Louisville, instead of being \$3,755,900, as given in the table, should be between ten and eleven millions of dollars. To this proposition I challenge attention and contradiction. The above amount of \$3,755,900 is composed of three items, namely, internal revenue, for which the receipts last year were \$3,489,672; postal receipts, \$197,196, and customs receipts, \$69,031.

The receipts from internal revenue of the Louisville district four years ago were \$4,033,377. Under the provisions of a joint resolution of Congress, approved March 28, 1878, the time during which distilled spirits entered into distillery warehouses was extended to three years. Since the passage of that law withdrawals have only been made to meet the wants of trade, and consequently a large per cent. of whisky has been left in bond, thus creating a temporary reduction of the internal revenue. The whisky which was placed in bond three years ago must now be continuously withdrawn. From this time forth, therefore, the amount of internal revenue in this district will be largely increased.

The records of the office of the Commissioner of Internal Revenue show an increase in the Louisville district during the present year of over 150 per cent. as compared with the corresponding months of last year. During the year ended June 30, 1880, the number of taxable gallons of spirits produced in the fifth Kentucky district (Louisville) was 4,651,090. During the year ended June 30, 1881, the number of gallons produced was 14,233,860; thus showing an increase in one year of 9,582,770 gallons. This enormous increase is owing to the increased number of new distilleries and the increased capacity of the old ones; and as this increase is permanent the internal revenue alone of the Louisville district will hereafter exceed \$10,000,000 per annum.

But, Mr. Speaker, it may be asked, does not the law affect all districts alike, and has not this increase been general? Most certainly not; and the explanation is at hand. The distilleries of the Louisville district manufacture fine whiskies, which need age to make them valuable. Outside of Kentucky the products of the distilleries are generally ready for the market at once. An examination of the last report of the Commissioner of Internal Revenue will illustrate and confirm this statement. On page 90 of the report is a table

showing by districts "the quantity in taxable gallons of spirits in warehouse June 30, 1881." From this it appears that outside of the State of Kentucky the aggregate number of gallons in bond at that time was 22,734,894. The total number of gallons, including Kentucky, was 64,648,111, which were distributed among the different districts in very unequal quantities.

In forty-three districts, being over one-third of the whole number, there were no spirits in warehouse at the end of the fiscal year, and consequently they are not represented in the Commissioner's statement. Of the remaining eighty-one districts, two—the twenty-second Pennsylvania (Pittsburgh) and the third Maryland (Baltimore)—had in bond between three and four million gallons. In only five was the number of gallons between one and two millions. In sixty-one of the eighty-one districts enumerated by the Commissioner—i. e., in more than three-fourths of all—the number of gallons was under a quarter of a million. The State of Kentucky had in bond \$41,913,217, or about two-thirds of the whole. The number of gallons in the Louisville district is stated at 19,909,031, which, deducting the Pittsburgh district, is more than all the other districts in the United States outside of Kentucky combined. The Louisville district is, therefore, exceptional. At ninety cents per gallon the amount of tax thus ready to be paid from that district on the 30th of June last was \$17,918,127. The estimate, therefore, of \$10,000,000 per annum from receipts of internal revenue is within the official statements.

A comparative idea of the amount which was actually collected last year from the Louisville district from this source may be formed when it is known that the States of Alabama, Arkansas, Colorado, Florida, Georgia, Kansas, Minnesota, Maine, New Hampshire, Vermont, Rhode Island, Mississippi, Nevada, Oregon, South Carolina, and Texas, and the Territories of Arizona, Dakota, Idaho, Montana, New Mexico, Utah, Washington, and Wyoming paid last year the aggregate amount of \$3,374,151, which is \$115,521 less than that district paid; in other words, this single district at Louisville had more public business in this direction than sixteen States and all the Territories of the Union combined. The aggregate receipts from the State of Kentucky for the same time were \$8,717,162.

The receipts from Kentucky for the last nineteen years from internal revenue amount to \$126,287,949. Of this immense sum, the Louisville district, formed by the consolidation of the fourth and fifth districts, paid \$49,893,085. Of the one hundred and twenty-six collectors' offices in the United States, the Louisville office, even upon present receipts, ranks seventh in importance, paying one-thirty-sixth of the total amount of internal revenue collected.

THE LARGEST MARKET FOR TOBACCO AND FINE WHISKIES IN THE WORLD.

An examination of the report of the Commissioner of Internal Revenue will show that the proportion of the enormous revenue business of Kentucky which is transacted at Louisville, always great, and now nearly one-half of the whole amount, has been steadily on the increase. Nor is this surprising to any one familiar with the facts. On the 8th of January, 1876, the fourth internal revenue district, composed of fourteen counties, was consolidated with the fifth district. Louisville thus became the commercial center of the largest whisky-producing district in the State. The counties of Nelson, Owen, Bullitt, La Rue, Marion, Washington, and Anderson, which are included in this district, have for half a century been noted for the manufacture of fine whiskies. The product of more than one-half of the State of Kentucky comes to Louisville, thus making it the first market in the United States, if not in the world, for this class of goods. This concentration of trade has given increased activity to the business. The statement is equally true as to the manufacture of beer, both common and lager. The storage capacity of nearly all the lager-beer breweries has been increased, some 50 per cent., some 75 per cent., and two of the largest more than double that of 1878.

As to another chief source of internal revenue, tobacco, it is well known that Louisville holds precedence over all other markets. It is, indeed, the largest and best leaf-tobacco market in the world, and is a center where the whole buying interest both of Europe and America is represented. A comparison with Cincinnati, Saint Louis, Clarksville, and Nashville—the four great tobacco markets of the world—will show the advantage which Louisville has. The total number of hogsheads received at these cities during the six years from 1873 to 1879, inclusive, are given in the first column, which I read, and the sales in the second:

Cities.	Receipts.	Sales.
Louisville	311,943	345,585
Cincinnati	197,817	194,565
Saint Louis	97,377	76,059
Clarksville	83,531	81,065
Nashville	33,449	29,209

It will thus be seen that the business of Louisville during these six years was ten times greater than Nashville, five times greater than Clarksville, four times that of Saint Louis, and one and one-half times that of Cincinnati. A brief glance at the statistical history of the Louisville tobacco market presents a remarkable example of rapid expansion. In the ten years ending with 1861, the sales amounted to 161,289 hogsheads, an average of 16,128 per annum; in

the ten years ending with 1871, the sales amounted to 399,407 hogsheads, an average of 39,940 per annum; and in the ten years ending with 1881, the sales amounted to 571,949 hogsheads, averaging 57,195 per annum. The average of the last ten years shows a gain of 255 per cent. as compared with the decade ending with 1861. The sales in 1881 amount to 67,408 hogsheads—more than 10,000 hogsheads greater than the average of the ten years ending with 1881—a gain of more than 20 per cent. The sales in 1881 exceed the average of the decade ending with 1871 by 72 per cent., and the average of the decade ending with 1861 by 320 per cent. What city in the Union can present a parallel to this rapid progress in any staple department of trade?

This immense and yearly increasing trade in leaf-tobacco has had its influence in stimulating the manufacturing interests. New factories have been established every year, and old firms have enlarged their capital and capacity, so that the revenue from this source has been, and will continue, steadily on the increase.

CUSTOMS AND POSTAL RECEIPTS.

The rapid increase of customs duties may be seen from the following statement, covering a period of four years:

Amount of duties collected during year 1878.....	\$36,651
Amount of duties collected during year 1879.....	44,034
Amount of duties collected during year 1880.....	58,788
Amount of duties collected during year 1881.....	75,053

It will be observed that the increase of business has been more than 100 per cent., and the detailed statement of the surveyor of the port, which I have before me, shows that this increase has not been spasmodic, but gradual, extending to almost every month throughout the entire four years. The transportation of foreign goods to inland ports without appraisement is destined, as that officer in a letter setting forth the insufficiency of his accommodations pertinently suggests, to revolutionize the methods of collecting revenue in the United States, and the extension of the system renders it necessary for the Government to materially enlarge her interior custom-houses, as the examination and appraisement of imported goods are now performed at the interior ports instead of at the seaboard.

Next in importance to customs and internal revenue is the postal business. The total receipts for the whole country from this source during the fiscal year ended June 30, 1881, were \$36,785,397. Of this amount the Louisville office paid \$197,196. Of the fifty thousand post-offices in the United States, New York ranks the first both in point of receipts and in amount of business, while Louisville is the thirteenth city in the amount of business and the sixteenth in receipts.

Of the one hundred and nine free-delivery offices in the United States as enumerated in the last report of the Auditor of the Treasury for the Post-Office Department, eighty-two of them do not return one-half as much, and sixty-seven of them do not return one-third as much receipts as the Louisville office, and yet in all of them, as shown by the preceding table, the buildings in which their business is transacted are, upon an average, fifty times larger and more expensive than the one in Louisville. The amount and character of business in this branch of the service at Louisville may be further realized from the following statement showing the amount of business during the year ended December 31, 1881:

General account.

	1880.	1881.	Increase.
Receipts.....	\$188,040 15	\$209,903 81	\$21,863 66
Expenses.....	60,916 94	62,092 68	
Net income.....	127,123 26	147,811 13	

MONEY-ORDER DIVISION—1881.

To 7,306 deposits received from postmasters.....	\$896,273 28

Postal cards.....	1,050,947
Papers, &c.....	566,773

Total pieces collected..... 4,354,689

Thirty-two carriers and four substitute carriers employed.

PENSION BUSINESS AT LOUISVILLE.

Another and very important branch of the public service at Louisville, which has not been considered in the tabular estimate of the public business, and which is daily increasing, is that of pensions. The pension list of the United States on the 30th of June last amounted to 268,830 persons. The aggregate amount paid last year for pensions was \$49,723,147, and for arrears of pensions \$678,685, making a grand total of \$50,626,538. This enormous business was formerly transacted by fifty-eight officers, but on the 7th of May, 1877, an order was issued by the President reducing the number of agencies to eighteen, the consolidation to take effect July 1, 1877. Subsequent to this the number of agencies was reduced to seventeen. One of these seventeen offices is at Louisville. Of the nine cities which exceed Louisville in the aggregate amount of their public business, Cincinnati, Baltimore, and Newark have no offices. The cities in the table which have pension agencies are New York, Boston, Philadelphia, Chicago, San Francisco, Saint Louis, Des Moines, Detroit, Indianapolis, Knoxville, Milwaukee, Pittsburgh, and Syracuse. The remaining four offices, Washington, Canandaigua, Columbus, and Concord, are not in the tabular list, as their business is transacted in rented offices. The amount of business at Louisville from this source for the year ending December 31, 1881, may be seen from the following statement:

	No. of pay-ments.	Amount.
Army pensions.....	23,468	\$1,031,230 56
Examining surgeons—Army.....	161	3,661 00
Navy pensions.....	80	5,013 93
Examining surgeons—Navy.....	5	11 00
Army arrears.....	17	7,822 36
Total.....	23,731	1,047,738 85

Deducting the payment for "arrears" the regular business of that office last year was \$1,039,916, an amount which for many years will be increasing. In making the tabular estimate of the amount of public business, this important element was omitted, because it entered into only a small portion of the whole number, there being, as we have just seen, only twelve other cities on the list which have such public business.

SUMMARY.

The aggregate amount of public business attended to in Louisville during the past year, ending December 31, 1881, is therefore as follows:

Internal revenue.....	\$4,165,300
Customs.....	75,053
Post office.....	292,906
Annual pension business.....	1,039,916
Total.....	5,490,181

But, as we have seen, the amount of internal revenue from this time forth in that district will, at the lowest estimate, be 250 per cent. greater than it has been for two years past. In other words, the amount of whisky now annually produced will yield a tax of \$10,000,000. Adding this to the above, we find the ordinary annual public business of that city to be over eleven million dollars. All the estimates in the table which I have given exclude the pension business, and also exclude this per cent. of internal revenue which has been, under the law, retained in the warehouses. If these are included—and that they should be no one can justly deny—the public business of Louisville will be, as just stated, \$11,490,181, instead of \$3,755,900, or over three times as great; the "ratio expended" in the fourth column of the "comparative table" should be multiplied by three and the average value of her public buildings, as compared with all the other cities in the United States would be over one hundred and fifty million dollars.

UTTER INADEQUACY OF ACCOMMODATIONS.

To accommodate her immense business there is only one public building at Louisville, which was built in the year 1851, at a cost of \$246,640. This one structure is made to serve the purposes of all the various governmental offices of the district. Constructed originally according to a plan which prevented the utilization of more than one-half of the space, the building at this time, aside from its dilapidated and insecure condition, does not and cannot be made to afford half the proper facilities for the transaction of public business. The lower floor, which is used for post-office and appraiser's office, is, as the report of the committee shows, badly arranged and entirely too contracted for the proper dispatch of a large and steadily increasing business. The first floor is also used as a storehouse for imported goods, and bales and boxes constantly blockade the entrance hall leading to the other two floors. The second floor is crowded with the surveyor's office, the collector of internal revenue, the pension agency, steamboat inspectors, and railway mail service. The third floor is occupied by the United States court-room, grand and petit jury rooms, United States marshal's office, library, assistant United States district attorney's office, judges' private chambers, and United States district and circuit clerks' offices. The United States court-room, thus located on the third floor, is difficult of access, inconveniently arranged, noisy, contracted, devoid of suitable accommodations, and utterly unfit for the large and growing business of the

courts. For years these court-rooms have been thronged with crowds of officials, attorneys, prisoners, witnesses, and other attendants at trials of Kuklux, "moonshine" distillers, and other violators of the law.

The officials in the building justly complain of the great annoyance of these attendants on the courts, as they lounge and swarm through the corridors; and the confusion of these crowds ascending and descending four long flights of iron stairs is not only a serious interruption to court proceedings, but to all other public business. Ladies must come daily and hourly for mail matter, to look after pension claims, &c., and grievously complain of the rude annoyances of these crowds, who are usually very rough, noisy, and intrusive. Not a single officer of the Government has sufficient room or facilities for the discharge of his duties. The district attorney has been compelled to rent an office in another building. The clerks of the district and circuit courts are so crowded that they find it utterly impossible to make a systematic arrangement of their books and documents. Under the bankrupt act the titles to millions of dollars have passed, and the records and proceedings establishing them are in such confusion that it is the work of days for an attorney to find and examine them.

Only a short while ago a prominent member of the Louisville bar informed me that he was thus engaged ten days when half an hour should have sufficed. Two thousand records of these courts have been, from want of space, removed to another place. For the same reason the records of both courts are kept in one room. When both district and circuit courts are in session one of the judges is compelled to use the library, which is entirely unsuited to such a purpose. The marshal and his deputies, who are also on the third floor, have equally cramped and insufficient offices. On the second floor the surveyor of customs has a small room, about fifteen by eighteen feet, in which to make his examination of goods. The basement and cellar, which he uses for store-rooms, are inadequate and unsuited for the purpose. The collector of internal revenue, who is located on this floor, has no rooms which answer the necessities of his office. From a letter of Colonel James F. Buckner, for twelve years collector of that district, I read the following extract:

On the 8th of January, 1876, the fourth district internal revenue, composed of fourteen counties, was consolidated with this fifth, and all the records and papers of both districts are now crowded into this office, except about fifty large boxes stored in the cellar for want of other room for them. You will see from the above that the space occupied by the collector and ten clerks, crowded into two rooms, (separated from each other,) with the necessary desks, presses for papers, &c., is entirely too small. The space allotted to the cashier, who receives daily large sums of money, is in the midst of all. The space occupied by the taxpayers, who assemble in crowds on certain occasions, is cramped and uncomfortable, and does not afford the proper convenience for the prompt transaction of business, and is the cause of much delay and confusion.

Furthermore, for want of room and other conveniences, the records, books, and other public property connected with this office are necessarily exposed and unsafe. The whole building is now crowded, too small, and unsuited to the purpose for which it is principally used. Its interior structure is made of very combustible material; it is filled with combustible matter, and liable to take fire at any moment, in which case heavy loss will fall on the Government. I cannot too strongly urge the propriety of erecting a new and large building entirely fire-proof.

The importance of having a building not only large enough but fire-proof for the protection of public property will be readily seen from this statement and the facts which it suggests. The average value of spirits, tobacco, beer, and proprietary stamps that the collector of such an office is required to keep on hand is over \$250,000. To this is to be added the special-tax stamps, received annually in April and held for several months, which amount to a still larger sum. In this one branch of the public service over half a million dollars of property could be destroyed in a single hour. The court and other official records connected with the post-office, &c., cannot be estimated in money.

The want of suitable accommodations for the postal service I have already incidentally alluded to, but an extract from a letter written by Mr. E. S. Tuley, assistant postmaster, will more fully and clearly present the facts:

Great need exists for increased accommodations for the business of this office. While it is possible for our present condition to be improved by alteration of the present building, it never can be properly arranged for permanent occupancy as a post-office. The large entrance-hall running through the center of the building causes the business of the office to be divided into three different apartments, by reason of which great delay occurs in transacting business.

A post-office should, as far as possible, occupy one room; then the mails can be handled with much greater facility, and, what is essential in this business, the employees can be kept under the immediate supervision of the postmaster and assistants. Such was the original purpose on the part of the Government concerning this office, which was originally intended to occupy that portion of the building lying east of the hall. But before the building was completed it was found necessary that the post-office should occupy the whole ground floor, except that portion used as an entrance hall. That was in 1857, at which time but eighteen persons were employed in the office, and, but one railroad being then completed, but three mail-route agents reported at the office. There was then no money-order business and no letter-carrier service.

I shall ask to print with these remarks the letter of Colonel Buckner, from which I have read an extract, a second letter from Mr. Tuley, and also letters from Colonel T. O. Shackelford, surveyor of the port; Colonel R. H. Crittenden, United States marshal; Colonel B. O. Carr, supervising inspector of steam-vessels; Colonel R. M. Kelly, pension agent; and Captain H. B. Jenks, head clerk of the railway mail service, together with resolutions of the Legislature of Kentucky, the Board of Trade, and the common council of the city of Louisville, which relate to the same subject.

"OLD THINGS HAVE PASSED AWAY."

But, Mr. Speaker, it is not necessary to present these minute details. The time when the building at Louisville was constructed should convince any mind of its entire inadequacy to the present pressing needs of the service. It answered the purpose for which it was built in 1857, but since then the character of our public business has changed and its amount enormously increased. The briefest reference to some of the points will suffice. Then the population of Louisville was 43,194. Now it is 123,645; nearly three times as large. At that time the laws of the General Government came in contact with the citizen once where now they touch and concern him in a hundred ways. From this fact—this increase of the subject-matters as well as of the jurisdiction of the Federal courts—has come an immense increase in the number of suits and a consequent necessity for enlarged accommodations. This increase of Federal business all over the country has been at least tenfold.

Then the sales of postage-stamps and stamped envelopes amounted to \$27,000. Now the receipts from the same source are \$219,236, an increase of over 800 per cent. The sales of stamps are a fair indication of the amount of business done in a community. This is so fully recognized that the compensation of postmasters is fixed under law by a commission on the stamps sold. There was then no money-order system, no railway mail service, and no letter-carriers. Now, as per last report, there are annually 110,455 money-order transactions, amounting in value to \$2,571,760; thirty-three postal clerks, route agents, and mail-route messengers report at the Louisville office; thirty-two carriers and four substitute carriers are employed in the free delivery, who collected and delivered last year 12,582,374 pieces of mail matter. There are now 104 employés, as against 18 in the year 1857, an increase of almost sixfold in twenty-four years. How utterly insufficient the present building is for these new branches of the postal service may be realized when it is known that the only accommodations provided for these clerks, &c., with their mails and registered matter, is a space equal to about ten by twelve feet. In addition to these striking changes, which so loudly demand an increase of facilities, two of the largest and most important branches of the public business then had no existence. The amount of business transacted by these, the pension agency and internal-revenue office, last year, as we have seen, exceeded \$4,500,000, and in future years will exceed \$12,000,000.

The simple statement of these facts, supported as they are by the unanimous report of the committee, should secure for Louisville the same prompt and favorable action which the other cities of the Union have received.

RECAPITULATION.

With this view, Mr. Speaker, I have submitted to the House such considerations as seemed to me relevant to the subject. I have presented the statements of the officials representing the Government, whose position affords them the best opportunity for information, which declare that the building at Louisville, defective in its original construction, is now old, insecure, and dilapidated, the roof leaking in over twenty places, combustible and filled with combustible material, and that it is wholly unsuited for the purposes to which it is devoted. I have shown further that since that building was erected, over a quarter of a century ago, there has been an enormous increase in customs receipts, postal transactions, and Federal court business, while the free-delivery and money-order systems, railway mail services, pension disbursements, and internal-revenue collections have come into existence, and that the demand for office-room has thus been increased more than one hundred fold. I have also, by a tabular statement carefully prepared from official sources, called attention to the fact that upon last year's business as a basis, Louisville would be entitled to public buildings whose average value as compared with all other cities, would exceed \$65,000,000; or by adding the annual pension business and the revenue on whisky in bond the average would be increased to \$150,000,000.

At all other cities in the United States, Mr. Speaker, facts such as these have been given their proper weight, and the Government has constructed suitable edifices for the transaction of its business. Why should their force and legitimate result be denied in this single instance? Why should not Louisville be placed upon an equal footing with her sister cities of the Union? At Chicago, Cleveland, Saint Louis, Cincinnati, Boston, New York, Pittsburgh, Philadelphia, and numerous other points large and commodious edifices have been erected or are in course of erection. I voted for the bills in their behalf, and rejoice at their success, for I knew it was deserved.

ARCHITECTURE A SOURCE OF PATRIOTISM AND AN INDEX OF CIVILIZATION.

Such edifices, aside from their practical utility and necessity, serve wise and patriotic purposes. They are impressive and attractive evidences of the majesty of our country, speaking to the eye and hearts of our people, inspiring at once respect for its power and grateful appreciation of its beneficence. Not only do such buildings make the Government familiar to the senses and affections of the people, thus promoting their love of country, but they furnish the complement and completion of its political history. Civilization has no exponent more sensitive than architecture. It is at once its index and type. All structures, whether religious or civic, whether of pomp or necessity, are deliberate and unconscious expressions of the prevailing sentiments, the social and political condition of the people who erect

them. They are enduring monuments of the national taste, skill, and power. The buildings constructed by the ancient Romans in their provinces contributed largely to spread the area of civilization, and to diffuse ideas of order, wealth, and comfort, and to-day their ruins are the best record we have of the power and affluence, the skill, intrepidity, and fertility of genius which characterized that ancient commonwealth.

Not only does architecture inspire patriotism, cultivate taste, and advance civilization, but it may and often does exercise a conservative influence upon society. In the shifting impetuous life of this new and rapidly expanding country, our architecture should be a conservative element, possessing a permanency of structure that should provide for posterity—which should furnish resting-places in the march of American life—unmoved columns around which the tides of innovation will sweep in vain. The spirit which likes only the new should be educated by our stable architecture into loving reverence that which is old. When our feverish national life under this and kindred influences shall become more calm, when we shall have in our midst temples of justice or religion at whose shrines the affections and memories of centuries shall gather, we will have taken a grand step toward securing the perpetuity and integrity of our free institutions.

Giving due weight to these general considerations, and recognizing the fact that the buildings in the cities to which I have alluded were called for, not by a mere desire for pompous display, but to fulfill certain serious and actual requirements of the public service, I cheerfully gave them my vote, and I consider their proposed construction a tribute at once to the judicious liberality and enlightened statesmanship of this House. I have referred to them, therefore, not to condemn their claims but only by the comparison to secure justice to the city which I have the honor to represent. I appeal to the members upon this floor to investigate the facts to which I have called attention and govern themselves accordingly.

PROSPECTIVE GROWTH OF LOUISVILLE.

This appeal I make with more confidence, because the urgent necessity for prompt action which now exists will increase with every coming year. The steady growth of population and business which has marked the past career of Louisville will hereafter not only continue but be even more rapid.

Certainly, very few cities on the continent can compare with it in natural advantages and geographical position or can point with surer hope to greater possibilities in the future. With rich and exhaustless treasures of mineral wealth at her very door; with immense beds of ore producing the best qualities of iron; with boundless supplies of the finest building stone, and the two greatest coal fields of the world within her easy reach; with a climate whose salubrity and healthfulness are almost without a parallel in the world; with the necessities of life abundant in quantity and superior in quality; with a vast water-power which, if utilized, could turn the spindles and drive the machinery of the world, upon what more solid foundation than these could any city rest its hopes of prospective growth and greatness? Superadded to these advantages, however, Louisville occupies a geographical position whose commanding importance in the political and commercial future of our country can hardly be exaggerated. It is the key, the gateway to the South and Southwest. It is the center of the Ohio Valley, and also of that great Mississippi Valley of which the Ohio forms a part. The fertility, the boundless resources, the agricultural and mineral wealth, the rapidly increasing population of this part of our continent, needs only to be suggested. That it is destined to be the seat of political supremacy and commercial greatness requires no prophet's ken to foresee.

Thus centrally located with reference to these great valleys, with every part of which, as well as the whole Union, she has direct communication by her comprehensive railway system of over six thousand miles and her river navigation of over twelve thousand miles, Louisville can confidently look forward to an annual decided increase of her public business, whose demand for sufficient accommodation is already so urgent and so well founded.

Resting, then, upon these facts, I now, Mr. Speaker, submit this bill to the decision of the House, with the full reliance that it will do whatever is just and right in the premises.

The proceedings of the Board of Trade of Louisville, Kentucky, the statements of the Government officials, the resolutions of the board of common council, and petition of members of the bar are as follows:

LOUISVILLE BOARD OF TRADE, Louisville, January 9, 1882.

At the annual meeting of the Board of Trade, held January 9, 1882, the following preamble and resolutions were recommended by the committee and adopted:

RESOLUTIONS ADOPTED.

Whereas the present United States Government building, now occupied as a post-office, as the offices of the collector of internal revenue, the surveyor of customs, and the pension agent, and by the United States court and its various officers, was completed in 1858, twenty-three years since, and is at this time entirely inadequate and unsuited to the largely increased and rapidly growing business of the various departments of the general Government represented in this city, as is shown by the accompanying statements of the officers of the Government and by the comparative table of statistics herewith presented: Therefore, it is

Resolved, That the Board of Trade of the city of Louisville respectfully ask of the Senators and Representatives from Kentucky their active and united efforts to secure this, the leading commercial center of our State, such a new building as

the necessities of the Government itself require for the prompt and efficient transaction of business, ample in all its appointments and creditable to the Government and to the city.

Respectfully,

W. A. ROBINSON,
W. H. DILLINGHAM,
J. B. CASTLEMAN,
Committee.

The committee of the Board of Trade, in connection with Hon. J. M. Wright, the superintendent, addressed letters, to which the following answers were received:

[From the collector.]

UNITED STATES INTERNAL REVENUE,
COLLECTOR'S OFFICE, FIFTH DISTRICT, KENTUCKY,
Louisville, March 12, 1880.

SIR: In compliance with the request of the Louisville Board of Trade, communicated through you, I make the following statements, giving my opinion of the necessity for the erection of a new Government building in this city to meet the wants of the present large and rapidly expanding trade concentrated here.

I will confine myself to matters of internal revenue, with which I have been connected for ten years past, the collector's office being in the present custom-house building. We occupy two rooms separated from each other.

The present building is old, very much out of repair, and leaks badly, so much so that the roof must be taken off and changed, and many other changes and repairs made in order to make it fit to be occupied even temporarily. The expense of this must certainly be great. Even then the greatest evil will not be remedied. The heating arrangements and ventilation, drainage, water-closets, and sewers are contracted and imperfect, making it dangerous to the health of persons employed in the building.

The building was constructed long before the internal revenue system was inaugurated; of course no provision was made for a collector's office. The business to be conducted in it was very small then compared to what it is now.

The post-office occupies the entire first floor, and I understand is cramped and crowded for room. I see it is likewise the case with all the other offices in the building.

In the internal-revenue department, which sprang up within the last seventeen years, while the subjects of taxation have diminished in number and the rate of taxation reduced, yet the aggregate amount collected has greatly increased. Internal-revenue taxes are now confined almost exclusively to three leading articles, whisky, tobacco, and fermented liquors. The first two peculiarly the production of our section of the United States.

The manufacture of whisky in this district is now 50 per cent. greater than in any preceding year. The product of more than one-half the State of Kentucky is concentrated here. Much comes from other States paying taxes in some shape.

We have the largest leaf-tobacco market in the world, twelve warehouses making daily sales of leaf-tobacco; as a consequence the manufacture of tobacco in all its branches—plug, smoking, cigars—is now very large and rapidly growing.

The manufacture of malt liquors is at least ten times larger than what it was ten years ago. The same is true of other industries subject to the internal-revenue tax payable at this office.

On the 8th of January, 1876, the fourth district internal revenue, composed of fourteen counties, was consolidated with this, (fifth,) and all the records and papers of both districts are now crowded into this office, except about fifty large boxes, stored in the cellar for want of other room for them.

You will see from the above that the space occupied by the collector and ten clerks crowded into two rooms, (separated from each other,) with the necessary desks, presses for papers, &c., is too small. The space allotted to the cashier, who receives daily large sums of money, is in the midst of all. The space occupied by the taxpayers, who assemble in crowds on certain occasions, is cramped and uncomfortable, and does not afford the proper convenience for the prompt transaction of business, and is the cause of much delay and confusion.

Furthermore, for want of room and other conveniences the records, books, and public property connected with this office are necessarily exposed and unsafe. The whole building is now crowded, too small, and unsuited for the purposes for which it is principally used. Its interior structure is made of very combustible material; it is filled with combustible matter, and liable to take fire at any moment, in which event heavy loss will fall on the Government. I cannot too strongly urge the propriety of erecting a new and large building, entirely fire-proof. I trust that the Board of Trade will sustain our able and worthy Representative, Mr. WILKINS, in procuring the appropriation for such a building.

Respectfully,

J. F. BUCKNER, Collector.

Major I. M. WRIGHT,
Superintendent Board of Trade, Louisville.

[From the surveyor of the port.]

CUSTOM-HOUSE, LOUISVILLE, KENTUCKY,
Surveyor's Office, March 13, 1880.

SIR: In reply to your letter of the 11th instant in relation to the present condition of the custom-house and the additional facilities needed for the transaction of the public business, as custodian of the building I would state that the accommodations afforded the various offices are by no means adequate to meet the growing importance of Louisville, which is really the gateway for the commerce of the South. The increase of business activity throughout this region calls for a corresponding increase in all the appliances of the National Government.

This building was built about twenty-five years ago, and is ill adapted to meet the present necessities of the public service. The internal arrangements are such as to preclude any economical use of the space assigned to the several officers. For example, in consequence of an entire change in the method of distributing the mails in the post-office a large force of letter-carriers and route agents (officers unknown to the service at the time the building was constructed) have now to be provided with accommodations in the building. This is due to modern methods of doing business, and is additional to the immense increase of the service incident to the growth of the country. Again, since that time, the Internal Revenue Department has been organized, with its multitude of subordinate officers, requiring additional room for the transaction of the business of the collector's office, and for the safe-keeping of innumerable official papers. So, also, the business connected with the United States courts has quite outgrown the dimensions it had twenty-five years ago. The entire third story, which has been assigned to these courts and their officers, has been found to be unfit for this service both as to convenience and amount of space. Formerly, all foreign goods were appraised at the original port of entry, but now the surveyor of customs is charged with the duty of weighing, gauging, examining, and appraising all goods consigned to this port. All this requires additional working space and better facilities for transacting the business.

To meet the exigencies of the public service the custodian has had to resort to many expedients to accommodate the several officers. The appraiser's store has had to be put in a room properly belonging to the post-office; the railway mail service has had to be assigned to a room belonging to the steamboat inspectors;

the special agent of the Post-Office has been quartered in the surveyor's office, and the special agent of the Internal Revenue in the grand-jury room, while the United States district attorney has had to find quarters outside of the building.

For these reasons I think that an appropriation for a new building might well be made.

T. O. SHACKELFORD,
Surveyor and Custodian.

I. M. WRIGHT, Secretary Board of Trade.

[From the postmaster.]

LOUISVILLE, KENTUCKY, January 4.

DEAR SIR: I am in receipt of your inquiry as to whether or not, in my opinion, a new custom-house and post-office is needed at this place.

In reply, I have to inform you that a new building should be erected as soon as practicable. The present building was first occupied in the autumn of the year 1858, at which time it was found necessary for the whole ground-floor (except the hall entrance to upstairs rooms) to be devoted to the business of the post-office, instead of one-half the ground floor, as was originally intended by the Treasury Department, to which the building properly belongs. As evidence of the increase of postal business since our first occupancy of the building, (twenty-three years ago,) it is only necessary for me to refer to the records ten years back. During the year 1871 the stamp sales of this office were \$115,121.65, whereas in the year 1881 they were \$219,236.22, showing an increase of \$104,114.40, amounting to almost double the sales of ten years ago. The net proceeds of the office in favor of the Government for the year 1871 were \$65,668, whereas the net proceeds for 1881 were \$152,466—an increase of \$86,798. The clerical force is now more than three times as great as it was when the building was first occupied. Moreover, thirty-three postal clerks and route agents now report at this office, whereas but six route agents alone reported twenty-three years ago. I might cite other evidence toward sustaining my opinion as to the need existing for the erection of a new building, but think it unnecessary to say more, save to mention the fact that we are now so cramped for room that the Supervising Architect is now maturing plans for making such alterations in our present quarters as will meet our present needs.

Very respectfully,

E. S. TULEY,
Assistant Postmaster.

WILLIAM A. ROBINSON, Esq.,
Chairman Board of Trade Committee, Louisville, Kentucky.

[From the pension agent.]

LOUISVILLE, KENTUCKY, January 12, 1882.

DEAR SIR: Having been asked for my opinion as to the necessity for a new Government building in Louisville, and as to the adequacy of the present custom-house for the needs of the public business and the convenience of the public, I have no hesitation in saying that the present building is not only too small for the convenient transaction of the business to be done in it, but is so designed that no amount of change or repair can make it sufficient or convenient. The public business, as well as the convenience of the citizens, is constantly suffering in a greater or less degree from the crowded condition and bad arrangement of the present custom-house.

Very respectfully,

R. M. KELLY.

W. A. ROBINSON, Esq.,
Vice-President Louisville Board of Trade.

[From the supervising inspector.]

OFFICE OF UNITED STATES SUPERVISING INSPECTOR OF STEAM-VESSELS,
Louisville, March 12, 1880.

MY DEAR SIR: Replying to yours of the 11th instant, asking my opinion as to the necessity for a new Government building in this city, would say: The present custom-house is not near large enough to accommodate the requirements of the public business, and belongs to a style of architecture (long out of use) which will not allow the utilization, for business purposes, of half the space it occupies. In fact, the Post-Office Department needs at this time the whole of the first and second floors. The public buildings at Memphis and Nashville, Tennessee, at Evansville, Indiana, and Cairo, Illinois, all ports in my district, either completed or now in process of construction, although intended for cities less than one-fourth the size of Louisville, have now available room, are much superior to our building, and are planned and constructed with a wise forethought for the future needs of the public business incident to increasing population and importance.

This building was erected before the war, when the population of Louisville was scarcely one-third what it now is, and when the most far-seeing legislator had not comprehended the great growth of public as well as private business already realized.

It is a matter of surprise to strangers visiting us that the people of Kentucky have been so long satisfied with the present building, while in cities of less importance all over the country the Government has erected, or is erecting, commodious and elegant buildings for the transaction of the public business.

I am, sir, very truly, &c., your obedient servant,

B. O. CARR,
Supervising Inspector Steam-Vessels.

Major I. M. WRIGHT,
Board of Trade Rooms, Louisville, Kentucky.

RAILWAY MAIL SERVICE,
Louisville, Kentucky, March 16, 1880.

The following was received at the Board of Trade this morning:

No branch of the public service is so badly off for suitable quarters as the railway mail service. The importance of this arm of the postal service has scarcely been recognized anywhere until within a few years, and in this respect Louisville has been no exception to the rule. In 1874 an office of this service was established here, but owing to the crowded condition of the Government building suitable quarters have never been obtained. Thirty-five postal clerks, route agents, and mail-route messengers report at this office, and for the purpose of transacting the business for which they are employed, as well as to provide suitable quarters for those men who arrive from and depart on their trips at all hours of the day and night, much more room is required than can be furnished without a radical change in the interior plan of the present building.

Very respectfully,

H. B. JENKS,
C. H. C., Railway Mail Service.

[From the marshal.]

LOUISVILLE, March 12, 1880.

SIR: In reply to your inquiry as to the suitability and sufficiency of the accommodations of the United States district and circuit courts in the United States building now occupied by them, I will state that they are insufficient, unsuitable, and in every way unworthy of the court and the Government.

With respect,

R. H. CRITTENDEN,
United States Marshal.

Hon. I. M. WRIGHT,
Superintendent Board of Trade, Louisville, Kentucky.

In addition to this action on the part of the Board of Trade, the citizens of Louisville have spoken, through the municipal government, by petition of the members of the bar, and by joint resolution of the General Assembly of the State.

RESOLUTION OF BOARD OF COMMON COUNCIL.

Whereas it is a patent and well-known fact that the Government buildings in the city of Louisville are totally inadequate in size and appointments for the purposes for which they are used: Therefore,

Be it resolved by the general council of the city of Louisville, That we are pleased to see the efforts being made by Hon. ALBERT S. WILLIS, our Representative in Congress, looking to an appropriation for larger and better buildings for Government purposes.

That we respectfully call the attention of Congress and the Government authorities to these facts, and request that such steps be immediately taken as will insure the purchase of a site and the erection of such buildings in this city as the increasing business transacted by the Government in this State demands.

Resolved, That the mayor be requested to send a copy of these resolutions to Hon. ALBERT S. WILLIS for presentation to Congress.

L. R. McCLEERY, C. B. C.
OLIVER LUCAS, C. B. A.
LAF. JOSEPH, P. B. C.
JAS. C. GILBERT, P. B. A.

Approved March 20, 1880.

A copy. Attest:

JNO. G. BAXTER, Mayor.
L. R. McCLEERY, C. B. C.

PETITIONS OF MEMBERS OF THE BAR.

To the Committee on Appropriations of the House of Representatives:

The undersigned, members of the bar at Louisville, Kentucky, beg to respectfully urge upon your honorable body the importance and necessity of larger and better quarters for the officers and courts of the United States at this place, and join in the request of other departments of business in this city that suitable appropriations be made for a new Government building adapted to the increased and increasing wants of the Government service and courts at Louisville.

ISAAC CALDWELL,
HENRY J. STITES,
And two hundred others.

Polygamy.

SPEECH

OF

HON. NEWTON C. BLANCHARD,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1882,

On the bill (S. No. 353) to amend section 5352 of the Revised Statutes of the United States, in reference to bigamy, and for other purposes.

Mr. BLANCHARD said:

Mr. SPEAKER: What I shall say in reference to this bill will be in vindication of the vote which I will be shortly called to give thereon. I do not propose to occupy the time of the House in any elaborate discussion of the question presented, but merely to give the reasons why I cannot sanction by my vote the passage of the bill in its present shape.

That I am utterly opposed to polygamy in all its forms none will dare deny; that I would vote with alacrity, ay, with pleasure, to strike it down whenever that question is presented in a manner not subject to constitutional objection is equally true.

But, Mr. Speaker, I agree with the gentlemen who have preceded me in opposition to this particular bill that it not only disposes of polygamy, but a good part of the Federal Constitution as well. As stated, I am ready at any and all times to dispose summarily of polygamy, but even in these degenerate times (politically speaking) I find I have still left sufficient reverence and veneration for that grand old instrument bequeathed to us by the fathers of the Republic to prevent me from violating its letter or spirit. Those gentlemen who, seeing no constitutional objections to the bill, can conscientiously vote for it I envy, for I would like to be free from doubt so as to vote the same way.

I regard this bill as disqualifying men for opinion's sake. I regard it as presenting, in some of its features, an *ex post facto* law. I regard it, as to some of its provisions, a bill of attainder.

Its ninth clause virtually creates a "returning board," giving it extraordinary and dangerous powers in matters of election. We in Louisiana, Mr. Speaker, have had some experience with "returning boards." The monster originated there, having been the unholy offspring of political corruption and greed of usurped power. Our experience with him was a painful and bitter one before he was finally throttled. We would therefore spare the people of Utah, whether they be Gentiles or Mormons, the infliction. A returning board is too great a punishment even for a Mormon.

Lastly, Mr. Speaker, this bill creates certain offenses and denounces certain penalties as a punishment therefor, one of which is ineligibility to office. But it provides no process of law for the ascertainment of the question of the innocence or guilt of the party accused. For these and other reasons which might be mentioned, I cannot vote for the bill.

Polygamy.

SPEECH

OF

HON. SAMUEL H. MILLER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1882,

On the bill (S. No. 353) to amend section 5352 of the Revised Statutes of the United States, in reference to bigamy, and for other purposes.

Mr. MILLER said:

Mr. SPEAKER: History is repeating itself. Twenty years ago the predecessors of the gentlemen on the other side of this House regretted their inability to vote for measures then before Congress to suppress the then existing rebellion, for the reason that the provisions of the Constitution would be violated if such bills should be enacted. When armed rebellion was defying the laws of this country the predecessors of the opposition in this House announced that they regretted their inability to discover any power in the Constitution to coerce a rebellious State.

When treason was triumphant on many southern battle-fields and defiant in its victories, when the funds in our Treasury were exhausted and means with which to prosecute the war to restore the Union must be created by Congress, the predecessors of the gentlemen on the other side deeply regretted the situation, but refused to vote for measures calculated to raise the necessary funds to carry on the war to suppress treason and rebellion, because the Constitution prevented such action on their part. Later on, when it became necessary to enact a law by Congress to fill up our depleted ranks by means of the act known as the "draft act," these same gentlemen of "twenty years ago" voted in the negative because such a provision trampled down the constitutional provisions protecting the liberty of the citizen. And so it was with every Congressional enactment from 1861 to 1865 devised by a loyal Congress to restore the Union and procure an honorable peace. The Democracy of that day loved the Constitution so much better than they loved the Union, although they always expressed great distaste of treason, that they refused their assent to every provision calculated to preserve the two former and overthrow the latter.

So it is to-day. The gentlemen on the other side are the lineal descendants of the opposition of "twenty years ago." They assert that they desire to see polygamy overthrown and uprooted, but they deeply regret that the Constitution of the country bars their progress in such a direction; and because they love the Constitution so dearly, as did their predecessors, the then representatives of the Democracy of this country, they have opposed this bill at every step, thrown every obstacle in the way of its passage, compelled a recess last evening, voted almost solidly, as the record will show, to strike out section 9 of the bill, without which it would be a dead letter and polygamy would be unshorn of its power.

Now, sir, what is this institution of polygamy which this bill proposes to eradicate? What is this system of Mormonism which section 8 of the bill provides shall disqualify—

Every person who practices it from voting at any election held in the Territory of Utah, or other place, or be eligible for election or appointment to, or be entitled to hold any office, or place, or public trust, honor or emolument, in, under, or for any such Territory or place, or under the United States?

This bill is the same in every particular which passed the Senate of the United States on the 16th day of February last. While this bill was under discussion in the Senate the ablest lawyers of that body took part in discussing it. Such able statesmen as EDMUNDS and BAYARD, and HOAR and GARLAND defended its constitutionality, as well as the pressing necessity of some immediate action by Congress. For years the institution has been openly defying the laws of the country. Every Congress during all those years has attempted to legislate it out of existence, but the gentlemen of the other side, then as now, opposed and obstructed such legislation, on the ground of its unconstitutionality. This same question was raised in the Senate, but the supporters of the law not only defended its constitutionality but asserted the supreme necessity of such an enactment for the reason that "the government of the Territory of Utah was not republican in form, was theocratic in practice, and fatal to Republican government, and to the constitutional, civil, and religious liberties that the Government was designed to protect."

The question then presents itself to the House, Shall the power of Congress be invoked to overthrow this institution? Is it possible, as asserted by the gentlemen on the other side, that the Constitution bars our progress in the passage of this bill, which has already received the sanction of the Senate? Is it possible that the majority of the citizens of Utah can live in open defiance of the statutes of the United States; can preach, teach, and practice tenets and uphold and obey the edicts of an institution that sets the laws of the Government at defiance, and is so baneful in its results that unless over-

thrown will sap the very foundation of our national structure? I contend, sir, that there is authority lodged in the Constitution to protect its existence from all assaults, domestic as well as foreign. For twenty years this institution of polygamy has been a festering sore on the body-politic. For the last fifteen years Representatives in this Hall have been rising on this side of the Chamber and asserting that the Territory was not properly governed, and a committee of the Fortieth Congress reported to that body "that by reason of polygamy in Utah great crimes had been committed and been let go unwhipped of justice; organized assassination had been frequently perpetrated; the sanctity of the ermine had been profaned, and the cause of justice obstructed." That same committee further reported:

Is it not time that the representative of this corrupt, licentious, tyrannical, traitorous, and blood-thirsty priesthood should be sent back to his constituents with instructions to abandon their unwarranted assumption of temporal power, obey the laws, and remodel their government, so that it should conform to the spirit of our free institutions?

At every session since then reports have been submitted in the two Houses of Congress of similar import, asserting that there was something wrong there, that there was something there that defied the laws of this country; that there was something there that set at naught the mandates and edicts of the two Houses of Congress, approved and sanctioned by the President and declared constitutional by the Supreme Court of the United States.

In view of all this, and in view of the defiant attitude of this so-called Church of the Latter-day Saints, which controls every step in the Territorial operation of that community; in view of the fact that a Delegate elected by that community openly boasts of his adulterous practices, presents himself at the bar of this House and demands that he be sworn, and when halted impudently asks you, "what are you going to do about it?" it is high time that this House should assert its prerogative and do its part to crush out this monster of injustice, iniquity, and anti-republicanism, which threatens the peace of this nation. I confess, sir, that I am astonished at the position of the Representatives of the Democracy in this matter. They profess by their lips to be opposed to polygamy, but they have resorted to every means known to parliamentary tactics to defeat this measure. They profess by their lips to be anxious to suppress polygamy, but they have voted almost solidly to strike from this bill the very provisions which will make it possible to eradicate the evil. They profess to be hostile to Mormonism, but if this side of the House would unite with them in what they propose, this measure would rest in the same grave wherein is buried all bills introduced in past Congresses on this subject. They profess to be hostile to polygamy, but if they had their way a polygamous Mormon would continue to represent that people in this and all future Congresses.

The people of this country are aroused on this subject. They demand as much as this bill grants; they will take nothing less. And, sir, I shall be surprised if the men who for two days have stood up solidly for the defeat of this measure, who have recorded their votes in favor of striking out sections 8 and 9 of this bill, and who shall vote against it on final passage, are not rebuked by their constituents, and this Hall know them no more.

It is not too late to retrace, and I hope that on the final passage of this bill few if any will refuse to support so wise, so important, so necessary a measure.

Polygamy.

SPEECH

OF

HON. STANTON J. PEELE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1882,

On the bill (S. No. 353) to amend section 5352 of the Revised Statutes of the United States, in reference to bigamy, and for other purposes.

Mr. PEELE said:

Mr. SPEAKER: Polygamy has ceased to be a question susceptible of debate in this country. The time has come for action, and I am glad to have the opportunity of expressing my opposition to polygamy by voting for this bill. All the teachings of civilization, all the teachings of morality, all the teachings of Christianity, all the teachings of man's better nature, demand that the crime of polygamy should be wiped out. Every loving pulsation of the heart for mankind and society, every regard for truth and duty, every mother in the civilized world, and duty to generations unborn, demand that we should now act in this matter, and act promptly. Without discussing this bill in detail, both for want of time and inclination, I am now willing that my vote shall be taken for my speech. "Actions speak louder than words."

Hawaiian Treaty—The Sugar Tariff.

REMARKS

OF

HON. RANDALL L. GIBSON,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 10, 1882,

On the bill (H. R. No. 4466) making appropriations for the Agricultural Department of the Government for the fiscal year ending June 30, 1883, and for other purposes.

Mr. GIBSON said:

Mr. CHAIRMAN: I had the honor in the last Congress to introduce a bill giving formal notice for the termination of the Hawaiian treaty, in accordance with the terms of the treaty. I introduced a similar bill in this Congress. My colleague [Mr. DARRELL] also introduced a similar bill, and several bills for the same purpose have been introduced in the Senate. I received this morning a petition from the Board of Trade and Transportation of New York, signed by a great body of business men of New York. I understand, also, that there is before you a petition from the business men of New Orleans in favor of the termination of the treaty.

I was opposed to the treaty in its inception, at the time that it was pending before the House, and I have had my views confirmed by the history of the treaty itself. There are two aspects in which the subject may be considered; one its commercial bearings, and the other its political bearings.

COMMERCIAL CONSIDERATIONS.

I propose first briefly to invite your attention to its commercial bearings, because it was in that light that it was brought to the House of Representatives. I first call the attention of the committee to the area of the islands. I refer the committee to the volume of Commercial Relations for 1875, page 1038:

The group of islands constituting this consular district is situated in North Pacific Ocean between latitude 18° 50' and 22° 21' north, and longitude 154° 50' and 160° 15' west of Greenwich, and comprises twelve islands, eight of which are inhabited. The other four are mostly barren and uninhabited. The inhabited islands contain in the aggregate 6,000 square miles, or 3,840,000 acres. Much diversity of opinion exists as to the proportion of the lands that are available for agricultural and grazing purposes.

Dr. Wood, in 1856, made an estimate as follows, which has been received generally till recently as correct:

Grazing lands, good.....	acres.....	1,920,000
Arable lands, good.....	acres.....	292,000
Sugar-cane lands.....	acres.....	100,000
Land adapted to raising hemp, manilla, bananas, &c.....	acres.....	500,000
Population, December, 1872.....		56,897

Total natives, 1866.....	58,765
Total natives, 1872.....	51,531

Decrease.....	7,234
In 1874 there was produced of sugar.....	pounds..... 25,066,611
In 1874 there was exported of sugar.....	pounds..... 24,666,611
In 1874 there was produced of rice.....	pounds..... 1,750,000
In 1874 there was exported of rice.....	pounds..... 1,187,996

In 1874 real property was.....	\$5,600,891
In 1874 personal property was.....	4,264,276

Total.....	9,865,167
------------	-----------

There was about \$2,750,000 of active capital, two-thirds of which was in sugar, and three-fifths of this capital belonging to American citizens.

There were employed on the sugar plantations last year 3,786 laborers, consisting principally of natives, Chinese, Japanese, and Portuguese. There is a system of indenture authorized by law, by which laborers are employed in these islands called "shipping" laborers, indentured for one, two, or three years. They get \$8 per month. (Report of majority, CONGRESSIONAL RECORD, volume 4, part 2, Forty-fourth Congress, first session, pages 1419, 1420.)

It was held at the time that the treaty was made, and was so reported by the Secretary of the Treasury in his letter on the subject, that if the Hawaiian Islands made 25,000,000 pounds of sugar they would be doing very well. I refer you to the majority report from the Committee on Ways and Means submitted to the House. The Secretary of the Treasury says, (and the Committee on Ways and Means adopt his language:)

The proposed release of this duty would undoubtedly increase this trade, and its increase would go far toward compensating for the loss resulting from the release of sugar from duty. Should the sugar product so released increase to 25,000,000 pounds yearly, the export trade would probably equal it in value. In addition to the particular articles of commerce affected by the treaty, there are general commercial advantages likely to follow which can only be alluded to here. The rendezvous so long afforded at these islands for the sailing fleets of the Pacific is still needed; and with the increasing commerce of all the seas bordering the Pacific, the demand increases for such aids and facilities as would be afforded through the establishment of American interests in the Hawaiian Islands proposed by the treaty.

It will thus be seen that the Secretary of the Treasury did not attach importance to the loss of revenue growing out of the ratification of this treaty.

But what says the Secretary of the Treasury in his report, December 2, 1878, two years after the treaty was ratified?

In this connection the attention of Congress is called to the operations of the reciprocity treaty between Hawaii and the United States, concluded January 30, 1875. The value of goods shipped from the United States to Hawaii for the year ended December 31, 1875, the year before the treaty went into operation, was \$947,260. And for the year ended December 31, 1877..... \$1,762,806

Excess in 1877 over 1875..... 815,545

The duties surrendered by virtue of the treaty on goods imported into the United States for the year ended December 31, 1877, were \$631,206.

Difference between duties remitted by the United States in 1877 and value of excess of exports in 1877 over that of 1875 was \$15,661; so that we have surrendered duties in an amount greater than the entire excess of exports in 1877 over those of 1875. Of the duties surrendered in 1877, \$716,732 was on sugar alone. The advantages thus far have not been reciprocal, but, as has been shown, have been largely in favor of Hawaii, and it is probable that the benefits in favor of Hawaii will increase largely.

The following table shows the condition of the trade between this country and the Hawaiian Islands from 1866 to 1880:

Year ended June 30—	Exports.		Total exports.	Imports.	Total imports and exports.
	Domestic.	Foreign.			
1866.....	\$965,204	\$160,806	\$1,126,070	\$1,586,221	\$2,712,291
1867.....	777,342	87,150	864,492	1,070,252	1,934,744
1868.....	751,941	89,951	841,892	1,189,409	2,031,292
1869.....	687,352	86,665	774,017	1,288,784	2,062,801
1870.....	744,371	64,045	808,416	1,134,723	1,943,139
1871.....	814,885	43,730	858,615	1,143,244	2,001,859
1872.....	590,295	43,469	633,764	1,280,833	1,914,597
1873.....	631,103	43,088	674,191	1,275,061	1,949,252
1874.....	588,280	26,348	614,628	1,016,952	1,631,580
1875.....	621,974	40,190	662,164	1,227,191	1,889,355
1876.....	724,267	45,395	769,662	1,376,681	2,146,343
1877.....	1,109,429	163,520	1,272,949	2,550,355	3,823,284
1878.....	1,683,446	52,653	1,736,099	2,678,830	4,414,929
1879.....	2,288,178	86,740	2,374,918	3,257,938	5,632,856
1880.....	1,985,506	106,664	2,092,170	4,606,444	6,698,614

Now, what has been the history of the treaty up to the present time? You have the report of the Secretary of the Treasury, showing that we were really giving one dollar to the Hawaiians for every dollar's worth of goods which they purchased from us.

The total value of our domestic exports for the year ended June 30, 1875, (the year before the treaty went into operation,) was \$621,974, and for the year ended June 30, 1881, \$2,694,583, showing an excess in 1881 over 1875 of \$2,072,609. The duties surrendered by virtue of the treaty on goods imported into the United States for the year ended June 30, 1881, amounted to \$2,400,000. The difference between the duties remitted by the United States in 1881 and the value of excess of exports in 1881 over 1875 was \$328,000; so that we have surrendered duties in an amount greater than the entire amount of excess of exports in 1881 over those of 1875. Of the duties surrendered in 1881, \$2,100,000 was on sugar, and the remainder (amounting to \$300) on rice, an undisputed donation of that amount as a subsidy out of the Treasury of the United States to the sugar and rice planters of Hawaii. We are paying to the Hawaiians one dollar as a bonus on every dollar's worth of goods they buy from us.

I would be glad if the committee would glance over these commercial reports from our consuls. I will now give you a statement of the population of the islands when this treaty went into operation. You will find it on pages 646 and 647 of the volume of Commercial Relations for 1876. It is the report of our consul, Mr. J. Scott. He says:

The commercial reciprocity treaty with the United States has given greater activity to the growth of sugar and rice. Lands are being freely purchased or leased. * * * The sugar and rice crops in the last year were good and above the average. On one plantation, on the Island of Maui, there were produced from nineteen acres of land, actual measurement, ninety-nine tons of sugar, or five and a half tons to the acre. There were produced on the Koliola plantation, on the Island of Hawaii, five hundred and nine tons of sugar on ninety-nine and one-half acres of land, actual measurement. The nineteen acres of the plantation on which ninety-nine tons were raised were irrigated. The ninety-nine and one-half acres in the Koliola plantation were not. These figures will appear almost incredible to persons who are not acquainted with the productiveness of these islands. I received my information from the agent of these plantations in this city, and other credible persons who were cognizant of the facts stated.

Mr. Scott then gives the population of the Hawaiian Islands in 1866 and 1872. He shows that the total number of natives, including half castes, was, in 1866, 58,765, and in 1872 51,531, showing a decrease in six years of 7,234.

Now, I want to call the attention of the committee to the system of contract labor in the Hawaiian Islands. Laborers indenture themselves for a given number of years—three or four years—and the law provides for the imprisonment of the laborer if he fails to fulfill his contract. There were about five thousand laborers so engaged, being principally Chinese. There are agents now in foreign countries seeking these laborers. The United States consul says:

On the ratification of the treaty sugar advanced in the islands 2.81 cents per pound; molasses, per gallon, 64 cents; rice, per pound, 23 cents, and paddy 2 cents per pound; the advance being equal to the duties remitted by the United States under the treaty. That was the effect of the treaty—the advance of the price of sugar in the islands.

I wish now to call the attention of the committee to a very par-

ticular feature in this case. The Hawaiian Government, I should think, has been run by others than Hawaiians; because, just after the treaty went into operation their tariff duties were raised from 10 per cent. ad valorem to 25 per cent. ad valorem on everything that they could tax of the commodities of the United States brought to the islands, thereby reimbursing themselves for the losses on the articles admitted free from the United States. That is a very interesting feature in this transaction. I will read what our intelligent consul at Honolulu says on the subject:

NEW HAWAIIAN TARIFF.

On the 27th day of —, 1876, the Hawaiian Legislature, then in session, passed a law providing that there shall be levied and collected from and after October 11, 1877, on the following goods coming into the country, a duty of 25 per cent. ad valorem, to wit:

Silks, satins, and silk velvets, and all manufactures of which silk shall form the principal material.
Clothing ready-made, and wearing apparel of every description, made up in whole or in part.
Carriages of all descriptions.
Hats and caps of all kinds.
Linen and all manufactures of which flax, grass cloth, or a similar material shall form the principal part, except bags and bagging, and canvas for ships' use.
Crocery and glassware of every description.
Drugs and medicines, patent and other.
Furniture of all kinds, if upholstered or carved, manufactured in whole or in part.
Millinery goods, beads, braids, bonnets, nets, buttons, corsets, collars, sleeves and cuffs, edgings, flowers, (artificial,) feathers, (fancy,) fringes for clothing and for upholstery.
Gloves and mitts, not otherwise provided for.
Gimps for clothing.
Hoopskirts.
Hooks and eyes.
Insertions, laces, and lace goods of all descriptions.
Ribbons, not otherwise provided for.
Silver-plate, plated ware or gilt ware.
Britannia ware and fancy metal ware.
Tea.
Watches and clocks, in whole or in part.
Cigarettes, and all descriptions of paper cigars.
Jewelry, and all descriptions of metal, glass or stone beads.
Paintings, pictures, engravings, statuary, bronzes, ornamental work of metal, stone, marble, plaster of Paris, or alabaster and all imitation thereof.
Perfumery, other than that which pays a spirit duty, scented soaps, powders, hair, tooth, nail, and other toilet brushes.
Pipes, (smoking,) pipe-stems, bowls and fixtures, cigar-holders.
Candles.
Candies.
Peanut oil.
Toys.
Fire-arms and ammunition.
Fire-works and fire-crackers.
Before the taking effect of this act the foregoing goods paid an ad valorem duty of 10 per cent.

The law further provides that from and after October 11, 1877, there shall be levied and collected on the following articles specific duties, namely:*

On playing cards, \$1 per dozen packs, [10 per cent. ad valorem.]
On kid and all other leather and skin gloves, \$3 per dozen pairs, [10 per cent. ad valorem.]
On cigars and cheroots, \$10 per thousand, [15 per cent. ad valorem.]
On China tobacco, 50 cents per pound, [15 per cent. ad valorem.]
On camphor trunks, in nests of four, \$2 per chest, [10 per cent. ad valorem:] and in nests of two, \$1 per chest, [10 per cent. ad valorem.]
On matches of all kinds, 25 cents per gross, [10 per cent. ad valorem.]
On China matting, \$1 per roll, [10 per cent. ad valorem.]
On port, sherry, madeira, and other wines of like nature, above 18 per cent. of alcoholic strength, also on all cordials, bitters, and other articles of any name or description containing alcohol, or preserved in alcohol, or spirits above that rate of strength and below that of 30 per cent., unless otherwise provided for, \$2 per gallon, [\$1.50 per gallon.]
On champagne, sparkling moselle, and sparkling hock, \$3 per dozen reputed quarts, and \$1.50 per dozen reputed pints, [15 per cent. ad valorem.]
On claret, Rhine wines, and other light wines under 18 per cent. of alcoholic strength, not otherwise provided for, \$1 per dozen reputed quarts, 50 cents per dozen reputed pints, and 40 cents per gallon if in bulk, [15 per cent. ad valorem.]
On ale, porter, cider, and all fermented drinks, not otherwise provided for, 50 cents per dozen reputed quarts, 25 cents per dozen reputed pints, and 15 cents per gallon if in bulk, [10 per cent. ad valorem.]
The clothing, carriages, hats, caps, patent medicines, furniture, silverware, and plated-ware, watches, clocks, jewelry, stationery, fire-arms, ammunition, fire-works, playing-cards, matches, and a number of the other articles named in the foregoing schedules are mostly imported from the United States.

BUSINESS DURING THE FIRST TREATY YEAR.

The following table, published in the papers of this kingdom a few weeks ago by the collector-general, shows the value of the imports from the United States during the year ending September 9, 1877, the first year of the operations of the treaty, compared with the two preceding years:

Imports.	Free by treaty.	Duty paid.	Bonded.	Total.
1877.....	\$962,125 93	\$516,559 38	\$66,451 56	\$1,545,136 87
1876.....	688,733 11	82,673 91	771,407 02	
1875.....		837,215 42	110,045 02	947,260 45

This table shows an increase in the value of importations in the first treaty year over the preceding year of \$773,729.85 and \$597,876.43 over the year 1875. The falling off of importations in 1876 from those of 1875 was the result of importers importing goods contained in the schedule of article 2 of the treaty sparingly in 1876 till after the ratification of the treaty, when they could be brought into the kingdom free of duty.

It will be seen, also, by the table that the duty-paying and bonded goods imported from the United States in the treaty year fall short only \$188,396.08 of the importations of the preceding year.

* The amount of duty paid before the taking effect of the law is inserted in brackets.

DUTIES REMITTED BY THE UNITED STATES.

The declared exports of sugar, molasses, rice, and paddy to the United States, and the duties remitted thereon, for the year ending September 9, 1877, the first year of the treaty, were as follows:

Sugar, 36,494,553 pounds, average duty on the same 2.81 cents per pound, remitted by the United States.....	\$1,025,459 51
Molasses, 224,430 gallons, duty 6½ cents per gallon, remitted on the same by the United States.....	14,026 87
Rice, 2,299,790 pounds, duty 2½ cents per pound, remitted on the same by the United States.....	57,494 75
Paddy, 1,418,943 pounds, duty 2 cents per pound, remitted on the same by the United States.....	28,378 86

Total amount of duties remitted by the United States.....	1,125,359 99
Total value of goods imported free from the United States for the year ending September 9, 1877, the first year of the treaty.....	962,125 93
Total duties, 10 per cent. ad valorem, remitted on the same by the Hawaiian Government.....	96,212 59

Excess of duties remitted by the United States..... 1,029,147 40

It will be seen by the above statement that the duties remitted by the United States during the first year of the treaty on sugar, molasses, rice, and paddy exported from this country to the United States amounted to \$163,234.06 more than the entire invoice value of all the free goods imported from the United States to this country; and the excess of duties remitted by the United States over the duties remitted by this country amounted to \$87,021.47 more than the entire invoice value of free goods imported from the United States to this country in the period named.

It will be observed that the foregoing statement does not include the exportation from this country to the United States of bananas, tallow, vegetables, dried and undried, and other articles included in the schedule of Article I of the treaty, nor the duties remitted thereon by the United States.

DECLINE OF THE WHALING FLEET.

There will be four or five American whaling vessels at this port this fall to recruit and land their oil, bone, and ivory. Fifteen years ago 150 or 200 American whalers came into this port every fall. The whole American fleet of whalers now in the North Pacific does not number over a dozen.

J. SCOTT.

Mr. DUNNELL. Do you mean to say that after the confirmation of the treaty there was an increase of tariff rates on these articles?

Mr. GIBSON. Yes; there was an increase from 10 per cent. ad valorem to 25 per cent. ad valorem.

Mr. DUNNELL. How soon after the making of the treaty?

Mr. GIBSON. The treaty went into operation in September, 1876, and the new tariff in the Hawaiian Islands went into operation on the 11th of October, 1877.

Mr. LORD. You have remarked that the duty was added in the Hawaiian Islands to the price of the sugar and rice. Now, has it not been alleged heretofore as a strong point that instead of that being the fact the California refiners and sugar-dealers got that benefit?

Mr. GIBSON. I will come to that in a moment. The effect of this treaty, gentlemen, as you will see by reference to the statistics, was to increase largely the exports of sugar and rice from the Hawaiian Islands to the United States. During the last year the amount of duties remitted to the sugar-planters of the Hawaiian Islands was between two and a half and three million dollars.

I now want to call the attention of the committee to the advance made in real estate in the islands. In 1875 the assessed value of property there was \$6,490,600; in 1876, in anticipation of the ratification of the treaty, it went up to \$7,642,061; it was assessed in 1879 at \$10,699,607. You will find these figures in the volume of Commercial Relations for 1879, page 671. Mr. Morton, United States consul at Honolulu, says:

The total value of real and personal property in the kingdom the present year, 1879, upon which a tax is levied by the government of three-quarters of 1 per cent. is as follows:

Real property.....	\$10,699,607
Personal property.....	12,022,449
Total.....	22,722,056

These figures show an increase of values since 1875 of \$12,856,889. The term "personal property" includes the growing crops, machinery, all moneys on hand and moneys loaned on mortgages, public stocks, and stocks in corporations.

The last report that we have (the report of imports and exports for the twelve months ended December 31, 1881,) hereto annexed and marked "C" shows that instead of the 25,000,000 pounds of sugar which the promoters of the treaty thought would come from the Hawaiian Islands into the United States the actual amount has been over 90,000,000 pounds of sugar and 7,483,446 pounds of rice.

Mr. BLOUNT. What period does that cover?

Mr. GIBSON. It covers the calendar year 1881. On that amount there was a remission of duties to the islands to the amount of \$2,919,000. The effect has been not only to more than double the entire assessed property of the islands, but to overwhelm the islands with Chinese laborers. When the treaty was made there were about five thousand laborers in the islands under the contract system. But now what does the United States minister (Mr. Comly) report? I refer the committee to the volume of Commercial Relations for August, 1881, published by the Department of State. Mr. Comly says:

Chinese immigration has increased rapidly, perhaps to an amount equal to the whole of the year 1880, since January 1. That for 1880 foots up as follows: Chinese arrived, males, 2,442; females, 63; total, 2,505. Departed, males, 622; females, 6; total, 628. Net gain, 1,877. I think it safe to say that there are now nearly 14,000 adult male Chinese in the kingdom.

The whole population of the islands is, in round numbers, about fifty thousand. There are in the islands from eight hundred to one thousand Americans. I have here a copy of the latest "Hawaiian Almanac, an annual for 1882—hand-book of information on matters

relating to the Hawaiian Islands." I call the attention of the committee to a statement concerning the sugar plantations. There is a total of eighty-two plantations given in the almanac, with the names of their owners, &c. Eighteen firms only own all the sugar plantations of all the islands. I beg gentlemen to look over this almanac themselves. Here are some of their names: C. Brewer & Co., Castle & Cooke, T. H. Davies, Hackfeld & Co., Hoffschlaeger & Co., W. C. Irwin & Co., G. W. Macfarlane & Co., F. A. Schaefer & Co. (See table "D," annexed.)

Mr. RICE, of Massachusetts. Are all these Americans?

Mr. GIBSON. I should take them to be Americans from their names. The only two who are not Americans are C. Afong and Wong Leong & Co. I presume these are Chinamen or Germans, or at all events foreigners. You will see from this rude sketch of mine what the condition of the Hawaiian Islands was in 1875 and what it is now with reference to the cultivation of sugar. You see how the product of sugar has increased beyond anything that was conceived of in 1875. You see how we are paying as a bonus to the sugar planters in the Hawaiian Islands some \$3,000,000 a year. You see how we are giving them in point of fact \$1 for every dollar's worth of goods that they buy from us. It cannot be urged that this is not a loss to us, because, if the treaty did not give this bonus to the sugar planters of the Hawaiian Islands we would not import so much sugar from them, because they would produce less. That is, the free sugar from the Hawaiian Islands crowds out the taxed sugar from the Philippine Islands and from Asia, which is taxed at the rate of 2.81 cents per pound, and diminishes our exports to those countries.

Now, what is the effect of this treaty on the sugar industry of this country? I have shown very clearly that it has no beneficial effect on the general commerce of the country. Certainly no gentleman can defend a commerce which we buy, in plain language. What will be the effect of a continuance of the treaty on the sugar interest of this country? First take the refining interests. I have not been in consultation with anybody on this subject. I have not heard the subject mentioned hardly outside of this committee. But I ask what will be the effect on the sugar-producing and sugar-refining interests of this country if this treaty be continued? The population on the Pacific coast numbers probably about 1,200,000 persons.

Mr. DUNNELL. Do you not underrate the population on the Pacific coast?

Mr. GIBSON. I mean, of course, the population of California and Oregon. I asked a gentleman yesterday from the Pacific coast, and he told me that the population was about one million two hundred thousand. But I will assume that the population is a million and a half. Now, if they consume 50 pounds of sugar per capita, which is above the average consumption, there would be only 75,000,000 pounds of sugar consumed on the Pacific coast. From the statistics supplied by our consul in Honolulu, they have already sent to this country 100,000,000 pounds of sugar, 25,000,000 in excess of the supply of the Pacific coast. These sugars were sold in Saint Louis and Chicago. There are 100,000 acres of sugar-cane lands there. One of our consuls states that there is one tract of land there of nearly 10,000 acres in extent, which nobody did consider as being worth one dollar, but which has been irrigated and brought into a high state of cultivation. Assuming that there are 100,000 acres of cane lands in the Hawaiian Islands, and that they produce from 6 to 7 tons an acre, or from 4 to 5 tons an acre, then they will produce within a small fraction of the entire consumption of the United States. But, suppose that the area and the average are one-half that. Still you have got 250,000 or 300,000 tons of sugar from the Hawaiian Islands, enough to supply the whole valley of the Mississippi. Look at it, gentlemen. I have here a report of the prices of sugar in New York, New Orleans, and San Francisco, in the daily newspapers of those cities.

Mr. RICE, of Massachusetts. What is the annual consumption of sugar in the United States?

Mr. GIBSON. About eight hundred and twenty-five thousand tons.

Mr. BROWNE. Two billion two hundred and twenty-four million pounds.

Mr. GIBSON. We will say 825,000 tons imported. The precise amount is 834,453 tons. The price of sugar in the New York market by the last report was from 7½ to 8½ cents per pound; at San Francisco, from 8 to 11½ cents per pound, and the highest price in New Orleans was 8 cents a pound. The importers of Sandwich Island sugar (and it is all bought up and owned in San Francisco, substantially by a few men there, according to the official statements of our consuls) have a bonus of 2.81 cents a pound on their sugar. They have an area of 100,000 acres of cane land for cultivation; they have as laborers Chinamen who are not encumbered with families, who have no Christian religion, no interest in society, but are mere machine men. The sugars imported from the Hawaiian Islands are all in the hands of a few men, and they can lay this sugar down in any market in the United States at a cost of 1 cent a pound for transportation. But suppose that it costs them 2 cents a pound for transportation, they have still a large margin of profit. A profit of half a cent a pound on a staple commodity like sugar is an enormous sum on one, two, or three hundred millions of pounds. Such an advantage in the hands of the San Francisco sugar-refiners would bring down every refinery in the valley of the Mississippi, and every refinery in the Eastern States; and all to the advantage of these eighteen firms that own 100,000 acres of land in the tropics, and who

work with Chinese labor. They will break down every sugar-refining industry in the East as well as in the West and in the South; and I am not surprised to see that the New York merchants have sent a petition here signed by every refiner and every man in the city who has any interest or connection with the sugar business.

SUGAR TARIFF.

In the commercial aspect of the case, therefore, I hold that this treaty ought to be terminated. And when I come to examine its political aspects you will be still more startled at the results. The sugar interest of Louisiana is represented here, so far as I know, by the members of the Louisiana delegation in Congress. If there are others here they are here as volunteers, and I am in no way responsible for them. I have always felt that in representing that industry I represent the men who hold the plow-handle and the landowners as well as refiners. I represent them, or I represent nothing. I do not concur in the opinion of the former member from Connecticut, alluded to by Mr. Boutwell the other day—that "associated wealth is the dynasty of modern states." Nor is associated labor the dynasty of modern states. But the crowned people, the laboring people as a whole, embracing all classes, all occupations, they constitute the dynasty which ought to rule, and which I hope will rule this Government—they and not associated wealth. It is certainly not associated wealth upon islands in distant seas, whose people are alien to our race, that is to be the dynasty to rule this country. What are the interests of Louisiana in this treaty? I expect that I will astonish even my former colleague on the Committee on Ways and Means [Mr. DUNNELL] when I tell him that the tariff on sugar to-day is relatively lower than it ever was in the history of this country.

Mr. DUNNELL. Do you mean to say that the tariff on sugar now is less than it was prior to 1862?

Mr. GIBSON. In 1861 it was reduced for a moment only; but I am speaking, of course, relatively. From 1846 to 1857, under the Robert J. Walker tariff, it was 30 per cent. ad valorem; but everything else was 30 per cent. ad valorem. From 1857 to 1861 it was 24 per cent. ad valorem; but everything else was 24 per cent. ad valorem. Now the planters are paying, and the laborers for whom I am speaking are paying, from 75 to 500 per cent. on every thing which they consume and from 80 to 90 per cent. on everything that goes into the production of sugar. Under the tariff of 1789—the first tariff bill introduced by Mr. Madison—the duty was 1 cent per pound on brown, raw, clayed sugar and 3 cents per pound on refined sugar. From 1804 to 1808 the duty was 2½ cents per pound on raw, clayed sugar and 9 cents per pound on refined sugar. From 1812 to 1816 the duty was raised to 9 cents on raw sugar and to 18 cents on refined sugar. From 1819 to 1830 the duty was 3 cents on brown sugar and 12 cents on refined sugar. From 1832 to 1841 the duty was 2½ cents on brown sugar and 12 cents on refined sugar. From 1842 to 1846 the duty was 2½ cents per pound on brown sugar and 6 cents on refined sugar. From 1846 to 1857, under the Robert J. Walker tariff, the duty was 30 per cent. ad valorem. And from 1857 to 1861 the duty was 24 per cent. ad valorem.

I have a table here showing the production of sugar in Louisiana, and how that industry was fostered by the tariff; how capital flowed into it on the good faith of the tariff; how, in 1862, the tariff was reduced; how, in 1870, it was still further reduced; and how to-day, while the average tariff schedule rate is 62½ per cent., the operative rate on sugar is not 45 per cent. ad valorem, (I do not believe over 30 per cent.) By the Dutch standard color alone and not quality became the standard of value. Then prizes and premiums were offered in all the tropical sugar-producing countries to chemists who would discover a process by which sugar testing 98 or 99 per cent. could be brought to a low color, so that it would go in at the lowest rate of duty. And to-day all the sugar imported into America is below 13; most of it is below 10, and much of it is as low as 7. So that the very finest sugars, if chemically tested, which should pay 50, or 60, or 70 per cent. ad valorem, from the manner in which their color is disguised, pay but from 30 to 35 per cent. ad valorem, for they are undervalued from 25 to 50 per cent.

From 1850 to 1857 Louisiana raised, even under the free-trade tariff, 47 per cent. of all the sugar consumed in the United States, and from that until the civil war broke out Louisiana produced nearly 50 per cent. of it, and now we produce only 10 per cent. of the consumption of the country. That industry was, of course, stricken down in the civil struggle. I venture to say there is not a gentleman in this committee who ever read in all history of such a *bouleversement*, such a pulverization, such a loss of individual property, such an upheaval of the social and labor systems of any country as were experienced in the State of Louisiana. Now we are struggling along under this reduced tariff, less than it ever was before, less than is afforded to any other industry. We have a lower tariff on sugar than any country in Europe not on a free-trade basis like England. The State Department has furnished me with the following table, showing the tariffs of different countries upon sugars: The United States tariff schedule is from 2 cents to 4.50 per pound; Germany from 3 cents to 3.75; France from 6.75 to 8 cents; the Netherlands, 3.75 to 8 cents; Belgium, 4.50 to 6; Spain, 3 cents; Russia, 5 to 8 cents, and Austria from 3.70 to 5 cents. Ours is not only the lowest, but discriminates in favor of the refiner, giving him high protection, and against the producer, who gets but little, and it is reduced practically by the ease and frequency with which it is evaded by disguising the color

and the opportunities afforded by the near approach to the ad valorem system and multiplicity of grades.

It is the lowest tariff rate that protects the domestic sugar production against the slave-grown sugar of the tropics, but under this tariff our laborers have to contend against the sugars of the tropics produced by cheap cooly-gang or slave labor as well as the cheap capital, skill, and machinery of the refiners. It will be observed that nearly all the sugars imported come in under No. 10. Under all the former tariffs a uniform specific tax was levied upon all unrefined sugars, because their cost of production is the same, and it was the only way to prevent evasion or fraud. It requires the same labor and skill, the same area of cultivated land, the same machinery, the same processes, the same capital, to produce all sugars under No. 13, and hence it is but just and fair that they should all be taxed the same rate, and such was the rule adopted by the Government in all tariffs until 1870. All the refiners paid the same tax upon their raw material—for their raw sugars. That was fair. There was no complaint. There could be none. The trade flourished. But as soon as this safe and immemorial custom was departed from by the establishment of the complex tariff of 1870, creating a number of new grades, the sugar trade has been in a constant ferment, the committees of Congress filled with complaints alleging that some refiners were making millions by getting in their raw sugars at less rates than others, who were being ruined; that the slightest errors or mistakes on the part of the appraising officers would make the fortunes of some and work the ruin of others; and that under a tariff of so many slightly differing grades mistakes and errors were unavoidable. That there is ample room for evasion and fraud under the present system there can be no doubt, but I do not believe that there is any systematic plan on the part of any persons engaged in this business to defraud the Government. At all events, discovery or detection is impossible, for the importing refiner and the poorly-paid appraiser are the only parties and witnesses to the transaction, and neither is likely to disclose facts to establish his own guilt. The temptation is great. In order however, to silence all complaint, remove the opportunities for unjust discrimination or errors or frauds by restoring the old rule, which can work no possible hardship. We always had a uniform rate on tea and coffee, of which there are many varieties of different qualities and prices, and yet no complaints were ever heard; and we still apply the same rule to rice, iron ores, and to many other subjects of tariff taxation.

To check the immense losses to the Government and the inequalities in the practical operation of the present tariff in favor of some refiners and against others, the Secretary of the Treasury authorized and directed the use of the polariscope, as that would disclose the quality of the sugar, if employed in connection with the Dutch standard, which is based upon color alone. But this the refiners resisted, and the Supreme Court, in a recent case, held that the Secretary had not the authority of law to apply any other test than the Dutch standard. Hence sugars of the very highest saccharine strength, No. 16 or 20 of the Dutch standard, by being colored down in the process of manufacture or afterwards, as may be easily done, to the color of No. 7 or No. 10, are valued as No. 7 or No. 10, and come in accordingly at the rate of duty affixed to those numbers. Even the application of the polariscope, so long as the multiplicity of grades exist was no effectual check against irregular and discriminating valuations or errors and evasions or frauds.

These different grades do not exist in nature. The foreign producer may cause all his sugars to be boiled to No. 7 or No. 10 or No. 13 or to No. 16 or 20, and color them down to No. 7 or 10. He will manufacture his sugars to take advantage of your tariff, and if the tariff discriminates in favor of any particular number, as it does in favor of No. 7 and No. 10, the foreign producer will bring all his sugars to that number. So long as the multiplicity of grades exist, errors, mistakes, evasions, frauds will continue; the trade will be unsettled and Congress harassed by the complaints of those who regard themselves as the victims of unjust valuations or of preferences extended to or gained by their more successful rivals in business, though in point of fact the greater success of their competitors may be due to superior energy, capacity, and capital, and better business methods. It is the system which I attack, and which is at fault.

Adopt the old rule, which puts all refiners on an equality and reduces to a minimum the opportunity for discriminations against or in favor of any one, and there will then be no room for complaint. And this can only be done by a uniform tariff on all raw sugars, and by establishing on the single grade, say No. 13, which is the dividing line, universally recognized, between raw and distributable sugars, not only the Dutch standard test, (for color is a very important element in value,) but also the polariscopic and chemical tests. One single test may be applied after a little practice with almost unerring certainty and fairness, but the six grades now established multiply by six the chances for errors and frauds.

The history of tariff legislation shows this. The fact that this was the rule until the tariff of 1870, the rule observed from 1789, and always the rule in England, should be sufficient to commend it to all disinterested and independent legislators.

The following table illustrates what I have said. It shows how the foreign producer (and nearly all our sugars come from Cuba) colors down his sugars to bring them into our country at the lowest tariff rates, while there cannot be a doubt but that they are of the

highest saccharine strength. Under this tariff sugar has ceased to be an article of legitimate commerce. It will be observed that little or none is imported, or can be imported, over No. 13. None can be imported by merchants for consumption; it must all go to the refiner, and he is enabled to monopolize and to control the market.

Statement showing the quantity of each grade of sugar and the total quantity of sugar of all grades imported into the United States and entered for consumption during the year ended June 30, 1881, not including sugar imported from the Hawaiian Islands under the reciprocity treaty.

Description or grade.	Pounds.	Tons of 2,240 pounds.
Not above No. 7	401,628,494	179,298
Above No. 7, and not above No. 10	1,323,451,981	590,827
Above No. 10, and not above No. 13	142,797,277	63,749
Above No. 13, and not above No. 16	1,267,216	566
Above No. 16, and not above No. 20	12,241	5
Above No. 20, and all refined, loaf, lump, crushed, powdered and granulated	18,609	8
Total dutiable	1,869,173,898	834,453

JOSEPH NIMMO, JR., *Chief of Bureau.*
TREASURY DEPARTMENT, BUREAU OF STATISTICS.

There must be some reason for the uniform action of all civilized governments in drawing their revenues from sugar. Even Sir Robert Peel reserved the tax upon this article when he took his memorable stand against his own party in favor of untaxed and cheaper food for the English people. The reasons are obvious. The article is bulky and cannot be smuggled, and if the tax be properly levied, cannot be evaded. The consumption is certain, permanent, large, and universal.

The revenue derivable from it, therefore, may be counted upon with certainty, even a definite amount. It is a diffusive tax, and not cumulative, reaching every man, and oppressing no particular class or person or interest. It may be sold in the smallest quantities and it takes but a small sum out of the pockets of the consumer to supply himself from time to time and keeps it out for the briefest possible period and the largest proportion of it goes into the Treasury of the nation. Next to the income tax it complies with the doctrines of Adam Smith that—

First. The subjects of every state ought to contribute toward the support of government as nearly as possible in proportion to their respective abilities.

Second. The tax which each individual is bound to pay ought to be certain and not arbitrary. The time of payment, the manner of payment, the quantity to be paid, ought all to be clear and plain to the contributor and to every person.

Third. Every tax ought to be levied at the time or in the manner in which it is most likely to be convenient for the contributor to pay.

(See Adam Smith's *Wealth of Nations*, page 37.)

Sugar is for the most part a necessity, but beyond a very small quantity it is a luxury or quasi luxury. The consumer pays little by little as he has occasion to buy, and he is at liberty to buy or not, or to buy small or large quantities, and he rarely suffers any inconvenience from such a tax; whereas if a man desires to purchase a suit of clothes, or a blanket, or a plow, it takes the savings of a whole month's wages to enable him to meet the increased cost by virtue of the tax and to make the purchase.

David A. Wells, not speaking for the refiners but as a political economist, says:

If we tax salt we tax all the processes of labor or production into which salt enters, and the people pay the revenue to the Government, the bounty to the salt maker, and also the interest or profit upon all the additional capital required in consequence of its enhanced price by those who use salt. But if we tax tea we tax an article ready for consumption, which represents one of the results for which, substantially, all labor is exerted, and upon which the consumer pays only the revenue needed by the Government with the least cost of collection, as it is a bulky article, and cannot be smuggled. Hence tea, coffee, sugar, and molasses are all fit articles for the imposition of duties, and the tax imposed upon them is not more diffused and not nearly as much a burden upon labor as a tax upon iron, steel, wool, hemp, salt, lumber, and the like. The one tax diffuses itself, plus only the cost of collection; the other diffuses itself as widely, plus bounties, profits, and other extras, amounting to a far greater sum than the tax itself.

The present tariff on tea, sugar and coffee taxes the consumers of the United States approximately as follows: Coffee, $\frac{1}{4}$ cents per week per capita; tea, 1 cent per week per capita; sugar, $\frac{1}{4}$ cents per week per capita. Can any one name three other taxes upon the whole list of imports and excises which produce so great a return with so little discomfort and so little an enhancement of the cost of general production?

Now, on the other hand, let us see how the people are taxed under the existing tariff on other articles of prime necessity. In 1869 a pair of 10-4 Holland blankets, weighing $4\frac{1}{2}$ pounds, could be bought for \$3.75. The present market price of these same blankets is \$5. Therefore some canes have come in since 1869 which have enhanced the price of blankets, of the poor and rich alike, at least \$1.25 per pair. The committee know well that these causes have been mainly the duties on wool and the duties on the finished product of wool; and they can more easily satisfy themselves that if there was no duty on blankets 10-4 Hollands could now be sold in any of the Atlantic cities, charges for freight, insurance and reasonable profits included, for less than \$3 per pair.

Now there are forty millions of people in the United States, and supposing five millions out of this number to require a pair of blankets per annum, then the annual tax levied on the masses for this single article of necessity, through the enhancement of price, will aggregate \$8,750,000, or nearly as much as the whole revenue collected from all the tea annually imported and consumed in the country. Again, let any one select an article of woolen goods suitable for the cheapest thick winter clothing—such an article as the women of the country who are not rich require—and then compare the price asked for the same in New York with the price at which it could be sold for in the absence of a tariff duty and he will find, comparing the two, that the difference in prices for the quantity requisite to make a cloak will amount to at least two dollars. Now, there are twenty millions of

females in the United States, and if we suppose that one-half of that number require a cloak each winter, then the tax levied on these women under the tariff will aggregate twenty millions, or nearly the amount now collected from all the tea and coffee imported into and consumed in the United States.

These statements and illustrations are applicable to-day as when made, for the principles upon which they are based and elucidated are unchangeable.

But I beg to invite the attention of the committee to the remarks of a gentleman known to you all and respected wherever known for his ability, courage, and fairness. I refer to Hon. Horatio C. Burdard, who, in speaking on this subject in the Forty-third Congress, said:

Another item is sugar. Our importation of sugar for the last fiscal year was 1,645,000,000 pounds, and of molasses 47,000,000 gallons. According to the census returns there was produced in the United States in 1870, 87,000 hogsheads of sugar only. The duty collected last year was \$35,000,000, which would give us 8,700,000 if we increase the duty one-fourth and the consumption continues as large as it has been.

The same remark in some respects can be applied to this tax that is applied to the tax on tea and coffee. It is not entirely revenue, but it is almost all revenue. More than nine-tenths of all sugar and molasses consumed in this country is imported from foreign countries. About one hundred and fifty millions of pounds is the estimate of the amount produced in this country during the last year. It will probably equal that amount. If there is any advantage anywhere, if any portion of the country ought to receive incidental benefits from increase of tariff duties, I think it should be those portions of the United States where this great staple is to some extent produced. We know that the people of the South and West, the people living along the Mississippi River, has been asking for an appropriation of \$2,000,000 to help restore the levee system which has gone into decay; we know the disordered condition of their industries. If it is allowable—and many of my friends think it is not only allowable but the duty of the Government—to aid struggling industries, it is right that the sugar-producing regions of the South should receive this little advantage from the tariff system, which in other respects is to them a heavy tax.

Gentlemen say we are collecting \$47,000,000 a year on sugar and molasses, and that is too much. To that I reply, raise the tariff on sugar a little and you will reduce the amount of revenue from it and increase vastly the home production. Reduce it and you will get more revenue, for you will import more. Louisiana will cease to produce sugar and you will import what she now supplies, and pay a higher price for sugar. It is because you have got a low revenue tariff on sugar that you are importing so much of it; you have a maximum of revenue and a minimum of protection. There is no protection, or but very slight protection, for Louisiana sugar interests under the present tariff. Lower your duty on woolen goods, and see how much revenue you will collect on them. Lower your duty on iron and cotton goods and on salt, and boots, shoes, and clothing, and copper, steel, and blankets, and see how much revenue you will collect, and how enormously the consumption of foreign manufactures will increase.

But under such a blow, suddenly struck as it was against sugar, how could the capital and labor of America engaged in these particular industries compete with the capital and labor of foreign countries, especially if they had unpaid slave-labor in the foreign countries in competition with them, though they escaped the catastrophes of the civil war and have enjoyed the benefits of an increasing tariff and of "associated wealth?" Let us look a little at the sugar production of Louisiana. I estimate that that interest embraces about twenty-five parishes in the State of Louisiana, with a population of about five hundred thousand. I include in that population capitalists, factors, merchants, sugar-brokers, clerks, mechanics, coopers, bricklayers, workers in iron and in copper, and day-laborers in New Orleans. I would be speaking within bounds to say there are half a million of souls dependent upon this industry in Louisiana alone, not including those who furnish transportation or the supplies from external sources. The assessed value of capital invested in land, machinery, and implements in connection with the sugar industry in Louisiana is \$40,000,000. As the assessments represent but two-thirds of the real value, you may add \$20,000,000 to that, and you will have a capital invested of \$60,000,000. Add to that a working capital of \$20,000,000, and the total investment will be found to be \$80,000,000. The gross crops, sugar and molasses, are worth about twenty-two million dollars. The cost of production, including the amounts distributed for wages, supplies of all kinds, implements, &c., may be estimated at \$20,000,000, and the net profits are \$2,000,000. These parishes produce practically none of the goods which they consume; but they buy from the other States all the breadstuffs, machinery, mills, engines and apparatus, and farming implements, meats, mules, horses, clothing, boots and shoes, furniture, and dry goods that they use. The commodities sold to the other States which in turn supply our wants afford the basis of an interstate trade of \$44,000,000 annually.

The bonus given to the sugar-growers of Hawaii under the existing treaty will enable them to put their sugar in New Orleans by the Southern Pacific Railway at from one to two cents a pound cheaper than sugar can be raised in the State of Louisiana. And I ask you whether it is right and proper to strike down an industry which once contributed one-half of the supply of sugar for the American market? If you will afford to it a just protection, (in the measure in which you did afford it protection when it was growing up,) and which you afford with lavish hands to other interests, it will be able to supply two-thirds of all the sugar that will be consumed in this country. Every other article in the country is protected. You gentlemen who

live along the Canadian frontier know very well how your oats, your corn, your potatoes, your wheat, your very wood in the forests, are protected by the tariff against Canadian competition. Your fisheries are protected, and, by prohibitory laws, you have a monopoly of our coasting trade. Official reports show that you are receiving a bounty of more than 90 per cent. ad valorem on blankets, flannels, hosiery, shirts, and drawers, and that the Government receives little or no revenue, less than a million dollars per annum, for these rates are prohibitive, and compel the poor consumer to pay for two blankets and two shirts in buying one. The rate is 89.96 per cent. on steel rails, spool thread 73 to 76, and on cotton manufactures from 46 to 58, with raw cotton free and at our doors, while foreign competitors import their cotton from us across the ocean. In buying steel rails for every thousand miles of railway the people, in consequence of the high prohibitive tariff tax, pay for a sufficient quantity of steel rails to lay down two thousand miles of railway, and the tax so paid does not go into the Treasury but as a bounty to the manufacturers of steel rails. And the sewing-women of the country in buying three spools of thread pay for five, and the laboring-man who buys two cotton shirts pays for three. Your salt, your iron, all your industries are protected, while sugar is about the only industry in the South which has ever received any protection; and the protection under this tariff goes for the benefit of the refiner rather than for that of the producer, because it is prohibitory on all sugar fit for consumption, and not a pound of such sugar can be introduced under the present tariff even from the Hawaiian Islands.

And yet there are men who, while demanding the highest protection for their interests, propose to take away from the American laborer, in competition with the slave systems of the tropics, the small modicum that a tariff for revenue only on sugar affords him. While insisting upon the protection that a prohibitory tariff affords them, they would sacrifice the free American laborer to the slave-owner of the tropics in order to get raw sugars free, principle to interest, their country to their pockets!

There should be an equality in the bounties of the tariff system, an equilibrium between agriculture, commerce, and manufactures.

Let us have a high protective tariff for all or a moderate tariff or a revenue tariff with incidental protection. Give us the tariff of 1832 or 1833, or 1842 or 1846—Henry Clay's or Robert J. Walker's tariff—but apply the same tariff to us that you take for yourselves. We can live under either system if it be uniform and prosper, as I have shown; but the present tariff is unequal and unjust and sectional, and affords no adequate protection to our free laborers against the slave-owners of the Southern Islands. It discriminates in favor of one class of the sugar industry and against another; in favor of one section and against the other; in favor of the refiner against the agriculturist.

The American refiner has a monopoly of our home markets by a prohibitory tariff on all refined sugars, while he gets his raw sugars of high saccharine strength, however, from Cuba with but a small tax. There is in effect a combination between the slave-grown sugar of the tropics and the capital and skill of the refiners against the laborers of Louisiana. That is the effect of the present tariff. Cuba is as close to New York and to the centers of consumption as Louisiana itself, and quite as accessible. And therefore it is that that measure of protection which the Atlantic Ocean gives to our other industries is not afforded to the sugar interest of Louisiana; because the question of transportation and of handling is a very important element in the cost of production, and in the value of the article.

POLITICAL CONSIDERATIONS.

I pass now from the commercial consideration of this subject to its political consideration. I sympathize with those gentlemen whose hearts are stirred at the idea of a grand Republic, who cherish the notion that we are the modern Romans, whose motto should be *urbis et orbis*. No man believes more than I do in the might of the American Republic. But I believe that the true policy of this country is to exalt its own citizenship, and to trust to the law of population and to the concurring forces of modern civilization to carry its banners, not only over the islands of the Pacific, but over the islands of the Atlantic, to the northward as well as to the southward. You all recollect that Rome made the name of a Roman citizen respected everywhere in the known world. *Romanus civis sum!* But what does this treaty tend to? To the belittling of American citizens, to the degradation of American labor, and to injustice to American industries.

Will you gentlemen (especially those of you from the North) strike down that region of country which comes in competition with the southern islands? Will you protect your own industries; but when it comes to protecting the industries of your countrymen of the South will you say to them, "Oh, no; Oh, no?" This \$20,000,000 (as Mr. Boutwell has said) is a mere bagatelle, this Louisiana industry." That gentleman told you that there is a great policy in this matter, a policy looking far into the future, and I expected he would quote from Tennyson—

For I dipt into the future as far as human eye could see,
Saw the vision of the world and all the wonders that would be.

Now I sympathize with all these ideas. I have no doubt the flag of this Republic will one day be the flag of Canada. The Canadians

are a great people like ourselves. They are from the same stock, a people with families, with firesides, with laws, and with religion, with wholesome traditions. But when you come to the races in these southern islands I say to you, beware of taking in too many at once. We have had enough already to test the powers of our digestion, of our morality, of our conservatism, of our institutions.

An intelligent Englishman, a liberal member of Parliament, said to me the other day in the House of Representatives, "I never dreamed that our institutions could stand the strain which you have put upon them in your country."

Now I ask this committee to come down to matters of fact. I ask the committee to look at the Webster treaty. Daniel Webster is honored and revered wherever the English language is spoken. *Clarum et venerabile nomen!* What did Mr. Webster say in 1842, when this very matter was before him as Secretary of State? He said, speaking for the President, to the House of Representatives:

Considering, therefore, that the United States possess so very large a share of the intercourse with those islands, it is deemed not unfit to make the declaration that their government seeks nevertheless no peculiar advantages, no exclusive control over the Hawaiian Government, but is content with its independent existence and anxiously wishes for its security and prosperity.

These are the sentiments of a statesman. In them you find no suggestions of bounties or jobbery.

How did he act when he came to make a treaty with them? How did he deal with this question of the Hawaiian Islands? I refer you to CONGRESSIONAL RECORD, volume 15, of 1876, page 2275. You will see there how Mr. Webster dealt with the subject; and I will ask you to be guided by him. Can you have a safer guide? Look at article 4 of the Webster treaty. I will read it:

No duties of tonnage, harbor, light-houses, pilotage, quarantine, or other similar duties, of whatever nature or under whatever denomination, shall be imposed in either country upon the vessels of the other in respect of voyages between the United States of America and the Hawaiian Islands if laden, or in respect of any voyage if in ballast, which shall not be equally imposed in the like cases on national vessels.

Mr. DUNNELL. What treaty are you referring to?

Mr. GIBSON. The treaty made by Mr. Webster in 1849. I wish you would also look at Mr. Charles Nordhoff's volume of travels in Northern California, Oregon, and the Sandwich Islands, and you will find what he says on the subject of our policy connected with those islands. He says:

It is plain the island trade is so largely in our hands that no other nation can be said to dispute it with us. If our flag flew over Honolulu we could hardly expect to have a more complete monopoly of Hawaiian commerce than we already enjoy. Moreover, almost all the sugar plantations—the most productive and valuable property on the islands—are owned by Americans; and the same is true of the greater number of stock-farms. Our political predominance on the islands is as complete as our commercial. In the present cabinet all the ministers are Americans except one. This was true also of the cabinet of the late king. Of the supreme court two of the judges are Americans and one is German. Almost all the executive or administrative offices are in the hands of Americans or Hawaiians. What the islands are they are because of American effort, American enterprise, American capital. American missionaries civilize them; Americans gave them laws wisely adapted to the customs and habits of their people; American enterprise and Boston capital established the sugar culture and other of the important industries.

If the islands ever offer themselves to any foreign power it will be to the United States. Their people, foreign as well as native, look to us as their neighbors and friends; and the king last summer blurted out one day, when too much wine had made him imprudent, this truth: that if annexation came it must be to the United States. As I write a negotiation has been opened with the United States Government for the purpose of offering us Pearl River in exchange for a reciprocity treaty.

I wish you to read also an interesting speech made by a distinguished New England Senator when this convention was under consideration in the Senate. I will read an extract from it:

Their capacity is variously estimated and will reach from three to five times the amount of the present production, which is stated to be from twenty-three to thirty millions of pounds, so that from one hundred to one hundred and fifty millions of pounds of the Sandwich Island sugars will ultimately take the place of an equal amount coming from other places that are now subject to the payment of duties, averaging for the class which will be received not less than 35 cents per pound, and may soon involve an uncompensated loss to the Treasury of two, three, or four million dollars annually. Our market for their sugar is the best they can possibly have, treaty or no treaty, charged with duty or not. The duty is a sheer loss to us, and a sheer gain to the twenty-five owners of the sugar plantations, whether they reside in Hawaii or elsewhere. It is an immense subsidy to these wholly private interests, and far more obnoxious than any subsidy which has heretofore found Congressional advocates. However honestly intended by the parties to the negotiation, I feel constrained to denounce it as a job, the chief result of which will be to put money into the purses of a few Hawaiian sugar planters, who have captured a good enough king to march at the head of their triumphant procession through the country at our expense, and who, by the by, is to issue his royal proclamation ratifying the treaty. When the rejected Hawaiian treaty of 1899 was before us it was claimed as a merit that all of the owners but two of the twenty-five were foreigners, and almost wholly Americans. There is no doubt they are so now.

Mr. Chairman and gentleman, I say that if you will, as statesmen, look at the Webster treaty you will see that it gave us political control and supremacy as well as commercial supremacy in those Islands. The treaty which we are now considering does not give us one single privilege which the other treaty did not give us. Mr. Boutwell says for the large concession which he admits we made from a commercial standpoint we get article 4 of the present treaty. There is nothing in it. Article 4 of the present treaty is as follows:

It is agreed on the part of His Hawaiian Majesty that so long as this treaty shall remain in force he will not lease or otherwise dispose of or create any lien upon any port, harbor, or other territory in his dominions, or grant any special privilege or rights of use therein to any power, state, or government, nor make any treaty by

which any other nation shall obtain the same privileges relative to the admission of any articles free of duty hereby secured to the United States.

Now, what is there of a political character in that? I admit that on the face of it there is a commercial advantage which we get in having our articles admitted free of duty, and which other nations do not get.

But that is simply a commercial advantage, and nothing more. But I think that I have demonstrated that it is not a commercial advantage to us. Mr. Boutwell himself admitted that it was not a commercial advantage to us. Nobody contends to-day that it is a commercial advantage to the United States, or to any interest of the United States. Now, where is the political advantage of this treaty? It is negative altogether. The Hawaiian Government binds itself not to lease any territory to any foreign nation. Has it leased any to us? If it did, we would be simply paying for that which we had without pay under the Webster treaty. When the Hawaiian Government came to make this treaty with us did it give us Pearl River? Oh, no! Did it give us an outpost? No. Did it give us any advantage for our fleets? No, none. Did it give us coal or a coaling-station? No. There is not a pound of coal in the islands, but the Webster treaty secured a coaling station. There is not the first political advantage in the world which I can discover in this treaty, and I have looked at it with a view to see if there were not some.

The steady progress of this nation in the plane of civilization in obedience, I may say, to the law of population, is one thing. It is inevitable that we must have the dominion of this continent. Nobody disputes that. The first Congress that assembled called itself the "Continental Congress," when we had merely the slopes of the Atlantic seaboard. Our whole policy is continental. It is not our merit or our fault that it is so. But how different is that wholesome, natural, orderly growth from the buccaneering spirit—

That those should take—who have the power,
And those should keep—who can—

that proposes to seize outposts. San Domingo at one time, Cuba at another time, and the Sandwich Islands at another time. Who is benefited by this treaty? Are the Hawaiians? I confess that many gentlemen in Congress voted for the treaty merely from sentiment, from sympathy with the human race. They supposed that it was going to benefit the Hawaiians. And what has been the operation of the treaty? It has been to inundate these islands with Chinese, imposing the Chinese, with his morals, in addition to the loathsome diseases, incurable leprosy and others, with which more than a thousand natives of Hawaii are stricken to-day.

I have got no particular prejudice against the Chinese; but there is not a gentleman in this committee who does not know that the corner-stone of the modern state is the family. It is the Christian fireside, the father, the mother, and sons and daughters that constitute the basis and chief ornament of modern civilization and the glory of Christianity. The Chinaman comes to the Sandwich Islands unaccompanied by his family, a pagan, and encamps for his wages alone on the soil of those islands. As I have shown you from these reports, he is driven into contracts binding him to the cupidity of the planter. The Sandwich Island planters have these "labor contracts;" they have now 14,000 Chinamen, (whose number is increasing at the rate of more than 2,500 a year.) These Chinamen are forced into contracts, and if they violate them they are imprisoned and punished. Is that for the benefit of this young state in the distant Pacific seas? Will the corruption, the debasement, the moral desolation and blight with which you afflict that community, tend to increase the power of this great Republic there? The Hawaiian Islands may be cultivated like a garden of roses; but rottenness is beneath. Is that an advantage to the Hawaiians, or is it an advantage to us?

Mr. Boutwell spoke of the importance of having this little outpost. It is fast becoming an outpost of China; it is already a Chinese colony. Your treaty has brought China that much closer to us. But most military writers insist that outposts, assuming this to be an American outpost, should never be taken to be held. It is generally expected that outposts shall be abandoned; that no trial of real strength shall be made upon them. But the dangers that threaten us are from England, from France, from the European nations, and not from the countries of the distant east without machinery or highways or any of the agencies or appliances or the activities or forces of modern civilization. One county in England has more life, energy, power, or one State of this Union, than the whole Empire of China. Nations like men must be weighed and measured by their intellectual and moral power. If we want outposts against France and England why not seize San Domingo or some of the other West India Islands? But does this treaty give you the Sandwich Islands as an outpost? It does not. It does not pretend to give you any political advantage. Under the Webster treaty, and before the Webster treaty, no nation dared to invade the sovereignty of the Sandwich Islands. One word from the American Government (as the Hawaiian minister, Mr. Allen, has shown) was sufficient to induce the French to quit and the English to quit. That was half a century ago. Should England desire, for the sake of the Sandwich Islands, to go to war with the United States, American diplomacy will find in the Eastern question, with Russia threaten-

ing Constantinople, and in the Egyptian question guarantees against English intervention, and the Pacific railways and Isthmian routes will make secure all our Pacific interests. Would any country in the plenitude of our power to-day cross our track with reference to the Sandwich Islands? Nobody pretends so. No country shows any disposition to take possession of the Sandwich Islands. If we adopt a foreign policy at all, gentlemen, let it be independent. Let it be founded on justice to American citizens, and not in the interest of a vulgar subsidy, in which we are to distribute largesses to a few planters lording it over pagan hirelings. Why protect California; why exclude the Chinese from our country and yet pay them a bonus of millions a year to come to the Sandwich Islands to destroy the growing civilization of that infant state and to overwhelm an American home industry?

Mr. LORD. Do you mean to imply that if the Sandwich Islands, or some one of them, were ceded to Great Britain, that would be cause for war with the United States?

Mr. GIBSON. Yes, sir; I do. I am going to read you a letter from one of the first men of this country in his profession; a gentleman who has recently spent a summer in the Sandwich Islands. I want you to inquire in your respective districts among the medical profession as to the standing of this gentleman in his profession. He is dean of the faculty in New Orleans. I wrote to him that I was going to address this committee on the subject of the Hawaiian treaty, and I desired to know what his views were, as he had spent a summer there. Here is his letter:

UNIVERSITY OF LOUISIANA, MEDICAL DEPARTMENT.
New Orleans, February 20, 1882.

DEAR SIR: I visited the Sandwich Islands in the summer of 1877, traveled extensively in Oahu, Maui, and Hawaii, and made the acquaintance of many of the best and wealthiest citizens. The treaty had then been in existence only a year or two; but its effect upon business and in the enhancement of the value of sugar and rice lands was spoken of by every one with whom I conversed. Fabulous prices were realized upon properties which only a short time before were unsalable, and men were "prospecting" all over the islands for lands suitable for the growth of cotton and sugar. As an evidence of the great advance in prices, a sugar plantation upon the Island of Maui was pointed out to me which only eighteen months previously had been sold to clear it of debt for less than \$65,000, but which during my stay there brought \$1,000,000. A notice of the sale, cut from one of the Honolulu newspapers, I herewith inclose:

"BIG TRANSACTION."

"By far the largest real-estate transaction which has ever yet transpired in this country was consummated last week at Lahaina, in the sale by Mr. James Campbell of his half interest in the sugar estate at that place known as the 'Pioneer Mills' to his late partner, Mr. Harry Turton, for the sum of \$500,000. By this purchase Mr. Turton becomes the sole owner and proprietor of an estate valued at \$1,000,000, and from which was derived last year an income over and above all expenditures of \$200,000."

The plantations are, with two or three exceptions, in the possession of foreigners, for whom the poor natives are "the hewers of wood and drawers of water." Many of these latter have lost their lives in the hard labor which has been exacted of them in the digging of ditches for irrigation and the forced cultivation of the soil. The most disastrous results have, however, occurred to the poor South Sea Islanders, who have been brought into the country by false representations. These poor creatures, unaccustomed to such severe labor, have died in great number, no provision having been made for their return when broken down by disease or hard service.

My friend * * * of * * * will furnish many facts as to the condition of these poor people if addressed confidentially upon the subject.

My opinion, based upon much observation, is that the treaty has resulted in the demoralization and impoverishment of the natives to a most fearful extent. The planters have, of course, realized enormous profits and will doubtless expend any amount of money to secure the continuance of the treaty.

I am, very truly, yours, in haste,
General R. L. Gibson.

T. G. RICHARDSON.

Now, gentleman, if this treaty is a clear bonus to these sugar planters in the Hawaiian Islands of \$3,000,000 a year, (and rising;) if it has no commercial advantages to the United States at all; if, on the contrary, it is working great injustice, and threatening to destroy the sugar-refining interests and the sugar-planting interests of the United States, it cannot be defended on commercial principles. That is clear. If it gives us no advantages over the Webster treaty of 1849; if our political supremacy in those islands was complete before this treaty was made; if it was made for the purpose of extending (in the opinion of many) our political influence, and if it has not extended it; if it gives no harbor for our fleets, no advantages in the event of war, no advantages of a political character in time of peace, then it cannot be defended on political grounds. If it has filled the islands with hordes of Chinese laborers, who are, in their customs and morals, the enemies of Christian civilization, then it has worked no good to the Hawaiian people themselves. I need not stop to say that it has not reduced the price of sugar in this country yet, because combinations may be made to keep up the price. While sugar is 2.81 cents per pound dearer in San Francisco than in the East, we know very well that that may be done temporarily by an arrangement with the railroad companies, and I understand that such an arrangement exists. But that the enormous production of Hawaiian sugar must ultimately cheapen the price of sugar and destroy the refining and planting interests I have shown.

Mr. LORD. I want to see that I clearly understand you in regard to what you said a moment ago. Suppose that we were to abandon this treaty, and that the Sandwich Islands were to renew it with Great Britain, do you say that that would be cause of war between the United States and Great Britain?

Mr. GIBSON. No, sir. I meant to say that if Great Britain should attempt to seize the Sandwich Islands, or any other island near our mainland on this continent, it would be cause of war.

Mr. LORD. Or if she should take them by peaceful cession from the Hawaiian Government?

Mr. GIBSON. Or if she should take them by peaceful cession.

Mr. LORD. You say that that would be cause for war?

Mr. GIBSON. That would be cause for war; but I think it time enough when she attempts to do that to speak of war. We have not got any peaceful cession of those islands. We have got no political advantages under the existing treaty. If, then, there be no political advantage to this country, and if there be great disadvantages to our civilization under this treaty, I cannot see the first ground on which the treaty can be defended by any American.

I take no exception to the Hawaiian minister appearing before the Foreign Affairs Committee, or other distinguished gentlemen, as its advocates, in this city. I find no fault with any appeal that may be made to your philanthropy or to your generosity in behalf of the people of the Sandwich Islands. I would contribute, and I have no doubt that every gentleman of this committee has contributed, to extend the Christian religion. But I insist that this subsidy of \$3,000,000 (and it will rise soon to \$10,000,000) a year to a few sugar planters in those islands in order to enable them to cultivate sugar with Chinese labor in competition with the sugar-producing and sugar-refining interests of this country is an injustice to the people of this country, is in direct opposition to the fixed policy of the Government and to every interest, moral, political, and commercial, of the people whom you and I have the honor to represent in the House of Representatives.

APPENDIX.

TABLE A.—Quantities and values of sugar, melada, and molasses imported into the United States during the years 1821, 1830, 1840, 1850, 1860, and from 1869 to 1880, inclusive.

NOTE.—The production of sugar and molasses in Louisiana is stated upon the authority of M. Champoiner for the period prior to 1861, and for the later years upon the authority of M. Louis Bouchereau. The authorities give both the number of hogsheads and the number of pounds for each year, with the exception of the year 1861-'62, for which year only the number of hogsheads is given. The number of pounds of sugar produced during that year has, however, been computed by estimating the weight of the hogshead at 1,150 pounds.

The petitions from New York and New Orleans, referred to by Mr. GIBSON in the opening of his remarks, are as follows:

NEW YORK BOARD OF TRADE AND TRANSPORTATION,
New York, February 12, 1882.

DEAR SIR: A petition, relating to the treaty with the Sandwich Islands, signed by nearly all the large importing houses of New York, with many manufacturers and others, exporting goods to foreign countries, together representing annual business transactions estimated at upward of one thousand millions of dollars, has been forwarded to Washington, and will be formally presented in both the Senate and House of Representatives. For your information we have had the heading of the petition struck off, together with a few of the names thereon, to illustrate the character of the signers, and we forward a copy herewith. Arrangements have already been made for the presentation of the originals, and it is therefore not necessary to have the printed portion which we send you presented, but we would ask your attention to the facts contained in the heading, and such action at your hands, when the matter comes up for consideration, as you think it deserves.

Respectfully, &c.,

DARWIN R. JAMES, Secretary.

To the honorable the members of the Senate and House
of Representatives in Congress assembled:

Whereas in 1875 the United States concluded a so-called reciprocity treaty with the Sandwich Islands, by which the products of each were admitted in the respective countries free of duty, said treaty to remain in force for a period of seven years and further until terminated by giving one year's notice; and

Whereas the operation of said treaty has proven to be one-sided and inequitable, inasmuch as it has been taken advantage of by a syndicate of capitalists to enormously develop the production of sugar in said islands, which under said treaty is admitted into the United States free of duty, while sugar produced by other friendly nations, which are large buyers of American products and justly entitled to the "most favored nation" clause in our foreign relations, is charged an average duty of two and one-half cents per pound; and

Whereas said treaty constitutes a discrimination not only against said nations but also injures our domestic sugar interests, and the public receives no corresponding benefit, inasmuch as the syndicate charges as much for the sugar thus admitted free of duty as is charged for sugar from other countries which pays a duty:

Therefore, the undersigned merchants and citizens of the United States respectfully petition your honorable bodies to take action looking to the termination of said treaty at the earliest time consistent with honorable compliance with its provisions; and further, if it should appear that its provisions have been evaded by passing a different grade of sugar than that contemplated in the treaty free of duty, that you will take action to remedy such evasion.

Polygamy.

SPEECH

OF

HON. JOSEPH H. BURROWS,

OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1882,

On the bill (S. No. 353) to amend section 5332 of the Revised Statutes of the United States, in reference to bigamy, and for other purposes.

Mr. BURROWS, of Missouri, said:

Mr. SPEAKER: It was not my intention at the commencement of the discussion upon this bill to say anything for or against its passage, believing as I did that the gentleman from Kansas [Mr. HASKELL] who has the bill in charge would select such assistants as would insure the strongest defense of the bill as a whole, and at the same time present such an array of facts as would leave not a lingering doubt in the mind of a single member upon this floor that this subject should be dealt with here and now. And it is not because this (in my humble opinion) has not been done, for in the time allotted for discussion it would be hard to crowd in more solid argument or good logic than has been done by the friends of the measure, and it is with no thought of adding to the reasons that have been given for the passage of the bill, or yet of entering into the constitutionality of such a measure. All this has already been done in a manner far beyond my ability. My purpose then is only, so far as I may be able, to voice the sentiments of the people whom I have the honor to represent upon this floor and at the proper moment reflect their will in my vote upon the final passage of the bill, which I shall endeavor to do.

Mr. Speaker, the power of Congress to deal with the question of polygamy in the Territories to the fullest extent I have never for one moment doubted, and having been reared within twelve miles of where the first Mormon temple was built at Nauvoo, Illinois, I know something of the enmity and prejudice that exist against this sect wherever they have lived and attempted to establish themselves. In one of the counties that form the district that sent me here, they tried to establish themselves, nearly forty years ago, and were only driven out (as from every other place wherever they have attempted to permanently reside) at the cost of blood and treasure; and they only sought out and migrated to their present abiding place because it was far removed from the restraints of civilization and morality. It is safe to say that the people of this country, through

their law-making power, have never looked with favor upon the peculiar doctrines or rather dogmas of this church; but have been awed into inactivity and silence through a desire to extend to all the widest range and greatest religious freedom lest the spirit of our organic law should be violated or the sanctity of the Declaration of Independence infringed upon.

We have waited until the heart of the nation has become faint and its whole head sick because of hope deferred. For more than thirty years this crime against the moral and civil law, as well as the condemnation which God himself has given in the almost equal creation of the sexes in the human family, has gone on, and it has been a stench in the nostrils of all Christendom. In the days of African slavery upon this continent it was denominated as a "twin relic of barbarism." Chattel slavery has been wiped out, but at great cost both in blood and treasure. The hatred of that struggle is dying slowly, but I hope surely. An era of better days is, I trust, dawning. Let us meet this question like men. Let us put the ban of our condemnation upon it. Let us say, thus far hast thou gone, but no farther. Already has this scarlet-robed woman of the desert grown too great, and we shall doubtless find additional legislation necessary in order to more fully and perfectly carry out the spirit and letter of this bill. There in the Territory of Utah will be found a large amount of property, 400,000 acres of land, a subsidy by the Government, managed and smuggled under the control of the church, besides much more that has been accumulated and acquired in one way or other and much by honest labor. How is this to be divided? These wives and children, who have themselves helped to acquire it, should also share in its division and enjoyment.

But it is said by this bill, you legislate three-fourths of all the officers of the Territory out of office. Mr. Speaker, here, in my opinion, is the panacea that is to cure the ill. It has been said, "The hair of the dog was good for the bite." These officers, from judge to jury and from constable to Territorial legislator, have protected and encouraged polygamous marriages, and, as the law now stands and has been, a conviction and punishment for bigamy in Utah was an impossibility, and have grown up to regard themselves as respectable, and for years past have elected their Delegate to Congress and sent him here commissioned by the governor and he has been admitted to a seat upon this floor and drawn his salary regularly; while in the States of this Union a man guilty of the same offense would have been convicted and sentenced to the penitentiary.

Mr. Speaker, the history of Utah since the completion of the Pacific Railroad and gentle immigration is somewhat known, but the crimes that were perpetrated under the guise and, I may add, sanction of the Mormon Church previous to that, through their "Danites" or "destroying angels," are known only and fully to the God of the universe, and eternity will alone reveal the dark deeds and bloody record. The Mountain Meadow victims will stand up in the judgment and testify to others than the "red man of the forest." The blood of murdered victims in Illinois, Missouri, and Utah cries for redress and the same laws to govern in Utah that govern in every other State and Territory of this nation.

Utah for a generation has been the plague-spot upon this continent, and the political parties have shirked their responsibility and avoided the issue. Congress has been petitioned and memorialized for more than thirty years. Bill after bill has died between the Senate and the House. Good men and true who have from time to time lifted up their voices in the Halls of Congress against this growing evil have gone to their graves and beheld this monster vice standing erect, bold and defiant, and to-day we may regard ourselves as fortunate if this iniquitous and demoralizing evil can be throttled and placed in a condition and prospect of ultimate extinction without bloodshed and great loss of life. Religious bigotry and fanaticism, which engender intolerance, hate, and persecution, have ever been found to take a firmer hold in the mind of man and to be harder to eradicate or control than any principle or feeling in the human family. Mr. Speaker, if I were to frame an indictment against the Mormon Church, as founded on its history in Utah, it would read something like this: "lawlessness, perjury, polygamy, lewdness, profanity and vulgarity, theft and murder," and to which I would add blasphemy and religious fanaticism.

About the only virtue that is offered as a rebuttal to all this, and which is presented with a "great flourish of trumpets," is that it is the only preventive of the social evil, and this is a most fruitful theme in the mouth of every Mormon speaker and Latter-Day Saint apologist, that these polygamous communities are more virtuous than the monogamic world. But is it a fact that plural marriage does tend to develop a virtuous state of society, does protect the sacred rights of confiding woman, shield and sanctify the influence around the home-circle and the hearth-stone, and aid in bringing and nurturing a noble offspring? If so, then the Mormon Church has much to commend it to the Christian world, for these would produce grand and glorious results, and are in fact and are in themselves the very beginning and foundation of good society and good government, and, if true, would "cover a multitude of sins." But the facts prove a state of things almost the opposite.

Those who have the best means of knowing and of ascertaining the true status and condition of things in this respect, in Salt Lake City and elsewhere in the Territory, say that for the same population

there is more private prostitution and more illegitimacy in Utah than in any other place in the civilized world. And why should not this be the case? The ties of the marriage vow are loosened by plural marriage; true, natural affection, as it does or ought to exist in all real marriages, is crushed and trampled upon; the tender care and love of the husband is disintegrated and divided, and soon neglect, and abandonment, and a severing of the tender ties that bind the true husband and wife. The children grow up to follow in the footsteps of the parent, and thus the whole tendency is immoral and in its character sensual, and if adopted by the civilized world would in an incredibly short time begin a retrograde movement and the progress of the last eighteen hundred and eighty years soon be lost to society and mankind. We are not ready for this, much less to initiate the movement upon the free soil of America and under the shield of the Constitution, as well as in defiance of the teaching of that gospel, the blessings and benign influence of which have made us great, grand, moral, and prosperous. Mr. Speaker, I hope this bill will pass just as it came from the Senate, and that we may start it upon its glorious errand, that it may extirpate this evil from the soil of America, and the generations yet unborn will rise up and call the Forty-seventh Congress blessed.

Polygamy.

SPEECH

OF

HON. HENRY L. MOREY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1882,

On the bill (S. No. 353) to amend section 5352 of the Revised Statutes of the United States, in reference to bigamy, and for other purposes.

Mr. MOREY said:

Mr. SPEAKER: There may be differences of opinion as to whether the bill under consideration is the perfection of legislation to prevent the evil against which it is directed. Laws for the suppression of vice and the prevention of crime, if not always experimental, are at least usually progressive in their character. There ought not to be any difference of opinion as to the duty of this body to legislate on this subject.

The sentiment of the country, the Christian civilization of the time, demand it, and the Republican party is pledged to it by its history and its promises. They all demand that this Congress shall lay its hand upon this hideous vice that boldly and defiantly stalks in Utah and adjoining Territories and declare it to be a crime against the law, as by the judgment of the civilized world it is a crime against private and public morals. Polygamy is a crime against American civilization; an oriental vice which is entitled to no place on our soil or in our institutions.

In every State in this Union bigamy is a felony, and the laws making it such are fearlessly and impartially executed against its offenders, in accordance with and in obedience to a righteous public sentiment. Should the Congress of the United States do less in the Territories over which it has exclusive jurisdiction? That would be weak, indeed.

This bill declares polygamy to be a felony. This is not a new provision in the law. To the honor of our country be it said, this insidious vice now rears its hideous front in the face of and in defiance of the criminal laws of the land. It disregards the law and challenges the public sentiment of the country, which brands it as degrading and infamous. It has appropriated and subordinated the public domain to the proprietorship and purposes of a religious hierarchy which has flourished in this vice, and attempts to gild it with the sanction of a religious ordinance.

Local and municipal officers have fallen into its control; courts, juries, and witnesses have been its willing tools. Thus intrenched, it has thus far defied the law and its officers, and grown stronger, bolder, and more insolent in spite of them.

This bill proposes to go further than legislation has gone in the past. It proposes a further remedy, one which it is hoped will prove more efficacious than have those of the past. Observation has suggested, and experience has proven, that it is not sufficient simply to stamp this evil with the badge of illegality and criminality.

The bill under consideration goes further, and strips these violators of law, of good order and decency, of the political power by which heretofore they have defied the law itself. As a step in the right direction, with a hope that it may be the means of eradicating this growing evil, I shall vote for this bill.

Chinese Immigration.

SPEECH

OF

HON. THOS. H. BRENTS,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. BRENTS said:

Mr. SPEAKER: Before the final vote is taken on this measure, I ask the further indulgence of the House for a very few moments.

No more important measure has received or is likely to receive the attention of this Congress. It is not surprising, perhaps, in view of the far-reaching results to be accomplished, that some gentlemen whose sincerity and patriotism are unquestionable have shown some hesitation in giving it their support.

No one holds in higher veneration than I the cherished traditions of our free country and her benign institutions. No one welcomes more heartily than I do the poor and oppressed of every race and nationality who come to our shores to find a refuge from oppression and a home. No one feels greater pride in hearing my country called the land of liberty, the asylum for the oppressed, and the home of freedom. No one upon this floor was moved with higher admiration as the eminent gentleman from Massachusetts [Mr. RICE] and the venerable gentleman from Ohio [Mr. TAYLOR] dwelt with such mastery and soul-stirring eloquence upon these delightful themes. It was, indeed, a source of great pleasure and gratification to me to find the opponents of this bill actuated in this matter by the same patriotic feelings, the same love of country, the same desire to perpetuate our American system of government, the same solicitude for the welfare of our American industries, and the elevation and prosperity of our American laborers, that have prompted its advocates in bringing it forward.

I am truly glad to find all parties in this House at least planted on the same humane and benevolent principles and impelled by the same philanthropic purposes. But it does seem a little strange that they should differ so widely and so radically in the simple application of them. Moved, as they claim to be, by the same grand purposes, and yet pursuing courses so divergent, can it be that both fully and correctly understand the bearings of the subject involved? Is it not manifest that either those who favor or those who oppose the measure, if alike sincere and candid in their professions of loyalty to republican institutions and of disinterested friendship for our laboring classes—as I have no reason to doubt in the least—must, in the very nature of the case, wholly misunderstand the character of these Chinese and the object of their coming? Now, sir, which is it most likely to be? Are those who have been brought in daily contact with them for years and in thousands as liable to be deceived and mistaken in this regard as those who know them only in books or who meet them but seldom?

Mr. Speaker, the citizens of the Pacific coast, of all classes and parties, laying aside all differences as to other matters, through the petition-box, and by their Senators, Representatives, and Delegates, with unbroken unanimity, are beseeching you, in the name of free government and free labor, to stay the on-coming tide. Are all these people misguided enthusiasts, blinded by race prejudice, or deluded by selfishness and jealousy? Are all virtue, brotherly kindness, and patriotism in our country to be found east of the Rocky Mountains? Sir, I have been a resident of the Pacific coast from boyhood, a period of thirty years, and I have found the people there to be as brave, as broad-minded, as intelligent, as enterprising, and as generous as any people on earth. They are as strongly attached to our Government, as deeply interested in the welfare of our common country, as ready to relieve the destitute and suffering, or champion the cause of the weak and defenseless, and as independent and fearless of fair and legitimate competition in the race of life as any people in the world. They gladly, heartily, and cordially welcome all foreigners who come in good faith to make this land their home and to enjoy the blessings of freedom. But, sir, we have learned, to our disappointment and sorrow, that these Chinese come for no such purposes. They come with no intention of becoming citizens, acquiring homes, or even remaining permanently with us. Every one has made provision, in case of unexpected death in this heathen country, as they consider it, for the return of his body to the Celestial Empire for burial. Every one has taken a solemn obligation not to renounce his allegiance to his own despotic government, the violation of which would subject him and his relatives left behind him to the most direful punishments. All or nearly all of them are sent here by the Six Chinese Companies, whose slaves they are, not to better their own condition nor to benefit us, but for purposes of cold and greedy speculation on the part of those who send them; and to enforce the strict performance of their onerous and servile obligations to their unscrupulous and grasping masters, and for their return with their accu-

mulations, everything they hold near and dear, wives and children, and even their right to life in this world and happiness in the next, are all placed in pawn. Their food, clothing, and other necessities are furnished from China, so that no portion of their earnings shall be spent in this country. Most of them are criminals or prostitutes of the most groveling instincts, many infected with loathsome and dangerous diseases—the very scum and dregs of the most degraded part of humanity—who bring with them all their barbaric and vicious manners, customs, habits, and practices, and maintain them here. That they may the more successfully compete with our most industrious, economic, and frugal American laborers, reduce wages, their wages even below starvation-rates, drive them out of employment, and so be enabled to supply the entire demand for labor, they huddle together by hundreds in their dens of vice, filth, and pestilence.

No laboring freeman who has the least regard for health, cleanliness, comfort, or even decency, certainly none who has a family to support and educate, stands any show whatever in competition with these brutish Mongolian slaves. It has been said on this floor that these Chinese are not filthy and offensive in their habits. Sir, I lived several years in San Francisco, and I have seen whole streets and even large districts, once the very seat of respectable and prosperous business and the promenade of fashion, the fairest portions of the city, abandoned by our citizens and occupied by these Chinese. Locations once the most desirable are now shunned. And so it is in nearly all the principal cities on the coast. Again, it is said they are inoffensive and law-abiding. In a sense, this may be true. They are seldom open, boisterous, or turbulent in the violation of law. But, almost without an exception, they will steal, commit perjury and other crimes of the most heinous nature, in which they hope to escape detection; and their general untruthfulness and unreliability have passed into a proverb. They even have their own courts and officers, by whom their despotic laws and customs are administered and enforced in our midst and in disregard of ours. They cherish no sympathy with our Government and feel no interest in our welfare. Call you this immigration? Do our Constitution, laws, and traditions demand that we shall continue to nurture and encourage it?

Must we, in order to be true patriots and philanthropists, keep open our ports to these marauding invaders? Must we, in order to show that we believe in the universal brotherhood of man and fatherhood of God, and in order to have it understood that our country is the land of the free and the home of the oppressed, permit them to maintain in the midst of our populous cities their loathsome dens reeking with lust, crime, and pestilence, spreading disease, debasing the morals of our youth, and driving our home laborers out of employment? Sir, I cannot subscribe to the doctrine. Believing it to be our duty to maintain and perpetuate our free institutions and the moral character of our people on which they depend, I hold, sir, that it is both our right and duty to prohibit the coming among us of any class of persons in any way inimical or antagonistic to them, even though those persons were willing to sever all allegiance to the land of their birth. Unquestionably we have that right and power when those persons cannot and will not renounce that allegiance. Most other foreigners coming among us bring their families and property with them, cast their lot with us, conform to our habits and customs, establish homes and rear and educate their children, become citizens, and help on the general prosperity of the country. They become attached to the principles of our Government, and are ever ready to go forth in its defense. But not so with these Chinese. Time and association have no influence on them. They remain the same and unchangeable forever.

But we are told that the remedy is in our own hands; that if we would not employ them they would cease to come. No doubt of that. The capitalist who employs this sort of labor because he can get it more cheaply, and thus sends the amount of the wages paid therefor out of our circulation into a foreign land, is a very shortsighted political economist, and does himself as well as his laboring countrymen great injustice. So also is the man who buys foreign-made merchandise in preference to the domestic article on the same principle, and he also does himself and his laboring countrymen a gross injustice. But, without legislative restrictions and discriminations protective of our home industries and labor, these things will go on, and the interests of American labor will continue to suffer. Now, sir, it seems to me that if Congress should interfere in the latter case, it should also in the former. Precisely the same principle is involved in the one case as in the other. I can see no reason to justify legislative protection to our laboring classes against competition with "the pauper labor of Europe" that does not call as loudly, yea, more loudly, for the like protection against competition with the servile labor of Asia. I cannot see how the advocates of protection or the friends of American republicanism can consistently vote against this measure.

But again, sir, it is said it will give offense to the Chinese Government and bring about a severance of our present favorable commercial relations with that nation, and result in the loss of our valuable Chinese trade. I do not believe it, Mr. Speaker, but if it does, so let it be. We cannot afford to barter away the blessings of American liberty and the dignity and glory of American free labor for any such paltry and sordid consideration.

In the hope of reaching an early vote and a triumphant passage of the bill, I now yield the floor.

Chinese Immigration.

SPEECH

OF

HON. J. HYATT SMITH,
OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882.

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. SMITH, of New York, said:

Mr. SPEAKER: I honor the boldness of the gentlemen on this floor who have so earnestly and eloquently opposed the provisions of this bill. With especial pleasure I listened to the honorable gentleman from Massachusetts, [Mr. RICE,] who nobly sustained the reputation of that grand old State as the mother of statesmen and orators. His tribute to the memory of my life-long friend, the late Anson Burlingame, had in it the ring of the eloquence of "the silver-tongued orator" whom he so justly eulogized. Captivated by his eloquence rather than his logic, I confess that for the moment he made "the worse appear the better reason." With the sharp sarcasm of a Randolph he ridiculed the (to him) needless alarm of the nation in view of the influx of a few Chinese immigrants—not more than ten thousand a year—among the hundreds of thousands poured upon our shores each year from all parts of the globe. Sir, that is true. Hundreds of thousands come to us annually from all lands. We welcome the Englishman, Irishman, German, Frenchman, and every other man coming here to make this land his home, and we open wide our doors as a refuge to the persecuted Jew. From the son of Abraham to the votary of Saint Patrick any man and every man has a brother's welcome who will cast in his lot with us and be an American citizen.

Mr. Speaker, it is the glory of our Republic that we receive all men from everywhere who are ready and willing to identify themselves with us and become part and parcel of our Republic. But I say with emphasis that no man, from any land, has a right to share our liberties, enjoy our protection, and get his bread from our soil who will not or cannot become a naturalized citizen. Whatever may be his love and veneration for the land of his fathers, if he will be with us he must be one of us. Self-preservation is as much the law of nations as individuals. We must not, we cannot receive into our body-politic an element utterly foreign to the principles and vital life of our Republic. The reception of one such man is the inoculation of a virus poisonous to the health of our institutions.

Sir, there is no parallel between the Chinese and any other people seeking place and privilege in our nation. All others come to identify themselves with us. "As well refuse the Irishman, and the German, and drive out the negro, as to turn away the Chinese," say the enemies of this bill. The Irish and the German share the burdens and discharge the duties of American citizens. Nay, more; in the day of our supreme national peril none were swifter to respond to the drum-beat and bugle-call of the Union than the Irish and German citizens. They poured out their blood as an oblation upon the altar of their adopted country, and their graves are their monuments upon every battle-field. The despised negro, down-trodden by the iron heel of oppression, heeded the call, and bared his black breast to the tempest of battle. These men, with the Englishman, and the Frenchman, marched abreast to the martial music of the Union.

Again, Mr. Speaker, all others, save the Chinese, coming to dwell with us acknowledge the reign of the God of nations whose divine statutes are the foundation and only surety of the permanence of our Republic. They build their temples to His worship. With the exception of the Jew—himself adoring that God who gave into the hand of his nation the code of law to all peoples, and all time, on the awful summits of Sinai—they lay their offering of holy sacrifice, whatever their creed, at the sacred foot of the cross of our common Lord and Saviour Jesus Christ. But these heathen Chinese worship an unknown god. Sir, as a Christian citizen, I protest against the desecration of this Christian land by the erection of any building dedicated to the profane orgies of heathenism, or the toleration of a people with no faith or interest in common with our Republic, and ignorant of even the name of the living God. As a citizen I speak, with no creed but my country, and no religion but the Republic.

Finally, sir, I declare that these barbarians are unfit to divide the toils and share the rewards of honest industry with the free laborers of our land. It is an insult to labor, and only that capitalists may procure service and gather gains at a cheaper rate. God has ever honored labor. In his first appearance to man he worked six days out of the seven. And in his second appearance he wrought at the carpenter's trade in Judea. That was the twofold coronation of labor. That turned the sweat-drops upon the bronzed brow of industry into a jeweled crown, placed upon the forehead of the laboring-man by the hand of a laboring God. Yes, and God is jealous of His honor, nor may you insult Him and His with impunity. Slavery insulted labor and God destroyed slavery. Criminal labor to-day, in our prisons over the land, robs honest industry of the hard-earned

fruits of toil and the contractors incur and deserve the wrath of offended Deity.

This Chinaman is a heathen slave whose labor is farmed out at a price. It must not be. Let free labor accomplish a freeman's work and have a freeman's reward. In the name of all honest citizens, toiling in the shop or field, I protest against this insult to the laboring classes all over the land.

Sir, let us in this Congress complete the good-begun work. We have passed a bill which, if carried out, will girdle the deadly upas tree of polygamy and leave it blackened and blasted as by the lightning of heaven, to stand its own contemptible monument and memorial. I left a sick bed to come to the Capitol that I might add the feeble force of my arm to that blow. Sir, let us complete the work of national purification this day, by passing without amendment a bill which shall effectually and forever rebuke the grasping greed of the capitalist, who, for the aggrandizement of wealth, would degrade the free laboring-man to the level of a slave; and the enactment of which shall hold over all the millions of the honest sons and daughters of toil the broad shield of a free republic. My voice and vote are for this bill.

Polygamy.

SPEECH

OF

HON. JORDAN E. CRAVENS,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1882,

On the bill (S. No. 353) to amend section 5352 of the Revised Statutes of the United States, in reference to bigamy, and for other purposes.

Mr. CRAVENS said:

Mr. SPEAKER: Polygamy cannot be properly treated in any other light than as a crime. It is a crime under the law, strongly condemned by the civilization of the age. We cannot, obeying the mandates of the Constitution, punish it as the crime of a church, an organized body or association of people, but must treat it as a crime only by the parties engaged in it, each being entitled to separate accusation, hearing, and trial. From the first to the sixth sections of this bill, inclusive, no sort of mention is made of any particular class of supposed violators of the law. These sections propose amendatory and healthy legislation looking to the certain punishment of violators of the law in localities where the jurisdiction of the courts of the United States is exclusive. No sort of objection can be offered to the general purpose of these sections by those who desire the certain and faithful execution of the law against the high crimes for which punishment is therein provided. It is an unfortunate thing for this country that further legislation is deemed important by any one. But it is a fact of which neither the people nor the National Legislature can profess ignorance, that in Utah more than in any other locality polygamy or bigamy abounds, and with the sanction of what is called or known as the Mormon Church.

Plural marriages being tolerated by the ordinances and rites of that church many have been entered into, a large number of which were before the passage of the act of July 1, 1862, which this act proposes to amend; and for that and perhaps other reasons, the seventh section proposes to legitimize the issue of such pretended marriages. The provisions of this section, as well as those of the sixth section, authorizing the President to grant amnesty to offenders guilty of bigamy or polygamy, are exceedingly liberal, and considering the increased facilities elsewhere provided for securing convictions, may have the effect to induce many of these deluded people to embrace the Government's liberality and abandon their life of crime against society and the plainly written laws of the land. Thus far this bill seems to be all right, except perhaps the third section. It is as follows:

SEC. 3. That if any male person, in a Territory or other place over which the United States have exclusive jurisdiction, hereafter cohabits with more than one woman, he shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be punished by a fine of not more than \$300, or by imprisonment for not more than six months, or by both of said punishments, in the discretion of the court.

That section is certainly open to Mormon criticism. It will be insisted by them that the Gentiles, as all other church people are called, are not actuated by sound morals, and that this section permits cohabitation with one woman without pretending to enter into the bonds of matrimony, and only makes penal the act of living with more than one woman in that relation. Unless the law already provides punishment for such cohabitation with one woman, and is in nowise affected by this section, it is manifestly open to such criticism. Be that as it may, the masses of the Mormon people will regard this section as especially aimed at them, and as exempting the equally guilty Gentiles, as they call other people, who thus live with one woman only. I have not had the time to ascertain the state of

the law in this respect in the Territories and the District of Columbia, and to study the effect of this section upon it; but it does seem to me that the frame of this section might be improved and made to embrace unmistakably all offenses against society of that kind. It is absolutely certain that leaving this section as it now stands places in the hands of those who desire it a powerful instrumentality to inflame the public mind in Utah.

If I understand the temper and disposition of the Congress of the United States, it is not so much to wreak vengeance upon the Mormon people for their past offenses as to lead them out of their way of ill and blot out the stain brought upon this great country by their evil and lawless practices.

To do this, they should have no just or seemingly just cause of complaint against us, as violating any common principle of right or sacred guarantee of the Constitution. We all stand here ready to take any action which may be rightfully taken to stamp out the great iniquity of polygamy in Utah, as well as in all the territory of the United States for which we may appropriately legislate. Legislation that will secure the certain conviction of the guilty parties, regularly and in order, ought to be sufficient. We, before this great evil, cannot hesitate to bring the full constitutional power of Congress to bear upon all persons wantonly violating the provisions of our enactments against it. The eighth section of this bill proposes heroic treatment of the subject, not in the way of bodily punishment for criminals after conviction in due course of law, by the courts of the country, but by inflicting pains and penalties upon suspected persons before such conviction.

If polygamy or bigamy is a high crime, and of this there can be no doubt, I hold that our fundamental law secures to persons accused the right of trial by jury, and that only after conviction by that mode of trial can any kind of punishment be inflicted. True, we may in the exercise of the power conferred upon us by the Constitution disfranchise the entire people of Utah and provide for filling all the offices by appointment, but when the law now in force permits certain classes of people to both vote and hold office, can we single out from those classes persons suspected of crime, revoke their privileges, and dispossess them of their offices to which they were lawfully elected? Is not this bill, so providing, a bill of attainder, expressly prohibited by the Constitution?

The point I desire to make clear is that the Government of the United States may fill all the offices in the Territory by appointment, no one being allowed a vote; or that it, as the States invariably do, may prescribe by direct legislation the qualifications of voters and persons entitled to hold office, or allow the Territorial Legislature so to do; but that when persons are lawfully elected to and installed into office, they cannot be deprived of their property right therein as a punishment for crime without first being duly convicted. I venture to say that in every State in the Union persons possessing the qualifications of voters generally, although indicted for bigamy and under recognizance, are entitled and permitted to vote. It is contrary to the great protective principles which we boast give security to the citizen in his person, property, good name, and fame, to visit any sort of penalty or punishment upon persons accused of crime before conviction had in due course of law.

It is not assumed, I again repeat, that a State may not or that the United States may not change or alter the qualifications of voters within territory over which their jurisdiction to fix them extends, as to do so would be absurd. But in doing so regard must be had to the right of every citizen to be accused, heard, tried, and convicted of crime before condemnation. A State statute running thus would be a novelty: "No murderer or thief shall be entitled to vote." Under it an inferior election officer would necessarily have to try every person challenged as a murderer or thief. Would not the common voice proclaim aloud such procedure a farce? Just such a farce the eighth section of this bill, if it becomes a law, will inaugurate in Utah. Every voter challenged will be tried by "proper persons" appointed by a returning board of five persons upon whom no restraints are placed whatever, and, of course, they will place none upon these "proper persons." All the States, it is presumed, disqualify persons convicted of high crimes; but in that case the election officers do not have to pass upon the question of guilt or innocence, but are required to simply ascertain a fact, that is, to say that they have been found guilty by a court of competent jurisdiction.

The character and reputation of the citizen should not be lightly dealt with and placed in the hands of an irresponsible and perhaps prejudiced, inferior election officer. It is manifestly intended that under this bill not only the election offices in Utah will be vacated as expressly provided by the ninth and last section, but that many will be vacated under the provisions of the eighth section. If not, why two years in advance of a general election appoint a board of five persons at a salary of \$3,000 each? Immediate work is to be done, and how it is to be done we are left to imagine, as no rule or method is provided. My imagination leads me to believe that under the eighth and ninth sections of this act robbery will be inaugurated and consummated in Utah, and outrages be perpetrated upon the freedom of the ballot such as to bring the blush of shame to the face of every true American. One-half the American people to-day have an abiding conviction that through the instrumentality of returning boards claiming unlimited power, such as is given by this bill to the board thereunder created, the chief executive office of this nation

was recently usurped for a period of four years, while a great portion of the remaining half have dark suspicions that such was really the case.

Believing as I do that no greater crime can be perpetrated than to defraud a citizen of his franchise, I shall never vote for so loose a bill as this, conferring as it does the undoubted power to so defraud. I shall always stand by my convictions when the freedom of elections is involved, no matter what the outcry may be against any people, and always and invariably stand firm against invasions of the right of trial by jury, no matter what pretext may be offered for violating that right in great or small degree.

Mr. Speaker, in the Forty-fifth Congress a bill was introduced by Mr. Luttrell, of California, to regulate elections and the elective franchise in Utah, and referred to the Committee on Territories, the first section whereof reads as follows:

Be it enacted, &c., That from and after the passage of this act every male citizen of the United States of the age of twenty-one years and upward who shall have resided in the Territory of Utah for six months next preceding any election, and ten days in the ward, township, or other election precinct in which such person shall offer to vote, and no other person whatever, shall be entitled to exercise the elective franchise in the said Territory: *Provided, however,* That no idiot, insane person, or person under sentence for any felony, or in prison under conviction for any crime, nor any person who is a bigamist or polygamist, if he entered into the relation or commenced the practice of living and cohabiting contemporaneously with more than one woman, recognizing or claiming them as his wives, since the passage of the act of Congress entitled "An act to punish and prevent the practice of polygamy in the Territories of the United States and other places, and disapproving and annulling certain acts of the Legislative Assembly of Utah Territory," approved July 1, 1862, and has not ceased thus to live and cohabit, shall be allowed to vote at any election; and none but qualified voters shall be elected to or hold any civil office in said Territory; and that the act of the Territorial Legislature of said Territory entitled "An act conferring upon women the elective franchise," approved February 12, 1870, and all other acts or parts of acts of said Territorial Legislature, so far as the same may have established, or attempted to establish, any other or different qualification of electors in said Territory, or any part thereof, from those in this section above provided, are hereby disapproved, annulled, and repealed.

The bill was duly considered by the committee, and by its direction I submitted a report thereon, which was printed and recommitted to the committee. The report is as follows:

The Committee on the Territories has duly considered the bill (H. R. No. 2078) to regulate elections and the elective franchise in the Territory of Utah, referred to it, and recommends the following amendments thereto:

First. Strike out from the first section all the words between the word "crime," in the twelfth line, and the word "shall," in the twenty-first line, and all after the word "Territory," in the twenty-third line of said section.

Second. Strike out the twenty-second, twenty-third, and twenty-fourth lines of section 15.

With the amendments above suggested, the passage of the bill is recommended.

Your committee deems it proper to state a few of the considerations which have led it to recommend the passage of this bill. Because of the peculiar practices of the people of that Territory, the Congress of the United States, by act dated July 1, 1862, provided for the punishment of the crime of bigamy in the Territories of the United States, which act still remains in force. While this act in terms is applicable to all the Territories, yet in point of fact it is well known that the object or purpose of the act was to suppress polygamy in Utah. That it has failed in its purpose is equally well known, the practice of polygamy having received no check from it, and this because of the indisposition of the Mormon jurists to enforce the law. The failure of the Mormon population to obey and enforce this by no means unusual statute, but a statute common to all civilized and Christian countries, they attempt to justify by claiming that polygamy is part and parcel of their religious faith, and so being, that the statute aforesaid, so far as it relates to them, is in contravention of the first amendment to the Constitution, and therefore null and void. If void as to any one person in the Territories of the United States, it must certainly be void as to every other person. A statute applicable to all persons in terms, but enforced and valid only as to the less guilty few, would be an anomaly.

That the irreligious in the States and Territories of the Union, who violate this and similar statutes, should be compelled to suffer the disgrace and punishment of dungeon darkness, while the religionists, so called, of Utah, with the protective shield of the Constitution thrown around them, can openly violate it with impunity, is a view or doctrine too monstrous to be seriously considered.

Bigamy had a well defined position in the catalogue of crimes when provision was made by our Constitution for the trial of all crimes. (Section 2, article 3.) The audacity and publicity of the violation of this statute, singularly enough, has had the effect to lessen the enormity of the crime in the minds of many, while in the judgment of your committee its public condemnation ought to be strengthened thereby.

While your committee is thus decided in its views upon the subject of polygamy, it cannot consent to visit punishment or impose disabilities upon those accused of the practice until their guilt shall be determined by the Constitutional mode, a trial by jury, for which reason the first amendment to this bill is suggested. The second amendment is suggested because a discrimination between the courts of competent jurisdiction is made by the original section. This bill, with the amendments suggested, if enacted into a law, without any discrimination against any class or character of citizens, except females, will furnish the means of a fair and free election. The Territorial law, as it now stands, authorizes female suffrage, and discriminates largely in their favor. Males are required to be native-born or naturalized citizens and tax-payers, while a multiplicity of alien-born wives may vote without being naturalized or tax-payers. Our law does not recognize more than one woman as a naturalized citizen by reason of the naturalization of any one man, and cannot recognize more than one alien woman as a naturalized citizen by reason of being the wife of a native-born citizen.

The following is the oath required of voters:

"**TERRITORY OF UTAH, County ———, ss:**

"I, ———, being first duly sworn, depose and say that I am over twenty-one years of age, and have resided in the Territory of Utah for six months, and in the precinct of ——— one month next preceding the date hereof, and (if a male) am a (native-born or naturalized, as the case may be) citizen of the United States, and a tax-payer in this Territory; (or if a female) I am native-born or naturalized, or the wife, widow, or daughter (as the case may be) of a native-born or naturalized citizen of the United States."

The manifest purpose and object of this law is to authorize plural wives to vote, without reference to their native or foreign birth, by means of a registration made by Mormon officials. A registration law in a new country is cumbersome and useless; besides, there are many objections to the details of the law, chief among which is the provision that the assessor shall visit every dwelling in each precinct, &c. In a new country, when many are tented in the wilderness or desert, and new settlements are constantly being made, it will be found impossible to

register the voters in that way, and under such a system it would be very convenient for the assessor not to know and not be able to find persons opposed to him in politics for registration. It is the opinion of your committee that it is the duty of Congress not to allow women, many of them alien-born and who cannot speak the English language, in contravention of the general rule prevailing in the States, to vote at public elections in Utah, and by their votes to foster the practice of polygamy, in which they themselves are engaged, in open violation of a statute of the United States.

The words proposed to be stricken out by the first amendment were the following, between the words "crime" and "shall:—"

Nor any person who is a bigamist or polygamist, if he entered into the relation or commenced the practice of living and cohabiting contemporaneously with more than one woman, recognizing or claiming them as his wives, since the passage of the act of Congress entitled "An act to punish and prevent the practice of polygamy in the Territories of the United States and other places, and disapproving and annulling certain acts of the Legislative Assembly of Utah Territory," approved July 1, 1862, and has not ceased thus to live and cohabit.

It will be observed that that bill did not embrace bigamists or polygamists who entered into the relation prior to the passage of the act of July 1, 1862. Although not so far-reaching as the present bill, the committee, as well as my recollection now serves me, unanimously concurred in the amendment to strike out, and for the reason stated in the report. There is no changed condition of things in Utah now, from then, so far as I am advised. That bill was lengthy and carefully prepared, and as amended it was then thought, and I still think, if enacted into law, would in a great degree prevent church domination in elections in Utah. It takes from women the franchise, which this bill does not, and in that respect it still meets with the approval of my judgment.

I believe, sir, that with appropriate amendments to the third section of this bill, and the substitution of that entire bill as amended for the eighth and ninth sections, we would have a measure before us to which all could give cheerful support, and from which, if enacted into law, good results could be reasonably expected. From the bill as now framed nothing good can come, and unless altered I feel impelled to vote against it.

Chinese Immigration.

SPEECH

OF

HON. EDWIN WILLITS,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. WILLITS said:

Mr. SPEAKER: I voted for the bill restricting Chinese immigration which passed Congress but was vetoed by the President during the Forty-fifth Congress. I gave that vote with great hesitation, as it conflicted with opinions I previously held, and which I had advocated. Mature reflection has confirmed me in the opinion that wise statesmanship calls for legislation qualifying the admission of the Chinese to our shores. Therefore I favor the fundamental principle of the pending measure. Some of its features I do not like and I shall vote to modify them.

My chief reason for supporting such a measure is, that I believe it is in the interest of American labor. Labor is a disgrace to no man; it should be honored everywhere. In America it is not only honored but it is dignified. It has no caste; in it are great possibilities, and by it the humblest in the land may raise himself to fortune and to fame; or he may lay the foundations of a household whose achievements may be lined in the annals of our country. The American laborer, no less than the millionaire, nay, more than he, lives not for himself alone, but for and in his family. He works not for sustenance alone, but for the comfort, competence, and education of his family; and he has a right to ask that he shall have for his toil, which may be his only capital, sufficient income to meet these demands. He has the right, further, to demand that he shall be protected from a policy that shall impair his status as an intelligent, self-reliant constituent of our body-politic. He has the right to protest against a labor that has a lower standard—has no hope of elevation, no aspiration beyond the bare necessities of life.

American labor has never objected to the immigration of European labor, for the reason that it is the same in all its essential characteristics with our own. The Frenchman, the German, the Irishman, the Swede, or the Norwegian comes to our shores with his family and his household gods for the purpose of bettering his condition and to build the fortunes of his little ones. He comes to be one with us, to make him a home. His purposes are the same, his necessities are of the like character, and the result is that he easily, so far as this point is concerned, assimilates to the condition of American labor, assumes its responsibilities, and makes a competition from numbers only, and not of another kind. He seeks a comfortable home for his wife and is willing to pay for it; he desires education for his children and is willing to pay for it; he wants the minor luxuries of a refined soci-

ety and he is willing to pay for them—all out of his labor; hence he too demands and has a right to demand such wages for his toil as shall confer these blessings upon him and his household. This labor is in kind the same as our own, and we have always welcomed it. It comes here to stay, to build and to leave as part of the country's resources the accumulation of its years of toil. The country is richer for it, and its institutions, its schools, its churches, its national life are not impaired by it.

But how is it with Chinese labor? We have had it here for nearly thirty years, and we ought by this time to see and know whether it fills the standard we have given to American labor, and which standard is to be maintained if we expect to perpetuate a republic of citizens with ballots in their hands as well as picks or plows. In almost every respect it has fallen short of the requirement. As a rule, the Chinaman does not come to stay. He brings no family. He has no home, in the American sense. He forms no more a constituent element in our body-politic than the beast of burden. He has few of those wants that all concede are legitimate in the American laborer. His expenses are correspondingly light. And in the end his accumulations, with his bones, are transferred to his native land, whose celestial shores have ever been blessed in his eyes. The country is no richer for him. He has done nothing to build up society, or education, or culture, or true national life. But he can work cheap! And why not? His life is single, his wants physical, his expenses trifling, and he can beyond all doubt compete with American labor, that has to incur the expense of citizenship and family and refined life. Before that kind of labor our American labor must go down. It must either withdraw from the field or come down to its low standard of duties and wants and aspirations. Neither of these can we permit. Wise statesmanship demands that we interpose, by legislation if necessary, and save American labor not from competition but such competition, not from immigration but from invasion, not from men who seek an asylum here from despotism or persecution but from men whose highest hopes are to return to their native land; not from men who leave a generation behind them as American as we are but who leave no generation at all.

Our late President Garfield stated the differences so tersely in his letter of acceptance that I cannot better close the few remarks I have to make on the main features of this bill than by quoting them, as follows:

The material interests of this country, the traditions of its settlement, and the sentiment of our people have led the Government to offer the widest hospitality to emigrants who seek our shores for new and happier homes, willing to share the burdens as well as the benefits of our society, and intending that their posterity shall become an undistinguishable part of our population. The recent movement of the Chinese to our Pacific coast partakes but little of the qualities of such an immigration, either in its purposes or result. It is too much like an importation to be welcomed without restriction; too much like an invasion to be looked upon without solicitude. We cannot consent to allow any form of servile labor to be introduced among us under the guise of immigration.

Polygamy.

SPEECH

OF

HON. ABRAM S. HEWITT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1882,

On the bill (S. No. 353) to amend section 5352 of the Revised Statutes of the United States, in reference to bigamy, and for other purposes.

Mr. HEWITT, of New York, said:

Mr. SPEAKER: Polygamy can have no defenders in this House. We all agree that it is a blot on our civilization which should be wiped out. But in wiping it out we must be careful not to destroy the foundation of our political system. The bill pending before the House in the eighth section contains a provision to which no friend of civil liberty can give assent. It punishes before trial and without conviction. It deprives citizens of the right of suffrage upon suspicion, and not upon proof and judgment of any other tribunal than the will of the inspector at the polls. Polygamy can be stamped out without resorting to a remedy which if generally applied would vitiate our whole political system and convert our elections into a mockery of justice. No consideration of expediency, no amount of clamor from persons, however worthy, who are ignorant of the fundamental conditions by which civil liberty exists, will ever induce me to give assent to a remedy which, worse than the disease, is based upon a doctrine so radically wrong that its admission into our code of political ethics would be fatal to free government elsewhere than in Utah. Hence I have voted to strike out the eighth and ninth sections of the bill; but as this amendment has failed, I am constrained to vote against the bill, not because I detest polygamy less, but because I love constitutional government more than those Representatives who support this measure.

Chinese Immigration.

SPEECH

OF

HON. STANTON J. PEELE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. PEELE said:

Mr. SPEAKER: A grave question and an unsolved problem confront us. A nation whose civilization has been touched with the finger of God is now asked to establish a precedent concerning its future relation with a heathen nation. What shall that precedent be? What will be its effect? The first we can determine by our action, the second can only be determined by the action of the Chinese Government and the lapse of time. For commercial reasons other nations will not feel interested in trying to preserve our hitherto friendly relations with China.

For three-quarters of a century we have sent our missionaries there to instruct them in their duty to God. In discussing this bill, therefore, it is well to keep in mind that friendly and missionary relation which has existed between the two countries.

Let us now glance at the treaty relations which have existed for nearly half a century between this country and China.

In 1844 the United States and the Chinese Empire entered into a treaty of peace, amity, and commerce, the first article of which is as follows:

There shall be a perfect, permanent, and universal peace, and a sincere and cordial amity between the United States of America on the one part, and the Ta Tsing Empire on the other part, and between their people respectively, without exception of persons or places.

In 1858 another treaty was entered into reaffirming the principles of peace and amity, and providing in a more clear and positive manner the rules which should be observed in the intercourse between the two countries. In the twenty-ninth article of this treaty "the principles of religion as professed by the Protestant and Roman Catholic Churches are recognized as teaching men to do good and to do to others as they would have others do to them."

Here the golden rule, that rule which the Saviour said on the mount was the "law and the prophets," is recognized by the Chinese Government as an evidence of their willingness to protect our missionaries in that country in their efforts to convert the Chinese mind to our system of religion; not that they were unfamiliar with that rule, but that here they recognized it as one of the principal teachings and practices of the Christian religion. To this treaty was soon added a supplemental treaty consequent upon changes in the tariff duties and also one for the amicable adjustment of claims, all of which have been faithfully kept.

The lessons learned during the war of the rebellion, and the necessities which were apparent at its close for building up our trade suggested additional treaty stipulations, so that in 1868 the treaty known as the "Burlingame treaty" was entered into not to abrogate the former treaties but to add to them, and the fifth article of that treaty is as follows:

The United States of America and the Emperor of China cordially recognize the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and subjects, respectively, from the one country to the other, for purposes of curiosity, of trade, or as permanent residents. The high contracting parties, therefore, join in reprobating any other than an entirely voluntary emigration for these purposes. They consequently agree to pass laws making it a penal offense for a citizen of the United States or Chinese subjects to take Chinese subjects either to the United States or to any other foreign country, or for a Chinese subject or citizen of the United States to take citizens of the United States to China or to any other foreign country without their free and voluntary consent respectively.

The inherent and inalienable right of man to change his home and allegiance is here recognized by the Chinese Empire, as it ever had been by the United States; yet the theory of our Government has been that none but the white races were subjects of naturalization, and in the sixth article of the "Burlingame treaty" it is expressly provided that nothing therein "contained shall be held to confer naturalization upon citizens of the United States in China nor upon subjects of China in the United States." It will also be seen by this article that the right to go and come, either for the purposes of travel or residence, should be enjoyed by such citizens or subjects the same as are enjoyed by the citizens or subjects of the most favored nation.

Within less than five years after this treaty had been promulgated our country experienced two extraordinary epochs, one an unparalleled period of prosperity, during which all classes were seemingly blessed with plenty, and when speculation wild and extravagant was the rule.

In 1873 the balance of trade on merchandise alone with China was, in round numbers, \$24,000,000 against us, to say nothing about our trade with other nations. Notwithstanding this nearly thirty thousand miles of railroad, or nearly one-third of all the railroads we now

have in this country, were built during that five years, thereby increasing the demand for labor, and necessarily encouraging foreign laborers to our shore. This demand was further increased by extensive public and private buildings in almost every part of our country, so much so that our municipal indebtedness was more than doubled, while increased individual indebtedness was the ruinous rule. During this same year (1873) that prosperity which we dreamed would be perpetual was arrested and the second epoch came, a crisis not unknown in this country, but hitherto unheeded.

This most unfortunate financial embarrassment closed the machine-shops, the factories, the mines, and the workshops, and suspended the building of railroads and other contemplated improvements, thereby throwing hundreds of thousands of laborers out of employment, and at the same time lessening the demand for labor, but during this time the Chinaman continued to come where prior to that time he supposed he was wanted, and I think I am not mistaken when I say he was wanted. Having in this way gained admittance to the door of labor in this country, he was not willing to yield his invited field and return to his native land. The consequence was that the people of the Pacific States, with an otherwise increased population, grew restless and demanded that the further coming of Chinese laborers should be suspended or restricted. This agitation, aggravated by the hard times and the further influx of white laborers, continued until Congress sought to grant relief by the enactment of a law, but being in violation of the treaty, as it was, the President vetoed the bill, which action, coupled with increased agitation, led to the treaty of 1880, that treaty which it is claimed furnishes the basis for this bill, and I think I am not mistaken when I say that this last treaty was made with reference to restrictive legislation. For greater precaution I quote that treaty:

Whereas in the eighth year of Hsien Feng, anno Domini 1858, a treaty of peace and friendship was concluded between the United States of America and China, and to which were added, in the seventh year of Tung Chih, anno Domini 1868, certain supplementary articles to the advantage of both parties, which supplementary articles were to be perpetually observed and obeyed; and

Whereas the Government of the United States, because of the constantly increasing immigration of Chinese laborers to the territory of the United States, and the embarrassments consequent upon such immigration, now desires to negotiate a modification of the existing treaties which shall not be in direct contravention of their spirit:

Now, therefore, the President of the United States of America has appointed James B. Angell of Michigan, John F. Swift of California, and William Henry Trescott of South Carolina, as his commissioners plenipotentiary; and his imperial majesty the Emperor of China has appointed Pao Chün, a member of his imperial majesty's privy council, and superintendent of the board of civil office; and Li Hungtsao, a member of his imperial majesty's privy council, as his commissioners plenipotentiary; and the said commissioners plenipotentiary, having conjointly examined their full powers, and having discussed the points of possible modification in existing treaties, have agreed upon the following articles in modification:

ARTICLE I.

Whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

ARTICLE II.

Chinese subjects, whether proceeding to the United States as teachers, students, merchants, or from curiosity, together with their body and household servants, and Chinese laborers who are now in the United States shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation.

ARTICLE III.

If Chinese laborers, or Chinese of any other class, now either permanently or temporarily residing in the territory of the United States, meet with ill treatment at the hands of any other persons, the Government of the United States will exert all its power to devise measures for their protection and to secure to them the same rights, privileges, immunities, and exemptions as may be enjoyed by the citizens or subjects of the most favored nation, and to which they are entitled by treaty.

ARTICLE IV.

The high contracting powers having agreed upon the foregoing articles, whenever the Government of the United States shall adopt legislative measures in accordance therewith such measures will be communicated to the Government of China. If the measures as enacted are found to work hardships upon the subjects of China, the Chinese minister at Washington may bring the matter to the notice of the Secretary of State of the United States, who will consider the subject with him; and the Chinese foreign office may also bring the matter to the notice of the United States minister at Peking and consider the subject with him, to the end that mutual and unequal benefit may result.

In faith whereof the respective plenipotentiaries have signed and sealed the foregoing at Peking, in English and Chinese, being three originals of each text of even tenor and date, the ratifications of which shall be exchanged at Peking within one year from date of its execution.

Done at Peking, this 17th day of November, in the year of our Lord 1880. Kuan-ghsi, sixth year, tenth moon, fifteenth day.

JAMES B. ANGELL.

"because of the constantly increasing immigration of Chinese laborers to the territories of the United States and the embarrassments consequent upon such immigration," and that in consequence of such alleged existing facts "desires to negotiate a modification of the existing treaties which shall not be in direct contravention of their spirit." Here is expressed by the United States the cause and the purpose of that treaty. In short, this is the title to the treaty, and the purposes as therein expressed should not be violated by the government that declared it.

The first article of this treaty furnishes much food for reflection and serious consideration. It has ever been the boast of our country that our plighted faith should be sacredly kept, and when in the opinion of some of the leading statesmen of this country (you will pardon this seeming digression) our 5-20 bonds could be paid in Treasury notes, the Republican party, if not the best men in all parties, contended that the United States by the terms of its contract was pledged to the payment of that sacred debt in coin, and that good faith required that the spirit of that contract should be kept, and so it was, and the consequence is that to-day the balance of trade is largely in our favor, while our currency as an item of commercial convenience is worth more than its redeemer.

The bonds of the nation, wisely protected as they were by the hope and faith of the past, have been funded by common consent into 3½ percents, with a bill now pending in this House from the Senate to fund at 3 per cent. Such is the marvel consequent upon our fidelity to the spirit of our contract. Now, remembering this, let us see what the material points are in the first article of our last treaty:

Whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States or their residence therein affects or threatens to affect the interest of that country, or to endanger the good order of the said country or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence.

Is not this a high moral trust committed to our charge, and that, too, by a confiding nation for whose religious welfare we have sent men and women in obedience to the command of Him who is "no respecter of persons," "Go ye into all the world and preach the Gospel to every creature?" When should this opinion be expressed? Certainly not until, in the language of the treaty, our interests are affected or threatened to be affected by the coming or residence of Chinese laborers. Has that time arrived? Will we, the representatives of the foremost nation in the world, subjecting as it has brute force to intelligent and Christian civilization, the genius of whose people has lightened the burdens of the world and utilized as it were the flashes of Heaven for our convenience, now assume the responsibility of saying and giving it out to the world as the opinion of this nation that because of the presence of less than 150,000 Chinamen in our country our interests are affected by their residence or threatened to be affected by their further coming?

I am aware of the fact that about two-thirds of all those now here are centered in a single State, and mostly in one city, and that we should not be deaf to their complaints nor lightly consider their reasonable demands for restrictive legislation. The people of this nation have no superiors, and by their superiority and civilization are, in my humble opinion, able to better and make purer every race that may come to our shores. I cannot believe that by contact with our people the Chinese will not improve and eventually take on our civilization; that civilization which my reading leads me to believe is an essential precursor to the Christianization of prosaic China. But let us look further at this article of the treaty. In its language we "may not absolutely prohibit it." The Chinese Government reposed such confidence in the people of the United States that it was willing to and did leave it to the United States to say what that regulation, limitation, or suspension should be, only that it should not absolutely prohibit.

I grant you that under the treaty large latitude is left to our discretion, but it was so left by a nation who recognized the rule "Do unto others as you would have others do unto you," and it is therefore important to the future welfare of this country, not only in our intercourse with China, but possibly with other nations whose laboring classes may seek to find homes and employment within our territory, that we should consider well the precedent we are about to establish. We cannot afford to violate that peace and amity which was declared in the first treaty, and which has ever characterized the two nations. But let us look at that article of the treaty still further and what do we find?

The limitation or suspension shall be reasonable, and shall only apply to Chinese who may go to the United States as laborers, other classes not being included in the limitations.

Thereby conforming to the purpose of the treaty as expressed in the preamble.

Here we find that in addition to the prohibitory clause it is expressly stated that such limitation and suspension shall apply only to Chinese laborers. While I admit that it is within the power of Congress to construe that term, I insist that it is an obligation to be as sacredly kept and exercised as the keeping of the prohibitory clause, and exercised, if at all, only in the light of international amity and good faith, otherwise we may justly subject ourselves to the charge of infidelity and bad faith, and thereby lessen our national

Now, it will be observed that the preamble sets forth that said treaty is desired upon the part of the Government of the United States

honor in the eyes of the civilized world. But let us look at that first article of the treaty still further:

Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

By this latter clause of the article we find that we are restricted to such legislation only as will be necessary to enforce whatever regulation or suspension we may adopt, again leaving it to our discretion to say what legislation, if any, may be necessary, so that there is imposed upon the nation the highest obligations of national honor. In a word, by the terms of the treaty we may adopt a reasonable limitation or suspension as against Chinese laborers, and then enact such laws only as may be necessary to enforce such limitation or suspension. There are three material questions to be considered:

First. Does the residence or coming of Chinese laborers to this country affect, or threaten to affect, our interests, or endanger the good order of our country, or any locality therein? for without this foundation upon which to stand the questions of reasonable suspension and necessary legislation cannot follow.

Certainly it cannot be claimed that our country as a whole is affected or threatened to be affected by the residence or coming of Chinese laborers; but that a particular locality may be affected by such residence and threatened to be still more affected by their coming I am not at liberty to deny, since the representatives from the Pacific States, irrespective of party or creed, assert in the halls of Congress that such is the case and that their people are almost a unit in demanding restrictive legislation. They are the best witnesses as to the evils, if any, growing out of the residence of Chinese laborers in their midst, for they speak from personal knowledge.

I am inclined, with considerable hesitancy as to the wisdom of this legislation, to yield to a demand for a reasonable suspension, and if the present bill provided for only five or ten years' suspension I would give it my support, though I would very much prefer the proposed amendments offered by the gentleman from Iowa [Mr. KASSON] or even the amendments offered by the gentleman from Massachusetts, [Mr. ROBINSON.]

Second. Accepting the condition of affairs in the Pacific States as detailed by the gentlemen from those States, and the petitions of their respective constituents, together with their urgent demand for some such legislation, the next question is, What would be a reasonable suspension?

We are without precedent, and to arrive at a just conclusion we must be governed by the spirit of the treaty.

The negotiations which preceded this treaty should be consulted in order to arrive at the intention of the Chinese Government as to the words "limitation and suspension."

Speaking on this subject of limitation and suspension, the United States commissioners said they—

would like to have a more definite statement of what such limitation meant and how it was proposed to carry it into effect.

To which the Chinese commissioners replied—

that they had informed the secretary of the commission verbally that there would be difficulty in their accepting the word "prohibition" used in the second article; and assuming that the word "regulate" would cover generally the other words "limit and suspend," they had suggested this limitation in hopes of learning from the United States commissioners what their idea of limitation was, and they would like to hear.

Mr. Trescott replied that the—

United States commissioners were not quite prepared to say, because as the article they had submitted was a distinct proposition they had been led by the language of the memorandum to suppose that the proposition for limitation in time and numbers was a substitute for that article and not a response to it, and that they had therefore expected that the Chinese commissioners would be prepared to explain it in some detail.

The Chinese commissioners said—

they did not intend their proposition to be considered as a substitute for article 2, or in any sense an ultimatum on the part of the Chinese Government. They rather intended it to induce a free discussion of the subject so it should be thoroughly understood.

By limitation in number they meant, for example, that the United States having, as they supposed, a record of the number of immigrants in each year as well as the total number of Chinese now there, that no more should be allowed to go in any one year in future than either the greatest number which had gone in any year in the past, or the least number which had gone in any year in the past, or that the total number should never be allowed to exceed the number now there.

As to limitation in time they meant, for example, that Chinese should be allowed to go in alternate years, or every third year; or, for example, that they should not be allowed to go for two, three, or five years.

Mr. Trescott replied that—

The United States commissioners feared there was some misunderstanding on the part of the Chinese commissioners as to the meaning of article 2. The United States Government did not ask the Chinese Government to regulate, limit, suspend, or prohibit immigration, but to leave that to the discretion and action of the United States Government itself; that under the Burlingame treaty as construed in practice the Chinese had the absolute right in any numbers to come to the United States. This had caused trouble and embarrassment. What the United States Government asked was that the Chinese Government should consent to such a modification of the Burlingame treaty as would enable it, without raising unpleasant questions of treaty construction, to exercise that discretion. The reasons why the United States Government should be allowed to do this rather than to impose the task upon the Government of China are manifest. If undertaken by China it would necessitate complicated regulations. The appointment of special officers at each port to enforce the rules on the part of the local officers would raise questions between the two governments. Besides, as the memorandum of the Chinese commissioners states, they could only apply to the ports of China, while the larger portion of emigrants go from Hong-Kong and Singapore.

It is far easier to prevent them from entering the United States than to prevent

their leaving China. If the United States had the right it would most easily find the power to accomplish this result by appropriate legislation. They thought it best for the friendly relations and the interests of both countries that the United States should have the right to limit, suspend, and prohibit, and to enforce such limitation or prohibition by their own laws, in their own ports, without imposing further responsibility upon China.

It will be seen by this conversation that the Chinese commissioners were under the impression that under the treaty it would devolve upon the Chinese Government to decree such restrictive measures, and inasmuch as the larger portion of the Chinese which had come to this country went from Hong-Kong and Singapore, both of which are English ports, they saw the difficulty, so the United States commissioners relieved them of that impression by saying that they thought it best for the United States to enact such laws.

By this negotiation it will be further seen what in the opinion of the Chinese Government would be a reasonable suspension, &c., and needs no comment from me. I now pass to the third material question, and that is, what legislation would be necessary to enforce a suspension of five, ten, or twenty years?

I am inclined to make no objection at this time to the manner in which this bill seeks to exclude Chinese laborers from our shores, but the sections of the bill with reference to the coming of Chinese subjects other than laborers are harsh, unwarranted by our intercourse with China, and ought to be stricken out and left to be regulated by the President after consultation with the Chinese authorities, as indicated in the amendments offered by the gentleman from Iowa, [Mr. KASSON.]

During the negotiation which preceded this treaty—

The Chinese commissioners asked if the United States commissioners could give them any idea of the laws which would be passed to carry such power into execution.

Mr. Trescott replied that this could hardly be done. It would be as difficult to say what would be the special character of any act of Congress as it would be to say what would be the words of an edict of the Emperor of China to execute a treaty power. That two great nations discussing such a subject must always assume that they will both act in good faith and with due consideration for the interests and friendship of each other.

That the United States Government might never deem it necessary to exercise this power. It would depend upon circumstances. If Chinese immigration concentrated in cities where it threatened public order, or if it confined itself to localities where it was an injury to the interests of the American people, the Government of the United States would undoubtedly take steps to prevent such accumulations of Chinese. If, on the contrary, there was no large immigration, or if there were sections of the country where such immigration was clearly beneficial, then the legislation of the United States under this power would be adapted to such circumstances. For example, there might be a demand for Chinese labor in the South and a surplus of such labor in California, and Congress might legislate in accordance with these facts. In general the legislation would be in view of and depend upon the circumstances of the situation at the moment such legislation became necessary.

The Chinese commissioners said this explanation was satisfactory; that they had not intended to ask for a draft of any special act, but for some general idea how the power would be exercised. What had just been said gave them the explanation which they wanted, and they asked that it might be given to them in writing.

Mr. Trescott replied that—

A *précis* of the entire conversation would be given to them. They further remarked that they were satisfied that if any special legislation worked unanticipated hardship, the Government of the United States would listen in the most just and friendly spirit to the representations of the Chinese Government through their minister in Washington.

No comment is necessary to explain or construe the language of that conversation. The Chinese commissioners expressed themselves as satisfied with the explanation given, and did not ask for the draft of any special act, but contented themselves with leaving such legislation to the judgment of this nation, as they were assured—

That if any special legislation worked unanticipated hardship, the Government of the United States would listen in the most just and friendly spirit to the representations of the Chinese Government through their minister in Washington.

Now, as to the character and habits of the Chinese people, I do not understand that the Chinese laborers are to be excluded simply upon the ground of their religion, civilization, or habits, but more largely because as a nation they have more laborers than perhaps the rest of the world and their coming here would materially affect our American laborers.

The language of the bill would seem to justify the conclusion that the Chinese people are to be feared in this country as a criminal, pauper, and diseased class; but I could not support this bill for either of these reasons, as the truth of history, as well as the experience and observation of our own people, refute such charges, not that they are altogether exempt from such charges, but that in proportion to population they are, after all, in those particulars at least, average men.

I could not support this bill on the ground of their alleged indelicacy and filth, for my information leads me to conclude that that is not sufficient to justify their exclusion, and I am strengthened in this opinion when I am assured as I am that the leading citizens of the Pacific States employ them as their house and kitchen servants. Neither could I support this bill on the ground of the lewd character of the Chinese women; not but that such an accusation may be true, but when we reflect that the Chinese women come to this country without that moral conception of responsibility to God which characterizes a people living in a Christian land, we can well afford to exercise in some degree that charity which our Saviour manifested toward one likewise guilty.

I can support a bill providing for a reasonable suspension upon the ground of protection to American labor as distinguished from pro-

tection to American society; that is, for the protection of American laborers against degradation and want resulting from Chinese cheap or servile labor, rather than for the protection of society in the aggregate against alleged evils pertaining to the Chinese people in our midst; not but what there are evils to society to be guarded against in consequence of their religion, customs, and habits, but I am not willing to admit that our system of morals and religion are such that we need fear the presence of Chinese because of such evils. Such an admission would be tantamount to a denial of the power and influence of the Christian religion to advance and better men's condition; and the progress of this country, as well as that of our missionaries in foreign fields, attest the value of the truths taught in the Bible too well for such an admission. Neither am I willing to admit that there is any danger of the American people taking on Chinese notions of morals or habits because of the presence of any considerable number of them among us. There is less danger of the American people (in fact no danger) affiliating with the Chinese than there is of the Chinese assimilating with the American people, not that there is any comparison, but that we must respect the pride of the Chinese people in their own civilization. Our civilization is too far in advance of theirs and is constantly advancing, while theirs is going backward.

The civilization of China was better four thousand years ago than it is to-day, and her material decline dates from the commencement of the Christian era, which lifted the clouds from a darkened world and made its defects known. The secret of the long life of the Chinese Empire is due more to the fact that her people have been constantly educated in the established customs and traditions of the country, not even allowing the Emperor himself to make innovations without a revolution. The incentive to such an education is because of its prerequisite to office. No wonder, therefore, that the old beaten paths are rapidly wearing out and the Chinese people seeking to make new ones. Speaking of Chinese institutions, Mr. Seward, in his *Travels Around the World*, says:

Mr. Burlingame's sanguine temperament and charitable disposition led him to form too favorable an opinion of the present condition of China. In his anxiety to secure a more liberal policy on the part of the western nations toward the ancient empire, he gave us to understand, especially in his speeches, that "while China has much to learn from the western nations, she is not without some peculiar institutions which they may advantageously adopt." This is not quite true. Although China is far from being a barbarous state, yet every system and institution there is inferior to its corresponding one in the west. * * * Chinese industry precludes invention; Chinese morals appeal not to conscience but to convenience; Chinese architecture and navigation eschew all improvement; Chinese Government maintains itself by extortion and terror; Chinese religion is materialistic—not even mystic, much less spiritual.

The opinion of Mr. Bayard Taylor concerning their system of government and their civilization was given in part the other day by the gentleman from California, [Mr. BERRY,] and I need not quote his opinion here.

Mr. O. N. Denny, our consul-general at Shanghai, in his report under date of June, 1880, gave the monthly account of a cooly laborer as follows:

Receipts in wages.....	\$4 50
Expenditures for food.....	\$3 00
Expenditures for lodging.....	50
Incidental expenses.....	50
	<hr/> 4 00
Net income.....	50

And then says:

With the class of cheap labor of which I have been speaking this empire can supply the world. Is it strange, then, under such circumstances, that the mind of a necessarily more expensive laborer, with entirely different hopes and aims in life, should become alarmed at the prospect of a stubborn competition with it? China stands to-day where she has stood for thousands of years, firmly wedded to Joss and her idols, looking backward, venerating the paths trod by her ancestors, and with no interest in any civilization but her own. On the contrary, there has been laid broad and deep upon the American continent the foundation of a society which secures the greatest good to the greatest number, and whose motto is "Onward and upward." There will be realized the full strength and highest culture of the human intellect, and there will be witnessed the grand triumph of civil and religious liberty. The downtrodden and oppressed of other lands who hope for the attainment of these ends have been invited to come and lend a helping hand, but none others. And since the laboring masses of the United States are in full sympathy with and are engaged in promoting the best interests of the Government, and since for this purpose it became necessary for them to subscribe to the rules of society under it, it would seem to be great injustice to compel them to compete for an existence with a labor belonging to a civilization going in an opposite direction from their own and which can never sympathize with it.

All parties in this country are pledged to some restrictive legislation, and the Republican party in its last platform said:

Since the authority for regular immigration and intercourse between the United States and foreign nations rests with the Congress of the United States and its treaty-making powers, the Republican party, regarding the unrestricted immigration of the Chinese as an evil of great magnitude, invoke the exercise of that power to restrain and limit that immigration by the enactment of such just, humane, and reasonable provision as will produce that result.

The declarations of the two great parties in this country on the subject of Chinese immigration were made known to the Chinese commissioners during the negotiations preceding our treaty, and they were therefore advised as to the feeling of the people in this country at the time that treaty was made. If the unrestricted immigration of Chinese was regarded "as an evil of great magnitude" in 1880 it cannot be regarded less so now; and the success of the

Republican party might be taken as an instruction to adopt some reasonable restriction.

The late President Garfield, in his letter of acceptance, said:

The material interests of this country, the traditions of its settlement, and the sentiment of our people have led the Government to offer the widest hospitality to immigrants who seek our shores for new and happier homes, willing to share the burdens as well as the benefits of our society, and intending that their posterity shall become an undistinguishable part of our population. The recent movement of the Chinese to our Pacific coast partakes but little of the qualities of such immigration, either in its purposes or its results. It is too much like an importation to be welcomed without restriction; too much like an invasion to be looked upon without solicitude. We cannot consent to allow any form of servile labor to be introduced among us under the guise of immigration. Recognizing the gravity of this subject the present administration, supported by Congress, has sent to China a commission of distinguished citizens for the purpose of securing such a modification of the existing treaty as will prevent the evils likely to arise from the present situation. It is confidently believed that these diplomatic negotiations will be successful without the loss of commercial intercourse between the two powers which promises a great increase of reciprocal trade and the enlargement of our markets. Should these efforts fail it will be the duty of Congress to mitigate the evils already felt and prevent their increase by such restrictions as without violence or injustice will place upon a sure foundation the peace of our communities and the freedom and dignity of labor.

The Republican party in its platform of 1880 also contained these words:

We reaffirm the belief avowed in 1876, that the duties levied for the purpose of revenue should so discriminate as to favor American labor.

So that the tariff question or the question of protection to American labor was one of the prominent issues in the last campaign, and I am free to say that in my district I kept that issue constantly before the people, and perhaps received some votes for that reason that I might not otherwise have received.

While I can see a distinction between protection resulting from import duties and by excluding Chinese laborers from our shores, the object sought is the same. I feel, therefore, that I ought not to wholly disregard the expressed object of a large number of my constituents, even though my better judgment might lead me to oppose this bill.

True, the passage of this bill would not directly affect the laboring classes in my district, yet I am not disposed to be bound by the narrow limits of either my district or State. I have not thought it proper at this time to enter into a discussion of the Chinese character, religion, or habits, as whatever support to restrictive legislation I may give will be upon the ground of protection to our American laborers for the reasons given, and not because I am afraid that our system of government, morals, or religion will retrograde because of the presence of less than one hundred and fifty thousand Chinese laborers in our country.

Chinese Immigration.

SPEECH

OF

HON. THOMPSON H. MURCH,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. MURCH said:

Mr. SPEAKER: In the remarks that I shall submit on this bill I shall endeavor to earnestly solicit the attention of those members of this House who may not have examined into this question from the point of view of those whose opportunities for judging of the question of Chinese immigration have been best and whose painful experiences under the blight of this poisonous influx have impelled our brethren of the Pacific States and Territories to cry out for years to us in the other portions of the country to come to their deliverance from a curse which threatens their social, political, financial, and physical existence.

It is little, if any, that I can add, Mr. Speaker, to the exhaustive and convincing arguments that have been presented in the Senate and on this floor to satisfy the most skeptical or the most obstinate member that the time has passed when we can longer afford to be neglectful of or indifferent to the demands, the sufferings, and the perils of the people of the Pacific States arising from Chinese immigration. The time has come, sir, when we should take decisive action for their protection, for we owe them the duties of national protection from the barbarian invasion under which they suffer, both by reason of our common citizenship and by reason of our duty to make the bonds of the Federal Union the ties of perpetual advantage and of highest worth to all parts of this great Republic.

This is not wholly a party measure, and although I have the honor to represent in part on this floor the party which has taken the strongest and most unequivocal grounds on this question, I still feel

that all parties are or should be interested in the welfare and preservation of our fellow-citizens against the "unarmed invasion" which is driving them through a sea of trouble whose depths no man can realize who has not familiarized himself with this theme from observation or study.

The Greenback party is a party instituted to preserve labor and the interests of laborers, and it is firmly committed to the policy of protecting our own citizens from these hordes of Asiatic lepers, who neither are nor can be citizens of our country nor participants in our civilization.

The Republican party, which sent out its protective tariff tracts along with its authoritative and vehement denials and repudiation of the spirit of the so-called Morey letter, should be as consistent now as when laborers' votes were in immediate demand, in their denunciation of Chinese immigration.

The Democratic party, which in the last Presidential campaign held it infamous for a Presidential candidate, or a party, to hold the ideas of even the very moderate and guarded Morey letter that stirred their indignation to its depths, should now be as consistent in behalf of the American workingman as when they sought his suffrage.

Thus, all parties represented on this floor are on record as favoring the principles of this bill. The Greenback party, thus making its record early and of choice, and independently of the circumstances which later induced the older parties to join in the procession of those who were awake to the welfare of the laboring masses, is entitled to the greatest credit. What, then, is there to prevent the House from passing this bill promptly?

Some gentlemen, it is claimed, are opposed to this bill because they demand free trade in labor while opposing free trade in the products of labor. These men are, I fear, not stopping to consider that those who get rich off of pauper, convict, degraded, barbarian, and Mongolian labor are they who take bread from the mouths of honest industry and from the homes of a higher civilization, which they wantonly sacrifice on the sordid and crime-stained altars of an alien and degraded race to do humanity at large the injury of retarding the progress of the best races and of preserving the worst.

That the Chinese who come to this country, excepting those who come in an official or independent character, are of the lowest grades of Tartars and Cantonese is conceded by all. That this estimate of Chinese which comes to us from the Pacific coast is not new and does not grow out of the contact of the Mongolian with our own race in this country is confirmed by writers and travelers who have lived in China. Twenty-seven years ago the late Bayard Taylor published his book of travels on India, China, and Japan, and in it he states his opinion of these people in these words:

It is my deliberate opinion that the Chinese are, morally, the most debased people on the face of the earth. Forms of vice which in other countries are barely named are in China so common that they excite no comment among the natives. They constitute the surface-level, and below them are depths and depths of depravity so shocking and horrible that their character cannot even be hinted. There are some dark shadows in human nature which we naturally shrink from penetrating, and I made no attempt to collect information of this kind; but there was enough in the things which I could not avoid seeing and hearing—which are brought almost daily to the notice of every foreign resident—to inspire us with a powerful aversion to the Chinese race. Their touch is pollution, and, harsh as the opinion may seem, justice to our own race demands that they should not be allowed to settle on our soil. Science may have lost something, but mankind has gained, by the exclusive policy which has governed China during the past centuries.

These sentiments were a warning before the evil came upon us, and the evils against which Bayard Taylor warned us in 1855 are here among our people of the Pacific States and are commencing to be realized in other portions of our country. Are we to ignore the law of self-protection for the sake of that spread-eagle sentiment in which we all love so much to indulge about this being the "land of refuge to the oppressed and asylum for all nations?" Are we to make this fair land the lunatic asylum, the leper's hospital, the criminal's refuge, the barbarian's resort, the lazzaroni's dumping ground, and the festering cesspool of the criminals of the whole earth, with no regard for the rights of our own race and the duties we owe to ourselves as the sons of those who have made this form of government possible for the highest nations of the Caucasian race?

I cannot believe, Mr. Speaker, that the sentimentalism which does not stop to weigh the consequences can be so blind in this instance as to be indifferent to the cry of our own people for deliverance from the Asiatic plague of human vice and degraded civilization that infests their communities on or near the Pacific. I cannot believe that Congress will force our own race to encounter longer the polluting contact of these lowest offshoots of the Mongolian races until they rise in bloody deeds to preserve life and virtue in their midst. This Chinese puzzle must be solved. If we do not do it by the wisdom of a bill which keeps out the Mongolian, a conflict of races that involves a bloody remedy will be inevitable. I beg gentlemen who oppose this bill or who are in doubt about it to read the facts that have been from year to year laid before the House and Senate. I ask them to recall the eloquent and forcible recital of the evils of Chinese importation—it is not immigration—as detailed in a former Congress by Hon. A. A. Sargent, of California, and by Senators JONES and MILLER in the present Congress. I invite attention to the facts cited by gentlemen from those far Western States on this floor. I cite them to the testimony taken in 1877 by a special committee of the

California State senate, to the action of the cities of the Pacific States, to the acts and resolutions of the churches of that section, notably that of the general association of the Congregational churches of California on the 13th of October, 1877. I cite these, gentlemen, not only as the opinions of workingmen whose agonies in competition with the Mongolian slaves have caused them to cry out in language that has not always been that of cool refined opinion; I cite gentlemen to the testimony of all classes of men, taken before the special committee of the Forty-sixth Congress, of which I had the honor to be a member, which investigated this Chinese problem under the philanthropic and patriotic chairmanship of the late Hendrick B. Wright, whose name is embalmed in the hearts of every lover of humanity and every admirer of the highest type of manhood, which can be found on pages 238 to 365, inclusive, of Miscellaneous Document No. 5, of the second session of the Forty-sixth Congress. I cite the late Professor John W. Draper as to the impossibility of ever making citizens of the Chinese. I cite Professor Goldwin Smith, the London Times, the American Social Science Association, the men and women of thought, of patriotism, of humanity, of all parties and sections.

Let us stop the spread of diseases, of horrible vices, of nameless crimes, and of rampant misery that owe their existence in this country wholly to the Chinese importations of these human slaves, lepers, prostitutes, and criminals.

Let us stop the robbery of men, women, and children who are of service to humanity and of value to our country, by keeping these criminals from Asia from destroying them through methods which enrich none but the Six Chinese Companies who control these slaves and the sordid traders in human life and misery who justify their employment of slaves and their ruin of our people by their desire to get rich at whatever cost of life or of crime.

Let us stop the drain of over two and a half millions of dollars a month in gold and silver from our Pacific States to be sunk into the human ocean of China, only to attract millions more of these low forms of human life to swarm for this golden bait where but thousands or tens of thousands now come after it.

Let us no longer welcome as we do immigrants those Orientals who neither can nor will become citizens. Let us understand that these people bring no children; that they have no wives; that they never establish homes among us; that they never adapt our laws nor obey them, having their own secret tribunals among themselves; that they do not learn our language; that, dead or alive, they return to China, not even enriching our soil with their bones; that they rear no children to grow up improved by the association of our institutions.

Let us remember that they can never be made useful as militia or soldiers; that they are mostly thieves, liars, and gamblers, unfit for human society, possessing only the questionable virtue of knowing how to live cheaply and work slavishly.

Let it be remembered that they pay no taxes to speak of—they are about one-sixth of the population of California; they pay less than one four-hundredth of the revenue and taxes of that State—that the cost of the Chinese criminals in the State prison of California alone is many thousands of dollars greater annually than the whole amount of taxes collected from the Chinese in that State; that where 1,000 a month came when the Chinese nuisance began to attract attention, there are from 3,000 to 4,000 Chinese imported each month now; and by the last month's statistics of immigration China held the third place and Ireland had fallen to the fifth in importance as to the number of persons coming to the United States from foreign countries, Germany and Canada only exceeding China in the numbers arriving here. Europeans and Canadians are of value to our form of civilization; they are welcome; they are of us and like us; they soon become a part of us; but the Chinaman is first and last a sore, a parasite, a disease on the body-politic and does us only harm.

We must have the courage to do our duty toward our own race and our own institutions or we and our children will suffer the consequences of our neglect. For reasons that have been cited by Senator JONES and others, the negro is not thus objectionable, although of another race. He lives and dies with us. He fights and works with and for us. He speaks our language, adopts our customs, inherits our institutions, and to all intents and purposes is a citizen and a part of our civilization.

The evils of Chinese importations cannot be overstated. The workingmen's party of California have, in a pamphlet published in the city of San Francisco March 10, 1880, given us the sickening details and specific localities of the nuisances to public health, morals, and decency, and the dangers of this social evil, in a manner that challenges contradiction.

The conflict is upon us. It is a serious one, and if we would be honored by our children, if we would win the loving gratitude of outraged States, of down-trodden labor, of humanity's best servants and helpers, we the American Congress must echo back the cry of wailing and despair, the cry of deep and meaning import, the cry of our poor and already degraded fellow-citizens, who struggle against the low class of human beings from Asia; and we must give no uncertain sound to our utterances when we answer by the passage of this bill that we too have come to see that to save ourselves and our brethren the Chinese must go.

Chinese Immigration.

SPEECH

OF

HON. WILLIAM S. ROSECRANS,

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. ROSECRANS said:

Mr. SPEAKER: I desire to state to the House a few of the numerous reasons why this bill should become a law.

That what I say may have that weight and consideration which is its due, I declare at the outset that I love justice and hate iniquity. I believe that the Chinese and the men of all other lands have the same Creator and that their souls have been bought at the same price as my own. I appeal to my past life to attest that neither fear of popular odium nor love of popularity has hitherto sufficed to prevent the avowal of my convictions or the acceptance of the duties they involved.

On this question my natural instincts to defend the weak and the oppressed colored my first impressions when I began to investigate the utility to us of Chinese labor and the advantages and disadvantages of having Chinese immigration to this country. I never overlooked the direct pecuniary advantages to the employer of cheap labor nor that some of that benefit resulted to the country. Thoughtful men among us opposing the use of Chinese labor never questioned that the Chinaman as well as any other had a right to the excess of his earnings over his expenditures and the right to send them away to China or anywhere else if he chose. Nor have they questioned the right of self-expatriation by each individual of the human race, provided he first discharges those higher obligations which devolve upon him to his country. But that the exercise of this right carries with it no right to intrude himself into any other country he may choose without the consent of that country is concomitant therewith they deny. Whatever theories about the right of universal humanity to own the universal world there may be, the right of each nation to control its own territory rests on the same general basis as the right of individuals to control their own property.

Wherefore the American people own this country. They do not hold it as tenants in common with all those who may choose to come here. They have the right to say who may come into it and on what conditions they may come, and to suspend or alter the same as reason and justice may prescribe.

Exercising this right, for reasons of great national interest, sentiment, and benevolence, at the birth of our Government our people decided to invite immigrants from all peoples of our race and civilization, and prescribed generous and liberal conditions, the wisdom of which is attested by the unexampled growth of our country. But should the reasons for this action ever disappear, it will be not only our right but our duty to change our laws and conform them to the altered circumstances. The admission of the people of China is therefore a question over which this nation has supreme control, subject to the universal obligations of reason and humanity. So sacred is this national right that were the fundamental interests of its people virtually, or even seriously, threatened by the immigration of any class of foreigners, that nation would be bound to exclude such foreigners, holding itself obliged to make proper reparation to the injured party for any resulting violation of treaty obligations. That the immigration of Chinese to our shores does threaten our vital interests, the people of the Pacific coast firmly believe and for the last six years have been giving their reasons for it to Congress and to the country.

I have reached the same conclusion personally from a study of the political, social, and industrial characteristics and wants of the great Chinese Empire which confronts us on the western shores of the Pacific Ocean, with 400,000,000 of people supported on a territory which sustains the enormous average of over 450 souls to the square mile; its civil and political society resting on the firm basis of parental authority, carrying that to the limits of almost absolute obedience, and giving in some cases to the parent the right of life and death over his children. As the most perfect human freedom consists in the subjection of all wills to just law, so the problems of human government are to devise such laws and subject the wills of its individual members to their dictates. When the child has learned that he must obey his parents implicitly, he has laid the foundation for subjecting his will to the laws of the land. But in China the influence of the parent extends beyond this life, and the worship of ancestors is made a religion, and the obligation of the child to behave so as to please them takes the place of that which Christians acknowledge toward their Creator. In the construction of the great Chinese society this hierarchy of obedience extends to the chiefs of the depart-

ments, to the chiefs of provinces, and to the Emperor, the supreme head and heaven-sent author of the whole Chinese family or nation.

Fifty centuries of conformity to these views and habits have wrought their work into the minds and hearts and habits of the Chinese, until his attachment to the empire is a part of his attachment to his home and his ancestors, more vague than the latter, but for all that more imposing. For fifty centuries this people has lived within itself, inhabiting a territory about the size of the United States, and developing to a high degree agriculture, manufactures, mechanics, and all the arts which minister to the support and comfort of human life, and has formed a social and political society, self-evolved, self-sufficing, whose hoary stability extends far back beyond the Christian era. The extreme pressure of population upon the possible means of subsistence has gradually settled the people into a pyramid from the apex of imperial power descending down until the lower grades are pressed by a most abject penury, where existence must be maintained by a perpetual struggle for means to supply the simple wants of an intelligent animal. But even so from such a solid mass the pressure of extreme want alone could permanently take away any of its units, and that extreme pressure evidently will operate upon those who are poorest and weakest in the struggle for life.

If the typical man be one having a sound body, the appetites of which are controlled by reason and that reason directed by a will subordinated to law, the Chinese type of manhood developed in this great empire is by no means low; and if civilization consists in the domination of reason and justice over the passions of individuals and of the communities they compose, a study of China will show that in the mere material and natural order it has the right to be called a highly civilized country. Whoever knows human nature knows how difficult it is for people to change inherited, social, and political habits and customs; and if it be difficult for people trained in our much less compact and consolidated civilization, how much more difficult must it be for the Chinese to change theirs and to acquire the habits of a civilization like that of the western nations and of the United States. If, therefore, they come to our coast they will bring their civilization with them, and that degree of it which belongs to the class of Chinamen who immigrate to our shores. These necessarily must be, as has been said, the poorest. But 400,000,000 of people could spare a million of its poor per annum to emigrate into foreign lands without perceptibly feeling it. They have found their way to the Pacific coast already, know its inducements, and the stream is increasing yearly. Were the bonds which bind the Chinaman to his native land to be broken by necessity or by imperial policy the flood of immigration could submerge us as easily and as irresistibly as the army-worm overruns our cotton-fields.

To the eye of the statesman, therefore, the admission of Chinese immigration to the United States, at least to the Pacific coast, requires us to decide which civilization we will prefer. Will we choose our own or the hoary and compact materialistic civilization of China? Mixture is impossible; assimilation impossible. Thirty years' experience in California and on the Pacific coast has demonstrated this practical impossibility. You have heard this often asserted on this floor in debate, and detailed reasons for it. With us it is no longer an experiment. The united voices of the people of the States of California, Oregon, Nevada, Colorado, and of the adjacent Territories of Arizona, Washington, Montana, and Idaho solemnly declare it. They are willing that those here should be allowed to earn their living by working for such employers and for such wages as they can obtain, and to live as economically as they please, subject to needful sanitary regulations.

We admit that their labor, hitherto, has often been convenient, useful, and in some sense profitable, by leaving a balance over cost in the hands of employers, and has in some measure elevated white labor by undertaking its inferior and less inviting grades. And notwithstanding all this that—

Because they send away to China, never to be returned, by far the largest part of that balance of profit which white laborers would retain among us;

Because practically they are, and always will remain, Chinese subjects, alien to our civilization, laws, customs, municipal life, modes of administering justice and obtaining evidence in courts of law;

Because they practically set up their own government within and unknown to our laws;

Because, unlike immigrants from European countries, they are not permitted, but are forbidden under the most terrible penalties, by their government from renouncing their allegiance to their own ruler, and commanded by their ancestor-worship to send home to China the very bones of those dying abroad;

Because, even were it otherwise, general ignorance of our language, unconquerable hereditary habits, customs, and modes of thought and of life would leave them practically and indefinitely Asiatic;

Because they are introducing among us some fearful diseases and degrading vices;

Because they furnish a fearfully large percentage of criminals, and impose on us excessive difficulties and expenses in the detection and punishment of crime among them;

Because it is practically impossible to prevent the criminal, dis-

eased, and pauper classes of Chinese from being poured in upon us, if any of the lower classes are admitted;

Because their presence here excludes a much more desirable population from filling our country with our own people and immigrants of our own race having all the general habits, customs, and ideas of liberty, law, and government appertaining to our civilization; and

Because the Chinese already here form but the vanguard of an industrial army of Asiatic laborers, impelled by an irresistible impulse to better their condition, which, unless prevented, will overrun our country and degrade our civilization.

In behalf of the intelligent, brave, and generous people of San Francisco whom I represent; in behalf of the noble and magnanimous people of the State of California, where stretching valleys, sunny vales, fertile hillsides, and mountains filled with precious metals, extending for eight hundred miles on the Pacific, invite to prosperous and happy homes millions of civilized immigrants; in behalf of the people of Oregon, of Washington Territory, of Arizona, with her treasures of gold, silver, copper, coal, and salt; in behalf of the free-hearted sons of Nevada and Colorado, the young giant of the mining West, and of our adjacent Territories; in behalf of free white labor throughout the Union, I implore this House to pass this bill.

Do not make the term of its operation ten years. In the name of all these for whom I speak, I declare that their relief from the present and impending evils of this Mongolian immigration was before the treaty, and is now, a duty above all that we owe to any other people. To avoid all shock to the commercial interests involved, and to that sentimentalism which seems to lavish itself, not so much upon those of our own household and race as upon those who are not, the late treaty was procured in hot haste, and yet, while bearing on its face the feebleness of a diplomacy based on such exigencies and motives, compared with the elephantine diplomacy of common sense and long experience in the government of a great empire, it shows that it was intended that our Government under it should be liable to no complaints for granting us reasonable relief. Upon whose testimony shall this House decide what is reasonable relief? Will you decide it upon the testimony of those who by thirty years of experiment have demonstrated the evil, or upon that of sentimentalists and *doctrinaires* who set up against this experience that our industries should be imperiled and white people deterred from coming to our coast by impending doubt and agitation as to whether or not the floodgates of Chinese labor immigration at the end of ten years' time would open to submerge our young industries and drown out white labor?

I feel assured that few members of this House will hesitate to listen to the voices of those who know and feel all that there is at stake, and resolve to protect their own people. I call upon my Republican friends in the House fairly and honestly to fulfill the assurance made in the platform of that party as interpreted to us on the Pacific by its banner-bearer and friends. I call upon the champions of protection to capital employed in various young, growing, and opulent industries to protect labor, that still dearer, less self-protecting, yet essential source of all our wealth and capital. You are willing to protect every other product of our land against the introduction of foreign goods; protect our labor against the cheapest and most disciplined, but most thoroughly abject labor on the face of the globe. New Englanders, you enjoy a protection that makes your manufacturers rich. Save white labor on our coast from this destructive Chinese competition.

Democrats, you who inherit the name of the party which for ninety years has claimed to represent the popular heart and head, the instincts of "a government of the people, by the people, and for the people," under the forms of our Constitution and laws, you who ought now to represent the great laboring, industrial, and allied business classes, and who have the guardianship of their interests against unjust encroachments from capital and monopolies as you do the preservation of the home liberties and the autonomy of the States, I call upon you to redeem the constant pledges and platform declarations you have made to our people on this Chinese question. Stand by us now and show that your platform of 1880 dealt fairly by the people of our coast, and you will make it good. Do not talk to us of a ten years' limit, it will not do. And limiting the operation of the law to ten years would produce an agitation among the people of the Pacific coast and all the intelligent working people in the East liable to bring to political grief all engaged in it.

An adroit diplomatic growl, an intimation of "consequences" if the bill should be passed as it came from the Senate, was heard through the Post this morning. But the great Chinese Empire will not sacrifice its substantial interests because we interpret "reasonable" to mean that which will accomplish the avowed objects of the treaty.

Would that some of our people in this matter had had more of the calm and reasonable practicality of the rulers of China, and, as she does, first care for their own people at home.

England's great Australian colonies have gone through the same experiences with Chinese labor as we have on the Pacific coast. They have arrived at the very same conclusions; they have passed restrictive laws against further Chinese immigration even more stringent than those contained in this bill, and her royal majesty

the Queen, without consultation or treaty with China, so far as I am informed, has been pleased to approve those laws within the last three months.

As an American citizen standing on the verge of the winter of life and whitening beneath its descending snows, I appeal to you, members of this House, in the name of the working people of the United States and of the four millions on the Pacific coast and the mountains west, to do as much for your own people as England has done for her Australian subjects, by passing this bill.

Polygamy.

SPEECH

OF

HON. SAMUEL W. MOULTON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1882,

On the bill (S. No. 353) to amend section 5352 of the Revised Statutes of the United States, in reference to bigamy, and for other purposes.

Mr. MOULTON said:

Mr. SPEAKER: The object of the bill under consideration is to eradicate polygamy in Utah.

There can be no doubt as to the power of Congress under the Constitution to make all laws and needful rules and regulations for the Territories, and in the exercise of this power Congress is the sole judge of what is necessary to be done for the government of the Territories and for the good of the whole country. There can be no doubt on the question of power.

The almost universal sentiment of the civilized world is against polygamy. That within the past forty years it could have obtained such proportion and strength upon our continent is a miracle and astonishes the Christian world.

The teachings and practice of polygamy are unnatural and in conflict with the physical and moral laws. Its effect upon the community in which it exists is its worst commentary. It dwarfs, separates, and isolates its devotees practically from the rest of the world. A creed, political or religious, that necessarily causes its followers to separate themselves from the rest of the community, to set up institutions inimical to the laws and constitution under which they live, will always, sooner or later, produce conflict and disastrous consequences to the whole country. The people on the American continent should be as near one people as is possible.

Will the bill before the House accomplish the object intended? I confess that upon this point I have great doubt.

This bill is not framed with reference to the present condition of things in Utah. The real government of Utah is a sort of religious hierarchy. The people are dispersed over vast plains and among the mountains, but are all alive to a simple touchstone of common interest and common brotherhood.

Besides, polygamy is not obtrusive. One may pass entirely over the Territory and wholly fail to discover it. It is not exposed to the casual observer.

The operation of this bill will prevent the open and known polygamist from voting or holding office. But a Mormon may vote and hold office, and may always control the Territory. This bill wipes out the present machinery of the registration and election offices, and provides five persons to execute all the election machinery, decide on the qualification of voters, who are elected to office, and in short to set in motion a new government so far as Territorial officers are concerned. It takes all power from the people and gives it to five men.

That some of the provisions of this bill are against the theory of our government, none will deny; that its provisions are severe and unusual, all must admit. But, in the light of the past twenty years' experience with these people, would any act of Congress less stringent in its provisions tend to extinguish polygamy? It is very doubtful, even with all that may be done under this bill, if much can be accomplished. It is an experiment, but in the right direction, and should be fairly tried.

Several of the provisions of this bill are very distasteful to us all; not because of their severity against polygamy, but because (as in the provisions of the ninth section) they seem to trench upon those principles of local self-government that as Americans we have always cherished as the palladiums of our liberty.

I shall vote for this bill, trusting that when the people of Utah see that the Government of this country is in earnest in this matter they will take warning and be governed by their sober second thought and better judgment. It may reasonably be hoped that the younger generation of the Mormon people will profit by the hard experience of the past.

Chinese Immigration.

SPEECH

OF

HON. A. HERR SMITH,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. SMITH, of Pennsylvania, said:

Mr. SPEAKER: Near the close of the Forty-fifth Congress a bill restricting emigration from China was passed by Congress, and, as is well known, vetoed by the President.

I voted against that bill, because I did not recognize the right of Congress to change or modify the existing treaty with China.

This position was maintained in the veto and sustained by the House, but the necessity for a change of the treaty seemed to be then conceded, as appears from the following extract from the veto message. Said the President:

The lapse of ten years since the negotiation of the Burlingame treaty has exhibited to the notice of the Chinese Government, as well as to our own people, the working of this experiment of emigration in great numbers of Chinese laborers to this country, and their maintenance here of all the traits of race, religion, manners and customs, habits, mode of life and segregation here, and the keeping up of the ties of their original home, which stamp them as strangers and sojourners, and not as incorporated elements of our national life and growth.

This experience may naturally suggest the reconsideration of the subject as dealt with by the Burlingame treaty, and may properly become the occasion of more direct and circumspect recognition, in renewed negotiations, of the difficulties surrounding this political and social problem.

It may well be that, to the apprehension of the Chinese Government, no less than our own, the simple provisions of the Burlingame treaty may need to be replaced by more careful methods, securing the Chinese and ourselves against a larger and more rapid infusion of this foreign race than our system of industry and society can take up and assimilate with ease and safety.

I regard the very grave discontents of the people of the Pacific States with the present working of the Chinese immigration, and their still graver apprehensions therefrom in the future, as deserving the most serious attention of the people of the whole country and a solicitous interest on the part of Congress and the Executive.

If this were not my own judgment, the passage of this bill by both Houses of Congress would impress upon me the seriousness of the situation, when a majority of the representatives of the people of the whole country had thought fit to justify so serious a measure of relief.

In due time, Mr. Speaker, commissioners were appointed to negotiate a new treaty, who executed their work November 17, 1880, and this treaty was proclaimed October 5, 1881.

The following are the articles of this treaty:

ARTICLE I.

Whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

ARTICLE II.

Chinese subjects, whether proceeding to the United States as teachers, students, merchants, or from curiosity, together with their body and household servants, and Chinese laborers who are now in the United States shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation.

ARTICLE III.

If Chinese laborers, or Chinese of any other class, now either permanently or temporarily residing in the territory of the United States, meet with ill treatment at the hands of any other persons, the Government of the United States will exert all its power to devise measures for their protection and to secure to them the same rights, privileges, immunities, and exemptions as may be enjoyed by the citizens or subjects of the most favored nation, and to which they are entitled by treaty.

ARTICLE IV.

The high contracting powers having agreed upon the foregoing articles, whenever the Government of the United States shall adopt legislative measures in accordance therewith such measures will be communicated to the Government of China. If the measures as enacted are found to work hardship upon the subjects of China, the Chinese minister at Washington may bring the matter to the notice of the Secretary of State of the United States, who will consider the subject with him; and the Chinese foreign office may also bring the matter to the notice of the United States minister at Peking and consider the subject with him, to the end that mutual and unqualified benefit may result.

In pursuance of the power given by said treaty this bill was framed. Its purpose is to suspend the immigration of Chinese laborers for twenty years. Why? Because their residence "affects" now and "threatens" in the not distant future to affect the interests of the native and naturalized citizens in the Pacific States. To make this manifest it is only necessary to become acquainted with the character of these immigrants. All who have given the subject careful attention agree that they are not laborers in the common acceptance of the term, but coolies, little better than slaves, imported by mammoth Chinese companies of large means, and hired under special contract for their

benefit. They come not voluntarily, like other immigrants of the Caucasian race, to better their condition, but are duped and entrapped by the piratical agents of these avaricious organizations. They come not to stay or share with us the burdens incident to our civilization. They come to make money; and, living on rice and garbage, they can easily undermine the American laborer. They come not as other immigrants, abandoning their allegiance to foreign potentates, to occupy our land and to become part of our social system. On the contrary, their express stipulation with their employers is, in case of death, to have their bones returned to the land of their nativity.

They are without honor or virtue, fearfully demoralizing, and, I fear, hopelessly demoralized.

They have their own Chinese laws, which are enforced in California, as appears from the following colloquy in the speech of Mr. BERRY, delivered a few days ago on the floor of this House:

Mr. TOWNSEND, of Illinois. Does the gentleman mean to say that these Chinese companies enforce their laws in California?

Mr. BERRY. I say that they enforce their own Chinese laws.

Mr. TOWNSEND, of Illinois. In California.

Mr. BERRY. In California. They even go so far as to compel every one of these slaves to fulfill his contract to the letter. Furthermore, if they violate any of the regulations of these companies they are no doubt even put to death.

Mr. PAGE. Will my colleague allow me to ask him one question?

Mr. BERRY. Certainly.

Mr. PAGE. Is it not true, and shown in the testimony, that no Chinaman belonging to one of these Six Chinese Companies can leave California on any Pacific Mail steamship without a permit from one of the Six Companies?

Mr. BERRY. It is established that they cannot leave to return to their own country without a permit. They are treated as if they were nothing but cattle; that is the experience of every man who has been among them.

I have been often compelled to hire Chinese because I could obtain no other labor. I never negotiated with the Chinaman himself; I went to his owner and made the contract with the owner or agent.

Bayard Taylor, Mr. Speaker, who was a native of my own State, wrote as follows:

It is my deliberate opinion that the Chinese are morally the most debased people on the face of the earth. Forms of vice which in other countries are barely named are in China so common that they excite no comment among the natives. They constitute the surface-level, and below them there are depths of depravity, so shocking and horrible that their character cannot even be hinted. There are some dark shadows in human nature which we naturally shrink from penetrating, and I made no attempt to collect information of this kind; but there was enough in the things which I could not avoid seeing and hearing, which are brought almost daily to the notice of every foreign resident, to inspire me with a powerful aversion to the Chinese race. Their touch is pollution, and harsh as the opinion may seem, justice to our own race demands that they should not be allowed to settle on our soil.

Unfortunately, Mr. Speaker, in our anxiety to extend our commerce and civilization, we opened the Golden Gate to the Oriental Empire by the Burlingame treaty of 1868, and, utterly ignoring the warning of the prophetic Taylor, permitted, by treaty, unlimited immigration, and with it have come our present unnumbered woes.

Our consul in China, Mr. Bailey, in 1871 says:

The subject of Chinese emigration from this port to the United States has claimed my careful thought and patient investigation for the last four months, with a view to get at the facts and to understand it in its surroundings and bearings. The whole subject is an anomaly. Rules that will do elsewhere in the world, when applied in considering questions of emigration, have no application to Chinese emigration to the United States. Emigrants to America from other parts of the world go of their own volition, free and voluntary. Emigration from China to all parts of the world is an organized business or trade, in which men of large capital and hongs [mercantile houses] of great wealth engage as a regular traffic, by which men are bought and sold for so much per head, precisely as a piece of merchandise is handled at its market value.

The cooly of China is bought by the rich trader to serve his purchaser at low wages for a series of years in a foreign country under contract, for the faithful performance of which in many instances he gives a mortgage on his wife and children, with a stipulation that at the end of his term of service he is to be brought back to China by his purchaser. This contract is sold by the dealer through his agents in the United States and elsewhere at a large advance, and is a source of great profit to the capitalists who have the means to buy and sell large numbers of men. This contract in the United States is no doubt null and void, but nevertheless the cooly will comply strictly with all its terms, a copy of which in Chinese characters is always in his possession, and this he will do because his purchaser holds his household lares in the land to which he always hopes and expects to return in pledge for the faithful performance of his bonds. The central idea of a Chinaman's religion, if he has any religion at all, is that of the worship of the tombs of his ancestors. The superstitions of Fung-Shuey dominate him wherever he may be in the world. The subtle mysticism of China, so strangely governing all its people in their social, political, and quasi-religious life, are as a hook in his nose, by which his purchaser controls him at all times and in all places; and thus this relation of master and quasi-slave, no matter how many miles apart, is welded by the mystical links of religious superstitions, family ties, and rights of ancestral tombs, which control and regulate the reciprocal duties of trader and cooly in the home land.

The means of obtaining coolies are as various as the ingenuity of man can devise, and are as corrupt as the incentive to large gains can stimulate and invent. Men and boys are decoyed by all sorts of tricks, opiates, and illusory promises into the haunts of the traders. Once in the clutches of these men-dealers, by a system of treachery and terrorism connived at by the local Chinese authorities, whose chief business in life is to "squeeze" the people, the stupefied cooly is overawed into making a contract under such Chinese influences and surroundings as to give it a sacredness of character nowhere else known in the world. From that moment he is the mere tool of the rich dealer wherever he may go. It is difficult for persons accustomed to western civilization to understand the depth and extent of this relationship; but Chinese civilization is unique, perhaps opaque, and cannot be measured by that of any other.

It is said, Mr. Speaker, that there are now about one hundred and ten thousand Chinese in California. These under the bill are entitled to full protection, and these, with Chinese subjects, as students, teachers, merchants, or travelers from curiosity, can come and go at will, and shall be accorded all the rights and privileges enjoyed by the citizens of the most favored nations.

This attempt to repress the immigration of Chinese laborers, or

more strictly speaking coolies, is no new or spasmodic effort. As early as 1862 statutes with severe penal provisions were enacted to break up the cooly trade, and a provision was inserted in the Burlingame treaty to the same effect.

The fifth article provides expressly "that the high contracting parties join in reprobating any other than an entirely voluntary immigration, and agree to pass laws making it a penal offense for a citizen of the United States or for Chinese subjects to take Chinese subjects either to the United States or to any other foreign country without their free and voluntary consent." But these penal provisions have been so successfully evaded by the importing companies that the only remedy to cure this growing evil is temporary suspension.

Is the period of twenty years in which to make an experiment reasonable? Under the peculiar circumstances I answer yes. The treaty gives the right to the United States Government whenever in their opinion the coming of Chinese laborers or their residence therein affects or threatens to affect the interests of that country or to endanger the good order of the said country, or of any locality within the territory thereof, to regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it, providing only that the limitation or suspension shall be reasonable. But suppose it should be held unreasonable by the Chinese Government; the matter will then be open to amicable arrangement as specially provided by article 4 of the treaty.

We are a new nation, having but recently celebrated our centennial birthday; China is the oldest empire of the world, dating back 5,000 years. The United States has 50,000,000 of inhabitants; China, 400,000,000. The Pacific States most interested in this controversy have a population of about one and a half millions, and the time indicated to settle and determine this new and momentous question is not unreasonable. Less time would, I fear, keep the people on the slope in a constant broil, and might result in a renewal of race hostility. Let the Mongolian now on our shores have a fair trial. If he will assimilate and become a homogeneous member of our American brotherhood, bone of our bone, flesh of our flesh, growing with our growth and strengthening with our strength, the Golden Gate can again be reopened to his Asiatic kinsman.

These coolies have now been in the Pacific States about twenty or twenty-five years. With their vices and their virtues, if they have the latter, we have become acquainted. We have tried these immigrants and found them wanting. Before we add to their number let us call a halt. Let us try to improve those who have unfortunately been forced upon our people, and who must be treated humanely and kindly; but let us not add to that number. Possibly we can improve them. Let us make the experiment, and by the influence of our civilization and religion endeavor to persuade them to cast their idols to the owls and bats, and instead of the dogmas of Confucius and Buddha teach them the eternal principles of the only true and living God. If, at the termination of this probationary period, or sooner, the law proposed is found to work injuriously to the interests of the country, it can be modified or entirely repealed.

All the testimony, Mr. Speaker, favors a change. Both living and dead historians testify to the iniquity of this cooly trade. The people of the Pacific States and their Senators and Representatives, without distinction of party, agree in regard to the depraved and servile character of these immigrants, and unite with singular unanimity in asking for the passage of this bill. They are on the spot; they have the opportunity and ability to collect the facts accurately and reach an intelligent and honest conclusion.

The twin relics of barbarism are dead. The sword killed the one, the pen the other; and this nation would justly deserve the scorn of all Christendom if, having the legal power, it lacked the courage to strike an effective blow against pagan coolyism, no matter under what euphonious name disguised.

Chinese Immigration.

SPEECH

OF

HON. HENRY S. HARRIS,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. HARRIS, of New Jersey, said:

Mr. SPEAKER: Relying upon the testimony given to the House by the Representatives of the Pacific States as to the objectionable character of the persons whose immigration it is proposed by the enactment of this bill to restrict, and firmly believing that the interests of the American laborer should be most jealously guarded and protected by Congress, and that the erection of a system of virtual slave labor in this country should be prevented, I shall cast my vote for the bill under consideration.

Chinese Immigration.

SPEECH

OF

HON. MOSES A. McCOID,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. McCOID said:

Mr. SPEAKER: Our legislation should conform to some general principle with which precedent will be safe and just.

The doctrines of immigration, expatriation, and change of citizenship and allegiance, are trophies of American conquest. The doctrine of the equality of all men before the law is a maxim of our Republic. Each one of these great principles is capable of conclusive and elaborate support, and have received it in this debate.

But all human rights are subject to legislative control as well as recognition. Around these doctrines I feel that the occasion may have come to throw another: that no race or nation whose civilization or whose barbarism is such when placed together with that of America, it cannot assimilate and be absorbed by the latter into a homogeneous and prosperous people, shall be permitted to colonize in large bodies within our Government. I am willing to carry out this principle in legislation under our treaty with China.

Not that I regard that people as so inferior as to be outside of the pale of these natural rights. I do not. Not that I regard them as an ignorant people. I do not. Not that I am unfriendly to them or their government, or would offer to that kindly empire any affront; all my sentiments are contrary to this. Not that I regard their industry and economy and thrift and skill as injurious to us. I do not. But that their habits, customs, ideas, and their ancient civilization is so different from ours, which has grown and changed in the journey of centuries around the globe, that we meet as the antipodes of mental structure, of moral growth, of social character, and of political faith. That we meet as steam and ice. That the chasm which centuries on centuries have created will require the mutual forbearance and patience of a long time to close. That as friendly powers, desiring the good of the subjects of both countries, we should extend across the Pacific waters to each other every friendly, Christian aid, and make every noble and mutual sacrifice for the amelioration of our brother men. And as fast as it is deemed best for the safety and happiness of both governments and people, let the Golden Gate stand ajar.

This is intelligent friendship, enlightened philanthropy, and the highest exercise of good-will toward men. This country in a broad and noble sense is both theirs and ours. But it is ours to preserve, protect, and defend. We do this, not for ourselves, but for them, for the world, and for our posterity. These measures of defense are dictated by the noblest sentiments of humanity. Where is the hope of China and of the world should we unwisely hesitate, by all the safeguards our wisdom can devise, to ward off the dangers that prudence can foresee and in some evil hour this experiment of free government should fail?

But there is another principle of our Government which I am unwilling to yield. That is that upon equal conditions every man in the Republic shall be permitted to don the robe of citizenship, attach himself to our institutions, render to our Government his allegiance, and receive in return all the privileges and immunities of citizenship. This is a principle we cannot defeat. And it is the true incentive to set before every man who comes to us from the nations of the earth. It leads to that homogeneity which is essential to our prosperity. If there is one man from China in all the Republic who is an exception to the rule and has become Americanized and is fit for citizenship, he ought to have it. I know there are some. This bill prohibits their becoming citizens, prohibits that very assimilation which is the evil it is designed to prevent. I want a section similar to that of the twelfth section of the substitute offered by me.

With some other amendments to the bill and some such general provision making citizenship possible to those who safely might be admitted, I would vote for restricting immigration.

I do not look with indifference upon the condition of our people on the Pacific slope. They are a noble people; they have wrought wonders in that distant land; they have enriched the coffers of the nation. They have made those wilds a paradise gilded in the setting sun. They have a bar and a judiciary which ranks with any in the Union. They are animated with the fervor of the foremost civilization in the world, and meeting for us this ancient race, with all its peculiar and antagonistic traits of character, they are fighting our battle for us. Theirs is the battle-ground; ours is the homestead roof and the fireside of peace. So far as the Republic can justly and safely go, and of right ought to go, I for one am ready to give them relief.

Chinese Immigration.

SPEECH

OF

HON. NATHANIEL C. DEERING,

OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. DEERING said:

Mr. SPEAKER: I only wish to say a word in explanation of my position and the vote I will give on this question.

In the Forty-fifth Congress I believed that the Pacific coast was in danger of being overrun with coolies from China, and I voted for a proposition to limit immigration from that country. I am anxious to do the same thing now. I would like to record my vote in favor of such reasonable and modified substitute for the pending bill as would restrict and regulate this immigration and at the same time give absolute protection to our own people on the Pacific coast. It is due to our neighbors over there that we should do this.

But it seems to me, sir, that they have advanced beyond the limits of reason and sound policy and, I think, the spirit of the treaty, in presenting a bill that is so sweeping and oppressive.

Doubtful or extreme measures should be adopted only in times of emergency or extreme peril, and I am not able to satisfy myself that we have upon us any pressing exigency or peril that would justify the rigorous treatment proposed in the bill.

I do not give a feather's weight to the idle clamor we hear about the traditions of the Government and the theories and policy of those who founded the Government. All that kind of talk is the sheerest nonsense. Sir, we are living in the light of a later century and surrounded by different circumstances. We have an absolute right to regulate and control in matters of immigration, and it is our duty to do so. Those who framed this Government never contemplated such a thing as throwing aside the right to protect our own people in their homes and interests.

If I build a house it is expected that I will regulate its occupancy and my associations, and if you build an asylum or a church and proclaim it is free the very fact of our civilization is a guarantee that its occupancy will be regulated and restricted.

But, sir, it seems to me that this bill is based on false assumptions; that it proposes to treat an evil in advance of its coming. Facts and figures do not warrant the alarm that is manifested. We find that emigration from year to year is decreasing, and the number of Chinese in the country diminishing, and still there is undoubtedly much cause for complaint and dissatisfaction, and I am willing and anxious, as I have already said, to record my vote in favor of reasonable restrictions, and I hope that our friends from the Pacific coast will allow us to do so, and will accept such modifications as will be satisfactory to this side of the House.

If in the future such enactment should prove insufficient and the evil should increase, it would still be in the power of a subsequent Congress to enact more stringent measures.

Chinese Immigration.

SPEECH

OF

HON. JOHN F. DEZENDORF,

OF VIRGINIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. DEZENDORF said:

Mr. SPEAKER: The agitation of the question of the right of this Government to regulate and control the migration and importation of persons into this country is as old as the Constitution. The question was discussed at the time of the framing of that instrument, and as the result of the discussion we find the first clause of section 9 of article 1 of the Constitution, which reads as follows:

The migration or importation of such persons as any of the States now existing shall think proper to admit shall not be prohibited by the Congress prior to the year 1808, but a tax or duty may be imposed on such importation not exceeding \$10 for each person.

This, sir, was a recognition of the right of the Government to admit

certain persons to certain States during a stated time. The results of this action will be considered as I pass on.

In February, 1803, Congress, composed in a large measure of the signers of the Declaration of Independence and framers of the Constitution, with the illustrious Thomas Jefferson as President of the United States, enacted the following law by an almost unanimous vote:

That from and after the 1st day of April next no master or captain of any ship or vessel, or any other person, shall import or bring, or cause to be imported or brought, any negro, mulatto, or other person of color, not being a native, a citizen, or registered seaman of the United States, or seamen natives of countries beyond the Cape of Good Hope, into any port or place of the United States, which port or place shall be situated in any State which by law has prohibited or shall prohibit the admission or importation of such negro, mulatto, or other person of color; and if any captain or master aforesaid shall import, or bring, or cause to be imported or brought, into any of the ports or places aforesaid, any of the persons whose admission or importation is prohibited as aforesaid, he shall forfeit and pay the sum of \$1,000 for each and every negro, mulatto, or other person of color aforesaid, brought or imported as aforesaid, to be sued for and recovered by action of debt, in any court of the United States.

SEC. 2. That no ship or vessel arriving in any of the said ports or places of the United States having on board any negro, mulatto, or other person of color not being a native, a citizen, or registered seaman of the United States, or seamen natives of countries beyond the Cape of Good Hope as aforesaid, shall be admitted to an entry. And if any such negro, mulatto, or other person of color shall be landed from on board any ship or vessel, in any of the ports or places aforesaid, or on the coast of any State prohibiting the admission or importation as aforesaid, the said ship or vessel, together with her tackle, apparel, and furniture, shall be forfeited to the United States, and one-half of the net proceeds of the sales on such forfeiture shall inure and be paid over to such person or persons on whose information the seizure on such forfeiture shall be made.

Here is the exercise of the right of the Government to prevent the importation of certain persons in certain cases where the people of certain States desired that such importation be so prohibited. And, Mr. Speaker, I desire to call the attention of those who say "that we must not legislate for localities," to this action of the fathers of the country. In the section of the Constitution above quoted they were providing for that portion of the country which desired the importation of servile labor, and in the law of 1803 they legislated to carry out the wishes of certain States which were aggrieved by the importation of certain persons from the French West Indies. This law of 1803, under which, Mr. Speaker, no Chinese could have been imported into the country, remained the law of the land until the Burlingame treaty was negotiated.

Now, sir, having given the precedents relating to the right of Congress to legislate upon this subject, let me consider how far they are applicable to the present case.

It seems, sir, to be generally admitted that the Chinese do not come here, as a rule, intending to become citizens, but that the great body of them are imported as laborers.

It is well understood that the persons alluded to in the article of the Constitution above quoted were persons imported as slaves, or to become such, and that the law of 1803 had the same reference, although it also included and referred to certain free persons of color who were imported from the French West Indies who were lawless persons. In neither case, Mr. Speaker, was the question one of race, color, or previous condition, but the great consideration was the purpose to which these persons were to be devoted after their arrival. The fact that they were to be slaves was the principle governing legislation in both cases.

In the discussion of the pending bill the question of race, color, or previous condition should be laid aside, and the subject treated upon the basis of reason guided by the experience of the past. This is not, sir, a question of race, color, or previous condition. It involves the right of this Government to regulate immigration independent of race, color, or previous condition. We have as a government a duty to perform in guarding the interests of our people from degrading influences, no matter from what source they come.

Mr. Speaker, what was the result of the adoption of the section of the Constitution to which I have referred? What was its effect upon the laboring element in the South and upon the country at large? Does not history prove that it was most disastrous, that it debased labor, put a blight upon enterprise in that section of the country where these importations largely settled, and in the end brought ruin and desolation to many a home?

Chinese servile labor is now being imported into California as the African labor was into the South, and who upon this floor will in the light of past experience dare to say that if allowed to go on the results will not be the same? The negroes—brought here against their will, at first few in number, being compelled to stay, have increased to 6,500,000, for the most part native to the soil, possessed of many of the characteristics and virtues of the people among whom they were born and reared—cannot, in justice to the negro, be put upon an equality with the Chinese. Though illiterate, as has been charged, and justly so, though from no fault of his own, the negro in the United States has shown his desire for knowledge, has proven his love of country by baring his breast to the fierce storm of battle in the defense of his native land, and is gradually and surely advancing in the scale of civilization. The process has been slow; but kept, as he was, for a century under the debasing influences of slavery, his progress since he was clothed with the rights and privileges of citizenship has been little less than marvelous. He is a part and parcel of the country and its history, and is enti-

tled to and will receive from coming generations all praise for the heroic manner in which he endured the trials of slavery, the uniform forbearance and kindness which he exercised to the families of his former masters during the war, and for his advancement and progress since emancipation.

How different is the case with the Chinese. Brought to our shores as servile laborers, they manifest no desire to become citizens or to identify themselves with our institutions. They have no family ties, and the increase in their numbers in this country will be due to the increased importation of a people who, as all the testimony shows, never adapt themselves to our forms or customs.

Shall it be said that we must throw open the doors to receive all comers—that our land is the refuge for the poor and oppressed of all nations? That, indeed, is the theory that has prevailed for nearly a century. But in the beginning of this the second century of our national existence, is it not well for us to pause and inquire whether we are willing to perpetrate the same mistake as that which marked the beginning of our life as a nation? Had we not better listen to the lessons of the past and take heed for the future? Ought we not to “take time by the forelock” and prevent that which, if permitted, might again plunge the country into a sea of trouble similar to that from which we have but recently emerged?

Mr. Speaker, gentlemen say that “there is no occasion for the strict measures of the bill,” that “the number of Chinese in the country is very small compared to the whole number of people,” that “the difficulty is a local one and not national.”

Sir, the number of Chinese is now small, so was the number of slaves when section 9 of article 1 was ingrafted in the Constitution; the difficulty is now a local one, so was slavery, but slavery proved a curse to the whole country.

The Chinese are almost exclusively confined to the Pacific slope, as were the slaves to the Southern States, and yet, with all the experience of the past before us, gentlemen upon this floor say that we ought not to make this a subject for national legislation. Not so thought the founders of the Government, those who adopted the section of the Constitution which I have quoted. When they saw the beginning of its evil effects they promptly passed a law which limited the danger, although the seed had been sown which afterward brought forth such bitter fruit.

In the States bordering upon the Pacific slope the evil is constantly increasing. If permitted to go on unchecked it will assume vast proportions until it will spread as a pall over the entire section. This is not an imaginary evil; it is one ever present to the people of that coast; and we who are here as the law-making power have no right to turn a deaf ear to their prayers for remedy and relief.

I cannot agree, sir, with the distinguished gentleman from Massachusetts, [Mr. Rice,] who in his eloquent and powerful speech asserted that the tendency of the employment of Chinese labor would be “to push up the American laborer.” The history of labor in the South does not bear out the assertion, and that is the only section of the country where any fair comparison can be made, because it is the only section where free labor was to any great extent brought into contact with servile labor, and, as I have before stated, history proves that its effect was most disastrous upon the free labor of that section.

We have made it the boast of the Republican party that we are in favor of elevating labor, that we want fewer hours of labor and better pay for those hours. Can we now fail to stand by these professions? If we permit these imported Chinese to flood any portion of our country, like locusts in Egypt, and thus place their servile labor in competition with the labor of our own people, can we escape the charge of insincerity?

Mr. Speaker, I am in full sympathy with that sentiment which would throw open the doors of this great land to all who seek refuge from oppression, who come to make this country their home, who propose to help build it up, and if necessary to peril their lives in its defense; but I cannot concede the wisdom of the policy which would permit a horde of idolaters to be imported here to debase the morals of the people, underbid them in the laboring and mechanical pursuits, who have no interests in common with us, who are a positive drain upon our resources, and are even averse to burial in our soil.

I am in favor of protection for American labor as well as for American capital invested in enterprises which require labor. A protective tariff does not and will not protect American labor, if the same Congress which passes the tariff bill fails to provide for the suspension of this importation of Chinese servile labor.

The laboring men of the United States look to us for protection. Do not let it be said that they “asked for bread and we gave them a stone.”

Mr. Speaker, we have in this country, as I have said, six million of people who had their origin here, as the result of the importation of laborers under the section of the Constitution to which I have referred. They have endured a century of degradation, and have but recently been endowed with all the rights and privileges of citizenship, and are now struggling manfully to discharge their duties as good citizens and to provide homes for themselves and their families. No one can witness these efforts without commending them and bidding them God speed. They have, by reason of their birth upon the soil, become imbued with the spirit of our institutions; they

worship our God, and share with us, as far as they are able, the burdens of government. They are by the Constitution entitled, as they ought to be, in common with all other citizens, to all the rights, privileges, and immunities of citizens of this great Republic.

But, sir, what would be the effect upon this portion of our people of an importation into the Southern States of these Chinese idolaters, who “bow down to stocks and stones” and, so to speak, “work for nothing and find themselves?” Would it not be damaging in many ways to their moral and material interests?

Sir, we are here to legislate in the interests of the whole people. We are here to legislate for California and the Pacific slope, as well as for New York and the Atlantic coast. Whatever endangers California flashes like an electric thrill through the length and breadth of the land. California and the Pacific States and Territories have since their organization poured into the National Treasury \$1,000,000,000 in gold and silver, a sum vast in its proportions, but only a tithe of that which in future years they will empty into the nation's coffers. This is the section, and these the people who now ask of us that protection which as a part of this nation they have a right to demand at our hands.

Mr. Speaker, the recent treaty puts it in our power, in my judgment, without any violation of its letter or spirit, to heed the prayer of California and the Pacific slope and grant the relief for which they pray. China has by this treaty agreed that the immigration of laborers may be suspended for a reasonable time. The bill provides for a suspension of twenty years. Gentlemen say that this is unreasonable. When the friends of servile labor in the creation of our national Government demanded a time during which the importation of servile labor should not be prohibited, twenty years was agreed upon by the framers of the Constitution as a proper limit. It seems to me, sir, that, when those who oppose the introduction of servile labor now, in the nineteenth century, with all the experience that grew out of the action of a century ago, ask that a limitation may be put upon it, twenty years is a wise provision.

Twenty years will put a different phase upon this subject in its moral and material aspects. That large portion of our people now struggling to overcome poverty and ignorance will then have made substantial progress and be better prepared to encounter competition. Then, too, we shall have had an opportunity to judge from experience the capacities and capabilities of the Chinese, through the actions of those now here, who, under the provisions of the treaty, may remain; and time will have developed whether the fears of today are groundless or well-founded. If, sir, time proves that we have made a mistake in passing this bill, we can reverse our action and repeal the bill, or adopt such amendments and modifications as may then seem just and proper.

Chinese Immigration.

SPEECH

OF

HON. JOHN RANDOLPH TUCKER,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1882.

The House having under consideration the bill (S. No. 71) to enforce treaty stipulations relating to Chinese—

Mr. TUCKER said:

Mr. SPEAKER: The first objection which is made to this bill is that it violates the stipulations of the recent treaty with China. I shall address myself to that question at once.

The first point I shall make is, that this treaty proposes to deal with a subject (the regulation of commerce with foreign nations) that by the Constitution of the United States is exclusively delegated to Congress; and this power to regulate commerce, by a number of decisions of the Supreme Court of the United States, has been held to include the power to regulate immigration to the United States, as I shall show directly by reference to the authorities.

The question is whether the treaty-making power can divest Congress of its power to regulate commerce in the exclusion or the permission of the migration of any alien people into the United States. It has been often held, and in the case of the Hawaiian treaty it was made expressly a part of the treaty, that that portion of a treaty which regulated the duties to be imposed, for instance, upon articles imported from a foreign country should be subject to the sanction of the Congress of the United States.

This treaty with China has not so provided; and it has been very much discussed, from the year 1796 down to the present time, whether the treaty-making power can divest Congress of the authority which it has to determine any question which is expressly delegated to it by the Constitution. It is a question of great consequence in preserving the balances of power created by the Constitution; and I will be pardoned for giving it a preliminary consideration.

The Constitution (article 2, section 2, clause 2) provides that the President "shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur." This is a general power without specifications. But Congress has the express power vested in it "to regulate commerce with foreign nations." (Constitution of the United States, article 1, section 8, clause 3.) And then it possesses the clearly defined authority "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof." (Constitution of the United States, article 1, section 8, clause 17.)

These various provisions are to be so construed as to give each and all of them as full force and effect as shall make them consistent.

The question is not whether Congress can annul a valid treaty, but is a treaty valid and binding on the United States which divests Congress of its constitutional functions without its sanction and consent? Congress may not by its dissent annul a valid treaty, but is not its assent essential to the validity of a treaty, divesting it of its constitutional power?

The operation which a treaty can have may be from its inherent force, or such as may be necessary in aid of its provisions. All that is necessary in aid of its provisions is dependent on the action of Congress and cannot operate *proprio vigore*, but must depend for its operative force upon the concurrent action of Congress. But as to its provisions, which may operate without the aid of Congressional action, it is argued the power of Congress is excluded absolutely and entirely.

Is this argument sound? Suppose a treaty with Great Britain should provide that the Government of the United States should never lay any duty on articles imported from that country, or that Congress should never borrow money, or should never naturalize an alien, or should not coin money, or raise armies, or provide a navy, or establish post-offices, &c. Can it be held that the President and Senate may by treaty thus divest Congress of its constitutional authority or relieve it of its constitutional duty to do any of these things? If so, then the treaty-making power may amend, alter, and destroy the Constitution and hold us bound in good faith to submit to this claim of a foreign power conferred and sanctioned by a treaty. This cannot be true. It is absurd. These express powers to Congress are limitations on the general power to make treaties.

The general power to make treaties vested in the President and Senate is met by a specific grant of power to do certain things above referred to. Shall the general authority be limited by the specific grant of power to Congress, or the latter yield to and be submerged by the former? How can both stand in harmony? Clearly thus: the general power to make treaties, to establish the relation of contract between the United States and a foreign country, is for the executive branch. Negotiation of terms of a treaty is for the President and Senate. But before these terms can deprive Congress of its constitutional functions its consent must be obtained; and while Congress is not a part of the treaty-making department, neither are its legislative functions any part of the treaty-making department; and both must therefore concur in the stipulations of the treaty before it can be "a treaty made under the authority of the United States," which are the terms used to make any treaty the supreme law of the land. (Constitution, article 6, clause 2.) It must pass a law as "necessary and proper for carrying into effect this power" to make treaties, "vested in another department of the Government of the United States."

This construction of the Constitution makes it harmonious. The contrary construction would give to the President and Senate the power by treaty to emasculate Congress, to strip it of its power to perform its duties to the people, and would give authority to the treaty-making department by compact with a foreign foe to destroy the Constitution.

The same reasoning applies to a treaty which regulates commerce, in which, as I shall hereafter show, is included the power to regulate, limit, and forbid the migration of aliens to this country. Take another class of necessary limitations on the treaty-making power. Could a treaty alienate a part of the territory of the Union, when Congress has the express power to dispose of it? Or could a treaty give one of the States to a foreign power? Or could one of the States by treaty be surrendered to Great Britain as a Botany Bay for its convicts, an asylum for its paupers, or a hospital for its diseased and insane population? And the reason of the construction for which I contend will readily appear from a consideration of the balances of the Constitution.

A law to be operative must have the concurrence of a majority of the people of the States represented in this House, of a majority of the Legislatures of the States represented in the Senate, and the approval of the President, representing all the States and the people of the States. The requisition of these concurrent voices of the States and people is a protection to them against injurious action by the Government. Each is a check upon inconsiderate action by the others. But how as to the treaty power? The President secretly negotiates, secretly proposes a treaty to the Senate for ratification, and the Senate deliberates with closed doors upon its ratification. Did the Constitution intend to give such power, as is claimed over the constitutional functions of Congress, to the President and Senate acting in secret, and properly so in many cases?

XIII—443

But I take stronger ground. The President may be—often has been—elected by a minority of the popular vote of the country. Mr. Polk, General Taylor, Mr. Lincoln, and Mr. Hayes were elected by a minority of the popular vote. Mr. Hayes on the popular vote was in a minority of a quarter of a million of votes. This in ordinary cases. If the election is thrown into this House, a majority of States with fifteen millions of people may elect a President.

How as to the Senate? Two-thirds are required to ratify a treaty. Twenty-six States, with twenty millions of people, may ratify a treaty proposed by a President elected by States with fifteen millions of people.

Nor is this state of things new. When the Constitution was adopted two-thirds of the original thirteen States, with a population of 1,800,000, could ratify a treaty against the voice of four States with a population of 2,100,000.

Now, I submit to the House, could the framers of the Constitution have intended to give a power to a minority to divest Congress of its constitutional functions, delegated to it for the welfare of the whole people?

If it is said that foreign powers know nothing of all this, I answer in the language of the law, *Qui cum alio contrahit vel est, vel esse debet, non ignorat ejus conditionis*. "Whoever contracts with another either is or ought not to be ignorant of the capacity of that other to contract." (Lawrence's Wheaton, Elements of International Law, 329.)

If her majesty the Queen of Great Britain should by treaty seek thus to rob Parliament of its well-nigh omnipotent authority, would we be justified in exacting such an abdication of power from Parliament on the ground of good faith by pleading ignorance of the fact of her majesty's lack of power to negotiate such a treaty? And if Parliament would not submit at the dictation of the Queen of England to such a treaty, is this Congress bound to do so at the dictation of the President and Senate, backed by the claim of good faith made against us by the Celestial Empire over the Pacific?

These views, based on reasons deduced from the organic nature of our federal system, have found confirmatory expression in the writings of jurists, in the decisions of the courts, and in the action of Congress.

In 1796 the House of Representatives contested the question with President Washington, a full account of which will be found in the Peter Force Papers. The House passed the following resolution, by a vote of yeas 57, nays 35:

Resolved, It being declared by the second section of the second article of the Constitution that the President shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur, the House of Representatives do not claim any agency in making treaties; but that, when a treaty stipulates regulations on any of the subjects submitted by the Constitution to the power of Congress, it must depend for its execution as to such stipulations on a law or laws to be passed by Congress, and it is the constitutional right and duty of the House of Representatives in all such cases to deliberate on the expediency or inexpediency of carrying such treaty into effect, and to determine and act thereon as in their judgment may be most conducive to the public good.

In 1816 Congressional action of like character was taken. (Annals of Congress, first session Fourteenth Congress, page 1018 *et seq.*) In 1844 Mr. Choate, in his report from the Committee on Foreign Affairs upon the Zoll-Verein treaty, took with great force and effect the very ground I am now taking; and upon that ground the treaty was rejected by a vote of yeas 26, nays 18. He said:

The committee, then, are not prepared to sanction so large an innovation upon ancient and uniform practice in respect of the department of Government by which duties on imports shall be imposed. The convention which has been submitted to the Senate changes duties which have been laid by law. It changes them either *ex directo* and by its own vigor or it engages the faith of the nation and the faith of the Legislature, through which the nation acts, to make the change. In either aspect, it is the President and Senate who, by the instrumentality of negotiation, repeal or materially vary regulations of commerce and laws of revenue which Congress had ordained. More than this: the executive department, by the same instrumentality of negotiation, places it beyond the power of Congress to exceed the stipulated maximum of import duties for at least three years, whatever exigency may intervene to require it.

In the judgment of the committee the Legislature is the department of Government by which commerce should be regulated and laws of revenue be passed. The Constitution in terms communicates the power to regulate commerce and to impose duties to that department. It communicates it in terms to no other. Without engaging at all in an examination of the extent, limits, and objects of the power to make treaties, the committee believe that the general rule of our system is, indisputably, that the control of trade and the function of taxing belong, without abridgment or participation, to Congress. They infer this from the language of the Constitution, from the nature and principles of our Government, from the theory of republican liberty itself, from the unvaried practice, evidencing the universal belief of all, in all periods, and of all parties and opinions. They think, too, that, as the general rule, the Representatives of the people sitting in their legislative capacity, with open doors, under the eye of the country, communicating freely with their constituents, may exercise this power more intelligently and more discreetly; may acquire more accurate and more minute information concerning the employments and the interests on which this description of measures will press, and may better discern what true policy prescribes and rejects than is within the competence of the executive department of the Government.

To follow, not to lead; to fulfill, not to ordain the law; to carry into effect, by negotiation and compact with foreign governments, the legislative will when it has been announced upon the great subjects of trade and revenue, not to interpose with controlling influence, not to go forward with too ambitious enterprise—these seem to the committee to be the appropriate functions of the Executive.

The principle was again asserted in the same way in 1853-54. In Foster vs. Neilson, 2 Peters, 314, Marshall, C. J., says:

A treaty is, in its nature, a contract between two nations, not a legislative act, and does not generally effect of itself the object to be accomplished, but is carried into execution by the sovereign power of the respective parties to the instrument. In the United States the Constitution declares a treaty to be the law of the land. It is consequently to be regarded in courts of justice as equivalent to an act of

the Legislature whenever it operates of itself, without any legislative provision. But when the terms of the stipulation import a contract, when either of the parties engages to perform a particular act, the treaty addresses itself to the political, not the judicial department, and the Legislature must execute the contract before it can become a rule for the court.

In *Turner vs. The American Baptist Union*, 5 McLean's Circuit Court Reports, 344, (decided in 1852,) Mr. Justice McLean said:

A treaty under the Federal Constitution is declared to be the supreme law of the land. This unquestionably applies to all treaties where the treaty-making power, without the aid of Congress, can carry it into effect. It is not, however, and cannot be the supreme law of the land where the concurrence of Congress is necessary to give it effect. Until this power is exercised, as where the appropriation of money is required, the treaty is not perfect. It is not operative, in the sense of the Constitution, as money cannot be appropriated by the treaty-making power. This results from the limitations of our Government. The action of no department of the Government can be regarded as a law until it shall have all the sanctions required by the Constitution to make it such. As well might it be contended that an ordinary act of Congress, without the signature of the President, was a law as that a treaty which engages to pay a sum of money is in itself a law.

And in such a case the representatives of the people and States exercise their own judgment in granting or withholding the money. They act upon their own responsibility, and not upon the responsibility of the treaty-making power. It cannot bind or control the legislative action in this respect, and every foreign government may be presumed to know that so far as the treaty stipulates to pay money the legislative sanction is required.

In *Taylor vs. Morton*, 2 Curtis's Circuit Court Reports, 454, decided in 1855, Curtis, J., said, after quoting the second section of the fourth article of the Constitution as to the supremacy of the Constitution and laws of the United States made in pursuance thereof and treaties made under the authority of the United States, (and remark in passing it does not say by the President and Senate, but under the authority of the United States; that is, with the sanction of that law which is necessary and proper to carry the treaty into effect:)

There is nothing in the language of this clause which enables us to say that in the case supposed the treaty, and not the act of Congress, is to afford the rule. * * * This provision of our Constitution has made treaties part of our municipal law. But it has not assigned to them any particular degree of authority in our municipal law, nor declared whether laws so enacted shall or shall not be paramount to laws otherwise enacted.

And after holding that a treaty and its obligatory force as between the United States and the foreign nation is a question for the political and not the judicial department, he says:

There is nothing in the mere fact that a treaty is a law which would prevent Congress from repealing it.

And again:

To refuse to execute a treaty for reasons which approve themselves to the conscientious judgment of the nation is a matter of the utmost gravity and delicacy; but the power to do so is prerogative, of which no nation can be deprived without deeply affecting its independence. That the people of the United States have deprived their Government of this power in any case I do not believe. That it must reside somewhere, and be applicable to all cases, I am convinced. I feel no doubt that it belongs to Congress.

The decision was, that a law of Congress could repeal a duty.

And finally, in *The Cherokee Tobacco*, 11 Wallace, 616, (decided in 1870,) Swayne, Justice, speaking for the Supreme Court, and citing the case of *Taylor vs. Morton*, already quoted with approval, said:

A treaty may supersede a prior act of Congress, and an act of Congress may supersede a prior treaty.

And this principle was decided in that case.

It thus appears that the judicial department may hold that a treaty stipulation is annulled by an act of Congress, though *inter partes* and by the political department the treaty may still be deemed binding upon the faith of the nation.

But these authorities do conclusively settle that Congress may repeal a treaty by its law, and that the courts, so far from being bound to regard a treaty as the supreme law of the land, are bound to give effect to the law of Congress repealing the operation of the treaty. Judge McLean goes further, and holds that a treaty which requires legislation to give it effect is no treaty until the legislation is passed. In *Wheaton's Elements*, page 329, that author says on this point:

The treaty, when thus ratified, is obligatory upon the contracting states, independently of the auxiliary legislative measures which may be necessary on the part of either in order to carry it into complete effect. Where indeed such auxiliary legislation becomes necessary, in consequence of some limitation upon the treaty-making power, expressed in the fundamental laws of the state, or necessarily implied from the distribution of its constitutional powers—such, for example, as a prohibition of alienating the national domain—then the treaty may be considered as imperfect in its obligation until the national assent has been given in the forms required by the municipal constitution.

Mr. Lawrence, the learned annotator of *Wheaton*, claims no more than that "if the treaty be within the constitutional limits, free from fraud, and not destructive of any of the great rights and interests of the country, then there is a moral obligation to grant the aid required." And this accords with Chancellor Kent, (1 Kent, page 285.)

From this review I feel justified in holding that if any treaty seeks to bind the United States to a foreign country in respect to the functional powers of Congress we are not open to a charge of bad faith if Congress refuses to sanction a divestiture of its constitutional authority to deal with any subject intrusted to it by specifically granted powers in the Constitution of the United States.

This treaty was made in 1881. At our first session we may act upon it, and do so for the welfare of our people without fear of the imputation of bad faith by a Government which made a treaty that took away our authority without right, and of the absence of right to do which that Government was not, or ought not to have been, ignorant. I hold, therefore, that this treaty, as it proposes to regulate commerce in the matter of immigration of aliens, is subject to the sanc-

tion or disannulment of this House and the other House of Congress. If I am right in this, and I do not think there is error in my reasoning, the result is: that, aside from the question whether this bill violates the terms of the proposed treaty, we have the right to say this proposed treaty is not the supreme law of the land, as a "treaty made under authority of the United States," in respect to this matter of regulating commerce, and the migration of Chinese laborers, included under the terms of the commercial power, until in addition to the formal ratification of the treaty it shall have the sanction of law by both Houses of Congress and of the President.

I now come to this question: But does this bill violate the stipulations of the proposed treaty? I hold it does not. What are the terms of this treaty? They are as follows:

ARTICLE I.

Whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable, and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

ARTICLE II.

Chinese subjects, whether proceeding to the United States as teachers, students, merchants, or from curiosity, together with their body and household servants, and Chinese laborers, who are now in the United States, shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, immunities and exemptions which are accorded to the citizens and subjects of the most favored nations.

ARTICLE III.

If Chinese laborers, or Chinese of any other class, now either permanently or temporarily residing in the territory of the United States, meet with ill treatment at the hands of any other persons, the Government of the United States will exert all its power to devise measures for their protection and to secure to them the same rights, privileges, immunities, and exemptions as may be enjoyed by the citizens or subjects of the most favored nation, and to which they are entitled by treaty.

ARTICLE IV.

The high contracting powers having agreed upon the foregoing articles, whenever the Government of the United States shall adopt legislative measures in accordance therewith such measures will be communicated to the Government of China. If the measures as enacted are found to work hardships upon the subjects of China the Chinese minister at Washington may bring the matter to the notice of the Secretary of State of the United States, who will consider the subject with him; and the Chinese foreign office may also bring the matter to the notice of the United States minister at Peking and consider the subject with him, to the end that mutual and unqualified benefit may result.

Mark its terms: "Whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States or their residence therein affects or threatens to affect the interests of that country or to endanger the good order of that country or any locality within the territory thereof;" thus the condition on which we are to act rests on our opinion. If we think there is danger from the coming of Chinese laborers, then "the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence."

How regulate? By such rules as we may subject it to, as to passports, certificates, &c., as provided by the fifth section of this bill. How may we limit it? By defining the number that may come in any year. How suspend? We may suspend, "but may not absolutely prohibit," immigration. If we prohibited, it would be by exclusion forever or for an indefinite time. We may suspend for a limited time, for a term of years.

This is clear. What restriction does the treaty put upon the period of this authorized limitation and suspension? It shall be reasonable. What is a reasonable time of suspension? Gentlemen around me admit that this immigration may be suspended or prohibited for six months. Then why not for six years? And if for six years, why not for twenty years? Where is the restriction? It is here, and I admit it. It must be reasonable. How reasonable? What is the purpose of suspension at all? It is the suspension of a privilege to the Chinaman, because it imperils the interests of our own people; and hence this immigration may be suspended; that is, the privilege of the Chinaman may be suspended until the peril and threat of danger to our interests is past. That is a question for you and me upon our own consciences before God to determine, and for no one else.

Now, what is a reasonable suspension, looking to this privilege on the one hand and the danger on the other? It is said there may be hardships to the Chinaman under the fourth article of the treaty. Hardship to a Chinaman to deny him a privilege he has never enjoyed and to which he is not entitled as a right! But gentlemen say the meaning is that our legislation must be reasonable as to the prevention of the coming of the Chinese. Very well; but it must be reasonable not only with reference to his privilege of coming but in reference to the threat of danger to our people from his coming; and as the power is left to the Government of the United States to determine upon the reasonableness of the suspension, looking to the interests of our own country, we cannot admit an alien country to come into our counsels and decide that question for us. Is, then, a suspension for twenty years reasonable?

Gentlemen on the other side who say that suspension for twenty years is unreasonable admit, as I understand, that they will vote for

a suspension for ten years. Why is a suspension for ten years reasonable and a suspension for twenty years unreasonable? Reasonable with respect to what? I say with respect to the cessation of the danger which threatens our interests and which leads us to suspend the immigration. What is the danger? The danger is (and I will come to that directly) that the immigration of the Chinese throws upon the Pacific coast so large an alien population antagonistic in its civilization to our own as endangers the peace and order of that part of the country, impedes its growth and prosperity, and obstructs its civilization.

Now, when that danger ceases it is unreasonable to continue the suspension. So long as it continues it is reasonable, in the sight of God and in the judgment of all true men, to continue it. As between the safety of our own people and the privilege of the Chinese to come here to labor and send his money saved from his wages back to his home in China, who in this House will hesitate to say that it is our right and duty under the treaty to take care that the rights of American citizens and the welfare of American States must first be conserved before we can consider the privileges and interests of the Chinaman? [Applause.]

As between the right of the citizen to peace and security and social progress, and the privilege of an alien to enter our country, can there be a doubt of the duty of our Government, which reserved and to which China conceded the authority to decide between these conflicting claims, to defend and preserve the interests of our own people, even if thereby it denies the privileges claimed by the foreigner? By the true construction of the treaty, right cannot yield to privilege, and the citizen must be preferred to the alien.

Now, if I am right in saying that this bill does not violate the treaty stipulations, and if the bill did violate them that no treaty stipulation in reference to this regulation of commerce binds us at all against our will, let us advance to the inquiry what our constitutional powers and duties are in this matter. The Constitution of the United States gives to Congress the power to regulate commerce with foreign nations; and by a series of decisions the Supreme Court has held that this extends not only to trade and to all the instruments of commerce and to navigation but to intercourse, which includes the migration of persons, as well as to the interchange of products. (Passenger cases, 7 Howard; Henderson vs. Mayor of New York, 2 Otto, 259.)

In the later case of *Chy Lung vs. Freeman*, 2 Otto, 275—I do not know how to pronounce the name of the Chinese gentleman—

Mr. PAGE. It makes no difference; their names are nearly all alike.

Mr. TUCKER. The Supreme Court held not only that Congress could admit or exclude immigration but that California, a State of the Union, could not by the law she had enacted exclude the prostitutes of China from her borders against the will of Congress, thus tending to deny to the State the police power to protect her people from disease, moral and physical, from pauperism and from crime. If this be so, it is obvious the courts by construction take away from the State the power of self-protection, and she can only appeal to Congress for relief.

The history of this clause in connection with that in article 1, section 9, of the Constitution, is interesting and instructive. The latter reads thus:

The migration or importation of such persons as any of the States now existing shall think proper to admit shall not be prohibited by the Congress prior to the year 1808, but a tax or duty may be imposed on such importation not exceeding \$10 for each person.

As matter of history, it is well known that this provision chiefly applied to the introduction of negroes as slaves. The idea of permitting negroes to come as free men and as candidates for naturalization never entered into the minds of the framers of the Constitution. On the contrary, it has been held by high judicial authority that this clause only applies to negro slaves, and not to the migration of free people. With this I cannot concur, for while migration, in contrast with importation, is used in the first branch of the clause, it is left out when the tax or duty is provided for in the last branch. Free men migrate; slaves were imported.

In confirmation of my opinion, I cite a remark of George Mason, of Gunston Hall, a member of the Federal Convention of 1787. The clause reported (3 *Mad. Papers*, 1415) provided for a tax on the migration as well as the importation. Gouverneur Morris remarked on this, as a power to tax free men, (3 *Mad. Papers*, 1429.) To this, on page 1430, Mr. Mason replied: "The provision as it stands was necessary for the case of convicts, in order to prevent the introduction of them."

It seems that the power to regulate commerce was supposed by some of the members of the convention to involve authority to prevent the importation of slaves. To avoid this result the early draft of the Constitution contained a proposition prohibiting any tax or duty on migration or importation of such persons, and providing that such migration and importation should not be prohibited, (2 *Mad. Papers*, 1233, 1234.)

A committee was raised on this subject—and the power over commerce, and reported that the migration or importation should not be prohibited prior to the year 1800, (3 *Mad. Papers*, 1415.) This would have allowed the prohibition of the slave trade and all migration in ten years.

General Pinckney, of South Carolina, seconded by Mr. Gorham of Massachusetts, moved to extend the time to twenty years by inserting 1808 for 1800 in the clause. Madison opposed it. It was adopted by the following vote: "New Hampshire, Massachusetts, Connecticut, Maryland, North Carolina, South Carolina, Georgia—ayes 7; New Jersey, Pennsylvania, Delaware, Virginia—noes 4." (3 *M. P.*, 1427, 1429.)

Migration of free men and importation of slaves thus united in the same clause were seemingly regarded as limitations on the power to regulate commerce. But whether so or not, the negative phrase that Congress shall prohibit neither prior to 1808 seems clearly to imply the power of Congress to prohibit either after 1808.

This is the basis of those decisions before referred to, by which the power of Congress over immigration has been held well-nigh absolute, and the power of the State to prevent it has been narrowed very greatly from the older decisions.

Deprecating as I do the tendency of these decisions to abridge the police power of the States in favor of the commercial power of this Government, I ask, how stands the question on these decisions? California and other States of the Union, notably New York, as decided in a great many cases, are denied the power to prevent the migration to its borders of immigrants from foreign countries, except perhaps in cases of convicts, paupers, or diseased persons; and therefore the only power that can prevent immigrants not in any of these latter classes is that of Congress. All the State has to do in reference to this immigration, which may be dangerous to its safety and to the preservation of the order and peace of society, is to hold up its hands and cry out to the General Government, "Save us from the increase of this class of immigrants!"

Let it be remembered that while Congress may well in the interest of all the States forbid immigration which one State might wish to admit, yet it is another thing and might be a cruel wrong for Congress to admit certain immigrants, against the earnest outcry of even one State, which would be the victim of their presence in its society. A law to admit or permit such immigration would be neither a just, "necessary, nor proper" law. It would violate the duty which this Government owes to the States—the duty so to use its powers as to protect and help, not to assail and hurt any State of the Union. Then what should Congress do when the States of the Union are stripped, as they have been by this clause of the Constitution, as interpreted by the Supreme Court, of their power to defend themselves against this morally, if not physically, diseased population? Shall this Congress turn a deaf ear to their protest and entreaties? Shall Congress say you cannot help yourselves under the Constitution of the United States, and we will not help you?

I hold that it is the duty of Congress to listen to the voice of the smallest State in the Union, and to prevent the migration of people who are injurious to its civilization or fatal to its safety. Is it just, is it a necessary and proper law to permit this treaty to go into effect, by which such migration shall be permitted on the Pacific coast which is dangerous to their peace and safety? Is it not a just and necessary and proper law for us to say that the treaty that opens the Golden Gate of California to the incursion of these Chinese laborers, injurious to their society and an impediment to their progress, shall be annulled, and that Golden Gate be closed against them for twenty years?

If the constitutional powers and duties of Congress to these Pacific States and Territories be such as I have contended, in case of danger to any one of them the question now is fairly presented, is a suspension of this immigration for twenty years such an exercise of the power by Congress as duty to the Pacific States demands, and is it reasonable under the terms of the treaty?

Now, Mr. Speaker, what is the danger? There are nearly a million and a half of people on the Pacific coast.

Mr. PAGE. A little over a million.

Mr. TUCKER. I include all the Territories, and I take it the population there is about a million and a half. The question is whether the presence of 100,000 Chinamen and the accession of a still larger number, if immigration continues, imperils the civilization of a million and a half of Caucasians. It is not whether it imperils the civilization of nearly 50,000,000 of persons on the Atlantic seaboard who never saw a Chinaman. It is whether it imperils the civilization of the Pacific coast, and I say it does until the Caucasian population on the Pacific coast grows to such number and strength as that Chinese immigration will be but a harmless drop in the bucket.

The question which we are to determine is whether a period of twenty years is too long a suspension when our object is that this tide of Asiatic immigration shall cease until that population has grown large enough to defend itself against the dangers of such a foreign substance in the body-politic. And on that question I rely mainly upon the judgment of those who are to be affected by our legislation. We have the power east of the Rocky Mountains to legislate for those on the Pacific, but we must take care to put ourselves in their place, and legislate for them in matters affecting their local interests as if we lived among them. Our power must not divorce itself from their interests.

But gentlemen say the idea that 100,000 Chinamen dropped into the bosom of 50,000,000 of Anglo-Saxons or Caucasians will be dangerous to their peace is absurd. But this is an unfair statement of the proposition. Of the 105,000 Chinamen reported by the census as

in the United States, 3,500 are in the Atlantic States and east of the Rocky Mountains, while 102,000 are in the bosom of that little society which nestles on the Pacific coast. Thirty-five hundred Chinamen among 48,500,000 Caucasians east of the Rocky Mountains is $\frac{1}{13}$ of 1 per cent.; while 102,000 of Chinese in 1,500,000 of population is nearly 7 per cent.

It must be ever kept in mind that while the Atlantic States are open to European immigration, the Pacific States are exposed to Asiatic immigration.

Let me call more special attention to the state of population in the Pacific States and Territories. I present the annexed table, showing the male and female population of the several States and Territories, the Chinese population, the percentage of Chinese to white population, of Chinese males to white males, and of Chinese adult males to white adult males.

Pacific States and Territories.

States and Territories.	Males.	Females.	Chinese.	Per cent. to whites.	Per cent. of Chinese males to white males.	Per cent. of Chinese male adults to white male adults.

* Less than 1 per cent.

Let me explain this table. In the State of California alone, you will note that out of the 75,000 Chinese population there are 70,000 who are males, and adult males without wives or children or any family to speak of. [Laughter.]

Then there will be in the State of California at least 70,000 Chinamen out of about 230,000 male adults, estimating the white male adults as 160,000; that is to say, 70,000 out of 230,000. The Chinese adult males are to the white adult males as 43 to 100; or at least 30 per cent. of the whole adult male population of California is Chinese.

I put it to my friends in this House who are opposed to this bill, how would you like one-third of the adult male population of your commonwealth to be Chinese? I put it to my friends from Massachusetts who are opposed to this bill, and even to the sentimental humanitarian from Ohio [Mr. TAYLOR] who addressed us so eloquently the other day: how would you like one-third of the male adult population of Massachusetts or Ohio to be Chinamen, and with the prospect of a large increase of that population, and that not in the ordinary way? [Laughter.] I invoke the application of the golden rule, What we would that they should not do to us, let us not do to them.

Well, now, the point that I want to present to the House is this: here are some infant commonwealths upon the Pacific seaboard, and other inchoate commonwealths in the form of Territories, subject to our control and government, who come here and ask us to rid them of this dreadful incursion of Chinese laborers now being made upon them. And I ask this House if they are prepared to say that we shall in judging for these people, having so deep an interest in the question, rule against them, notwithstanding their plea, according to our judgment upon the facts, of which, and of all the circumstances of their condition, the people of the Pacific must know so much better than we do.

Mr. Speaker, the question comes up, then, gravely for our consideration, Is this immigration such an evil as that we ought to seek to prevent it? What kind of people are these Chinese laborers? Will not this continued immigration stifle the energy, impede the growth, and adulterate the civilization of the young Hercules on the Pacific? Shall we force him in his cradle to wrestle with serpents which menace his vitality and his purity?

It is said by gentlemen here, and I heard the honorable gentleman from Iowa [Mr. KASSON] this morning say, that this bill was contrary to the great principles of American policy; which is, to let everybody come at his pleasure to this "land of the free and this home of the brave;" to this asylum for the oppressed and the down-trodden everywhere.

Mr. Speaker, I have a proper sympathy with these sentiments, and while according much to them in our general policy, and giving large privilege to immigrants from other lands, yet when the right to come is claimed for them I protest against it as no part of our policy. I do not so read the Constitution of my country. Look at its preamble:

We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

The men who formed that Constitution formed it for the people of the United States; for the people of the several States who were united by the former articles of confederation, but who were to be continued in unity under this Constitution.

Gentlemen quote Scripture for their purpose:

God hath made of one—

That is the new translation contained in the Revision which was admitted free of duty the other day, and therefore I may so quote it as by authority of Congress—

God hath made of one all the nations of men to dwell upon the face of the earth—

Very well, that is all true; but gentlemen forget to quote the remainder of the passage—

having determined their appointed seasons and the bounds of their habitations.

What are these determined bounds? Asia for the Mongolian and Semitic races; Africa for the sons of Ham; Europe for the Caucasian; and America, thank God, for the great Caucasian family of nations. [Applause.]

Now, let us see who peopled this country, and who it was that framed our Constitution, and spoke it into being, as "We, the people of the United States," ordaining and establishing it for "ourselves and our posterity." The English Puritan in New England; the Hollander in New York; the Swede, the Norwegian, and the Dane in New Jersey, Delaware, and Pennsylvania; the English Catholic in Maryland; the German and Scotch-Irish in Pennsylvania and in the valley of my own ancient Commonwealth; the English cavalier, the Saxon planters, farmers, and artisans in Virginia and elsewhere; the French Huguenot in the Carolinas and in Georgia; and the other representatives of European stocks of the old Caucasian family and races of people all over the Union, and the Irish everywhere. [Laughter and applause.] We did not ordain and establish this Constitution for the Chinaman and for all the other races of the earth.

Mr. THOMPSON, of Iowa. Would it interrupt the honorable gentleman from Virginia to read from a speech against this bill in answer to his question?

Mr. TUCKER. I regret that I cannot yield to the gentleman. I have but a very short time. If I can get an extension of the time I will let you interject your question anywhere.

I hold that this Constitution was ordained and established by our fathers for their posterity of the Caucasian people of America. How much domain did we have when we started our Union? We talked about a country beyond the Mississippi, but nobody had been out there to people and possess it. And now, when by the enterprise and energy and skill and civilization and blood and treasure of the Caucasian race we have stretched out until we have reached the shores of the Pacific, John Chinaman comes in and asks, yea, demands, that they and the other peoples of the world, now that our lines have fallen to us in such pleasant places and that we have so goodly an heritage, shall come in and enjoy the fruits of our labor and civilization as coequal partners with us. Is this their right, in the face of the power vested in us by the Constitution to prohibit immigration at our will after 1808, and when the limit on our power over immigration and importation was chiefly made in the interest of negro slavery, and was extended to 1808 by the votes of New England and the cotton States of the South?

I hold that American statesman to be the best humanitarian who is a legislator for our own country, who attends to the business and looks to the interests of our own people, and who strives for the preservation of the liberty and happiness and prosperity of the citizens of this great Union of States. [Applause.]

Mr. ROBESON. I agree to that.

Mr. TUCKER. I knew that you would agree to that; and further, that the liberty and prosperity and civilization of our own people is the principal business of the American statesman; and the less we interfere with the affairs of other people, leaving them to attend to their own as God gives them opportunity, the better will we promote the welfare of our own country, and, by our example and policy, benefit the other nations of the earth.

Now, Mr. Speaker, if that be the case, if we of the Caucasian family have made this Constitution; and by our energy and blood and treasure have won this great heritage; if we have conferred this boon upon the Caucasian race, I maintain that it is not only our legal right, but that it is our duty in justice and equity to determine who shall come and share it with us. And if the coming in of the Asiatic be unpropitious to the welfare of this country, or to the welfare of any portion of it, I am ready as a member of Congress here to vote against his coming.

But it is said, you let the Irish, the Scotch, the English, and the German come. That is very true. But these are bone of our bone and flesh of our flesh. Do you say there is no homogeneity between us and them? Why, sir, who that is present here to-day if he could run back through four generations would not find a current of Irish, Scotch, English, German, or French blood in his veins? And I do not know but that I have all of them myself. [Laughter.]

A MEMBER. How about the Indian?

Mr. TUCKER. None of the Indian for me; I am pure white.

Mr. MOORE. Is there none of the Pocahontas blood in your veins?

Mr. TUCKER. No, sir; none of the blood of Pocahontas. I respect that old granddame of Indian memory; but I have not the honor to have any of her royal blood in my veins.

Now, Mr. Speaker, if I am right in the view I have taken, I proceed to inquire, what, then, is the objection to the Chinaman coming here? I am willing that everybody who does not hurt us should come. But what is the objection to the Chinaman coming?

I have no time to go into an elaborate discussion of the philosophical or scientific phase of this great subject. But I do mean to say that where two peoples have for thousands of years held as a part of their inheritance antagonistic opinions on those subjects that go down to the very roots of our social being and order; when you find a current of civilization like that of the Chinese running for two, three, four, five, or, as they claim, ten thousand years in one bold stream absolutely parallel to our own and never touching it in any point, (though it may be a superior civilization as they claim;) but admitting that it is, where the plane of its motion is never tangential to that on which the Caucasian moves, it cannot be for the development and progress of our Caucasian civilization to commingle it with the diverse polity and civilization of the Mongolian. Can it be wise for us, as American legislators, to admit a new stream of civilization into our society diametrically antagonistic to our own, and hope for peace, and order, and comfort in the homes of our American people? Is this race such an one as we should inject into the life-blood of our confederated Republic of free commonwealths?

In answer to this question I must say that the granite foundations of moral, religious, social, and political ideas must be in harmony or coalescence is impossible. Homogeneity of races does not exist where they cannot flow together in the relations of social life, in marriage, in the family, and in the home. Civil and political relations are difficult of adjustment when social and individual affinities are impossible and social and personal incompatibilities exist.

What is civilization? It consists in the ideas; the moral and religious instincts, innate and acquired; and in the advanced and quickened intellectual and moral forces of a people, from which, as the soil, air, light, and moisture spring and grow the bud, the flower, and fruit of the human race; in art and science and philosophy; in social institutions, in the family, the home, and the customs of social life, giving law to the relations of human beings to each other; in moral and religious principles; in the relations of the state to the individual, and in all those forms of material development by which the brain of man subjects physical forces to his will, attaches them to the car of his progress, and achieves the triumphs which we witness among the nations of Christendom in this splendid century of human history.

What are the fundamental ideas of our Christian civilization?

First. Monotheism—the worship of the one only living and invisible God.

Second. Marriage between one man and one woman in the holy union which makes a pure and happy household for the nurture and training of children, in the home of the Caucasian race. This is the true foundation of every well-ordered state. Conserve this, and the state will be noble and prosperous; destroy it, and all is lost.

Third. Parental nurture as the highest duty and noblest privilege on the one side, and on the other filial obedience and honor to the parent; the law of the home by which the child is educated for the position he is to hold as a law-loving and law-supporting citizen of a free country.

Fourth. The liberty of the citizen secured against the despotic and absolute domination of the government, which is bound to obedience to the will of the people, expressed in its fundamental law, the constitution of the state, creating and prescribing the authority of the government, and securing the rights of the individual man.

Contrast this with the civilization of the Chinaman. We are monotheists; he is a polytheistic pagan and idolater.

We are monogamists. The Chinaman is a polygamist! [Laughter.] God save the mark! Polygamists, buying and selling wives and admitting concubines to the home of the isolated and secluded wife! And gentlemen who lately were so earnest in extirpating polygamy from the society of American citizens are indignantly insisting on importing it from China in order to the pollution of the home life of our people on the Pacific coast. [Applause and laughter.]

What is the family relation? The Chinaman is not only a polygamist in such forms that this presence does not allow me to speak of it further, but he owns the child and may sell him into slavery.

What is the relation of the Chinaman (I cannot call him citizen) to the government? The emperor is the high priest of a theocracy, the vicegerent of God, and an autocrat, with absolute and unlimited power over the whole mass of Chinese people, his base and willing slaves. How can you transform such a slave into a citizen of free America?

The SPEAKER *pro tempore*, (Mr. PACHECO.) The time of the gentleman from Virginia has expired.

Mr. ROBESON. I ask that the gentleman's time be extended.

There was no objection.

Mr. TUCKER. What can you do with the Chinese when they come? You must either naturalize him or leave him forever as an exotic member of our society. Naturalize him! What kind of a citizen would he make? You would plant him in the States of the Pacific as a hostile element in their political affairs. Absolutely antagonistic in all his civilization, you would clog the Caucasian race with a body of death about their social and political life. One-third of the voters of California would be Chinamen. How could the

young Commonwealths on the Pacific survive it? How would Massachusetts, how would Pennsylvania, how would Ohio, or the Old Dominion stand that? And can we put on the infant States beyond the Rocky Mountains what we would not, could not bear for ourselves?

But suppose the Chinaman is not naturalized, then what? We would fasten a fungus, foreign, and malignant substance in their body-politic to fester, poison, and destroy the Pacific States.

But gentlemen say, Why you have already here an element antagonistic to our civilization. Ah, yes, sir; and that is as many as we can carry. [Laughter and applause.] Now, gentlemen will not understand me as intending to rake up the embers of the old struggle; far from it, sir. But I do mean to say there is not a philosophical statesman in this land who to-day does not say either that the citizenship and the voting power of the African race in the South is a failure—either that or that it is an unsolved problem of our future. We have that one disease in the body-politic, which God grant we may recover from. But for God's sake do not let us inoculate the body-politic with another disease of the same kind with the hopeful idea that the youthful Hercules can get over that one too. I believe, Mr. Speaker, that the African is a better form of the disease, a much more curable form of the disease, than the Chinaman.

The African has been with us for two hundred and sixty years. I tell you, gentlemen of the North, that we, perhaps more than you, have loved the African. In the arms of the African mammy we have been carried, and our forms have rested on her lap in our childhood, and her eyes have been closed in death by these hands. In their humble way they embraced our Christianity, which is large enough to fill the mind of a Newton and simple enough to feed the faith of the poor African. They believe, not in a Christianity that is travestied, as my friend from Maryland [Mr. McLANE] has shown you the Chinese converts did, but they believe in Christianity with a simple faith that makes them and us akin in a firm reliance for eternal happiness on the death and life of the same divine Redeemer.

But gentlemen say let us now look at the immigration on the Atlantic seaboard. Look at the eastern people who come to us. Gentlemen say they come fleeing from oppression and have lived under tyrannical governments, and how are they fitted for American citizenship? Do gentlemen put our European immigrants on a footing with the Asiatic? This cannot be done. The old German in his native forests, the primal example of individualism, the free and bold barbarian (as described by Tacitus) sounded the key-note of all the liberties that have come to your ancestors and mine in the mother country for all the generations that have followed. The French have struggled for liberty and have won it. The Englishman has fought for his constitutional freedom and has achieved it. And poor Ireland is struggling to-day, as she has done for centuries, for what is so essential to ourselves and to all liberty-loving people, the right, the absolute right of local government in local affairs; for the government which rules local affairs in which it has no interest is, in fact, a foreign government, whose authority will be abused and do injury to its subjects, because power is divorced from interest, and interest is not represented by the hands which wield power.

Now, what is it that our friends from California and the Pacific coast are now asking? They say "As we cannot regulate our local affairs as to the people that are to live among us, as we are denied the right to exclude Chinese immigration from our homes on the far-off Pacific slope, for God's sake let Congress, which can check this immigration, do it for us."

All these people who come to us from European countries are different from the Asiatic horde who swarm upon the Pacific. They are members of that great Caucasian family which in these centuries that have passed have been struggling upward and onward in the career of freedom; and therefore it is that whenever an Irishman, or a Scotchman, or an Englishman, or a Frenchman, or a German drops into the bosom of our society he keeps step with the march of our own people in maintaining the principles of liberty and constitutional government, and in advancing our common civilization.

I have thus endeavored to explain what I mean in maintaining that you cannot have peace and order and comfort in our American society unless the races that people our country and take part in our polity, are homogeneous races with like fundamental ideas, in morality, in religion, in reference to the relations of the government to the man; and in that most fundamental of all ideas, the question of the relations of the man to his wife and his children in the family and the home, which is at once the foundation and the capstone of the edifice of every well-regulated society.

There are other objections which are made to this bill. They say that the Chinaman is a cheaper laborer than we have, and therefore it is our interest to admit him.

That was substantially the language, as I understand, of the celebrated Morey letter, which was attributed to my distinguished and lamented friend, the late President of the United States; that all we wanted was to get enough of cheap Chinese labor and then we would prevent any further immigration. And so alarmed were the friends of that distinguished leader that his prompt disavowal of that letter was considered necessary in order that the party might carry the country.

And yet what is the doctrine we hear advocated on this floor? It is that the Chinaman is the cheaper laborer, and therefore he should

be allowed to come into this country and compete with our laborers. And gentlemen who hold to the doctrine (and I desire to call attention to this) that we ought to have a tariff high enough to protect the American laborer against the pauper laborer of Europe are instant in season and out of season in advocacy of a policy which would import millions of the poor laborers of China against whom our laborers at home must run the gauntlet of a destructive competition.

Now, I have no hesitation in saying that I am in favor of obtaining the products of other countries under a liberal tariff system, although they are made there cheaper than they can be made in America. I believe that would be to the advantage of the great consuming classes of this country. But I am not in favor of degrading the modes of living and the customs and habits of our laboring classes down to the base level of the Chinese laborers in the fierce competitive struggle for employment. Nor let it be forgotten that while our home laborer keeps his accumulated earnings here to add to his comfort and that of his family, and to the aggregate of national wealth, the Chinese laborer, in the worst form of absenteeism, lives on almost nothing here and sends his surplus wages to his home in China.

But another view has been pressed by my distinguished friend from Mississippi, [Mr. HOOKER,] who said yesterday, and it has been repeated here to-day, that one of the great things we have to look to is the preservation of our important trade with China. They tell us that if we do not let the Chinese laborers come in, China will be displeased and will not let us trade with her; that the Chinese embassy is to decamp from the capital at Washington and go to Spain. Well, I would not interfere with his highness if he desires to go to Spain. Perhaps it would be more pleasant there during the summer months. But that we should not be frightened from our propriety by any such threat as that from the embassy of China I suppose it is not necessary for me to insist before this audience.

What is this important trade? I annex a table on which I will comment:

Value of merchandise imported into, and exported from, the United States in our trade with China, including Hong-Kong.

Year ended June 30—	Exports.		Total ex- ports.	Imports.	Total im- ports and exports.	Total im- ports and exports of United States—all countries.
	Domestic.	Foreign				
1840.....	\$469,186	\$63,777	\$531,963	\$6,640,829	\$7,173,792	\$239,227,465
1858.....	2,793,754	127,399	2,911,153	10,570,442	13,481,595	607,257,571
1868.....	3,942,332	37,682	3,980,014	11,384,969	15,365,013	747,361,803
1881.....	8,361,949	2,585	8,364,534	24,717,557	33,082,091	1,675,624,318

* Also including Singapore for 1869.

It will be seen that before we ever had a treaty with the Celestial Empire our export and import trade with China was \$7,173,792; which was 3 per cent. of the entire export and import trade of the United States. Under the present treaty, with all our boasted facilities, our whole export and import trade with China was less than 2 per cent. of the entire export and import trade of the United States. In other words, in 1840 our China trade was 3 per cent. of our total foreign trade. In 1858, before the treaty of that year, it was 2.2 per cent. In 1868, before the Burlingame treaty it had fallen to 2 per cent. In 1881, after all our efforts by treaty it had fallen below 2 per cent. So much for these treaties in advancing our trade with China. It is true the aggregate amount has increased, but the relative proportion to the whole has fallen. But look at the amount. Last year we exported to China, including Hong-Kong, goods to the value of \$8,364,534, and we imported goods to the value of \$24,717,557. As my friend from Maryland [Mr. McLANE] said this morning, they sell to us all that we will buy, and they buy of us nothing that they can help; they take their payment in trade dollars, and not in merchandise.

A great part of this export and import trade with China is with Hong-Kong, where there is a large European population who take and consume our supplies. So far as China is concerned the export and import trade is very small.

Compare this for one moment with our trade with Great Britain. Out of a total export trade last year (year ending June 30, 1881) of \$883,925,947 we exported to Great Britain \$476,000,000, which is 57 per cent. We exported to China \$40,900 of breadstuffs, and to Hong-Kong \$973,145, in all \$1,014,045, or less than one-half of 1 per cent. of total export of breadstuffs. To Great Britain we exported largely over \$100,000,000 of breadstuffs alone.

With or without treaty we will get no more trade than Chinese prohibition will allow, and the totality in either event is only an infinitesimal factor in the great sum of American commerce. And for the chance of peddling to China some of our cast-off goods that we cannot sell at home, we are asked to open our ports and permit to be poured upon the fertile plains of the Pacific coast this Chinese immigration against the protest of the Caucasian race there.

With your leave, Mr. Speaker, I will present one other point and then close. This is a graver question than one merely of trade. It is a question of the permanence, the peaceful and loving permanence

of the American Union. The States on the Pacific coast, separated from us by the Rocky Mountains, are open to Asiatic immigration; we on the Atlantic coast are open to European immigration. Now, if these two tides of immigration are allowed to come in to an unlimited extent the effect will be that while we on the Atlantic seaboard will be Caucasian in our civilization the Pacific States will become Asiatic, and how can a union continue between States on the Pacific dominated by Asiatic ideas and States on the Atlantic dominated by the free principles of the Caucasian family? [Applause.]

But, further than that, this Government here at Washington must take care in all of its legislation, I will not say to be in accord with the ideas which come from the Pacific or from the Atlantic, but where the question involves the special interests of any one locality of the country, that those interests shall be respected and guarded in the legislation which we shall adopt.

Now, how can the Caucasian race on the Pacific coast think otherwise than unkindly of a government, paternal and patriarchal as it may be in many respects, that refuses to rid them of this great and enormous evil that is threatening them, merely for the sake of selling a few goods to Chinamen on the other side of the Pacific? This race question is one which goes to the hearts and homes of these great and growing communities on the Pacific. Let us not thwart their appeal and alienate them, but let us hear and meet it by this bill, and attach them to us more strongly, and cement the Pacific and Atlantic States in a deeper devotion than ever to the Union that binds them in one.

With these views, though as an original question I might have preferred to make the suspension ten years instead of twenty, I shall in deference to the opinion of the friends of this measure vote for the bill as it is, believing it to be a reasonable suspension looking to the peace and harmony and well-being of our sister States on the Pacific Ocean.

I would say to gentlemen on all sides of this House, if we would have a permanent Union of these States, in peace and generous co-operation for the great objects of its creation, not linked by the iron bands of force and military power, but bound by the silken cords of love and confidence, we must, as in like cases, respect the feelings and opinions of the Pacific States in this matter, which concerns their internal polity, their local interests, their social, family, and home life, their prosperity in wealth and the development of their great resources, and their progress in civilization and in political influence and power.

To gentlemen of North and South, I rejoice that I may speak freely and without reserve to-day on this question, which does not involve directly any peculiar interests of the South. Treating all sections with that magnanimity which has charity for all and malice toward none; without the passion of party, the prejudices of section or the enthusiasm of a sentimental humanitarianism, but with a calm and judicial moderation, which begets wisdom in counsels and in action, we will, under the blessing and directing hand of God's Providence, surmount all difficulties, heal all divisions, forget all dissensions, and live only with one common purpose to make our constitutional Government an example to the world of a system, where peace, safety, and order are assured in consistency with liberty and the individual rights of the man—the one under the Government of the Union, the other under the home governments of the States, and all under and by virtue of this glorious Republic of Republics established by the wisdom and patriotism of our fathers of the great Caucasian race. [Applause.]

Polygamy.

SPEECH

OF

HON. PERRY BELMONT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1882,

On the bill (S. No. 353) to amend section 5352 of the Revised Statutes of the United States, in reference to bigamy, and for other purposes.

Mr. BELMONT said:

Mr. SPEAKER: I have but a word to say in this connection. I shall not vote for this bill, because I desire effective and proper legislation against polygamy and because I am not willing to submit to trial a measure so crude and ill-considered that its evil consequences may easily be foreseen. Even those who are loudest in the clamor for the immediate and hasty passage of the measure as it now stands before the House are obliged to confess that it is not what it should be. Many who content themselves with voting in its favor say that it will disappoint its framers and will not accomplish the purpose for which it is intended; and I feel satisfied that such is the fact. Before this session of Congress is over it may become necessary to remedy its glaring defects, but until that is done I will not lend it my support.

National Banks.

That Congress has no power to charter a national bank. We believe such an institution one of deadly hostility to the best interests of the country, dangerous to our republican institutions and the liberties of the people, and calculated to place the business of the country within the control of a concentrated money power and above the laws and the will of the people.—*From Democratic platform of 1856.*

SPEECH

OF

HON. CAMPBELL P. BERRY,
OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 29, 1882,

On the bill (H. R. No. 4167) to enable national-banking associations to extend their corporate existence.

Mr. BERRY said:

Mr. SPEAKER: On examination of the law under which all the national banks were organized, except the gold banks, passed June 3, 1864, (13 Statutes, page 99,) reveals the fact that the banks are to have corporate existence for twenty years, not from the date of the law authorizing them, but from the date of their organization. The eighth section reads as follows:

And be it further enacted, That every association formed pursuant to the provisions of this act shall, from the date of the execution of its organization certificate, be a body corporate, but shall transact no business except such as may be incidental to its organization and necessarily preliminary until authorized by the Comptroller of the Currency to commence the business of banking. Such association shall have power to adopt a corporate seal, and shall have succession by the name designated in its organization certificate for the period of twenty years from its organization, unless sooner dissolved according to the provisions of its articles of association, or by the act of its shareholders owning two-thirds of its stock, or unless the franchise shall be forfeited by a violation of this act.

By this provision each banking association formed under it may exist twenty years from the date of its organization; and it cannot be dissolved excepting by a two-thirds vote of its stockholders, or by the Government for a violation of its charter. And here permit me to say that, in my opinion, there are but few of these institutions but what have violated their charters repeatedly, and could now be closed upon that account by proceedings instituted by the Comptroller of the Currency. But the reading of that officer's reports will, I think, satisfy even the careless reader that he prefers their perpetuation rather than their extinction. That he regards them as the chief support of the business of the country—the blessing of the nineteenth century.

This act, as well as all the other acts relating to national banks, emanated from Hon. JOHN SHERMAN, then chairman of the Finance Committee of the Senate. It is highly probable that this feature of the banking act, as it was called, escaped the attention or was not fully understood by many who voted for it, but was passed, as the law of 1873 demonetizing silver was, in ignorance of its scope and extent.

The bill now before the House is for the purpose of enabling the banks to renew their charters, as a large number will expire in 1884 by limitation, and it is claimed that some such legislation is necessary. It certainly seems to me that it is not necessary. Such legislation may be very convenient for the banks, but under the law as it now exists let me inquire what can hinder them by a two-third vote of their stockholders from surrendering their franchise and obtaining from the Comptroller new articles of association, and in twenty years the same process can be again gone through with, and so on to the end of time.*

I assert that there is nothing in the present law to prevent. I further assert that we now have a perpetual banking system established by law, based upon our public debt, a system that can be perpetuated as long as the debt exists without further legislation; and that the present legislation is not necessary, and not in the interest of the people, but would be only a convenience to the banks and in their interest.

I apprehend that this is only one more link in the chain that is being forged to bind the people to a perpetual banking system, founded upon a perpetual debt, which, in the language of every Democratic platform, from 1840 to 1860, is to be "above the laws and above the people."

In my judgment, this is a critical period in the history of this Government. I believe there is a systematic effort to be made to reduce the revenues of the Government and to enter upon a system of internal improvements, building a navy, enlarging ocean mail lines, increase of pensions, a national system of education, and other expenditures, the chief object of which is to absorb the revenues of the country; to prevent the extinguishment of the public debt below the point of \$1,000,000,000, that the banks may be perpetuated and furnish and control the circulating medium of the country.

*Since this speech was prepared the Attorney-General of the United States has given an opinion in accord with this view.

Sirs, there is but one way now to extricate ourselves from the network being woven around us by the money power of the country, and that is to insist that our revenues be continued and the public debt paid. The present national-bank act is the first ever passed in the history of our legislation to perpetuate banking institutions. Previous to this, four national-banking laws had been framed. The first was dated February 25, 1791, (1 Statutes, 194.) Its charter extended twenty years. The bank did not go into operation for some time after the date of the charter, but the charter expired February 25, 1811, just twenty years from the passage of the act to a day. It applied for a recharter in 1810 but it was not granted, and it went into liquidation. The second act was passed April 10, 1816, (3 Statutes, 266,) and the United States Bank soon after went into operation.

Much corruption existed in relation to this institution, but no one ever intimated that the charter dated from the time the bank went into operation instead of from the passage of the law. The charter expired on the 10th of April, 1836, twenty years to a day, and it was so treated by Congress.

Another feature in relation to these two banks is worthy of notice, and that is the laws creating them provided that their notes should be received for all debts due the United States. They were so received for forty years, or during the existence of their charters. Another fact in this connection is, that both these banks after their charters expired attempted to pay out their circulation, and thus sustain themselves upon the credit which the reception of their notes by the Government gave them. Therefore, on March 10, 1812, (2 Statutes, 695,) Congress enacted that the notes of the first United States Bank should no longer be received for debts due the United States.

The charter of the second Bank of the United States expired April 10, 1836; and on June 15, 1836, (5 Statutes, 48,) the notes of this bank, which were being put in circulation were demonetized.

In 1832 Congress rechartered the second Bank of the United States, but the measure was defeated by the veto of President Jackson. Even this proposed law did not contemplate that banks should exist twenty years from their organization, but only twenty years from the date of the grant. Just here let me advise those who admire national banks and our present system of banking to read Jackson's veto message, which I believe to be one of the ablest state papers that ever emanated from a President of the United States; especially would I request all Democrats to read it.

Again, in 1841 a law was passed establishing a United States bank with a capital of fifty millions, but it was vetoed by President Tyler. That act contained no provision that the charter should extend twenty years from the time the bank went into operation.

It may be said that these United States banks to which I have referred were individual institutions, and not intended to extend to all the States, as our present system of banks. While this is true, it is also true that the United States banks were allowed by the laws creating them to establish branches in all the States; and they did establish branches in some of the States. In many instances these branches were established years after the act authorizing the bank and years after the organizing of the mother bank; yet they all expired with the original act or charter, without regard to the date of their going into operation.

The acts of 1863 and 1864 were the first attempts to fasten upon the people of this country a perpetual banking system, from which it was hoped they would never extricate themselves; and the effort now is to see that hope realized. This proposed action is only a part of the stupendous scheme by which a privileged few, without labor, may eat out the substance and enslave the many who do labor. This system has ramified our entire country. There are banks now located in every State and Territory in the Union, numbering more than two thousand.

If we are to pursue a policy that will foster, build up, and augment their already overgrown power by enacting such laws as they may see fit to ask, and yielding to their every demand in the future as in the past, it will be but a short time until they will number more than five thousand, with a capital of more than a billion of dollars.

The only limit is the bonds of the United States. It is also estimated that at the present time they have more than a billion of dollars deposits, and with fostering legislation in the line of that now proposed there is every reason to believe that within twenty years they will accumulate two billion deposits.

Every sane man knows, not alone from the past history of our own country but from the history of the world in all ages, that they will combine and act together to augment and perpetuate their power. Every member upon this floor is a living witness to this line of conduct on the part of the banks. No man is ignorant of the great power they already command. We should therefore pause before taking a step that will permit them to intrench themselves securely in the power they now have and to increase it until their dictum is law.

It cannot be denied that their influence has been mighty in the management of public affairs since 1864. They have commanded, and Congress and the Executive have obeyed. They have spoken, and it has been done. It was the bank interest that demanded the exception clause in the legal-tender act, and their demand was complied with. This was the first time such exceptions were ever made with the paper issues of the United States. The result was a tre-

mendous discount, to the great loss and injury of the people, the idea prevailing that the Government was about to repudiate its circulation.

Again, the banks demanded that after July 1, 1863, the legal-tender notes should not be received for bonds, although the laws creating both the bonds and the notes, as well as the notes themselves upon their face, provided that they should be received for bonds the "same as coin." This demand was also complied with by the act of March 3, 1863. The notes then dropped to a discount, until it required \$2.50 of notes to equal \$100 in coin. These notes were made by law receivable at par for three years, interest-bearing notes. These interest notes were invested in bonds at par, not costing the purchaser above fifty cents on the dollar. The banks further demanded that the gold interest on these bonds should be paid one year in advance; and this was done for five consecutive years.

The act of June 3, 1864, limited the bank circulation to \$300,000,000. This was not satisfactory to the banks, and at their demand it was increased to \$354,000,000 in 1870. Still unsatisfied, they demanded unlimited circulation, and it was granted by the act of 1875, (16 Statutes, 445, and 18 Statutes, 206.)

Previous to June 20, 1874, (18 Statutes, 296,) the banks in money centers were required to keep 25 per cent. of their circulation in legal-tender notes.

Again, the banks came forward with a demand that they be relieved of this restriction; and it was complied with to the extent of 20 per cent., leaving only 5 per cent. they were required to keep, and that was to be deposited in the Treasury.

Prior to 1870 and 1874, before the banks could lift their bonds deposited as security for their circulation, they were required to present to the Treasury their own notes to the amount of the bonds. At this time the 5 and 6 per cent. bonds were at a large premium, which the banks wished to avail themselves of before they could be compelled to bank on the 4½ and 4 per cent. bonds.

They demanded, therefore, that they should be permitted to deposit in the Treasury legal-tender notes to the amount of their circulation instead of their own notes. Congress promptly complied with this demand, thus aiding them to sell their bonds, which they had procured at an average price of about fifty cents on the dollar, at from 10 to 20 per cent. premium, notwithstanding the circulating medium was largely contracted by this transaction to the great injury of the country.

In 1865, 1866, 1867, the banks insisted on retiring the legal-tender notes and all other non-interest-bearing notes of the United States, and their investment in interest-bearing bonds, in order that their currency, the national-bank notes, might take their place. Through the friendly influences of the Secretary of the Treasury, Congress again yielded to the demand of the banks, as the acts of 1865 and 1866 will show. (Act of March 3, 1865, 13 Statutes, 498; and September 12, 1865, 14, page 14; also April 12, 1866.)

But these bondholders and banks were not yet satisfied. Though they had purchased these bonds with legal-tender notes at par, when the notes cost not more than fifty cents on the dollar, coin; and though in 1869 these notes were not over 30 per cent. discount, and the principal of the bonds was, under the laws, payable in these, they demanded that Congress should pass an act making their bonds payable in coin. The demand was complied with by the act of March 18, 1869, (16 Statutes at Large, page 1,) which provided that all the bonds of the United States should be paid in coin, "or its equivalent."

This was a gain to the banks and bondholders and a loss to the people of several hundred million dollars. But the banks and bondholders were not yet satisfied. They did not relish the word "equivalent" in the act of March 18, 1869. They knew well that the legal-tender notes could be made the equivalent of coin simply by the repeal of the exception clause in the legal-tender act. They feared it might be done and that their bonds would be paid in legal-tender notes, thus adding to the value of Government notes and reducing that of national-bank notes. To meet this difficulty the law of July 14, 1870, (16 Statutes, 270,) was passed, which provided that \$1,500,000,000 of 5, 4½, and 4 per cent. bonds should be issued and sold to redeem at par the outstanding bonds, nearly four hundred millions of which were in the hands of the banks. To the reduction of the interest the banks were opposed, but finally agreed to it upon the condition that the new bonds should not only be made payable in gold and silver coin nine-tenths fine but that the bonds should be exempted from all taxation, both State and national. These terms were accepted by Congress and the banks permitted the act to pass.

Just here permit me to say that so far as I know this was the first act of Congress exempting United States bonds from national taxation. Other laws exempted bonds from State and municipal taxation, but not from national taxation. This act went the whole distance, and not only exempted the bonds but the interest also. Previous to the passage of this act banks and bondholders had been compelled to pay tax on their incomes from bonds; but this contract with the banks released them from this burden. The income tax was soon after repealed, and we have had no such tax since that time.

Again, Germany, Denmark, Sweden and Norway had demonetized silver, and its value was much reduced. The bonds held by the banks, as well as those held by others in Europe and America, were

all payable under the laws of 1869 and 1870 in silver as well as gold. It would not do to make a public demand for the demonetization of silver dollars in the United States, but the demand was made to a very few political leaders and wire-workers, and on the 12th of February, 1873, (17 Statutes at Large, page 424,) silver dollars, in which all bonds were payable, were demonetized in the United States. This made the bonds of the banks, as well as of others, payable in gold only. By destroying one-half the money in which the bonds were payable they doubled the value of the bonds to the holders and the debt to the people.

But the act of demonetization of silver, when it became known to the people, aroused their indignation, and they demanded its remonetization. This was violently opposed by the banks, the bondholders, and the men who had practiced the fraud upon the people; but in 1878 (20 Statutes at Large, page 25) the act of remonetization became a law over the veto of President Hayes. The Secretary of the Treasury refused and continued to refuse to pay out silver dollars, which were full legal-tender money, for interest and principal of bonds; and the banks also, in the money centers, combined to defy the law, refusing to receive these lawful dollars at par. In the language of all Democratic platforms up to 1860 "these banks were above the law and the people."

But this was not all. When the 3 per cent. funding bill of last year was passed there were members of Congress upon the floor who stood up and offered to read letters from more than one hundred banks, warning Congress of what they would do if the bill should pass. For once Congress refused to be intimidated, and passed the act. As soon as the bill was in the hands of the President the bank presidents, cashiers, and directors surrounded him and induced him to veto the bill and defeat the law. Before this had been accomplished, however, the banks had carried out their threats, and under the act of June 20, 1874, reduced their circulation over \$18,000,000, causing great distress in business circles. Not satisfied with all the favors Congress has heaped upon them, they are now clamoring to have the taxes imposed upon them removed, but unwilling to have the interest on their bonds reduced.

Mr. Speaker, I made this brief review of the history of our legislation in connection with these banks to show that they have been the favored institutions of the country, that they have been granted their every demand; also to show that they are by no means modest in their demands, but, like all corporations, are soulless, ever ready to take to themselves every advantage obtainable, regardless of the rights of others and of the business prosperity of our country, regardless of the cries of thousands of widows and orphans throughout our country and the wails of distress going up all over our land because of the grievous burdens laid upon the millions of laboring poor by reason of their unjust exactions. As before stated, I am satisfied it is the settled purpose to so shape legislation as to continue this condition of things and still more strongly intrench themselves in their position. Their views and their policy have been clearly expressed and outlined in the damnable doctrine that "a national debt is a national blessing." Hence the only thing yet remaining for them to do is to control the revenues of the country and to deprive the greenback of its legal-tender quality. This done their scheme is complete.

To the banks the perpetuation of the debt is an absolute necessity. Their notes are based upon the interest-bearing bonded debt. When these bonds are paid off their issues must cease. To postpone to as remote a date as possible or to prevent altogether the payment of the debt we now see the movement all along the line for a reduction of taxation to the end that there may be no surplus revenues to further materially reduce the debt. If this course is adopted it will render a nullity the law creating the sinking fund. It will be in conflict with the policy of our fathers, with all acts of Congress from 1789 to 1860, as well as in direct violation of the repeated admonitions of Washington, John Adams, Jefferson, Madison, Monroe, the younger Adams, and Jackson. This move to have a national banking system founded upon a perpetual debt is not in accord with our institutions. It is English, not American; it is monarchical, not republican.

I am fully satisfied there is no necessity for these banking institutions. A sound, uniform currency can be secured to the people without the bank circulation. It is now in part furnished and can be wholly furnished by the issues of the Treasury without the interposition of banks of issue. Treasury issue is the best paper money we can have, and has been and always will be most satisfactory to the people.

The best estimates that can be made give the United States about one billion four hundred million dollars circulating medium, consisting of coin, coin certificates, legal-tender notes or greenbacks, and national-bank notes. In round numbers, we have about seven hundred millions of greenbacks and national-bank notes together, nearly equally divided, so that at the present time all are agreed that in addition to our coin circulation that amount is necessary for the transaction of the business of the country. In fact, the opinion is general that a larger volume than we now have would add to our prosperity. Our per capita is but little over \$20. The per capita of England is above \$40; France and Belgium, above \$50. Almost every country is more than the United States.

The business interest of this country, if not at the present time, will soon demand at least one billion of paper money in addition to

our coin circulation, instead of the seven hundred millions we now have. I think I might say this is recognized by all who have given the subject any thought. None see and understand this better than the managers of the national banks. The question now presented is, How shall this circulation be furnished?

The bank party believe that we should perpetuate the debt, continue our banking system, substituting bank notes for greenbacks, and thus furnish all this circulation through the banks, while I, and I think the great mass of the people, if they could be heard, believe that whatever paper circulation is necessary should be supplied by the United States Treasury direct, and not through the medium of the banks.

Mr. Speaker, the pending bill to recharter the national banks, in my judgment, is but one more move upon the financial check-board that is to commit this great Government to the damnable heresy "that a national debt is a national blessing," and thus chain our people for generations yet unborn to the chariot-wheels of the moneying and the corporation car of the privileged few and make of them "hewers of wood and drawers of water."

Those who think we have the best financial system that the world has ever seen or that can be devised, and who so admire it as to now be willing to perpetuate it by legislating for its continuance and are ready to enter upon a policy of reducing taxation that the bonded debt upon which this system is based may be perpetuated, should remember that it is a costly contrivance for the producing and laboring people—those who in the end foot all bills and pay all debts.

This billion of currency furnished through the national banks, as this system contemplates, would require at least \$1,000,000,000 in interest-bearing bonds as a base. The annual interest on these bonds at 3 per cent. would be thirty millions, and in thirty-three years and four months would equal the principal; at 4 per cent. would be forty millions per annum, and would equal the principal in twenty-five years; and at 5 per cent. would be \$50,000,000 per annum, and would equal the principal in twenty years.

These bonds are non-taxable and bear none of the burdens of the Government, while the people who pay the taxes and support the Government must also pay the interest on these bonds to the banks, who under the proposed banking system are the holders. But this is not all. The already overburdened people, before they can use the currency, must pay the banks from 5 to 10 per cent. interest on it, in accordance with the State law in which the bank is located. Thus, for a billion of currency furnished by the banks the people pay interest on a billion of bonds and interest on a billion of currency. The debt of England, which in round numbers is two billion dollars, has in two hundred years drawn twenty-four billions in interest, or twelve times the principal—enough to make the few very rich and the many very poor. May this not be the chief cause of the distressing poverty of her masses, and in it do we not see the future of America? I say emphatically that no better scheme can ever be devised, and none that will more surely enslave the great body of the people and build up a moneyed aristocracy, than to fasten upon them a perpetual debt the interest of which is a mortgage forever.

Under the acts of June 20, 1874, and January 14, 1875, the power has been conferred upon these banking institutions to contract or expand the currency at their will and pleasure—certainly a most dangerous power to be placed in the hands of corporations. The limit of inflation is only the limit of the bonds of the United States or the ability of the banks to command them. This is a power by which they can increase all property values, real and personal, as they deem best for their own interest. The control of the money of the United States is conferred by the Constitution upon Congress. They may, if they see proper, contract or expand the currency of the country, but they have no right under the Constitution, as I understand it, to transfer that power to any banks or corporations. Recently the banks have been taking out currency more rapidly than ever before. I predict that, if the present bill becomes a law, it will be but a short time until the volume of the currency is greatly increased, property values largely inflated, and the business of the country, in a measure, placed upon a fictitious basis. Then will follow necessarily, under the laws of commerce and trade, a corresponding contraction, the result of which is paralysis of enterprise, stagnation of trade, decrease of production, labor thrown out of employment, and increased poverty, distress, and suffering throughout our land.

The banks can, under existing law, surrender their currency at pleasure; and that they may not be subjected to the annoyance and delay of gathering up their notes, which are circulating among the people, it is provided that greenbacks may be deposited in the Treasury in lieu of them, and there held until the bank notes are redeemed. When so redeemed they are to be destroyed. By this means, so long as the legal-tender notes and the bank notes remain about equal in quantity, they can retire one-half of the paper circulation, create a panic, and reduce the price of all commodities 50 per cent. in a short time. This, in reality, gives them control of the market value of all property. They can dictate the price of the poor man's bread as well as the earnings of his toil and labor. The bill now under consideration proposes a renewal of this dangerous power in their hands. It will not do for gentlemen to say that if they do hold such power they will not exercise it. All history and our own experience teaches to the contrary.

It was charged, and no doubt truly, that the United States Bank,

whose charter expired in 1836, subsidized the press, controlled members of Congress, attempted to control elections, State and national, and but for the iron will and great personal influence of President Jackson, would have done so, thus forcing (at that early period in our history) this Government into the adoption of the policy that its circulating medium should be furnished through the intervention of banks and its volume controlled by chartered corporation. It was a life-and-death struggle at that time with the people, led by Jackson on one side, and the corporations and money-power, with the United States Bank at the head, on the other.

If a bank with a capital of only thirty-five millions, and twenty-five or thirty branches in the United States, could wield such an influence in the management of public affairs, let me inquire, what may we not expect from two to five thousand banks, located in every town and hamlet in our land, commanding a capital of from five hundred million to a billion dollars, all acting in concert?

We are not left in ignorance in this matter, nor are we without example. It is an open secret that the banks contribute large sums of money to every fund to be used at elections, the result of which in the least affects or might affect them. Their mighty power is felt everywhere; its effects are witnessed on every hand. They build up or they pull down. They elect to position their friends or hurl from place those who oppose their wishes. They act in perfect harmony, are united as one man, and to-day their power is almost irresistible. They command, and it is obeyed. A striking and humiliating illustration of this truth was witnessed one year ago in the veto of the 3 per cent. funding bill.

Mr. Speaker, it is with alarm that the people regard corporate interference in the management of our public affairs, in the formation, administration, and adjudication of the laws of the land. It is a notorious fact, as the history of our financial legislation which I have been reviewing abundantly proves, that the dictum of the banks is law. Any measure they seek to obtain seldom, if ever, fails, and any measure they seek to thwart never becomes a law. In every contest where the people have sought to resist their demands or curb their power the banks have come out triumphant, and gather to themselves the spoils of victory. In my humble judgment there is imminent danger of the people of the United States passing wholly under the control of aggregated capital.

The history of other nations as well as that of our own country, the history of almost every State in this Union, notably my own State, (California,) shows plainly that all important legislation is molded by corporations. The bank corporations, the railroad corporations, and telegraph corporations are triumvirate monopolies enthroned, before whose mighty power our rulers bow. Their joint influence is wholly irresistible. So observable has this become "that he who runs may read." So absolute is their sway that a statesman not long since remarked "that he was not sure but that the time had come when it would be better to hand over the control of the Government to the corporations entirely; that were it done they would no more control than they do now, but likely would control by less corrupting and demoralizing influences."

Seeing, sirs, that Congress, the representative body of fifty millions of people, chosen from their midst, the law-making branch of this great Government, is powerless before this triple-headed sovereign, and unable to enter upon or carry out a policy against the wishes of the banks and in the interest of the people, I think we should at least stand our ground and resist the further invasion of the rights of the people and the usurpation of the functions of Government. We should not pass this or any other law rechartering these banks, or that looks to perpetuating in their hands the power that rightfully belongs to the people and of which they never should have been deprived.

What Congress should have done long ago, and that which would have been in the interest of all the people, and what should now be done, is to pass a law making provision for substituting Treasury notes for bank notes, redeem the bonds of the Government to the extent of the present bank circulation, and discontinue all banks of issue at the end of twenty years from the passage of the law under which they were organized. Let them bank if they desire, but upon coin or Treasury notes, as other banks do.

We should also promptly revise the tariff on a just and equitable basis, not in the interest of free trade or protection, but with a view to producing the greatest amount of revenue, maintain our internal revenue taxes, especially upon whisky and tobacco, and extinguish the debt at the earliest date possible. This is the only process by which the people can be relieved of their burdens and free themselves from this oppression.

Gentlemen may discourse eloquently about the people being ground down by taxation, and let their souls run out in sympathy for them. Do not deceive yourselves with the belief that you will gain popularity by such propositions to reduce taxation. Let me inquire what are your propositions for reducing taxation, and who do you propose to relieve; is it really those who bear the burdens of Government and are entitled to your sympathy? Let us see, using the language of the gentleman from Texas [Mr. MILLS] while discussing the funding bill in the Forty-sixth Congress:

How much do you propose to reduce the tax on sugar, that is taxed from 62 to 73 per cent.? On rice, that is taxed 100 per cent.? On salt, that is taxed from 40 to 66 per cent.? On cotton goods, that are taxed from 61 to 71 per cent.? On window-glass, that is taxed from 90 to 116 per cent.? On iron, that is taxed from 70

to 90 per cent. ? On candy, that is taxed from 100 to 153 per cent. ? The children of poor folks would like for it to come near enough for them to get a lick at it occasionally. How much do you propose to reduce the taxes on spices, that are all the way from 181 to 461 per cent. ? How much on wool and woolen goods, so essential to the comfort of fifty millions of people in winter ? They are taxed from 60 to 90 per cent. How much on blankets and wool hats, that are taxed 89 per cent. ? Is it not a shame that woolen clothing is taxed 90 per cent. ? How many thousands are to-day destitute of such comforts because they are not within their reach ? These taxes are shamefully oppressive. They are so exorbitant that they defraud the Government and rob the people.

And yet the gentlemen who are here urging a repeal of taxes would not so much as touch them with their little fingers. Who is it, then, that is so oppressed with taxes ? Why, the banks. The little tax on their circulation must be repealed. What next ? The tax on bank deposits must be repealed. What next ? The tax on bank capital must be repealed. What next ? The tax on bank checks must be repealed. It is banks, and only banks—banks first, banks last, and banks all the time. The banks in whose vaults are two thousand millions of money, and who are receiving a bounty from the Government of over \$15,000,000 annually as interest on the bonds they have deposited, while 90 per cent. of them have been paid in dollars that are equal in value to gold, are no doubt greatly oppressed.

Sir, the people are not to be fooled. The American people are a reading people, they are political economists, and I shall be surprised if many Representatives do not find upon their return to their constituency that they will be able to give them information upon subjects that have been considered in this House and inform them of measures to which they have given no attention. The people understand that the national debt has to be paid at some time ; they understand also that it is drawing interest and will draw interest until it is paid. From this they know there is no escape. They also know that they have already paid in interest an amount equal to the principal. They know and understand that it is in the hands of money-kings, banking corporations, and Shylocks who fatten upon the interest which they must finally pay. They understand that it is non-taxable and bears none of the burdens of Government. They understand that by manipulating the legislation of the country it has been made the base of a banking system by which they are made to pay interest on a large part of the money they are compelled to use ; and they understand as well as we do that efforts are being made to perpetuate this condition of things. Hence, sir, they regard the debt not only as a burden from which they desire speedy relief but as a source of danger to their liberties and a thing now being used to make the rich richer and the poor poorer. The people understand all this, and know there is but one avenue that leads to relief, and that is its speedy and complete extinguishment. With this prospect before them, this morning star of hope blazing in the horizon, heralding the dawn of the day of their relief, they are willing to suffer on. They will not uphold any policy that seeks to perpetuate this debt, whether by the reduction of the revenues to a point where nothing can be applied to its payment, or by raising the tariff dues in the interest of protection to a point where it amounts to prohibition, and thus destroy the revenues, so that no reduction of the debt can be made.

The efforts now being made to reduce taxation relates wholly to internal revenue and not to import duties. The principal reduction proposed, besides whisky and tobacco, is the abolition of the tax of 1 per cent. on the circulation of the banks and the tax on their deposits as well as upon the deposits of all banking institutions. None of these taxes should be removed. Whisky and tobacco are articles not of necessity, but of luxury and evil, and should therefore be made to compensate for the evil, so far as it can be done, by bearing the burdens of Government.

The tax on the bank circulation should not be removed, because 1 per cent. per annum is a very small tax for the privilege of extorting double interest from the people on almost their entire capital, aside from the power given them to control the property valuation.

The tax on deposits, one-half of 1 per cent. should not be removed, because the banks do not pay interest upon but a very small portion of their deposits. They make interest on a very large portion of it ; therefore they can well afford to pay this tax, especially the national banks.

The tax on the checks of merchants, dealers, and business men, which is paid by them and not by the banks, might be repealed. It is an unnecessary tax upon commerce, and can well be dispensed with. There are other minor internal taxes that might be abolished, because they are more a source of annoyance than of revenue. But to any material reduction of the revenues by which the time will be prolonged when our country shall be liberated from the thralldom of debt I am unalterably opposed.

Mr. Speaker, our present national banking system is a departure from the teachings of the fathers of this Republic and in direct opposition to the fundamental doctrine of the Democratic party.

I confess that I am at a loss to understand how any one calling himself a Democrat can uphold the national banking system and be willing to enter upon a policy that seeks to perpetuate the bonded debt upon which this system is based.

Washington, in his farewell address, used these words :

Avoid the accumulation of debt, not only by shunning occasion of expense but by vigorous exertions in time of peace to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burdens which we ourselves ought to bear.

Jefferson, in a letter to John W. Eppes, of September 11, 1813, (volume 6, page 199, Jefferson's Works,) speaking of State banks, said :

Bank paper must be suppressed and the circulating medium be restored to the nation to whom it belongs. It is the only fund on which they can rely for loans ;

it is the only resource which can never fail them, and it is an abundant one for every necessary purpose.

Treasury bills, bottomed on taxes, bearing or not bearing interest, as may be found necessary, thrown into circulation, will take the place of so much gold and silver, which last when crowded will find an efflux into other countries and thus keep the quantum of medium at its salutary level.

Let banks continue if they please, but let them discount for cash alone or for Treasury notes.

Again, Andrew Jackson had positive convictions upon this subject. Hear what he has to say :

The charter of the Bank of the United States expires in 1836, and its stockholders will most probably apply for a renewal of their privileges. In order to avoid the evils resulting from precipitancy in a measure involving such important principles and such deep pecuniary interests, I feel that I cannot, in justice to the parties interested, too soon present it to the deliberate consideration of the Legislature and the people. Both the constitutionality and the expediency of the law creating this bank are well questioned by a large portion of our fellow-citizens ; and it must be admitted by all that it has failed in the great end of establishing a uniform and sound currency.

Under these circumstances, if such an institution is deemed essential to the fiscal operations of the Government, I submit to the wisdom of the Legislature whether a national one, founded upon the credit of the Government and its revenues, might not be devised which would avoid all constitutional difficulties, and at the same time secure all the advantages to the Government and country that were expected to result from the present bank.—*Opinions of Andrew Jackson, message of December 8, 1829, Statesman's Manual, volume 2, pages 713, 714.*

A bank of the United States is, in many respects, convenient for the Government and useful to the people. Entertaining this opinion, and deeply impressed with the belief that some of the powers and privileges possessed by the existing bank are unauthorized by the Constitution, subversive of the rights of the States, and dangerous to the liberties of the people, I felt it my duty, at an early period of my administration, to call the attention of Congress to the practicability of organizing an institution combining all its advantages and obviating these objections. I sincerely regret that in the act before me I can perceive none of those modifications of the bank charter which are necessary, in my opinion, to make it compatible with justice, with sound policy, or with the Constitution of our country.

It is maintained by some that the bank is a means of executing the constitutional power "to coin money and regulate the value thereof." Congress have established a mint to coin money, and passed laws to regulate the value thereof. The money so coined, with its value so regulated, and such foreign coins as Congress may adopt, are the only currency known to the Constitution. But if they have other power to regulate the currency, it was conferred to be exercised by themselves, and not to be transferred to a corporation. If the bank be established for that purpose, with a charter unalterable without its consent, Congress have parted with their power for a term of years, during which the Constitution is a dead letter. It is neither necessary nor proper to transfer its legislative powers to such a bank, and therefore unconstitutional.—*Jackson's veto message, July 10, 1832, Statesman's Manual, volume 2, page 767.*

It being thus established by unquestionable proof that the Bank of the United States was converted into a permanent electioneering engine, it appeared to me that the path of duty which the executive department of the Government ought to pursue was not doubtful. As by the terms of the bank charter no officer but the Secretary of the Treasury could remove the deposits, it seemed to me that this authority ought to be at once exerted to deprive that great corporation of the support and countenance of the Government in such a use of its funds and such an exertion of its power. In this point of the case the question is distinctly presented, whether the people of the United States are to govern through representatives chosen by their unbiased suffrages, or whether the power and money of a great corporation are to be secretly exerted to influence their judgment and control their decisions. It must now be determined whether the bank is to have its candidates for all offices in the country, from the highest to the lowest, or whether candidates on both sides of political questions shall be brought forward as heretofore, and supported by the usual means.—*Message, December 3, 1833, Statesman's Manual, volume 2, page 837.*

These extracts, in fact the whole history of our Government, show conclusively that the doctrine and traditions of the Democratic party, as taught by these fathers, are in opposition to the circulating medium being furnished to the people through banking corporations, as well as against the policy that would perpetuate the debt, as a "moral canker" upon the country. Opposition to such a policy has found expression in every National Democratic platform from 1840 to 1860.

The following is the language of the platform in 1856, which contains the precise language of all the platforms which preceded it since 1840 :

6. That Congress has no power to charter a national bank ; that we believe such an institution one of deadly hostility to the best interests of the country, dangerous to our republican institutions and the liberties of the people, and calculated to place the business of the country within the control of a concentrated money power, and above the laws and the will of the people ; and that the results of Democratic legislation, in this and all other financial measures upon which issues have been made between the two political parties of the country, have demonstrated to candid and practical men of all parties their soundness, safety, and utility, in all business pursuits.

7. That the separation of the moneys of the Government from banking institutions is indispensable for the safety of the funds of the Government and the rights of the people.

Even down to 1868 these words formed a part of the platform that expressed the sentiments of the national Democracy :

3. Payment of the public debt of the United States as rapidly as practicable ; all moneys drawn from the people by taxation, except so much as is requisite for the necessities of the Government, economically administered, being honestly applied to such payment, and where the obligations of the Government do not expressly state upon their face, or the law under which they were issued does not provide that they shall be paid in coin, they ought, in right and in justice, to be paid in the lawful money of the United States.

4. Equal taxation of every species of property according to its real value, including Government bonds and other public securities.

5. One currency for the Government and the people, the laborer and the officeholder, the pensioner and the soldier, the producer and the bondholder.

Now, sirs, I ask Democrats to stand by the ancient landmarks of our party ; do not be seduced by false doctrines, nor bend the knee to the money-gods. Do not desert the people in this their day of peril.

As in the days of Jackson, we are brought face to face with the bank power. In the days of Jackson "it was established by unques-

tionable proof that the Bank of the United States was converted into a permanent electioneering engine." So it is equally clear now that the banks are an organized power in every election, to shape public policy in their interest and to perpetuate their rule.

As in the days of Jackson, "when the question was distinctly presented, whether the people of the United States were to govern through Representatives chosen by their unbiased suffrage, or whether the power and money of a great corporation were to be secretly exerted to influence their judgment and control their decisions," so now the question is again presented, whether the corporations on one hand or the people on the other shall rule this country.

In making these remarks, I am not to be understood as favoring paper money, or what might be properly called credit money, by no means. I prefer gold and silver, the money of the world. I, in part, represent a State where gold and silver is the currency used by all the people—they prefer it; a paper dollar is seldom ever seen in the channels of circulation. If there was gold and silver enough to transact the business of the country I should condemn the policy that would aim to issue one dollar of circulation for which there was not a dollar on deposit to redeem the same. But as we have not a sufficient quantity of those metals to supply the wants of trade as money, it is the duty of Congress to make necessary provision for supplying this deficiency. This, I contend, should be done direct from the national Treasury, by paper issue bottomed on taxes and redeemable for all debts due the Government, and not through the medium of banks. I am to be understood as uncompromisingly opposed to the policy that double taxes the people for this paper issue to supply the deficiency of gold and silver and hand over both taxes to corporations. I denounce it as high-handed robbery. I denounce the policy that permits the volume of the currency to be contracted by corporations as an outrage and subversion of the people's rights. I regard any policy that looks to the perpetuation of the national debt as dangerous in the extreme, and denounce it as anti-republican and undemocratic. I predict that if such a policy be persisted in and carried out, the liberties of this great people will go down in blood and be lost in poverty.

Chinese Immigration.

SPEECH

OF

HON. GEORGE D. WISE,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1882.

The House having under consideration the bill (S. No. 71) to enforce treaty stipulations relating to Chinese—

Mr. WISE, of Virginia, said:

Mr. SPEAKER: The question under consideration has been so fully and exhaustively discussed in this and in the other end of the Capitol that I hesitate to trespass even for a brief space of time upon the patience and indulgence of this House. I do not hope to be able to make any new or striking presentation of it, my purpose in rising to speak simply being to place myself more emphatically upon the record as in sympathy with the object proposed to be accomplished by this bill than I could by a simple vote. This question is of a gravity to demand our most serious consideration, and the problem too important to be treated with levity or indifference. Immigration exerts a wonderful influence upon our civilization and upon our growth and development as a nation, and the subject is worthy of the study and reflection of our wisest statesmen.

The people on the Pacific slope have spoken with no uncertain sound, and with a unanimity almost unexampled. I am unwilling to believe that in their loud and earnest demands for relief they have been controlled by blind passion and unreasoning prejudices. These appeals to Congress for the application of a remedy for what is considered as a great and growing evil come to us from men in every walk and grade of life, and I am convinced that a real and not an imaginary cause exists to produce them. These bitter complaints come to us not alone from the laboring classes, who in their various callings are confronted with an unequal and degrading competition, but from others also whose conclusions are the result of intelligent observation and reflection.

The object sought to be accomplished by this bill is the suspension of the immigration of Chinese laborers for the period of twenty years. There are some who hold to the opinion that a suspension for so many years is unreasonable and amounts to prohibition, and therefore is violative of the stipulation of our treaty with the Government of China. These are the words:

The limitation or suspension shall be reasonable, and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers shall be of such

a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

By the terms of this treaty the United States may limit or suspend, but may not prohibit. "Such suspension shall be reasonable," and that is the only limitation upon our right to stop for a time at least the immigration of Chinese laborers. In the treaty it is recognized and conceded that the necessity for a "suspension" may arise, and when it shall the Government of the United States is authorized to act as may be deemed best for the interests of the country, its welfare and prosperity.

The remedy must be commensurate with the disease, and its application must be for such time as will produce the desired results. I am at a loss to discover by what process of reasoning, by what rule of interpretation gentlemen have arrived at the conclusion that a suspension for ten years would be reasonable but for twenty years would not be. Many and great events have followed each other in quick succession during the past twenty years. During that period we have grown rapidly in wealth, population, and power, and our advancement in the arts and sciences has far exceeded the expectations of the most sanguine. But while it is true that much has been accomplished in the past twenty years, and it is likely that the developments in the future will be as rapid and wonderful as they have been in the past, years are not to be counted in the life of a nation as in that of an individual. If we shall find that we have made a mistake I see no obstacle in the way of receding from it. In the proposed legislation we are actuated by no hostility or unfriendly feelings toward the government or people of China.

But, Mr. Speaker, I have not the time nor the inclination to pursue further the subject in this connection. While I am for keeping faith with all nations, and would not consciously, even to gain an advantage, step a hair's breadth beyond the limit of this treaty, I am satisfied that we have the right to "suspend" for the period named in the bill, and that it is our duty to exercise it. While much of sickly sentimentality has been indulged in, no other objections worthy of mention have been advanced. I call attention to the fact that no gentleman in this discussion has dared (I use the word in no offensive sense) to put himself on record as entertaining the opinion that Chinese immigration is desirable, and that it ought not to be restrained and limited. There are some, it is true, who have advanced the opinion that cheap labor is a blessing, and that the multiplication of industrial pursuits would be the logical result of its employment; but even they have not denied that the unlimited influx of Chinese might be an evil. I want to say right here that I do not share in this opinion, and I cannot see a blessing in the degradation of our working people to a servile condition. I entertain the belief that the condition of that State is the happiest and best in which the wages of labor are such as to enable the laboring classes to maintain their self-respect and to furnish the means for the comfortable maintenance of their families and the education of their children.

They are inconsistent who maintain that the industries of the country should be fostered and sustained by a protective policy, and yet are unwilling to give protection and security to labor, which is the chief element in production, and without which those industries could not exist. I hold to the opinion that the laborer is entitled to a fair share in the profits of the business in which he may be employed, and that he ought not to be placed in a condition to accept the alternative of starvation or of working for a remuneration insufficient to afford a comfortable living for himself and family. If time permitted it might be shown by abundant citations from the report of the joint select committee appointed to investigate Chinese immigration that white men and women in California have been forced to abandon various callings by the competition of cheap Chinese labor, and that the result has been to increase the profits of capital, but not to cheapen to the consumer the articles of production.

I shall always steadily and firmly resist those whose utterances are in the interest of capital against labor, of monopolies against the rights of man. In the competition between the Caucasian and Asiatic races the conditions are all opposed to the former and the advantages in favor of the latter.

The Chinese are not enumbered with families, and they live huddled together, in large numbers, in the same room, so that they require no more for their subsistence than has been found sufficient for the maintenance of convicts in our prisons. I cannot entertain the opinion that blessings will flow from the degradation of our working people to such a condition, and I can tell gentlemen that the intelligent representatives of the negro race are as much opposed to it as are the whites. While I would not fan the fires of passion and prejudice, I tell gentlemen plainly that the laboring classes will not tamely submit to what they feel to be a wrong and injustice, and that discords and sanguinary results are inevitable.

The honorable gentleman from Ohio, Mr. TAYLOR, whose presentation of his side of the case is not exceeded, in my humble judgment, in ability and eloquence by that of any other opponent of this measure, was careful to express in this connection his convictions in language too plain to be mistaken. He is reported in the RECORD as having said:

The reason I object to the bill chiefly and finally is because it changes essentially our condition as a nation; it changes our condition before the world. It is taking upon us an exclusiveness that has not belonged to us in the past, and for

one I am not willing to do that. But, Mr. Speaker, permit me to say in justice to myself I hope my remarks have not been understood as favoring a further immigration of the Chinese. I deplore their presence here as much as any man. I have not been addressing myself to that branch of the subject. I want no more of them.

If it is not desirable to have more of them, if "unrestricted immigration is an evil of great magnitude" and their presence here is something to be deplored, I cannot see why we should hesitate to change our condition before the world and to take upon ourselves an exclusiveness in regard to them that has not belonged to us in the past. Their presence here is to be deplored, says the honorable gentleman. We have the statement of the joint special committee, appointed by the two Houses of Congress to investigate this subject, "that the influx of Chinese is a standing menace to republican institutions on the Pacific and the existence there of Christian civilization." We have the concurrent testimony of hundreds of intelligent witnesses, unbiased by prejudice, that it is a great and growing evil, demanding the application of a speedy remedy, and yet we are gravely told that we must continue in a ruinous policy because a departure from it "changes our condition before the world." For one I hesitate not to say, if there is a necessity for it our condition ought to be changed, and that we ought now "to take upon ourselves an exclusiveness that has not belonged to us in the past." Self-preservation is the first law of nature, and if we have the right, which is admitted, I hold it to be a duty to provide against that which is dangerous to the existence of our free institutions, to Christian civilization, and to social order.

But as to this class of immigrants we have already adopted a policy of exclusiveness, for while they have been permitted to come and remain here, they have been excluded from citizenship and from the enjoyment of the political rights and privileges accorded freely to immigrants from other and more favored nations. We have opened wide our doors for their reception, but they remain a foreign element in our midst, alien in feeling, and without any appreciation or knowledge of our institutions, of our political or social organizations. No one has dared to say that he is in favor of conferring upon them the franchise and permitting them to become by naturalization a component part of the body-politic. The evidence is clear to the effect that they "have no conception of representative and free institutions; that there has not been and that there cannot be amalgamation, and that all the conditions are opposed to assimilation." Already they are in the Pacific States in such numbers as that they could control elections there if given the ballot, and the vast hive from which a supply may be drawn teeming with millions is almost inexhaustible. In the light of all the testimony in regard to the Chinese I am satisfied that we cannot, with a due regard for the safety of the States in which they exist, confer upon them the ballot, and we are constrained by a wise policy to withhold from them political rights and privileges. I am satisfied that this indigestible mass, alien in feeling, pagan in religion, inferior in mental and moral qualities, kept in this exceptional and anomalous condition, is a continual menace to the existence of republican institutions and likely to produce disorders. We are not left to speculation on this subject, but the evidence is abundant to the effect that serious conflicts have resulted from the presence in the Pacific States of the class proposed to be excluded by this bill.

The honorable gentleman from Ohio [Mr. TAYLOR] attempted to account for the disorders and violent outbreaks which from time to time have occurred in California, in a manner which would have excited a smile if he had not mentioned it with so much of gravity:

A ship comes in loaded with these coolies. They are unloaded on the wharf and get into their carts. Half-grown, wild boys on the wharf and in the streets throw mud and stones at them, and load them with abuse which I shall not describe. Finally a warfare exists between the two races, and that is to be deplored.

A warfare between races is always to be deplored, but its origin is not to be found in the pranks and disorderly conduct of mad, wild boys. I venture to tell him that the warfare between the races is inevitable. The people of San Francisco may be no better but they are no worse than those residing in other portions of our Union. I venture the assertion that similar conflicts would occur in the district represented by the gentleman from Ohio if the same conditions existed there. They have a deeper significance, and they mark the struggles of the laboring classes, who are subjected by the influx of cheap Chinese labor to an unequal and degrading competition, in resistance to their exclusion from the channels of industry, to which they are accustomed, and to avert from themselves and families the probability of a servile dependence.

Allusion has been made in the progress of this discussion to the negro race. I do not propose to rake over the embers of the past to arouse afresh the hates and animosities which, happily for us, have in great part ceased to exist. "Let the dead past bury its dead." I can speak upon this subject without passion or prejudice. Having known him from my childhood I have none but the kindest feelings toward the negro. The ancestors of those now here did not come of their own free will and accord, and they were brought from their native homes to satisfy the demands of a grasping cupidity. I will not pause here to inquire upon whom the responsibility rests for their introduction and for the dire consequences which have followed it. I read the history of the past that I may gather wisdom from experience.

The negroes now in this country were born here, and they have a right to remain. Justice and humanity alike require that we should discharge our duty to them fully and cheerfully. As a southern Representative upon this floor I take pride and pleasure in making here the declaration that I recognize that obligation, and that I will cheerfully sustain all measures having for their object the education and elevation of that race and the amelioration of its condition. They have no better nor truer friends than are to be found among the intelligent and humane citizens of the South among whom they were born and reared. I hope to God that the experiment of conferring upon them the ballot may not prove a failure, and I hold it to be a sacred duty to do all which can be done to make it a success. But we cannot close our eyes to the fact that conflicts have occurred from the presence of the non-assimilating white and black races. Thousands of valuable lives have been sacrificed in the long and bitter struggles which have followed their introduction into this country.

The originating cause of our civil war was not philanthropy for the negro; it was not waged for his emancipation, though that was one of its logical results. I repeat that the negroes now in this country were born here, and that we are under an obligation as to them which cannot with honor or safety be disregarded. But our experience in reference to the negro race has not been such as to convince us that it is safe to make the experiment with the Chinese. The question now presented to us is whether we will invite or permit the introduction of a large and indigestible mass of pagan Mongolians from whose presence disorders and conflicts are inevitable. The gentleman from Ohio [Mr. TAYLOR] sounds the alarm "that this bill, whether meant for them or not, strikes at our foreign citizens and their security," and speaking in this connection he says:

We know not when the next gate will be erected nor where the foundations will be laid. It is the first break in the levee; when the waters stream over the crevasse will follow as the levee gives way. The way that we have been traveling, the road that we have been making, has been straight and in one direction. If that way is encumbered, and our feet led from it, where shall we be brought up? Where will it end? Who lives that can tell?

Those of you that remember the years of 1854 and 1855 need not be told what prejudice may do when craftily excited. Good citizens then traveled the streets nights lest the Catholic hired girls should poison the wells. Their remedy was the exclusion of a foreign non-assimilating religion. "Put none but Americans on guard to-night" was the cry that went up; and war almost commenced between races then upon the ground of non-assimilation.

I thank the gentleman for the allusion. The foreign citizens and the Catholics of this country have not forgotten and they cannot forget that period in our history referred to by the honorable gentleman. The cry "Put none but Americans on guard to-night" then rang out upon the air from the throats of men known to each other by grips and signs and associated in secret orders by solemn oaths. This tidal-wave of proscription swept over New England and the States of the North. And then it was that upon the soil of Virginia, under the banner of the invincible Democracy, the battle for civil and religious liberty was fought over again, and the black knight, with his visor down, met there his first defeat. The proscription party to which he referred did not have its origin in any warfare growing out of non-assimilating races or religions, and its fate was not such as to invite another similar attempt.

We welcome the coming to our shores of the staid, sturdy, and thrifty German from Fatherland, of the warm-hearted, genial, and liberty-loving sons of the Emerald Isle, of the gay and giddy Frenchman from the vine-clad hills of France. We hail their coming, and give to these a hearty welcome, because they can and do become fellow-citizens in truth and in fact, and not alone in name, accommodating themselves readily to our modes of thought and easily adapting themselves to our political methods. Though speaking different languages, they bring with them a civilization similar to our own, and they soon become thoroughly identified with the communities to which they attach themselves. Their blood becomes mingled with our blood, and in a few brief years their identity as a foreign element is lost by the process of absorption. The immigrant who may arrive during this year from Germany, from Ireland, from Italy, from France, from Britain, or from the fair land of Poland, in the next generation will be represented here by sons and daughters native and to the manor born; and though descended from fathers and mothers whose eyes first beheld the light of heaven in foreign lands, they will be Americans all, thoroughly imbued with the spirit and genius of our free republican institutions.

We welcome their coming not only because they are capable of assimilation but because there is wealth in their muscle, wealth in their brains, riches far exceeding in value the mines of Nevada or the golden sands of California. But not so with the Chinese. He is a Chinaman when he arrives and remains a Chinaman until he dies. There is and ought not to be any intermarriage between the Caucasian and Asiatic races. The Mongolian comes here and sets up for worship his hideous idols, and turning a deaf ear to the teachings of a higher, a purer, and a better religion, he goes through all the disgusting forms of his idolatrous worship. He is a stranger to the sweet and gentle influences of family. He never changes and never advances, but remains fixed in his habits and modes of thought, and cannot be elevated to the standard of a higher and purer civilization. But if I could I would not have the mingling of Caucasian blood with that of any inferior race. Looking to the future, I would

rather that my country should be peopled with men and women of the highest type.

Ill fares the land to hastening ills a prey,
Where wealth accumulates, and men decay.

These are my sentiments, crudely expressed, it may be, but the earnest and honest convictions of my head and heart. I agree with the honorable gentleman from Ohio that sentiment is something not to be cast off and laid aside as a worthless garment. I agree with him that sentiment is thought as well as feeling. But knowing that radical differences exist between the Asiatic and Caucasian races, believing in my heart that amalgamation is neither possible nor desirable, I must adopt that course which I believe to be for the best interests of my country, its welfare, and prosperity. In the language of the eloquent Randolph of Roanoke:

I would to God that for this single occasion I could utter my feelings in thoughts that breathe and words that burn. I would kindle a flame that should find an altar in every heart and burn to ashes the prejudices of the hour and the petty interests of the day, throwing a steady flame of light upon our path of duty and directing us forward to the permanent welfare, honor, and safety of the whole country.

Retirement of National-Bank Notes.

SPEECH

OF

HON. JOSEPH H. BURROWS,

OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 1, 1882,

On the bill (H. R. No. 2982) to retire national-bank notes.

Mr. BURROWS said:

Mr. SPEAKER: In rising to address this House upon the merits and advantages of this bill, I am not unmindful of the large stock of prejudice I shall encounter on both sides of the House and of the opposition which this bill receives from the capitalists of the nation; and if my political colleagues here were "ninety and nine," instead of simply the latter, we should see here the grandest lobby that has assembled at Washington since the "credit strengthening act" was passed over thirteen years ago. It is with some degree of embarrassment that I approach a subject of such paramount importance, second to none, unless it be the perpetuation of the Government itself, and it is so intricately and intimately interwoven with this as to permeate every avenue of trade and pulsate in every artery of business, industry, and enterprise; and it must be acknowledged that every citizen, from a Vanderbilt with his millions to the pauper in his rags, has an interest in this question.

Here upon this floor I see men of large experience, tried statesmen, and of scholarly attainments; men who have been wont to study this subject for years, aided by the ripe experience of the statesmen of this and other countries, whose well-matured conclusions are printed upon 10,000 pages. When I remember this and contrast it with my own brief life as a member of this body, I tremble! But, when I look back along the track of time, and behold the wrecks of millions of fortunes, and of disaster and ruin; when I think of the human suffering and of the broken hearts, withered lives and blasted prospects, and the wail of anguish of the poor as they cry for bread, rendered so by the manipulations of those men who, through their systems of finance, bring on and produce these terrible financial cyclones that sweep away like blizzards from the north the accumulations of years, my blood tingles in my veins, my spirit rises, and I feel it not only a duty, but an exceeding great pleasure, to rise in my seat and defend that system of finance that ignores that so-called "specie basis system," which is but a delusion, a fallacy, a cunningly devised scheme of robbery and plunder! A mere bubble that bursts upon the slightest contraction or demand for the basis itself.

Forty-four years ago John C. Calhoun said in a speech in the United States Senate:

It is then my impression that in the present condition of the world a paper currency, in some form, is almost indispensable in the financial and commercial operations of civilized and extensive communities.

If this was true then, how much more so now? Then the national debt was less than two million, (\$1,878,223.) Now it is more than a thousand times greater, and our country is inhabited from ocean to ocean, and from the lakes to the Gulf of Mexico. Electricity and steam have worked wonders in forty years, and gold, the commodity money of the past, is almost discarded from the commercial transactions of to-day.

At the bankers' convention, held at Niagara August 10, 1881, John Thompson, the veteran banker of New York, said:

In fact there is at no time but an inadequate amount of real money to do business on. I feel confident that over 95 per cent. of our business and the business of England is done on paper tokens, checks, drafts, notes, letters of credit, &c., which, as long as confidence is good, are a perfect substitute for money, but, like young

partridges, that disappear "on call," not allowing even three days' grace. Discounts are declined, deposits drawn and hoarded. Thus not only the credit system and the money-token power is destroyed but the real money itself disappeared, not to be again visible until induced out by an enormous depression in prices.

Here is a voluntary admission that 95 per cent. of the business of the country is done with paper. The "real money," so called by Mr. Thompson, is the gold of the country. Now, if 5 per cent. furnishes a safe basis, why not 4, 3, 2, or even 1 per cent.? Or let me go still further, and reduce the 1 per cent. to mills, or, as some one has aptly said, lock up a dollar in gold, throw away the key, and call it a basis.

This system has come down to us from the past, and has nothing but age to commend it, while it reeks with the toil and blood of innocence, a robber in every age, and to-day the only true and real specie-basis currency in existence in the land is attempted to be swept away or retired from circulation, and by the same parties that profess themselves to be in favor of a "specie-basis currency." And why is this? Because here is \$66,000,000 of money (currency) issued by the Government that the banks can neither increase nor diminish. In a word, it is not their issue. Lest I should be misunderstood, I will quote the language of Hon. Charles J. Folger, Secretary of the Treasury, on page 11 of his report, under the heading "silver certificates." He says:

It is recommended, therefore, that measures be taken for a repeal of the act requiring the issue of such [silver] certificates and the early retirement of them from circulation.

What reason is given for this recommendation? Only this, that the silver dollar is not large enough, contains but eighty-eight cents of pure silver. We ask, when, since the first silver dollar was coined by this Government, was it larger than it now is? Never. Save in a single instance in 1873 Congress authorized the coinage of the trade-dollar of 420 grains of silver, legal-tender to the amount of \$5. Since, the fiat of the Government is taken off, and now it is not money at all, and it is universally discounted, although containing $7\frac{1}{2}$ grains more silver than the dollar of 1792, 1837, and 1879.

Before entering upon the discussion of this bill proper, I desire to preface my argument by a few plain questions and answers. They are, What is money? What are its purposes? Who should issue it, and by whom should its volume be controlled? A proper answer to these questions, however brief the explanation, will go far to aid in enabling us to appreciate the provisions of this bill.

What is money? Plato says "money is a creation of law to effect exchanges." Aristotle says "money is a measure of value, a medium of exchange; an invention of man, not a product of nature." Money comes from *moneudo*, to stamp. As wax is not a seal without the stamp, so metal is not money without the impression of sovereign authority. No higher authority can be given in answer to this question than these, and during the long centuries when nothing but metals formed the moneys of Europe, monarchs and kings were wont to increase the volume of money in times of stringency by the use of alloy, and that the courts sustained such action the history of all Europe attests.

What are the purposes of money? Money is a necessary means of intercommunication between all the citizens of a state or nation. It is the tool of trade; a vehicle of commerce. It is in another, and very proper sense, an evidence of debt, a credit token, a bill of exchange on society. It performs for mankind, in the exchange of labor or property, just what, in quantity, is ascertained by the scales, yardstick, half bushel, or gallon. Money is a representative of wealth, and is not wealth itself, except it be composed of a substance that may be used in the arts and sciences, and when so used it ceases to be money, and at once becomes a commodity. And an American citizen had just as well take gold and silver bullion to Europe to make his purchases or pay his traveling expenses as to take the American coined gold and silver. Both coined money and bullion will be thrown into the banker's scales and weighed. So as to our Treasury notes or national-bank notes when they have served their day, and become worn or mutilated, they are saturated with water and ground to a pulp and sold by the pound, and are manufactured into toys and other articles, thus ceasing to be money, and becoming a mercantile commodity.

Our nickels and pennies would not be worth much as commodities. Abroad, as money, nothing! The fiat of this Government makes them just what they are here—five cents and one cent. This brings us to our third question. Who should issue it? Or, if you prefer it, who should coin it? We are all familiar with the language of the Constitution, which declares that "Congress shall have power to coin money and regulate the value thereof, and of foreign coin," &c. To coin is a verb, denoting an action, but does not prescribe the material out of which the money is to be coined, made, manufactured, or created. Hence the Government has made it out of gold, silver, copper, nickel, and paper, five distinct materials, and has legalized the coins made or coined by other nations. Now, if Congress has this power no one else has, and the language of the Constitution being emphatic and specific Congress cannot delegate that power even to States, much less to corporations. It is charged that greenbacks are not money; then what are national-bank notes? In what respect are they any better? It is sometimes said they are redeemable in gold, but this is not true. They are redeemable in lawful money. I desire to ask a few questions as I advance in my remarks, and one that occurs to me just here is this: If Congress can create money for

the banks why not create money for itself? And still another is: If greenbacks were ever money, why are they not now? If they were never money, did the bondholder ever loan any money to the Government? And once more: If it is the bond, on which a bank note rests, that secures and makes it good, why is not that which makes and sustains the bond itself better?

The wealth of the nation is that which makes the bonds command a premium in all the markets of the world; it is not the amount of our gold, but our ability to pay; and it may be said in truth that 90 per cent. of all the bonds held abroad will never be paid in coin and never have been, but in our wheat, beef, pork, petroleum, and cotton; in a word, in our exports, which largely exceed our imports, the excess averaging for the last six years \$196,778,117 per annum or for the last ten years averaging \$104,706,922 per annum. (See Treasury Report, page 16.) Here is the secret of specie resumption; more, far more potent than the passage of a resumption act, which of itself neither increased or decreased the volume of money while every dollar that came from abroad over and above our imports went to swell the quantity of our money and circulating medium, thereby increasing prices of labor and property. We now come to the fourth and last question which I shall ask and answer before proceeding to take up the bill proper, and that is: Who shall control the volume of money? And here is the marrow of the subject of finance; the Gibraltar of the Shylocks. They will give up every other privilege connected with this momentous subject before they will surrender this. It matters little as to how much or how little gold there is in the country, or whether there is any, so long as the banks control the quantity of what constitutes the circulating medium. The amount of money in a country represents all the property. Hence as the stock of money increases prices or values increase, and *vice versa*, not only of property but of labor also. This plain declaration has been verified so often in the last twenty-five years as to need no greater proof. The difference in values to-day as compared with those of 1873 are as the ratio of increase in the amount of money in the country then and now. I allude to values in the aggregate and not in every specific instance that may be but local and momentary in its character.

The party to which I belong believe that the people through their Senators and Representatives (the Congress of the United States) should alone control and issue all the money of this country; that its volume should be regular and governed by the business needs of the country, and not by the national-bank oligarchy or any other combination of capitalists.

To my Democratic friends I would commend the teachings of the father of Democracy, Thomas Jefferson, when, in a letter to John W. Eppes, September 11, 1813, he said:

Bank paper must be suppressed, and the circulating medium must be restored to the nation, to whom it belongs. It is the only fund on which they can rely for loans; it is the only resource which can never fail them, and it is an abundant one for every necessary purpose. Treasury bills, bottomed on taxes bearing or not bearing interest, as may be found necessary, thrown into circulation will take the place of so much gold or silver, which last, when crowded, will find an efflux into other countries, and thus keep the quantum of medium at its salutary level.

Or to that life-long Democrat, John C. Calhoun, when he said:

No one can doubt but that the Government credit is better than that of any bank, more stable and more safe. Bank paper is cheap to those who make it, but dear, very dear, to those who use it. On the other hand, the credit of the Government, while it would greatly facilitate its financial operations, would cost nothing or next to nothing, both to it and the people, and would of course add nothing to the cost of production, which would give every branch of our industries—agriculture, commerce, and manufactures, so far as its circulation might extend, great advantages both at home and abroad; and I now undertake to affirm, and without the least fear of being answered, that a paper issued by the Government with the simple promise to receive it for all its dues, leaving its creditors to take it or gold or silver at their option, would, to the extent it could circulate, form a perfect paper circulation which could not be abused by the Government; that it would be as uniform in value as the metals themselves; and I shall be able to prove that it is within the Constitution and powers of Congress to use such a paper in the management of its finances according to the most rigid rule of construing the Constitution.

To my Republican friends I would present the utterance of that statesman and philosopher, Benjamin Franklin, when he said:

On the whole, no method has hitherto been found to establish a medium of trade equal in all its advantages to bills of credit made a legal tender. Paper money, well founded, has great advantages over gold and silver, being light and convenient for handling in large sums, and not likely to be reduced by demand for exportation.

It has been said from the rostrum, and reiterated by the press, that the national banks are not a monopoly. Then, I ask in all candor, what is a monopoly? Is there a limit to the number of national banks that may be organized, or to the amount of their circulation? No, sir, save the limit of the national debt itself, less 10 per cent. Here is the power to inflate or to contract, as was witnessed less than one year ago, when, regardless of the public interest, and in order to deter and overawe Congress, they actually withdrew from circulation \$18,000,000 in a few days, and well-nigh produced a panic, which the Government alone was unable to prevent accomplishing its intended desire, a distressing financial calamity.

National bankers are human and, like most of our race, are full of avarice, and when you give them the power to lessen the volume of money and to double the rate of interest, they are sure to do so, and to take advantage of all discounts and collections, &c., "for the love of money is the root of all evil." I cannot refrain from a quotation from the veto of President Jackson of the bill rechartering the United

States Bank, July 10, 1832, or nearly fifty years ago. I quote from near its close. He says:

Many of our rich men have not been content with equal protection and equal benefits, but have besought us to make them richer by acts of Congress. Experience should teach us wisdom. By attempting to gratify their desires we have, in the results of our legislation, arrayed section against section, interest against interest, and man against man, in a commotion that threatens the stability of our Union.

If we cannot at once, in justice to interests vested under improper legislation, make our Government what it ought to be, we can at least take a stand against all new grants of monopolies and exclusive privileges, against any prostitution of our Government to the advancement of the few at the expense of the many, and in favor of compromise and gradual reform in our code of laws and system of political economy.

Words could not be more aptly or fitly spoken in this our day, for we are conscious of the fact that the war between the banks and the people as fought fifty years ago is and must be repeated now. I would to God the Executive of this nation now was as clearly and unmistakably with the people as he who occupied that chair fifty years ago. I would that a veto was as certain to come now, if this Congress shall pass a bill rechartering or continuing the national banking system, as if a Jackson were President of the United States. Jackson had his faults, but he never forsook the masses in their struggles against organized monopoly.

I will now proceed to the consideration of the bill. I present the following reasons in favor of my bill:

First. It does not propose to destroy national banks. It says, with Jefferson, "Let banks exist if they will, but let them bank on coin or Treasury notes." It proposes only to deprive them of circulation by preventing the Treasury from furnishing them with notes on and after the passage of the act. Congress has the right to do this under the Constitution. All power to issue money for the United States, of whatever composed, and to regulate the value thereof, is lodged by the Constitution in Congress. But the Constitution gives Congress no authority to delegate that power to any man or association of men.

But the objectors say the notes of national banks are not money, but simple notes based upon securities which are worth and will bring money. But this is not the language of the law enacting these notes. The laws creating national-bank notes not only base them upon "lawful money of the United States," meaning the legal-tender notes of the United States, but they repeatedly call these national-bank notes money. They are lawful money in payment of all debts due to and by the United States, excepting duties on imports and interest on bonds. They are lawful money in payment of all Government officials, but they are not, like the legal-tender notes, legal tenders in payments from man to man or by these banks to the people.

If a farmer owes a thousand-dollar mortgage upon his farm and wishes to pay it with \$1,000 in national-bank notes, he cannot do it unless the holder of the mortgage is willing to receive these notes. Not so with the legal-tender notes of the Government. They will pay all debts due the Government and individuals, excepting duties on imports and interest on bonds. They will not pay these because the law says they will not. The difference between Government notes and those of national banks is, first, the two will both pay any debt due the United States except those stated, and neither will pay interest on the bonds due individuals or corporations, but the United States notes will pay all debts due individuals excepting interest, and the national-bank notes will not pay any private debt unless the person or persons to whom it is due are willing to receive them. The time will soon come when these notes will be rejected by all individuals and the people will demand payment in "lawful money of the United States." This will be the most effectual method of destroying the credit of this circulation and forcing it out of existence. I hereby recommend this plan of compelling the retirement of these notes.

Second. In the national-bank act of June 3, 1864, Congress reserved the right to deprive national banks of their charters for cause; but if they had not reserved this right they would still have possessed it. As before stated, Congress have no right under the Constitution to suspend for twenty years any right or power conferred upon them by the Constitution, by conferring that right upon associations of men or any one man. In the language of President Jackson, "if they have the power and thus part with it, the Constitution is suspended for said twenty years." If Congress have conveyed to the national banks the right to issue paper money for twenty years and have retained no right to annul the grant when they see proper, then they place their banks above the Constitution and the authorities of the nation. The idea is too preposterous to be entertained.

Third. Whether in words claiming this right or not Congress have in all the national-bank acts used the power conferred upon them by the Constitution of replacing, altering, and changing these acts. The act of June 3, 1864, repealed the act of February 25, 1863. The following acts all add to or take from national banks some rights or powers they did or did not possess: the acts of March 3, 1865; of March 3, 1869; of July 14, 1870; of June 8, 1872; of March 3, 1873; of June 20, 1874; and of January 14, 1875. The law of 1864 limited national-bank circulation to \$300,000,000; the law of 1874, to \$354,000,000; and the law of 1875 removed all limits upon circulation. All acts previous to that of 1874 provided that all banks in reserve or redemption cities should hold 25 per cent. both of their circulation and deposits

in legal-tender notes, and in other places and cities 15 per cent.; but the law of 1874 repealed that portion of the law providing a reserve for circulation, and provided that only 5 per cent. need to be retained and that this sum should be kept in the Treasury. No one disputes the right of Congress to thus limit and unlimit the circulation of national banks if they have any rights at all upon the subject. Why, then, should any one dispute the right of Congress to say that after a certain period, named in the bill, no more national-bank notes shall be issued? If Congress had the right to repeal the first national-bank act, and to repeal that part of the act of 1864 limiting the circulation to \$300,000,000, and to make the limit \$354,000,000, and then to repeal all limitations upon their circulation, they certainly have a right to repeal this portion of the act of 1875, and say by that no more circulation shall be issued.

The powers of Congress over the money of the country are not confined to that which will benefit banks and bondholders. It extends to that which will benefit the people, though Congress has not often used it in their interest. The interest of banks and bondholders has engaged the supreme attention and legislation of Congress since 1862. Scarcely one law during all that time has been passed for the benefit of the people. When men talk about good faith to the banks and bondholders they should be reminded of the bad faith to the people for the benefit of these banks and bondholders in the following acts of Congress:

First. The act of February 25, 1862, which excluded the Government notes from the custom-house, when all the Treasury notes ever issued by the United States, from 1812 until 1860, had been, under the law, legal tender for all debts due the United States.

Second. That part of the law of March 3, 1863, which excluded United States notes from the purchase of bonds after July 1, 1863. Then the law creating both the bonds and notes provided that these notes should be received for all bonds of the United States "the same as coin." These notes to the amount of \$150,000,000 were then out among the people. They had paid the Treasury full consideration for them. In addition to the provision in the law creating them that they should be received for bonds, they had this pledge upon their face. A more flagrant violation of contract made with forty million people was never perpetrated by a great nation. This was done, as Mr. SHERMAN states, that the value of these notes, then in the hands of the people for a valuable consideration paid therefor, might be reduced in the market to such an extent that capitalists would purchase them and put them into bonds, and not more than \$50 on the \$100 coin, and obtain national-bank notes upon them.

Third. The act making the interest on these bonds payable in coin, when all the business of the country was done upon legal-tender notes and all debts paid therein except duties on imports and their interest.

Fourth. By the law of 1864, by making bonds then in the hands of bondholders and banks, the interest upon which was payable in coin, annually, payable one year in advance without rebate. The bonds were then being purchased at par for legal-tender notes, and the notes were selling at \$250 and \$285 for \$100 coin. But Congress did not consider these rates sufficient compensation to the banks and bondholders, and they made their bonds, or the interest thereon, payable one year in advance, in gold. This interest was so paid for five years.

Fifth. The authority granted the Secretary of the Treasury in the laws of 1865 and 1866, to greatly reduce the circulating medium, upon which the value of all property depended, to the great injury of the people and the business of the country, and investing this money in interest-bearing bonds until the crisis and distresses of the nation compelled Congress to repeal the acts authorizing this reduction of the currency.

Sixth. The law of March 18, 1869, by providing that all the 5-20 bonds of the United States, and other bonds which were then under the laws creating them payable in legal-tender notes, should be paid in coin, thus causing the people to lose and the bondholders and banks to make \$500,000,000.

Seventh. By the act of July 12, 1870, the 5, 4, and 4 per cent. bonds and exempting both the principal and the interest from all taxation, State and national. This had never been done previously. The laws had exempted United States bonds from State and municipal taxation, but not from national taxation. This added at least 2 per cent. per annum to the value of these bonds.

Eighth. The act of 1871, changing the payment of interest on these bonds from semi-annually to quarterly, which imposed a loss of interest upon the people. This was done at the bidding of pirate capitalists.

Ninth. The law of February 12, 1873, by which the silver dollar was fraudulently demonetized so that the bonds of 1870 could not be paid therein, though the law under which they were issued provided they should be so paid.

THE CHARTER OF NATIONAL BANKS.

Some seem to entertain the idea that a national bank may at any time during the twenty years named in the laws of 1863 and 1864 engage in the business of national banking and continue for twenty years, not from the time the law passed, but from the time the bank went into operation. This appears to be the opinion of Hon. JOHN

SHERMAN. But that this supposition has no foundation in truth appears from the fact that this would be the creating of national banks for forty instead of twenty years under this banking law. But that this cannot be the intention of the law of June 3, 1864, or of any other banking act is evident from the provisions of the law that the privileges therein granted are to continue for twenty years, which of course means from the date of the law.

All the precedents are in favor of this construction of the act. The act of February 25, 1791, chartered the first national bank for twenty years. The bank did not go into operation for some time after the granting of the charter; but the charter expired and was not renewed February 25, 1811, just twenty years from the time the charter was granted. No one thought in those days of political purity of contending that the bank had a right, under the law, to issue notes and continue business after the day upon which the charter expired or that the expiration should date from the time the bank commenced business under the charter.

On March 10, 1816, Congress chartered the second national bank for twenty years. These twenty years expired March 10, 1836, and though the bank did not go into operation for some time after the granting of the charter, the charter expired just twenty years to a day after it was granted. It will be seen, therefore, that the construction given to the act of 1864 is something new in the history of the country, and a false pretense as well as a part of the fraudulent attempt to fasten the national-banking scheme of 1863 and 1864 upon the American people perpetually. Let the people resist this effort by all lawful means. If national banks are to exist in the United States for another twenty years let them obtain their charters openly and above-board. "Let them not attempt to climb up some other way." This method of sustaining their circulation is selected because they know they can not openly go before the people and ask for new charters.

Section 2 provides that from and after the 1st of July, 1862, national banks shall not pay out their notes for expenses or in the payment of any debts due individuals. This they have no right to do, but they are in the habit of doing it. If they exist under law, it is right they should be made to obey the law. They have a right to pay their notes to the Government for all debts, excepting duties on imports, and to pay them to national banks for debts due them. This the present bill does not prevent them from doing, but it provides that for all debts due individuals coin or United States notes shall be paid.

Section 3 provides that all national-bank notes paid to the United States, or in any way coming into the Treasury, shall not be again paid out, but that said banks shall receive therefor from the Treasury United States notes to the full amount thereof; and that said national-bank notes shall be destroyed, and the legal-tender notes paid therefor shall be charged to said banks and canceled, and bonds to that amount credited.

But it is said in opposition to this section that said bonds may at the time be worth a premium, and that the crediting of said bonds to the banks at par would be an injustice to them. In reply to this I present the fact that at first these bonds were purchased by these banks with legal-tender notes which the laws had made fully 50 per cent. discount for coin; that \$400,000,000 of bonds did not cost them in coin more than \$200,000,000; that they have collected from the Treasury in gold more than the amount of the legal-tender notes paid for the bonds, and twice as much as said bonds cost them in coin; that for five years of the time this gold interest was paid in advance, without rebate, when the legal-tender notes were at their greatest discount; that though the bonds held by them were payable in legal-tender notes, Congress, by the law of March 18, 1869, made them payable in coin, increasing their value to the extent of the difference between gold and Government notes; that by the act of 1870 all bonds were made payable, principal and interest, in coin of nine-tenths standard fineness, and both the interest and the principal were exempted from all taxation, both State and national; that in 1873, to prevent bonds from being paid in silver, as provided in the law of 1870, the silver dollar was demonetized; that their banks might be able to sell their bonds bearing 6 per cent. interest at 20 and 25 per cent. premium, the act of 1874 was passed, allowing national banks to deposit legal-tender notes in the Treasury to the amount of their circulation and to lift and sell their bonds at a large profit; that all the time from their going into operation these banks have been granted by the Comptroller of the Currency circulating notes to the extent of 90 per cent., not upon the face value of the bonds but upon the current market value thereof; that upon these notes, which often amounted to the face of the bonds, and for which they paid the United States not one dollar of consideration, they made by loans and interest from 6 to 10 per cent., depending upon the rate in the States where the banks were located; that from the beginning these banks have declared large dividends to their stockholders, and they now have a reserve fund of between one hundred and two hundred million dollars.

In view of all these facts how ridiculous it appears to insist that the United States shall pay these banks a premium upon the bonds held by them, when in place of their notes destroyed by the Treasury they will have been paid the notes of the Government, which are worth 1 per cent. premium over gold in Europe, and in all parts

of the United States. On the Pacific Coast and in Canada they are worth 2 per cent. over gold. If there was ever anything just and proper the carrying out of the third section of this bill is.

THE FOURTH SECTION.

This section provides that from and after July 1, 1882, all national-bank notes received by the banks themselves shall be transmitted to the Treasury, and the notes of the Government shall at once be sent to said banks therefor, and that all these bank notes shall be destroyed in the Treasury; and that the Government notes paid therefor shall be charged to said banks, and bonds of the United States belonging to said banks to the full amount thereof credited to said banks and canceled. The remarks upon section 2 will apply to this section also. In reply to the objection that the Government has no right to thus compel national banks to surrender circulation until the expiration of their charters, I again state that these banks are the creatures of Congress, and Congress has the right to annul their charters or to make any modifications therein at any time, as the statements under the first section of the bill show. The only change proposed by this act is that after July 1 they shall not pay out for any purpose their own notes, but shall receive therefor and pay out legal-tender notes of the United States.

Again, the suggestion that the retiring of all the national-bank notes would so reduce the circulating medium as to create a panic and greatly reduce the value of all property, I state that this bill provides that before this redemption commences the Treasury shall prepare and issue United States full legal-tender Treasury notes to the amount of all the national-bank notes issued to these banks, so as to be prepared at any time to transmit to national banks sending their circulation to the Treasury for redemption United States notes to the full amount thereof. No; this bill does not contemplate the reduction of the currency. On the contrary, the power of banks to reduce or inflate the currency under the laws of 1874 and 1875 is one of the worst and most dangerous powers granted these banks. This bill takes that power from them, and does not lodge it with any bank or banks. They have been able under the law of 1874 to reduce the legal-tender circulation by depositing the notes in the Treasury to redeem their own circulation at all times when they could make money by it, or perpetuate their power by so doing, and under the law of 1875 of increasing this circulation when they could accomplish the same objects. The people of the United States are disgusted with these proceedings and are determined an end shall be put to them.

This bill, therefore, repeals the act of 1874, allowing national banks to redeem this circulation in the Treasury with legal-tender notes, and to lift and sell their bonds, and provides that these notes shall be redeemed at the Treasury and by the Treasury in the notes of the Government; and that to the amount of national-bank circulation thus redeemed the bonds, instead of being handed over to the banks and sold, shall be credited to said banks and canceled, and the people relieved from paying the interest thereon. This method does ample justice to the banks, and protects the oppressed people from further imposition for the benefit of this the greatest of monopolies. This bill also provides that any bonds deposited in the Treasury by these banks over and above the amount of the circulation granted them shall be delivered to them, the banks, unless they are willing to receive legal-tender notes of the Government therefor at par. If the latter, the notes may be paid to them and the bonds canceled. The bill further provides that this process shall be continued until all the circulation of the banks shall have been redeemed, and there shall be no money of any kind in the United States but that issued by the Treasury, not to the banks, but to the people. This bill allows national banks to continue, if they see proper, under national law as banks of discount, deposit, and exchange, but deprives them of their own circulation at the cost of the people, and requires them, if they bank at all, to bank on coin or the notes of the United States. This act also provides that national banks which choose to go into liquidation after their circulation shall be withdrawn shall be allowed two years from July 1, 1882, in which to close up their affairs.

I close with a brief consideration of the right of the United States under the Constitution to make their own paper money legal tender for all payments public and private. The plain and short way of coming at this matter is by considering the plain language of the Constitution and the acts of Congress under it.

Those who allege that nothing but gold and silver coin can be made full legal tender under the Constitution rely upon the language of the Constitution that the States should not make anything legal tender in payment of debts but gold and silver coin. The States were prohibited from making gold and silver bullion legal tender in payment of debts. They are limited to gold and silver coin; to that which is made lawful money by the law of some nation, and which has its stamp upon it. But let it be remembered that this prohibition applies only to the States in their separate capacity in the Union. It is found among those things which the States are prohibited from doing under the Constitution and in the Union. It is not among those things which are prohibited to the United States. The truth is there is nothing in the Constitution providing any material of which Congress shall have power to make or coin money. On the contrary the Constitution leaves the whole matter to Con-

gress, leaving them free to make money of any material which they saw proper to use and to make it legal tender for all debts public and private, and which prerogative Congress has used. In proof of this proposition, I need only refer to what Congress has done since the adoption of the Constitution. They have made legal-tender money of seven materials, counting the alloy, only two of which are so much as named in the Constitution, and then in relation to the States and not to the General Government or United States. I will name them all.

1. In 1791, before the law creating the mint was established, and before the unit of value and of the money of account was adopted for the United States, Congress, acting under the Constitution and in the Union, created paper money, the first ever created by Congress under the Constitution. They created a national bank, took one-fifth of the stock, had five directors in the institution, gave it the name of the United States, and made its notes full legal tender for all debts due the United States for twenty years.

2. In 1792 Congress created a mint and provided for the issue of copper, silver, and gold coin; under this law the first money coined was composed of copper, consisting of cents and half cents. This material was not named or hinted in the Constitution as a money metal, yet it was the first coined by Congress under the Constitution and was made by law full legal tender. The second money coined under the Constitution and under the law of 1792 was composed of copper and silver. This money, composed of these two metals, was not named in the Constitution. The Constitution speaks of silver coin but not of coin composed of both these metals.

The third money coined by the United States under the mintage act of 1792, was made of copper and gold, though no such coin is named in the Constitution. The Constitution speaks of gold coin and not of coin composed of copper and gold. The fourth money coined by Congress under the Constitution and according to law was money composed of 88 parts copper and 12 parts nickel, another metal not named in the Constitution. This money was also made legal tender by law. The fifth money made by Congress of metal was and now is composed of copper, tin, and zinc, not one of these metals being named or referred to in the Constitution. This money was also made legal tender. Of these seven materials of which Congress have made money, to wit, paper, copper, gold, silver, nickel, tin, and zinc, only two are named in the Constitution, and then are not named as coined by authority of Congress.

It is therefore self-evident that the Constitution provides no metal of which Congress are to make money, but that the whole matter is left to the discretion of Congress. These being the facts as shown by our own legislation, it is useless to consume further time and space in considering the opinions and decisions of our courts; they are generally in favor of the right and power of the United States to issue full legal-tender paper money. I might refer to the instances when it has been done by our own and other nations; but, as shown, Congress are at liberty to make money of any material which they choose. They have the right to make it of paper, which is the least costly and the most convenient of any material of which it can be made. This every man in the United States knows to be true. Our legal-tender paper money issued by the United States has demonstrated its truth, convenience and safety.

To what I have said and in support of the system of finance advocated by the friends of currency reform, and which I believe is carried out in part at least in the features of this bill, I desired to have read and to have printed with my remarks a few quotations from Stephen Colwell, in his treatise, *Ways and Means of Payment*, a standard work, thoroughly reliable and comprehensive in all its details. I desire to give the substance of his history of the Bank of Venice—that bank which stands without a rival in the history of the world. I only regret that I am unable to print the whole twenty-two pages devoted by Mr. Colwell in his history of this bank, but will take the liberty of saying in advance that these extracts or quotations are not garbled so as to serve a purpose and do violence to the whole from which they are taken, but are in perfect harmony and accord with the facts as related. For more than four hundred years this bank existed and maintained its issue without coin as a basis, or, in fact, in its vaults. The overthrow of the republic was the destruction of the bank, and Napoleon, in conquering Italy, carried off no coin, no penny of prey.

QUOTATIONS FROM COLWELL'S *WAYS AND MEANS OF PAYMENT*.

The Bank of Venice gradually assumed the form under which it was for many ages the admiration of Europe, the chief instrument of Venetian finance, and the chief facility of a commerce, not surpassed by that of any European nation.

Facility of transfer coupled with the security of the state, and regular payment of the interest, seems to have led to a very rapid circulation of this loan.

The reimbursement of the loan ceased to be regarded as either necessary or desirable. Every creditor was reimbursed when he transferred his claim on the books of the bank. . . . From being convenient and valuable as an investment readily obtained, and as readily disposed of, it became by a natural process a medium of payment in transactions of commerce. That fund which was desirable to all seeking investment, would be willingly, in many instances, accepted in payment of debts already existing, or for goods just purchased.

Whatever may have been the malpractices which grew up in the usages of the bank in the first two hundred and fifty years of its history, it fully vindicated in that period its power and utility as a financial agent of the republic and its efficiency in promoting the movements of commerce.

The republic could well afford to maintain a liberal policy toward an institu-

tion so important both as a fiscal and commercial agent. That the inhabitants of Venice were well satisfied we cannot doubt, as not an objection was ever made to the bank, at least none is extant; neither book nor speech nor pamphlet have we found in which any merchant or dweller in Venice ever put forth any condemnation of its theory or its practice. There was no hesitation in carrying money to the bank so long as it was not doubted that bank funds would purchase specie without loss whenever it might be needed; and the uniform premium of bank funds settled that point. Under such a system the regular payments of trade would proceed with a rapidity and economy previously unknown so far as the history of commerce informs us. In this aspect it deserves special examination.

The facility of payment furnished by the bank, which made it the admiration of Europe, honorable at once to the government and merchants of Venice, and a support to the pride and power of its people, consisted in substituting, as a medium of payment, the debt of the republic for current coin.

This system of payments was so well adapted to the exigencies of commerce that it was maintained in full vigor in the great commercial city of Venice for almost four hundred years.

The Bank of Venice enjoyed a reputation throughout the commercial world which promoted the success of Venetian trade.

It was a tower of financial strength to the republic in her long and expensive wars, and of course contributed no small share to the celebrity of the city, as well as to its power and wealth.

To comprehend this extraordinary fact of a credit on the books of a bank, with no money in its vaults, and not bound to make that credit good in later times even by the payment of the interest, or to redeem it in any way, having been for hundreds of years at a high premium over gold and silver, we need only remember that these credits were the funds in which debts were chiefly paid. If credits had been convertible at will into the precious metals, theagio could never have originated, much less attained so high a point; for the moment the holders of credits advanced the price, specie, if a legal tender, would have become the medium of payment, as the cheaper medium. Those who had occasion for gold or silver, purchased with these deposits what was required, and, with slight exception, for more than four hundred years the precious metals were at a discount, compared with the bank funds, the demand for that which would pay bills of exchange being greater than for gold or silver for any special use to which they could be applied.

The public loan of Venice, which gave origin to the bank, was forced, but the whole subsequent history of the bank and the public credit is one of entire confidence on the part of the people, and admirable prudence, good faith, and forbearance on the part of the government. Venice made the public debt the chief currency or medium of exchange in all the large operations of trade, and the public debt was wisely kept at that amount which not only preserved its value but furnished the full quantity of currency required for trade with the means of increasing or diminishing the amount according to the proper demand. This mutual confidence and prudent management are creditable alike to the financial skill and intelligence of all concerned. The government enjoyed a loan free of interest equal to the whole capital of the bank without having given any special guarantee or any evidence of the debt, except an inscription on the books of the bank; the people enjoyed a currency which for centuries stood at a high premium over gold and silver. The Bank of Venice and its public finances, commencing in violence soon settled into simplicity and regularity of progress and freedom from undue fluctuation of which for such a long period there is no parallel.

Here is a precedent and the best evidence in the world that currency, full legal tender and receivable for all debts, dues, taxes, and customs, is founded upon nothing greater nor more valuable or durable than the credit of the Government and wealth of the nation, and when these fail let our circulating medium fail with us. Every dollar of our legal-tender currency is so much of the national debt that bears no interest and never has. If we had paid 5 per cent. interest on the same amount of bonds that has been represented by our greenback money since 1862 until the present time, simple interest and payable but once each year, our national debt would be \$350,000,000 greater than what it is; if we had kept in circulation twice as much as we have the national debt would be \$350,000,000 less than what it is; yes, a far greater reduction than this, for we should never have passed through the panic of 1873, the losses of which are beyond computation. Money at best is but a representative of debt, which is discharged every time it passes from hand to hand in the purchase of property, exchanged for labor, or in payment of debt. Currency does this as readily and perfectly as coin, be it gold or silver. Had there never been a bond issued, and no exceptions on our legal tenders, we would have no national debt to-day, and a currency equal to any the world has produced.

A few more words and I will conclude. Money is a creature of law, and this law can be expressed upon paper or upon metal. It is the fiat of the government issuing it that makes it what it is—money. There is no money that is not fiat money, money created by sovereign authority or power. You cannot divorce money from law; they are bound in eternal wedlock. Bonds are paper, and yet they are more valuable than money, even gold; not because they are paper, it is true, but because they bear interest and are exempt from taxation, and that under them rests not the \$200,000,000 in gold and silver coin in our vaults, but that which is better, the entire wealth of the nation, our fields and forests, mines and manufactures, our commerce and every industry in the land. I cannot close without appropriating a brief quotation from the memorable words of Jackson—I have no higher aim:

The ambition which leads me on is an anxious desire and a fixed determination to return to the people, unimpaired, the sacred trust they have confided in my charge; * * * to persuade my countrymen, so far as I may, that it is not in a splendid government, supported by powerful monopolies and aristocratic establishments, that they will find happiness, and their liberties be protected, but in a plain system, void of pomp, protecting all, and granting favors to none. It is such a government that the genius of our people requires.

The people rallied around him, and victory crowned their patriotic efforts. But the struggle was terrible.

XIII—444

Chinese Immigration.

SPEECH

OF

HON. MORGAN R. WISE,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 22, 1882.

The House having under consideration the bill (S. No. 71) to enforce treaty stipulations relating to Chinese—

Mr. WISE, of Pennsylvania, said:

Mr. SPEAKER: I did not expect to occupy any part of the time of the House in the discussion of this question, but as the gentleman from South Carolina has kindly yielded me a portion of his time, I will submit a few remarks upon this subject. I do this, sir, believing that my people are deeply interested in the pending question. I represent as large a laboring constituency as any member upon this floor. Arguing, then, from the great leading point that that which will affect any member of the body-politic unfavorably will necessarily affect my people, and in defense of them as laborers, and in support of the honor and integrity of the Republic, I register myself in opposition to Chinese immigration.

I wish to say, Mr. Speaker, that early in the history of my life and before California was a State I crossed the plains and entered that Territory in pursuit of active life. There I found representatives of every nationality. I do not now remember any one but what was represented to some extent in that now great city of San Francisco.

Some would believe that this is a question of recent agitation. I recall to my recollection that while a gentleman was a candidate in that distant "land of promise" as a member of the Legislative Assembly, the subject of Chinese immigration was one of the leading questions in the political campaign at that time. This gentleman stated that if elected to that body he would oppose Chinese immigration, believing it to be deleterious to the welfare of the people of that Territory and of the States. His declarations were undoubtedly true. The issue was made and resulted in his election by an overwhelming majority. It is true also that at that time but a small proportion of the people were in that country as compared to the present time, because it was thinly or only partially settled; but now, since it has assumed its large proportions, the importance of that question is in the same proportion greater before the American people.

I am glad to see, Mr. Speaker, that the Democratic party has set itself right on this question, and I must confess that to some extent I was a little anxious for our Republican friends lest they should forget to make good their claim to be stalwarts to some extent in protecting our American laborers. But I believe that they are now falling into line in keeping with the doctrines laid down by the Democratic party, although the major part of the opposition to the bill now under consideration is manifested from the Republican side of the Chamber, while the Democratic members are almost a unit upon the subject. I believe that the Chinese people are God's creatures, and as such I would not deny them any of their natural rights or privileges, so long as they conform to our fundamental laws of government and established rules of society. But, sir, when the most servile, the most degraded and corrupt of that vast pagan empire come to our free and prosperous shores as slaves—for cooly labor is a system of slavery—I am in favor of prohibiting their landing as absolutely as though the ships were laden with a contagion, the contact of which with our people would spread disease and death throughout our land. We must have no more seeds of slavery planted in the soil of now free America.

I say if we are true to the interests of our people we will act, and act promptly. And, Mr. Speaker, if we are at all subject to criticism, it is because we have not acted more promptly in relation to the matter.

The right to restrict the importation of Chinese cooly labor under our treaty stipulations, by act of Congress, has been made clear to me, as presented through the recent arguments of the question by the ablest legal minds of the two Houses. If there were any doubts remaining in regard to our right, they would be removed by an examination of the plain words of the first article of the last treaty entered into between China and this Government.

The following is the treaty:

ARTICLE I.

Whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

ARTICLE II.

Chinese subjects, whether proceeding to the United States as teachers, students, merchants, or from curiosity, together with their body and household servants, and Chinese laborers who are now in the United States shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation.

ARTICLE III.

If Chinese laborers, or Chinese of any other class, now either permanently or temporarily residing in the territory of the United States, meet with ill treatment at the hands of any other persons, the Government of the United States will exert all its power to devise measures for their protection and to secure to them the same rights, privileges, immunities, and exemptions as may be enjoyed by the citizens or subjects of the most favored nation, and to which they are entitled by treaty.

ARTICLE IV.

The high contracting powers having agreed upon the foregoing articles, whenever the Government of the United States shall adopt legislative measures in accordance therewith such measures will be communicated to the Government of China. If the measures as enacted are found to work hardships upon the subjects of China the Chinese minister at Washington may bring the matter to the notice of the Secretary of State of the United States, who will consider the subject with him; and the Chinese foreign office may also bring the matter to the notice of the United States minister at Peking and consider the subject with him, to the end that mutual and unqualified benefit may result.

"Man was formed for society," but as it is impossible for the whole race of mankind to be united in one great society they must necessarily divide into many, and form separate States, commonwealths, and nations, independent of each other and yet liable to a mutual intercourse. Hence arises what is called "the law of nations," which, as none of these States will acknowledge a superiority in the other, cannot be dictated by any, but depends entirely upon the rules of natural law, or upon mutual compacts, treaties, leagues, and agreements between these several communities. This, I believe, is laid down by writers on the subject as the rule.

The above treaty is a compact and an agreement between the only two nations interested in the subject, wherein China expressly agrees "that the Government of the United States may regulate, limit, or suspend such coming or residence," but that "the limitation or suspension shall be reasonable." Of course no rule is good unless reasonable. Are not the provisions of the bill we are considering reasonable? It has been abundantly proven that the cooly labor is contracted for by organized speculators in China; that the lowest, most ignorant, and servile of that immense pagan empire, under such contracts, are brought to this country, and their labor bartered and controlled; that they refuse to accept our rules or manners, politically, socially, or religiously, or in any way or manner to qualify themselves for citizenship; that they degrade labor, and in various ways do injury and wrong to our people with whom they come in contact, and therefore cause much discontent and unhappiness among our citizens in the communities where they are located.

Is it not then "reasonable" for Congress to enact laws to correct such a mistake, to remedy such a wrong? It seems to me manifestly so.

Then, if the bill is reasonable it is in accordance with the treaty stipulations, and if in accordance with the treaty stipulations it logically follows that it is not in the least in conflict with the laws of nations. And therefore, taking all things into consideration, it is our bounden duty to enact the bill into a law.

As to the protection of American labor, it is so broad and so extensive that it would occupy too much time to even attempt to elaborate it to the extent its vast importance demands, but the tariff question has been dwelt upon by those on both sides of the subject at issue. The two have, for manifest reasons, been united and argued together.

Some gentlemen will rise and say that the principle of protection of our manufacturing interests as well as the laboring interests of the country has been but the child of a century. I say, sir, as one in favor of protecting the industries of my country, that so long as a bloated aristocracy and nobility will do injustice to the laboring classes of Western Europe and Asia that the principle of protection in this country must be closely adhered to. I think our Government is responsible to God as well as to the whole human family for the protection of human labor, and so long as the laboring classes in these countries are looked upon as servants, slaves, or serfs, I hold that it is the great duty of American representatives, so far as in them lies, to protect American labor.

In that connection this Chinese question is the very point at issue; yet it will be maintained here that the great thing for which man is to labor is the almighty dollar. We, as Americans, and under our grand American system, claim that the men who labor should not only be amply remunerated so far as dollars and cents are concerned, but that their social condition and moral elevation should be assiduously promoted and jealously protected. This is the most important point to which we should direct our attention, and to this point I believe both parties should direct their steps, should unite with each other, and act promptly and decisively, Democrats and Republicans.

Take, for instance, 50,000 of these Chinese laborers and place them in the twenty-first Congressional district, where the laborers of that portion of my State receive from \$1.50 to \$5 a day manufacturing iron and other materials of prime necessity to civilization, and what would we expect but a general revulsion? Nothing short of it. Civilization means comfort; and the difference between the pay of servile

Mongolian labor and that of intelligent free American labor is so great that the latter cannot nor will not tolerate a contact with the former.

I have before rather fully enunciated my views in regard to the tariff question, and will now but incidentally speak of it. I favor a tariff for almost precisely the same reasons that I favor the bill we are now considering. Free trade would be well in practice were all the nations the same in form of government. The superiority of one nation over another in articles produced by labor would then solely depend upon the superiority of skill, machinery, and the frugality and industry of the people competing. Such a state of affairs does not, however, exist. In order to maintain the high standing of our working people and at the same time to compete with the low-priced and degraded labor of monarchies, we must have a sufficient tariff to keep the price of our products proportionate with the labor that produces them. To compete with the manufacturers of those nations without the intervention of tariff laws our working people would have to be brought upon a level with those of the monarchies; would have to live as they live; would, sooner or later, have to be deprived of the fruits of liberty now vouchsafed them.

The same causes will produce the same effects, in England, Germany, France, and America, when applied to the same race of people. Low wages—consequently poverty and ignorance—of the laboring classes of Europe and Asia have deprived them of sufficient liberty and prosperity to produce any considerable degree of comfort, while Americans have maintained good wages, and consequently, intelligence, liberty, and comparatively a high degree of comfort.

Mr. Speaker, allow me here to remark that while capital and labor should work harmoniously together, one cannot properly exist without the other, yet the lower the pay of labor the greater the distance it is from capital. The higher the pay the closer do the two come; the more do they respect each other, and the more security and comfort ensue. The more you degrade labor, the poorer become the poor, the richer become the rich, the greater the distance and the greater the distinction between the two great factors, a consummation rather wished by some of our public men, if we are to judge from their arguments.

It is as important to protect our industries internally as externally; as important to prevent the cooly labor from degrading our working people as to restrict by proper duties the direct competition of the European pauper labor. Free trade and Chinese cheap labor have the same tendency, namely, the lowering the wages of our American laborers.

I favor a properly adjusted tariff. Articles that we can abundantly produce should be adequately protected by tariff laws. Articles that enter into the necessary consumption of or add to the comfort of our people and that we cannot produce, should be free of duty. The internal-revenue tax should also be removed from all articles that are necessarily consumed by our people. Enough upon this branch of the subject at the present time. At a future period of this session I desire to give my views more fully upon the tariff question. With free trade and Chinese cheap labor fully established in this country the result must be clear to every mind.

In the infancy of this country unprincipled speculators went to the shores of Africa, contracted for poor, barbarous negroes, brought them here, and they were sold because the slave-trader was enriched and the purchaser obtained cheap labor. What the result of the introduction and increase of this infamous system was we all know to our sorrow and shame. Those who deal in the cooly trade are actuated by the same motives, and if encouraged and fostered will in the end produce the same results.

This question more closely interests the American laboring classes than any other that has lately arisen. It is seldom laws are passed so plainly in accordance with their desires. So far as we can learn they are almost unanimously in favor of this bill. Let us comply with their wishes once.

Mr. Speaker, I consider the elevation of the laboring classes to a high social, intellectual, and moral position essential to the stability of our Republic. Therefore, in considering even the near future of our country, the labor question, it will be seen, is one of the most important that presents itself to our view. By the condition of the laboring-man may be estimated the prosperity of a nation; the wealth, strength, and security of the public are proportionate to the comfort which he enjoys, and his wretchedness the sure criterion of a bad administration of government. He ought to be rendered as comfortable as his situation in life will allow, and our representatives in Congress ought to contribute all in their power to alleviate his necessities, amply reward his labor, and enlarge the circle of his comfort. "That nation cannot be free where the rulers will not feel for the people until they are obliged to feel with the people, and then it is too late."

In submitting some remarks on a former occasion in this House, I stated that while an increase of well-provided-for, intelligent, and industrious population is of the greatest political importance to a government, and every proper means should be resorted to to accomplish such an end, yet excessive population, if unattended by adequate means of support—lack of employment or labor inadequately compensated—so far from proving a blessing to a country, is calculated to produce the most deplorable scenes of wretchedness.

In order to have the masses country-loving they must be employed,

well fed, and clothed. In order to maintain for any considerable length of time a republican form of government the masses must be educated, and in order to educate them they must not only be employed but fully remunerated for the work they perform. So, in whatever way we view the subject, the same grand principle is presented. Give employment to the people and pay them for their labor what is commensurate with the skill and intelligence of freemen. This is so important to the maintenance and well-being of republican institutions that it cannot be too often nor too earnestly presented for the consideration of our representative men.

Whatever others may do or say, as for myself I will raise my weak voice and use whatever other feeble energy I may possess in support of this principle, whenever the opportunity offers.

I am pleased to note that my talented colleague from the Gibraltar of Democracy of the Old Keystone State [Mr. ERMENROUT] in a speech of March 16 argued the Chinese question in such a clear, forcible, and yet brief manner, and so entirely in accordance with my views, that I give the following extract. Mr. ERMENROUT said:

I affirm that no sincere lover of American liberty will hesitate to cut out of our system and our national, moral, political, and social life any and everything that prevents the workingman of this country from advancing to knowledge, from securing to him the fruits of his labors, whether they be more leisure for mental improvement, enhanced social advantages, benefits, and privileges, or more personal and family comfort. For these things this Government, all legitimate government, was ordained by the Almighty. These alone make it worth loving, defending, perpetuating.

Now, let loose upon the American adult male population 30 per cent. of Mongolian adult males. You who live away from the Pacific slope take this home to your State, your city, your township, your school district. You will then realize somewhat the loud call that comes to us from the Golden Gate. Not alone from the Golden Gate, but from every toiler in America, for such a calamity is not only possible but probable, if this immigration is allowed to go on, fostered and protected by law.

The Pennsylvania representatives of both parties seem to be fully alive to the great importance of the labor question. While I am willing to respect every nationality in the great family of nations, yet our first duty is the protection of our own people, and the time for attending to this duty is at hand.

The bill will pass, and it is to be hoped his excellency the President will, in his wisdom, place to it his sign manual and thereby make it a law. We will wait and see.

National Banking Association.

SPEECH

OF

HON. RICHARD WARNER,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 30, 1882,

On the bill (H. R. No. 4167) to enable national banking associations to extend their corporate existence.

Mr. WARNER, said:

Mr. CHAIRMAN: I desire to present the danger and wrongs of extending national banking associations to the liberties and freedom of the people.

THE GOVERNMENTS OF DIFFERENT NATIONS.

There are three classes of absolute governments, namely, the absolute monarchy, recognizing the sovereignty of the nation in one alone, the king, the monarch, or crowned head, who is above law, and cannot be made answerable thereto. His will is the constitution; the people, his subjects, as serfs, must obey his behests. Second, the absolute aristocracy, recognizing the sovereignty as contained in the few, the nobles, who claim to be superior to the masses of the people by birth and blood. Their will is the constitutional law of such nations, and the people are their servants. The difference between this government and the absolute monarchy, first named, is that, in the former the people have but one tyrant, while in the latter they may have a hundred or more, increasing tyranny in proportion to numbers. The third class is the absolute democracy, recognizing the sovereignty, the state, or nation, as in the people; and their will is the constitutional law of such governments. Here the people *en masse* assemble, make their laws and go home and obey them without officers. Each of these has branches of different shades: the limited monarchy, the limited aristocracy, and the limited democracy.

THE GOVERNMENT OF THE UNITED STATES.

Our Government, both State and national, is the limited or representative democracy, recognizing the sovereignty in the people and all officers as their agents, to do their will. Whenever an officer disobeys the will of his constituents he is guilty of a breach of trust, and has that far exceeded his powers; his acts to that extent cannot bind the people, they being the source of power. An individual by himself is his own governor, legislator, and judge, as there is no one

with whom he has a community of interests; but when a number of persons are associated a community of interests exists—each being entitled to the inalienable rights God has planted in him, which are the right to life, liberty, the pursuit of happiness, and to hold and enjoy property, neither having the right to interfere with these rights, the body being composed of men, women, and children, different in strength, size, age, and health. The body as a whole unites its strength and becomes a party to all free governments; and each individual individually the other party, to form a government for the protection of all equally. The government thus formed promises protection to each citizen in life, liberty, pursuit of happiness, and prosperity, each individual promising to defend his government in war and support it in war and peace by taxation. Thus far the obligation is mutual and no further.

THE FIRST FORMATION OF GOVERNMENTS—THE UNITED STATES PREVIOUS TO THE ADOPTION OF THE CONSTITUTION.

Governments were first established by charters in towns and in cities, the country people being left out; hence the reason why town people think themselves better than country people, which is not true in our form of government. In England charters are recognized in three ways—by prescription, by act of Parliament, and by the prerogative of the King. Our colonial governments were first established by charters from the Kings, they maintaining the absolute veto power over all the legislative acts up to the Declaration of Independence, at which time all the power of the Government of England over the colonies ceased, each colony becoming a free or independent state or nation. Thereafter, in 1777, ten of said States, as independent sovereigns—one in 1778, one in 1779, and one in 1781—surrendered certain expressed powers to the United States contained and expressed in what are known as the Articles of Confederation, retaining and reserving to themselves all other powers as sovereigns. When the Revolution closed, it was found by investigation that Congress under the Articles of Confederation only had the power to declare and no power to execute or do, there being no separate executive department and no separate judicial department, article 2 declaring "each State retains its sovereignty, freedom, independence, and every power, jurisdiction, and right, which is not by this confederation expressly delegated to the United States in Congress assembled." This language cut off implied power either to carry into effect an express one, or creating an incidental one, kindred to an express one. Hence it became absolutely necessary to have a new constitution or no general government.

THE GOVERNMENT OF THE UNITED STATES UNDER THE CONSTITUTION.

A new Constitution was formed with certain delegated powers, dividing the government into three departments, each sovereign in its own sphere, to wit, the legislative, executive, and judicial. Neither the Declaration of Independence, the Articles of Confederation, the present Constitution, nor any amendment made thereto was ever submitted to the people of the United States for ratification or rejection; but the votes in the convention that framed the Declaration of Independence, that which framed the Articles of Confederation; that which framed the Constitution, was ratified by States, each State having one vote without regard to its wealth or population. All amendments made thereto since have been ratified by the Legislatures of the States or conventions called by the Legislatures thereof, so in no instance have the people directly voted for or against any of these. Two parties originated in the incipency of the Government, one favoring State rights, the other centralization of power in the General Government. Upon these two principles parties have existed to the present time—the one giving the Constitution a broad and liberal construction, the other a strict, narrow, and literal construction, from a compromise of which originated the ninth and tenth articles in the amendments to the Constitution, ratified in 1791—the ninth declaring the enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people; the tenth, that the powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States respectively or to the people. So it is clear the Constitution of the United States embraces only delegated powers, and the rule of construction is to see what powers are delegated, as none others can be exercised, while the contrary rule applies to the States. You look to the Constitution to see what powers are prohibited, leaving the States unlimited sovereigns in all powers not prohibited nor delegated by the United States Constitution.

When the Constitution was formed great jealousy existed in the States against a superior master, having felt the tyranny of the Kings of England in the colonies and believing the General Government would continue to usurp the powers in the States until the whole would be centered in one General Government. This idea has been truly verified. As the Government has advanced in age the first ten amendments, ratified in 1791, the eleventh in 1793, and the twelfth in 1804, were all favorable to the rights of the States and people; but the thirteenth, adopted in 1865, the fourteenth, adopted in 1868, and the fifteenth, adopted in 1870, are all destructive of State rights and tending to consolidation. So also has the great body of the acts of Congress since the late war been tainted with the same. It is clear to be seen that as the General Government recedes from its original principles it becomes corrupted and anti-republican.

In the origin of our governments, both State and national, a public

debt was by our great statesmen held as a public curse; perpetuities were regarded as slavish and destructive of liberty; monopolies and great moneyed corporations as dangerous to a republican form of government; but now and for the last twenty years the great mass of the legislation has been and is to give them more power, lend them more strength, and to extort from the people, upon whose shoulders all the burdens of government rests, their substance.

A corporation is an invisible, intangible being, created alone by law; it has no existence except from and in the law that creates it. Corporations are the only things created by man or that have ever been created since God first created the world and all things in it. Writers on corporations say they have no souls, and so say all jurists; hence, they are not responsible to God for anything they do; they are not of God's creation, but of man's. In England, a monarchy, corporations are allowed to exist by prescription, implication, acts of Parliament, or by the implied or express will of the King; but not so in the United States and the States thereof; they are created and allowed to exist alone by legislative enactment. This has been the law from the birth of every corporation created by the King of England until the present time. In the United States and States thereof, therefore, the legislative departments of our governments, both national and State, alone can create corporations and confer upon them their powers. The nature, office, and foundation of our judicial department of Government are to place it above the legislative and executive departments in the interpretation of law, to hold them in check, especially when they, or either of them, seek to do what the Constitution gives them no power to do.

LAWs CREATING CORPORATIONS MUST BE STRICTLY CONSTRUED.

To do this the courts have established in reason, usage, practice, and wisdom rules for the protection of our republican governments, both State and national. These principles have been adopted by the best legal lights and jurists whose silvery hairs have adorned the legal bench, from the coming of Christ to the present time. The leading one of these rules is that all statutes and laws that confer powers upon corporations shall be strictly construed, and that no corporation shall exist or exercise any power except by the express language of the statute; no implied power shall be exercised except it be absolutely necessary to carry into effect the express powers.

AUTHORITIES ESTABLISHING THIS ALLEGATION.

See 2 Kent's Commentaries, pages 360-361; 4 Wheaton, 626, case of Dartmouth College vs. Woodward; first volume Bouvier's Institutes, page 74, section 179; first volume Bouvier's Law Dictionary, page 318; 2 Hinn. Tennessee Reports, 252. No rule is better settled than that charters of incorporations are to be construed strictly as against the corporations. The first presumption in every such case is that the State has granted in express terms all that it designed to grant. "When a State," says the supreme court of Pennsylvania, "means to clothe a corporate body with a portion of its sovereignty, and to disarm herself to that extent of the power that belongs to her, it is so easy to say so that we will never believe it to be meant unless it is said." In the construction of a charter to be in doubt is to be resolved; every resolution which springs from doubt is against the corporation. If the usefulness of the company would be increased by extending its privileges, let the Legislature see to it; but remember that nothing but plain English words will do it.

FURTHER AUTHORITIES.

See Pet., 514; 11 Pet., 544; 9 How., 172; 13 How., 21; 21 Conn., 294; 19 Penn., 211; 2 Mass., 143-227; N. Y., 87, and 3 Wal., 51; Cooley's Cons. Lim., 394-5. The tendency of our laws has been, both in the constitutional and legislative enactments of the United States and States thereof, to lessen and more rigidly restrict the creation and powers of corporations; more especially moneyed and railroad corporations. By the amended constitution of New York, in 1821, the Legislature was not allowed to charter a company except by a vote of two-thirds of both houses; and in the amended constitution of 1846 they were not allowed to create any corporation by special enactment, but could only do so by general law. So, also, in the constitution of Tennessee of 1870. The constitution of New Jersey requires three-fourths of both houses of the Legislature to vote for a charter before it can exist. In New York, Rhode Island, Maryland, Massachusetts, and other States, the private property of corporate members is made liable for corporate acts. New Hampshire, Connecticut, and Michigan have similar laws, all showing the whole tendency of a republican form of government has been and is to draw rigidly restrictions around the creation and powers of these dangerous monopolies, more especially those of a moneyed and centralized character, that stand at the wheels of government and attach to them silver cranks and golden levers. (See third ed. of Angell and Ames on Corporations, pp. 546 to 564; 2d Kent's Com., fourth ed., pp. 308 to 360.)

THE SOVEREIGNTY OF THE PEOPLE.

Free governments recognize this sovereignty in the people. The creation of these moneyed and other monopolies necessarily extracts from the people their sovereignty in proportion to the numbers and powers of the corporations, and shears the States and nation of that much sovereignty. These are the hydra-headed monsters that sap the life-blood and destroy the very foundation of the Government—growing in size and strength as the Government departs from its original purity, and, unless checked by an upheaving of the toiling mil-

ions dwelling on the hills and in the valleys of the great agricultural area of the United States and the mechanical and manufacturing laborers, this great and glorious sovereignty, purchased by blood, labor, and toil, this Government of the people, Heaven's best gift to the oppressed of all lands, will sink beneath the leaden weight of monopoly and become the prey of the oppressors of mankind.

THE GENERAL GOVERNMENT ONE OF DELEGATED POWERS.

The General Government is one of delegated powers created and confirmed by States. Certain powers have been delegated to Congress assembled. These powers Congress alone can exercise, and none other, to wit:

To borrow money on the credit of the United States.

To regulate commerce with foreign nations, and among the several States, and with the Indian tribes.—Constitution, article 1, section 8, clauses 2 and 3.

To coin money, regulate the value thereof and of foreign coin and to fix the standard of weights and measures—these three great powers constitute great moving elements in the halls of our national council, involving the material interest of every man, woman, and child that breathes the free air of the Republic.

The clause to borrow money on the credit of the United States certainly means nothing more than to borrow it in cases of necessity, and in no event could it be borrowed except where Congress has the power to lay and collect taxes, duties, imposts, and excises. This is the only way the Government can collect money; and this it can only do to support itself, the people who have purchased property being the owners of the same, and the Government only having the right to ask them to support it in war and peace. The regulation of commerce being one of vast importance to the people of the United States needs close investigation. The railroads, telegraphs, navigable streams, and canals connecting towns, villages, and ports under jurisdiction of this grand and glorious Government, loading the great channels of commerce with the combined and commingled works of God and man of this glorious Eden of the world, demand the closest and strictest scrutiny of the national and State governments to bring them under their subjection and control, that their great mammoth mouths shall not swallow up our Republic. The coining of money and regulating the value thereof, being another great national mouth, demands the greatest and strictest attention of Congress, it being the standard of value fixed by Congress to regulate and control the value of all commerce within the United States. The public debt, commerce, and money are the great controlling powers in war and peace with all nations.

MONEY DEPENDS FOR ITS VALUE UPON LAW.

The value of money depends alone upon the acts of Congress. Why? Because Congress has the right to coin money. What does "coin" mean as used in the Constitution? It is not a noun. "To coin" is a verb—an act. To do what? To coin money. Who does this act? Congress. How? By enacting a law by which money is coined. This does not mean a coin, a metal, but to coin—a verb, an act. What is this act? It is an act of Congress, by law, fixing how money shall be coined, and carrying the act into effect. Congress has the power to say upon what this act shall take effect. They are not compelled to say money shall be coined of gold, of silver, of iron, of paper, or of what. The coining is an act; not a thing. It is what the Government, through Congress, says shall be done to make money. Now, our bank currency is but the representative of money, and not money. Hence, if Congress says a certain thing shall be money, that makes it money; not the representative of money. So Congress has the power to make anything money they desire, as they have the power to coin it. The next provision is to regulate the value thereof. How is this done? Who fixes the value on money? Congress. How does Congress fix it? By putting a value thereon. In what way? By making it a legal tender. For what? For the payment of all public and private dues. What does this mean? It means the President, his Cabinet, all foreign and domestic ministers, consuls, and officers of the United States shall receive it for their salaries; all Congressmen and legislative officers shall receive it; all judicial and ministerial officers shall receive it; in a word, all the officers of the United States shall receive it. What next? Every private person in the United States shall receive it for every note, account, contract, judgment, and everything of that nature due them.

There is no clause in the Constitution of the United States expressly declaring anything shall be a legal-tender; but the legal-tender quality rests alone in this clause giving Congress the power to coin money and regulate the value thereof. The regulation of the value means to make it a legal-tender for all dues, public and private, not an intrinsic value, but an exchangeable value. Every nation has the right to make and does make its own money and regulate its value. England can say what shall be money in her jurisdiction—gold, silver, iron, or paper. So with France, Spain, Mexico, and all other nations. But the regulation of the value by either or any of them can have no effect in another nation except by law which gives it effect. So it is the law of the nation that makes money and gives it value therein. The English pound, the Spanish dollar, the French franc, and the Mexican dollar may have more grains of gold or silver in them than that of the United States, yet they may be of less value in the United States. Why? Because Congress has not made them a legal-tender, and no one, either public or private, is compelled to receive them. All is left to their own option. It is the legal-tender

quality fixed by Congress that gives money its value. Six per cent. is always 6 per cent. as compared with a dollar; but not so when compared with other things. The scarcity of money makes wheat, corn, bacon, &c., sell for less; the abundance of money for more; because you compare money with other things. This is what produces panics in commerce. A pound of beef might at one time be worth two cents, and at another six, owing to the amount of the circulating medium.

Congress has no power to compel any man to sell his land, wheat, corn, cow, or anything else, or to take any control thereof from him, or to fix any price thereon. This is at his own discretion, yet when he does make the contract at a stipulated price and delivers the article, Congress has the power to make him and does make him receive money at a fixed value, which is compelled to be uniform throughout the United States. This is what gives money its value, not intrinsic but exchangeable value. It is the standard fixed by law, and must be received as such all over the United States. Each nation declares what shall be money within its own limits. Sparta made iron money; some of the colonies made leather money, but gold and silver have been more universally recognized by the civilized nations of the world as money than anything else.

The Constitution of the United States does not make anything money, nor are the words gold and silver to be found anywhere in it, except that the States are prohibited from making anything but gold and silver coin a tender in the payment of debts. The only power that Congress has is under the eighth section, fifth subsection, to coin money and regulate the value thereof; making money a legal tender for public and private dues regulates and fixes its value. There is a clause in the articles of confederation giving Congress the power expressly to borrow money or to emit bills on the credit of the United States, but there is no express clause in our Constitution of this character. But there is a clause which declares that no State shall emit bills of credit. In transferring the former clause to our Constitution the language is thus expressed: "to borrow money on the credit of the United States," as shown.

There is no clause in the Constitution prohibiting Congress from impairing the obligations of a contract. The prohibitory clause declares, "no bill of attainder or *ex post facto* law shall be passed by Congress." An *ex post facto* law as defined applies alone to crimes and not to contracts. But in the prohibition as to the States, no State is allowed to pass any law impairing the obligations of contracts. The United States is a nation and Congress its supreme legislative department. The Constitution creates but one judiciary department, which is the Supreme Court of the United States. Congress has the power to create all other courts. The Constitution vests in the Supreme Court original jurisdiction only in cases affecting ambassadors, other public ministers, consuls, and those in which a State shall be a party; but only appellate jurisdiction in all other cases. So Congress, being the creative power of courts other than the Supreme Court, and the Supreme Court having no original jurisdiction over contracts or anything else except as above shown, it is in the power of Congress to impair the obligation of a contract, (other than as restricted in the fourteenth amendment,) annul the court in which any suit could be brought against the United States, or prohibit any suit from being brought. It is true the fourteenth amendment, section 4, declares "the validity of the public debt of the United States authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned." This clause only prohibited Congress from questioning the validity of the debts expressed, but does not fix any mode of payment, any court in which suit could be brought, and does not fix anything as money or state any value thereon, or make anything a legal tender in the payment of the public debts.

I am here only presenting legal propositions and constitutional questions, without arguing the policy or impolicy of the same. It is in the power of Congress to coin money, which means to make money, and to stamp upon it its value; which means to make it a legal tender for all public and private dues. Congress can make gold money, silver money, greenbacks or Treasury notes money, or anything else it sees proper, and can make all or any of these a legal tender. It is the legal-tender quality that gives to money its value. Bank paper is not money, but the professed representative of money; hence, it is not a legal tender without making it money. Nothing can be made a legal tender but money. All citizens owe allegiance to their Government; that is, it is their duty to defend their Government in war and to support it in war and peace. The Government is bound to protect the citizen in his right to life, liberty, pursuit of happiness, and property. The Government, therefore, can demand no more of the citizen's property than what is necessary for its support and protection. Anything beyond this is a usurpation by the Government of private rights, because every man who holds land has paid the Government for it and got his grant. Likewise with all personal property; the private citizen owns the property, and not the Government. The Government is only entitled to pay from the citizen for protecting him in his life, liberty, property, and pursuit of happiness.

Our Government recognizes all citizens as political equals, that is, all electors; so also the commercial, agricultural, and manufacturing interests of the country should have equal protection. This being true, equal protection should be extended by law to all classes; and any law that favors one class to the detriment of another is contrary

to the spirit and genius of the Government. It is class legislation, destructive of liberty, creative of imperialism, and monarchical in its tendency. In the origin of our Government this was the acknowledged theory, but since our late war it has been the reverse. The agricultural interest, which is the bone and sinew of the country, the life and support of all human beings and animals—the toiling millions, mechanical, manufacturing, and agricultural, have had the least aid and protection by law, yet they have borne the burden of government either directly or indirectly. They had to pay the stamp-act duties, the infamous duties that caused the colonies to revolt from England. They have had to pay the lawyer's license, the doctor's license, the merchant's license, the tariff duties on imports, the cotton tax, the tobacco tax, the whisky tax, the wine tax, and in a word, the entire tax. While this is true, the whole burden of the Government has rested on land and labor, extracted their substance and attempted to bind them with chains, hand and foot. The great mass of legislation since our late war has been to protect banks, bonds, and monopolies, and to relieve them from paying any tribute to the Government for their protection.

The whole policy has been to centralize power and perpetuate monopolies. Think of it for one moment. Twenty-two hundred banking associations, chartered and protected by the strong arm of the Government for a period of twenty years, are now knocking at the doors of Congress for charters of equal time, resting upon the bonds of the United States locked up in the Treasury, drawing from 5 to 6 per cent. interest in gold, making from 10 to 12 per cent. interest on the issue resting upon these bonds; pouring into these great rich institutions from 16 to 18 per cent. per annum—all done by the strong arm of the law; and yet these monopolies are freed from paying any interest to the Government thus protecting them. On the other hand, take the great agricultural area of the United States, from whence all prosperity must come, with little or no protection rendered by law, numbering — square miles, and yet not more than 2 per cent. is the actual income, and even this is extracted, yes, extorted, to pay the Government for its pitiful protection. So, also, with the mechanical, manufacturing, and domestic toilers, and all laboring classes of the United States. While the moneyed monopolists are increasing in wealth from 16 to 18 per cent. per annum by operation of law, the great farming and laboring masses are weakening and diminishing in prosperity and money power. This is class legislation—monarchical, aristocratical, destructive of and contrary to a republican form of government—and should not be tolerated by representatives of the people in Congress assembled. They are but the agents of the people, holding a trust conferred upon them by their constituents to watch and guard with care the interests of those who have conferred upon them the honor and office of their representatives. When they become unfaithful to the trust or negligent in its execution, they are unworthy servants and a dishonor to the position they fill. Office seems to be sought for the money in it, not the honor like the mines of gold, the gold is sought but the mines neglected.

BONDS OF THE UNITED STATES.

There are now some two billions of bonds out against the United States. Some twenty-two hundred banking corporations rest alone upon bonds, and yet with their 16 or 18 per cent. per annum they bear but a small part of the burdens of our United States, State, county, or corporate governments. There is also property belonging to religious, charitable, benevolent, and school institutions to the amount of about eight billion dollars, yet they bear no part of the burdens of government. Now, has our Government come to this, that bankers, bondholders, and moneyed monopolies shall be classed with religious, school, and charitable institutions? Are they to be the elect of the land, lulled and rocked in cradles of ease, the only inhabitants of our political heaven? Are they superior in worth? Is the blood in their veins superior to that of the masses of the people? Our Government is not an aristocracy nor a monarchy. The sovereignty does not rest in one, nor in a few, but in the whole mass of the people as political equals. No one is entitled to preference; whenever the wheels of government are moved in the interest of one class against the interest of another, they become destructive of liberty; of a republican form of government, and become promotive of an aristocracy or monarchy which destroys the original design of our Government.

The original idea of the framers of the Constitution of the United States and the States thereof was, that each class should have equal protection by law, to wit, the manufacturing, the agricultural, the commercial, the mechanical, mining, &c. Whenever any law becomes oppressive to one of these classes and promotive of the others, it is class legislation and contrary to our form of government. Now let us investigate and see the tenor and course of Congressional legislation during and since our late war. First, a large bonded debt was created during and after the war under acts, as follows:

THE BONDED DEBT OF THE UNITED STATES.

Sixes of 1861, interest on same 6 per cent. in gold, payable semi-annually, issued under act February 8, 1861, \$18,415,000; under acts July 17 and August 15, 1861, \$50,000,000; under acts July 17 and August 5, 1861, in exchange, seven-thirties, \$139,317,150; under act March 3, 1863, principal payable in gold coin, \$75,000,000; total \$282,732,150. Under act February 25, 1862, \$514,771,600, five-twenties,

interest payable in gold semi-annually, at 6 per cent.; under act June 30, 1864, and March 3, 1864, \$3,882,500, principal payable in gold, \$125,561,300, 6 per cent. interest, in gold, payable semi-annually; total, \$129,443,800; five-twentieths, under act March 3, 1865, in exchange for seven-thirtieths, converted and amounted August 1, 1868, to \$373,346,350; interest, 6 per cent., payable in gold semi-annually. Also, under same act, \$197,777,250, issued at different dates. Also, under same act, in exchange for seven-thirtieths, \$371,346,350. Also, under same act, in exchange for seven-thirtieths, \$39,000,000; ten-fortieths, issued under acts March 3, 1863, and 1864, principal payable in gold, \$194,291,500; fives of 1870, redeemable at the pleasure of the United States, after May 1, 1881, in coin, interest 5 per cent. in coin, payable quarterly; under acts July 14, 1870, and January 20, 1871, \$200,000,000; railroad issue, 4 per cent. interest, under acts July 1, 1862, and July 2, 1864, up to September 1, 1870, \$64,618,832.

Tabular statement of United States debt.

Year.	Amount.	Year.	Amount.
1791	\$75,463,476 52	1837	\$3,308,124 07
1792	77,227,924 66	1838	10,434,221 14
1793	80,352,634 04	1839	3,573,343 82
1794	78,427,404 77	1840	5,250,875 54
1795	80,747,558 39	1841	13,594,480 73

1813	55,962,827 57	1859	58,496,837 88
1814	81,487,846 24	1860	64,842,287 88
1815	99,833,660 15	1861	90,580,873 72
1816	127,334,933 74	1862	524,176,412 13
1817	123,491,965 16	1863	1,119,772,138 63
1818	103,466,633 83	1864	1,815,784,370 57
1819	95,529,648 28	1865	2,680,647,869 74
1820	91,015,566 15	1866	2,773,236,173 69
1821	89,987,427 66	1867	2,678,126,103 87
1822	93,546,676 98	1868	2,611,687,851 19
1823	90,875,877 28	1869	2,588,452,213 94
1824	90,269,777 77	1870	2,480,672,427 81
1825	83,788,432 71	1871	2,353,211,332 32
1826	81,054,059 99	1872	2,253,251,328 78
1827	73,987,357 20	1873	2,234,482,963 20
1828	67,475,043 87	1874	2,251,690,468 43
1829	58,421,413 67	1875	2,232,284,531 95
1830	48,565,406 50	1876	2,180,395,067 15
1831	39,123,191 68	1877	2,205,301,392 10
1832	24,322,235 18	1878	2,256,205,892 53
1833	7,001,698 83	1879	2,245,495,072 04
1834	4,760,082 08	1880	2,120,415,379 63
1835	37,513 05	1881	2,000,000,000 00
1836	336,957 83		

The above embraces the public debt of the United States from 1790 to 1882, and shows that when the war commenced in 1860 the debt of the United States was only \$64,842,287.88, now that debt is \$2,000,000,000. Then the debt was about two dollars per capita; now it is about forty dollars upon the head of every man, woman, and child, with interest in coin, wrung from the toil of the people—over \$2,000,000,000 more. Yet it is argued on this floor that the bonded indebtedness shall be perpetuated and the national banks rechartered, that the life-blood of the masses may be extracted from their veins to support and enrich the few. The people demand that these burdens shall be lifted from their shoulders and that these shackles shall be stricken from their limbs. They also demand that the currency shall be restored to the Government to which it belongs and from which it was wickedly taken and given to national banks. During and after the war the bonded indebtedness of the United States was wickedly and unnecessarily created for the purpose of creating a national-bank circulation. At that time the greenback currency was by law the established money of the United States, being legal tender for all debts public and private, except duties and interest. This money paid all individuals for their wheat, corn, bacon, cotton, horses, everything they had to sell. It paid all State officers of every grade their salaries, and it was issued alone by the Government. It was subject to taxation in the hands of all persons equally by the United States Government, by the State governments, by county and corporate governments.

Before silver was demonetized our currency was a trinity, to wit, gold, silver, and greenbacks or Treasury notes, all resting for their value on Congress, as Congress alone can coin money and regulate the value thereof. Now, it is the legal-tender quality for all dues both public and private that gives gold, silver, greenbacks, or Treas-

ury notes their uniform value and circulation within the limits of the United States. Congress might say that gold or silver, or both, should not be a legal tender, and that greenbacks or Treasury notes should be; hence, nobody would be compelled to receive gold or silver for public or private dues, but all would be compelled to receive greenbacks or Treasury notes for all dues, public and private. So it is clear that Congress has the power to coin money and regulate the value thereof and of foreign coins, and to fix the standard of weights and measures, making them uniform throughout the United States. Now, suppose there was no act of Congress to coin money, regulate the value thereof and of foreign coin, and fixing the standard of weights and measures, what would be money? What would be its value? What would be a pound? What would be a bushel? Would gold be money? Would silver be money? Would greenbacks or Treasury notes be money? Who would say, and by what authority?

So it is clear from our Constitution that the only power to coin or make money, to regulate the value thereof and of foreign coin, and to fix a standard of weights and measures rests with Congress, and is a legislative power, and that this power can be delegated to no corporation or body by Congress, but must be exercised alone by Congress, being the only legislative body of the United States. The coining of money, regulating its value, fixing the standard of weights and measures, making all these uniform throughout the United States, get their whole life and existence from acts of Congress and areas much vested in Congress as any other power of the United States. Now, when money is thus created it always bears the same proportion to itself, be it scarce or plentiful, but the fluctuations are always between money and other things. Money and bank paper differ. Money rests alone upon the faith of the United States. This is its basis or bottom, nothing else. While bank paper of all characters, including the national currency, is not money but only its representative, hence it is no legal tender. So this bank paper must have a bottom, it must rest upon something that is a legal tender, to give it value and circulation, to wit, gold, silver, Treasury notes, &c.

But our national banking system is based upon United States bonds, and these bonds rest upon the faith and credit of the United States; so the value of all money rests upon the faith and credit of the United States. Now, as money and its value is one of the great levers and preservers of Government and one of its sovereign attributes, as war cannot be carried on without it, as the Government in peace and war cannot be carried on without it, it should at all times be kept within the power and under the control of the Government. It should be issued and distributed among the citizens with the least expense possible. It is the power of the Government; like the hair of Samson, the strength of the nation is in it, and whenever you shear the Government of it, and bestow it on a corporation or other power, you have taken its strength, vested it in other powers, and made it but their subject. Now, so long as the control of the money rested in the Government its distribution among the people was of little or no expense—not more than 1 per cent.; but when the currency became vested in national banks the expense increased from 16 to 18 per cent. upon the people, which gave the banks from 15 to 17 per cent. of the people's earnings.

Let us see how this law allowed banks to be chartered for twenty years. Five or more persons form themselves into a body-corporate under a certain name and style, buy up \$50,000 or \$100,000 United States bonds as they see proper, at whatever price they can buy them in the market, go and deposit them with the Treasurer of the United States, receive in return \$90,000 or \$45,000, according to the number of bonds deposited, in national currency issued to them. They now become a body-corporate and banking association. These bonds lie locked up and draw from 5 to 6 per cent. interest per annum, payable in gold semi-annually, which the banks get. They take their \$90,000 or \$45,000 in national currency and realize off it from 10 to 20 per cent. per annum; so they make clear from the people from 15 to 18 per cent. What do the farmers, agriculturists, or all classes of laborers make off their capital invested and their labor? Not more than 2 per cent. per annum. Besides this, where does this have to go? Let us see. After the war the following taxes rested upon and sucked the life-blood out of the laboring classes, to wit, the stamp-tax upon all contracts, marriage-licenses, and all written instruments; upon lawyers, doctors, merchants; the cotton tax, the whisky tax, the heavy tax upon all importations. All this vast sum of money was wrung from toiling millions to support the bondholders, banks, and Shylocks who had large fortunes off the people and the misfortunes of the country.

Labor has performed all this under law for the benefit of the idle few. From these causes the General Government has been supported by the poor. It has been the same in principle with all State, county, and corporate governments. From the workers, the toilers, and producers of this nation \$3,000,000,000 have been extracted to support the Government, while they have not realized more than 2 per cent. on their capital outside the support and imperative expenses of their families. The bondholders, the bankers on bonds, the school, the benevolent, the charitable, and the church institutions of the United States and the States thereof have borne no part of the burdens of government. So here are about sixteen billion dollars' worth of property that pays the Government nothing for its protection.

While the bankers and bondholders realize their 15 or 18 per cent. and pay no tribute to the Government for their protection, the farming and laboring classes of all grades realize about 2 per cent. on their toil and investments and pay all the burdens of the Government.

A PROTECTIVE TARIFF.

In the next place let us look at the manufacturing monopolies of the United States. They claim they should have encouragement by law in the form of a protective tariff. In the origin of our Government, when this country was but a wilderness, when only thirteen colonies, sparsely settled, just emerged from a bloody revolution with a debt of \$42,000,000, little or no capital, an impoverished community, no manufacturing implements, and with but little means to procure them, there were some good reasons for a protective tariff to foster the growth of manufacturing establishments in our midst, that we might cope with other nations and be enabled to live within ourselves. Then the country was but little cleared and there was employment for all the people in agriculture. Even up to the formation of our Constitution the whole population amounted to but about three and one-half millions; but it is a well-established rule of law that when the reasons for the law cease to exist the law itself should cease. What is the condition of the United States now? We have thirty-eight States and eight Territories, with a population of over fifty millions and an area of about two hundred million acres of land in cultivation, over 90,000 miles of railroad, equaling almost all Europe combined, forming a net-work binding cities, towns, and the most distant parts of the country, all pouring their great commerce into the sea-ports of the United States.

We have great manufacturing establishments, with a capital, in 1870, of \$2,118,208,796, engaging 2,053,996 hands, over the various parts of the United States; the railroads shipping over \$18,000,000,000 of commerce yearly. We have of navigation over 3,000 miles of sea-coast, besides the inland navigable streams, the Mississippi River, its tributaries; the Alabama, its tributaries; the Potomac, its tributaries, and others, numbering many thousands of miles inland navigation. Now, with all this transportation by railroads, by navigable streams; with all this capital invested in manufacturing implements; with all facilities to reach markets, both domestic and foreign, for all the manufacturing implements and articles of all characters; why the reason and necessity for giving extra protection in favor of the manufacturing monopolies? It is an imposition on the toiling millions engaged in labor of all kinds. It is the irrepressible conflict arising not so much between labor and capital as between the protection extended by law to capital against labor. This, again, is class legislation, against the genius of our Government, for when the foreign merchants bring imports to the United States of all grades they must buy them at the manufacturer's price at home, and when they sell them here they must increase the price to equal the full tariff duties put upon them in our ports before they can afford to place them on the market. So the merchant who buys them here gives that much more for them, and those who buy them from the merchant, the consumer, for instance, must pay the merchant that much more, together with the taxes he has to pay and his percentage on them.

Now our manufacturing establishments, with their present mammoth strength and capital, ought certainly be able to manufacture as cheaply as foreign nations. This being true, if they should sell their manufactured articles as high here in our markets as those manufactured by foreign nations are sold here, they would get the full benefit of the difference between the price of the articles sold in foreign nations to be shipped here and the price given for them here when shipped. Who has to pay this difference? It is the agricultural, mechanical, laboring, and consuming classes of the United States. So this is discriminating against one class in favor of another. This is but another means of consolidating power in moneyed monopolies and extracting the substance from the people. Now combine the great banking powers, the great bonded powers, the great railroad powers, the great manufacturing powers, with their great capital as they exist in corporate bodies, the great telegraphic powers under their control. The location of all these corporations in cities, towns and villages, with communication quick and easily obtained, from all parts of the United States, with their influence and powers over legislation, and then give them the advantage of the resistless power of the law by discriminating in their favor, how long will it be till the toiling millions of all classes and grades, the mass of the people, the workers, the toilers and producers, will be reduced to hopeless serfdom, mere hewers of wood and drawers of water for their monopolized masters. The nature of the government is perverted, the sovereignty which rests in the people is stolen from them and vested in a favored few. It is not my purpose to array one class against another, all classes should have the same protection by law, labor and capital alike.

The whole spirit of our Government is equality, (politically.) Whenever a law becomes destructive of this end it is destructive of liberty. Corporations are anti-republican; they are the creation of petty governments and monopolies within general government. Every one that is created is vested with rights delegated to it by the general government of so much of its own sovereignty. When they become numerous, by a unity of power they may become stronger

than the government itself, and bring their creator under their control. Take, for instance, the twenty-two hundred banking corporations scattered over the United States, with the entire control of the currency in their power, which they can contract or expand at their pleasure. The nation could not even go to war, it matters not how just the cause or great the provocation, against their will. We are compelled to rely on them as England is compelled to rely upon the Rothschilds to borrow money before a war could be engaged in. The currency is the right arm of the Government; deprive it of this and it becomes crippled in its most vital limb. Now the bonds and national banks are twin brothers, financial Siamese twins, inseparably connected, and must live and die together. Take next the great number of manufacturing corporations depending upon capital, depending on the financial blood of banks and bonds, and you have another mighty power of the nation paralyzed for war, which cannot be carried on without manufactured implements in the form of guns and war machinery. Take next our commercial resources, in the forms of our great railroad corporations and telegraph lines, and you have among the strongest elements and attributes of government in the hands of monopolies—an irresistible force.

Consolidate the powers of all the mighty corporations and monopolies we have mentioned, place them or allow them to place themselves beyond the control of the Government, and how long would it be with their united influence and power until the legislative, executive, and judicial departments would become subject to their will and dictation? Hence wisdom dictates that the Government should always keep in its own hands the power and control over its own currency, its commerce, manufacturing, and all corporations, to keep them at all times within the letter of their legal existence. If there be any class that deserves the sympathy and the constant and vigilant watchfulness of Congress and other legislative bodies it should be the agricultural, mechanical, mining, and laboring classes of all grades, as they are following pursuits that scatter them sparsely over the land; whose toil gives vitality to the nation, who are the bone and sinew of the country. Remote from political centers, from telegraphic lines, from current information, from the daily press, absorbed in their labors, engaged in the highest duties of good citizens, toil in producing, not consuming, relying on the good faith of representatives that their interests shall not be regarded with unconcern or suffer through unjust legislation, they perform the duties of American citizens, and appoint no lobbyists to lurk around legislative halls to solicit laws and special privileges in their favor.

Now the telegraphic lines run along the railroads, the railroads connect the villages, towns, and cities of the United States; the manufacturing establishments are generally in cities and towns and on the railroad lines. So with the banks and bondholders; they have easy, quick, and cheap communication and transportation, and can assemble around legislative and Congressional bodies from every city, town, and village in the land to work, plead, to scheme and manipulate legislation, and urge laws for their own benefit and interest. In other words, the latter class have counsel, able and numerous, to plead for them in their behalf, while the poor toiling millions have none, but must rely alone upon the purity, integrity, and honesty of their representative. Hence it is easy to see, independent of any attempt at corruption, why legislation is more apt to favor these great corporations and monopolies with laws beneficial to their interests than to the farming and other laboring classes of the United States. The corporations are not to blame, unless unfair means are used or corruption resorted to to accumulate money. But the legislative body is that which makes the law that gives them the advantage. The legislative body should see to it that each and every class has the same and equal protection in order that our Republic may be preserved and liberty protected, and that one class shall not revel in luxury while the other is chained hand and foot in slavery and servitude.

But the great question arises, where and what is the remedy for the evils here presented? In the first place we have had too much legislation. In the second, it has been class legislation to a great extent. In the third, it has moved too much in arbitrary channels. In the fourth, it has been moved by sectional motives. In the fifth place the tendency has been to array one class against the other. My first remedy would be to change the streams of legislation so as to produce equality. How is this to be done? First, you have about twenty-two hundred banking corporations knocking at the doors of Congress to recharter them for a period of twenty or thirty years, as the case may be, and leaving a law in existence which will permit the chartering of as many more if desired, asking to allow the control of the currency to be continued in corporate bodies. I would favor the repeal of the law allowing the charter of national banks, refuse to re-enact them, and pass a law winding up national banks as soon as their charters expired, taking from them the power and control of the currency, placing it back in Congress, where the Constitution fixes it. The Constitution creates but one legislative body and vests in that body the sole and exclusive legislative power. There is no clause in the Constitution that gives Congress the power to delegate legislative power to any other body. It alone can exercise such power. If Congress has the power to give or delegate to banking corporations power and control over the currency to the exclusion of itself, by parity of reasoning could they not delegate and give to rail-

road corporations the power and control over commerce, to manufacturing corporations the power and control over manufacturing? So with all corporations created by act of Congress.

COINS AND THEIR WEIGHT.

The following is a table of coins and their weight and alloy as now made at the Mint:

Denomination.	Weight of single piece.	Fines.	Proportionate alloy.	Deviation allowed by law.
	Grains.			Gr.
Gold:				
Double eagle.....	516	900	900 parts gold, 100 parts copper...	
Eagle.....	258	900	900 parts gold, 100 parts copper...	
Half eagle.....	129	900	900 parts gold, 100 parts copper...	
Third eagle.....	77.4	900	900 parts gold, 100 parts copper...	
Quarter eagle.....	64.5	900	900 parts gold, 100 parts copper...	
Dollar.....	25.8	900	900 parts gold, 100 parts copper...	
Silver:				
Trade-dollar.....	420	900	900 parts silver, 100 parts copper...	
Half dollar.....	192	900	900 parts silver, 100 parts copper...	
Quarter dollar.....	96.45	900	900 parts silver, 100 parts copper...	
Twenty cents.....	77.16	900	900 parts silver, 100 parts copper...	
Dime.....	38.58	900	900 parts silver, 100 parts copper...	
Nickel:				
Five cents.....	77.16		25 parts nickel, 75 parts copper...	
Three cents.....	32		25 parts nickel, 75 parts copper...	
Bronze:				
One cent.....	48		95 parts copper, 5 tin and zinc...	

No eagles were coined from 1805 to 1837, inclusive, no half eagles in 1816 or 1817, no quarter eagles before 1796 nor in 1800 or 1801, nor from 1809 to 1820, or in 1822, 1823, 1828 or 1841; no dollars from 1806 to 1838, except 1,000 in 1836; no half dollars from 1797 to 1800, nor in 1815; no quarters before 1796, none from 1798 to 1803, none from 1808 to 1814, and none in 1817, 1824, 1826, 1829, and 1830; no dimes before 1796, none in 1799, 1806, 1808, 1812, and 1813, 1815 to 1819, none in 1824, 1828, and 1830; no half dimes in 1798, 1799, 1804, 1806 to 1828; no cents in 1815, a few specimens in 1823; no half cents in 1798, 1801, 1812 to 1824, 1827 to 1830, 1834, 1836, and 1840. A few half cents were struck every year from 1840 to 1857. First three-dollar pieces in 1854. The coinage of the silver dollar of 412½ grains, the five and three cent silver pieces and bronze two-cent pieces was discontinued under the coinage act of 1873, which went in effect on the 1st of April of that year. Pure silver is worth \$1.30 an ounce, troy. Pure gold is worth \$20.67 an ounce, or a fraction over fifteen times as much as silver. The pure gold is always a bright straw color; the different grades of color seen in jewelry, &c., are caused by different alloys. Half cents have not been coined since 1857. All of the base coins for the country are coined in Philadelphia. It is capable of making enough coin to supply the wants of the nation and of the world. The coinage of the Mint up to June 30, 1876, amounted to \$1,132,226,390. This includes gold, silver, nickel, and copper. The mints at Carson and San Francisco coin gold and silver only. The mint at Denver does not make coin; its operations are confined to assaying and refining. (See the Foot-prints of Time, pages 280 and 281.) Here it is seen our money from the origin of our Government to the present has never been pure gold or silver coin. But an alloy with other metals of the \$1,132,226,390 only \$1,000,000,000 was pure gold and silver, while \$113,226,390 was copper, zinc, tin, and nickel. Then if under our Constitution Congress could make nothing money but gold and silver coin, we have never had a constitutional dollar since the organization of our Government, and every court, Congressman, and officer of our Government has labored under a grievous error. If Congress has the power to demonetize silver, they equally have the power to demonetize gold. Hence we as a nation would have no money. If silver and gold are constitutional money, Congress could neither make them nor demonetize them, because they would be money by the Constitution and not by an act of Congress. Hence the clause in the Constitution giving Congress the power to coin money, regulate the value thereof, and of foreign coin would be nugatory. The Constitution never mentions gold or silver, except in its prohibitions upon States in section 10. It declares no State shall make anything but gold and silver coin a tender in payment of debts. It nowhere mentions copper, zinc, tin, nickel, or any other metal. It nowhere mentions what shall be a dollar, how many grains of anything or what shall be the standard of weights and measures, but vests the power in Congress to coin money, regulate the value thereof and of foreign coin, and fix the standard of weights and measures. So it could not be known what was a dollar or any part thereof, except by an act of Congress; how many grains of silver were in a silver dollar, or gold were in a gold dollar, or even what was a dollar in gold, silver, or anything else. So it can be clearly seen that the plenary power over the creation of money, its value, the fixing of the standard of weights and measures, is vested in Congress, is a legislative power, and cannot be delegated to corporations; as Congress alone can exercise legislative power under our Constitution.

THE POWER OF CONGRESS TO CREATE CORPORATIONS.

There is no express clause in the Constitution of the United States

giving Congress the power to create any corporation, except, probably, in the seventeenth subsection under the eighth section, which reads as follows:

Congress shall have the power to exercise exclusive legislation in all cases whatsoever over such district (not exceeding ten miles square) as may by cession of particular States and the acceptance of Congress become the seat of government of the United States, and to exercise like authority over all places purchased by the consent of the Legislature of the State in which the same shall be for the erection of forts, magazines, arsenals, dock-yards, and other needful buildings;

And the eighteenth, as follows:

To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or office thereof.

This only gives Congress the exclusive legislative power over such districts, territories, forts, magazines, arsenals, dock-yards, and buildings as belong to the United States, and none other. If Congress has any power to create any corporation other than as above set out, it must be an implied or incidental power.

It is true the Supreme Court of the United States has declared that a United States bank is constitutional, but that was upon the ground that money and its representative was an attribute of sovereignty necessary for the preservation and defense of the nation; but this does not give Congress the general power to create corporations. If they have such power under the Constitution, what would be its effect? Why Congress would create railroad corporations all over the United States; turnpike corporations likewise; school and church corporations; also, plank-road corporations, manufacturing corporations, and, in a word, corporations of all characters. If, therefore, Congress could transfer all the railroad corporations, manufacturing corporations, &c., to the United States, pray tell me what powers would be left to the States. They would be but shadows without substance, frames without vitality, for they would have no control over railroads, turnpikes, schools, churches, charitable institutions, or benevolent societies. The States would be but powerless subjects. If Congress has the power to create corporations, it certainly cannot exist only where it is absolutely necessary to carry into effect an express power, except where they have absolute control over the territory.

The first clause of the eighth section of the first article of the Constitution declares that Congress shall have the power to lay and collect taxes, duties, imposts, and excises; to pay the public debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States. This clause certainly does not give Congress two separate and distinct powers, but only one power, and that for certain purposes, to wit, to lay and collect taxes, duties, imposts, and excises in order to and for the purpose of paying the debts, providing for the common defense and general welfare of the United States. If Congress could lay and collect taxes, duties, imposts, and excises for any purpose they saw proper, this would give them absolute power. If they could pay the debts, provide for the common defense and general welfare in any way they saw proper, this again would give them absolute power; hence there would be no necessity for conferring any further power upon Congress, as they already would be absolute masters of all.

Now, if Congress can create a corporation at all, it can only be where it is absolutely essential and necessary for the defense and protection of the General Government, except in the District of Columbia, Territories, and places under their control absolutely, and the exercise of and carrying into effect the powers granted in the Constitution. It was proposed in the convention that framed the Constitution to give a general power to Congress "to grant charters of incorporation" in cases where the public good may require them, and the authority of a single State may be incompetent, and to grant letters of incorporation for canals, &c. But these propositions were voted down. (See Journal of convention, page 260; also page 376, Lloyd's Debates, 257.)

Therefore, it is very clear it was not the intention of the framers of our Constitution to give Congress any general power to create corporations nor to give them any express power to create corporations of any character whatsoever. But if they should have any power over them at all, it should only exist by implication and when it was absolutely necessary for the preservation and defense of the Government itself, except in cases where the Government had absolute control and legislative power over districts, Territories, forts, magazines, dock-yards, and other needful buildings. So it is to be seen by the wisdom of the framers of our Constitution the powers of Congress over corporations was intended to be limited as above set forth.

NATIONAL BANKS.

Next, these banks are very expensive to the people. The law of their creation was passed February 25, 1863, but they had no circulation in that year. Their circulation was—

In 1864.....	\$31,235,270	In 1873.....	\$347,267,061
In 1865.....	146,137,800	In 1874.....	351,981,032
In 1866.....	281,070,908	In 1875.....	354,408,008
In 1867.....	290,625,379	In 1876.....	332,998,306
In 1868.....	299,762,855	In 1877.....	317,048,872
In 1869.....	299,929,625	In 1878.....	324,514,284
In 1870.....	299,766,984	In 1879.....	329,691,697
In 1871.....	318,261,211	In 1880.....	343,834,107
In 1872.....	337,664,795		

So the average circulation for each of the above years is over \$300,000,000, and would require \$330,000,000 of bonds to issue a circulation of \$300,000,000. These bonds are locked up in the Treasury. Interest on them at 6 per cent. per annum would be \$19,800,000; for sixteen years at simple interest it would be \$316,800,000. All the interest paid on bonds by the Government since 1862 has been paid in gold. Take the statement of the Secretary of the Treasury, January 1, 1879, showing the premium on gold each year from 1863 to 1880, which is as follows for \$1 in gold in greenbacks:

1864.....	\$1 85	1872.....	\$1 11
1865.....	1 30	1873.....	1 13
1866.....	1 34	1874.....	1 09
1867.....	1 39	1875.....	1 13
1868.....	1 30	1876.....	1 11
1869.....	1 27	1877.....	1 06
1870.....	1 27	1878.....	1 01
1871.....	1 15	1879.....	1 00

So the average premium for fifteen years would be 29 per cent. and the interest on the premium for one year would be \$5,742,000; for fifteen years, \$86,130,000. Take the \$300,000,000 of national-bank notes resting upon these bonds, put in circulation by the banks at 10 per cent. interest per annum, and it would make \$30,000,000 interest annually; for fifteen years it would be \$450,000,000. Now, take the deposits by individuals in national banks, which average about \$600,000,000 a year, for sixteen years, at an average interest of 8 per cent. in the different States, and in sixteen years the interest would be \$768,000,000. Bonds were purchased in 1864, 1865, 1866, 1867, and 1868 to establish national banks with legal-tender notes and not coin, at a discount on an average of 60 per cent., which, on \$330,000,000, amounts to \$198,000,000 clear gain; this, deducted from \$330,000,000, leaves \$132,000,000; all that the bonds cost the bankers in coin. So add all of the foregoing gains and profits together and there has been floated into the bosom of these great monopolies \$1,848,930,000 by operation of law, on a bonus of only \$132,000,000 paid out by them within a period of only sixteen years, and they are still the owners of the \$132,000,000, while the same amount invested in land has not yielded 2 per cent. So, take \$330,000,000 capital invested in land at 2 per cent. per annum, and the amount is \$6,600,000 a year; for sixteen years it would be \$105,600,000 resting upon the full capital of \$330,000,000, making a difference of gain in favor of the banks of \$1,743,330,000; about 18 to 1 or 36 to 1 on the capital actually invested.

There are many other gains and profits of said banks that I have not time here to mention. But they would at least equal the expenses, taxes, and burdens upon said banks. In 1813 Thomas Jefferson declared "bank notes must be suppressed and the circulation restored to the nation to whom it belongs." President Madison in his message of December 3, 1816, said:

The local accumulations of the revenue have already enabled the Treasury to meet the public engagements in the local currency of most of the States, and it is expected that the same cause will produce the same effect throughout the Union. But for the interests of the community at large, as well as for the purpose of the Treasury, it is essential that the nation should possess a currency of equal value, credit, and use wherever it may circulate. The Constitution has intrusted Congress exclusively with the power of creating and regulating a currency of that description.

John C. Calhoun said:

I now undertake to affirm positively, and without the least fear that I can be answered, what heretofore I have but suggested, that a paper issue by Government, with the simple promise to receive in all dues, leaving its creditors to take it or gold or silver at their option, would, to the extent to which it would circulate, form a perfect paper circulation which could not be abused by the Government, that would be as steady and uniform in value as the metals themselves. I shall not enter into the discussion now, but at a suitable occasion I shall be able to make good every word that I have uttered. I will be able to do more; to prove that it is within the constitutional power of Congress to use such paper in the management of its finances according to the most rigid rule of construing the Constitution, and that those at least who think that Congress can authorize the notes of private corporations to be received in the public dues are estopped from denying its right to receive its own paper.

Also from Mr. Benton:

The Government ought not to delegate this power if it could. It was too great a power to be trusted to any banking company whatever, or to any authority but to the highest and most responsible which was known to our form of government. The Government itself ceases to be independent, it ceases to be safe, when the national currency is at the will of a company. The Government can undertake no greater enterprise, neither of war nor peace, without the consent and co-operation of that company; it cannot count its revenues for six months ahead without referring to the action of that company, its friendship or its enmity, its concurrence or its opposition, to see how far that company will permit money to be scarce or to be plentiful, how far it will let the money system go on regularly or throw it into disorder, how far it will suit the interest or policy of that company to create a tempest or suffer a calm in the moneyed ocean. The people are not safe when such a company has such a power. The temptation is too great, the opportunity too easy, to put up and put down prices, to make and to break fortunes, to bring the whole community upon its knees to the Neptunes who preside over the flux and reflux of paper. All property is at their mercy.

Also from General Jackson:

I submit to the wisdom of the Legislature whether a national one, [currency], founded upon the credit of the Government and its resources, might not be devised which would obviate all constitutional difficulties and at the same time secure all advantages to the Government and the country that were expected to result from the present bank.

Section 5182 of the Revised Statutes of the United States provides that Treasury notes (or greenbacks)—

Shall be received at par in all parts of the United States in payment of taxes, excise, public lands, and all other dues to the United States, except duties on im-

ports; and also for all salaries and other debts and demands owing by the United States to individuals, corporations, and associations within the United States, except interest on the public debt, and in redemption of the national currency.

The Supreme Court of the United States, in the case of *Knox vs. Lee*, (12 Wallace, 457,) held that the above statute was constitutional; that Congress had power to issue Treasury notes and make them a legal tender for the payment of all debts and dues, public and private. Also, 12 Wallace, 687; 13 Wallace, 604; 14 Wallace, 297; 15 Wallace, 195 and 639. From fifteen to twenty State supreme courts have held the same doctrine. I could quote further, but deem it useless.

It is argued that national banks under our present banking law last for twenty years from the time the company organizes and receives its charter, and not from the time the law went into effect. If this be true then the national-bank system is perpetual, the Government has lost control forever of the currency of the nation, and the whole power of Congress over the same is irrevocably delegated to these corporations. Hence we have upon us perpetual bonds, perpetual banks, and perpetual bank currency, all of which are perpetuities and contrary to the nature, spirit, and genius of our Government. This would be making these corporations masters and the Government their servant. There is no law that Congress has the power constitutionally to pass that they have not the power to repeal. If, therefore, they have the power to pass a law creating banks, they equally have the power to repeal that law; otherwise the creature would be greater than the creator. The United States Bank and branches thereof, organized and chartered under the act of 1791, expired in 1811, regardless of the time when they went into operation; and that law permitted banks to be chartered for twenty years.

No one contended after 1811 the banks chartered under the law of 1791 could have any further existence or do any further business as banks. But the power of said banks ceased twenty years after the law went into effect and not twenty years after the banks were organized. From 1811 to 1816 there was no United States bank. In 1816 Congress again passed an act allowing a United States bank and branches thereof to be chartered for a period of twenty years. In 1836 these banks expired regardless of the time when they were organized and chartered. The construction placed upon the law by all jurists and statesmen was that the banks expired under said law twenty years from the time the law took effect. From 1836 to 1864 no national banks existed, there being no new law under which they could be chartered. February 25, 1863, the present banking law was passed allowing national banks to be chartered for twenty years. Under section 5136 of said law the first power conferred upon the banks is to adopt and use a corporate seal. Second power, to have succession for the period of twenty years from its organization, unless it is sooner dissolved according to the provision of its articles of association, or by the acts of its shareholders owning two-thirds of its stock, or unless its franchise becomes forfeited by some violation of law. It certainly was not the intention of the framers of this law that banks should organize at any time after the passage of this law and have twenty years' existence from the time they organized. For if that be true they could organize and run for nineteen years, wind up, form new associations, assume new names and new corporate seals, and run for nineteen years more, and so on *ad infinitum*.

Nor do I believe it was the intention that said law should be irrevocable. If Congress did mean in said law the opposite of the last two above propositions, this would be giving them the power to transfer the sovereignty of the nation to corporations, sell the people into slavery, and create perpetuities, extracting the sovereignty from the bosom of the people and lodging it in that of banking corporations. Is it possible such a construction as this should be maintained and fifty millions of people shall be brought to their knees to pray to the Neptunes who preside over the flux and reflux of paper currency; that forty billions of property shall be at their mercy; that they, like the ebbing and flowing of the sea, can expand and contract the currency every twenty-four hours; that the scepter be placed in their hands and they wield it over the people with the iron rule of the Czar of Russia? God forbid that such shall ever be over this people!

THE DANGER OF MONEYED CORPORATIONS TO LIBERTY.

The bonds now outstanding against the United States is about \$2,000,000,000, most of them now made payable in gold, and all the interest on them payable semi-annually in gold. The twenty-two hundred banking associations scattered all over the United States control the whole currency of the United States, and rest alone upon bonds. The bondholders and bankers combine their influence and are a unit in prejudicing the community against silver dollars, silver certificates, and Treasury notes, to put the whole power over money in the palm of their hands. The community would be better without bonds or banks. Can it not be safely asserted that a United States bank of issue is a financial evil and hostile to the country's best interests? Soulless corporations, having the right, merely for the furtherance of their own interest, either to inflate or contract the property of every individual of the land without their consent, is not this a power too great to grant to a corporation? It is certainly too great to confer on individuals.

Gold is the money of the rich, the bankers and bondholders, while silver, Treasury notes, and silver certificates are the money of the people, the poor, the toiling classes. The people are wedded to a paper currency for convenience sake; Treasury notes and silver certifi-

icates are the cheapest and best. The former has the faith and all of the revenue at its back; the latter has a silver dollar for dollar. This renders them safe and sound. Certainly the revenues of the whole Government, based upon the wealth of the United States, is greater than that of any bank corporation. The catchword which is trumpeted throughout the country and used to prejudice silver dollars or Treasury notes is unworthy of men having even the first rudiments of financial knowledge. Give us a silver dollar and a Treasury-note dollar, worth each a gold dollar, and we have a trinity in our currency protecting equally the rich and the poor. Stop one hundred men as they pass by your door, and ask them to show their pocket-books, and silver or Treasury notes, in a greater or less quantity, would be found in all, while it is doubtful whether one would have a gold dollar.

The rich of the world are wedded to gold, the poor to silver and paper money. It is to the interest of the rich and moneyed kings to demonetize silver and Treasury notes and make gold the sole currency, because they own the gold. Hence the reason of the conference between the moneyed powers of the United States, England, France, and Germany, that brought about the act demonetizing silver in 1872, which was repealed in 1878. It is well demonstrated and sufficiently proved that two things are lodged in the people's hearts: first, they will not have silver demonetized; second, they will have a paper circulating medium. Money is the great lever and moving power of all nations in war and in peace. And when the control over it is vested in corporations, they can wield the nation with as much power as the Czar of Russia upon the throne with the scepter in his hand. The nation must get upon its knees and pray to these monsters for deliverance. They control the Army in war, the ballot-box, the legislative halls, the Executive Departments, and judicial forums in peace. They chain the people hand and foot.

The attempt of the conference of moneyed kings to make gold the only money of the world was but a combination of moneyed capital against labor to bring about an irrepressible conflict, to absorb the liberty of the people, to stab to the heart this Republic and spill its life-blood upon its own ruin; it was the bankers and bondholders of this Government entering into entangling alliances with the crown heads of Europe to bring the moneyed powers of the world to bear upon the poorer and toiling millions that they might be reduced to serfdom and slavery, and that a king be enthroned in our national capital with the crown upon his head and the scepter in his hand; that the bondholders and bankers be the lords, and our once proud and boasted liberty be entombed. I can now see the cloud of death upon liberty, and fully realize the warning words of Washington—the first in war, the first in peace, and the first in the hearts of his countrymen—in his Farewell Address: "I conjure you, my countrymen, to beware of the insidious wiles of a foreign influence."

O Liberty, thou goddess heavenly bright,
Profusion of bliss and pregnant with delight;
Eternal pleasures in thy presence reign,
And smiling plenty leads thy wanton train;
Eas'd of her load, subjection grows more light,
And poverty looks cheerful in thy sight;
Thou mak'st the gloomy face of nature gay,
Giv'st beauty to the sun and pleasure to the day.

Tariff and Tax Commission.

SPEECH

OF

HON. JOHN G. CARLISLE,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

March 28 and 29, 1882.

The House, being in Committee of the Whole House on the state of the Union, having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

Mr. CARLISLE said:

Mr. CHAIRMAN: As the gentleman from Iowa [Mr. KASSON] has suggested, the general subject presented for consideration by this bill is an old one, and no man, however diligently he may have studied it, can hope to say anything very new in relation to it. Within three days after the organization of the First Congress under the Constitution the policy of laying and collecting duties on imported goods and the principles by which the proposed legislation upon that subject should be governed were presented for the consideration of that body, and from that day to this, with occasional intermissions, the discussion upon these questions has been going on among the people and their representatives. Our volumes of debates are full of arguments and our statute-books are full of laws upon this subject, some of which have been standing for many years, and yet I venture to think that gentlemen on the other side are somewhat premature in con-

gratulating themselves upon the present situation as a final settlement of the policy of the Government.

Sir, no settlement can or ought to be final that is not just to the great body of the people, to the workers and consumers in every other department of industry as well as to those who are engaged exclusively in mechanical and manufacturing pursuits. There is a general, I might almost say a universal, conviction that the existing system is not a just and fair one, that it does not distribute its burdens and benefits equally among all the people, or all parts of the country, and that after a trial of nearly twenty years, partly in peace and partly in war, partly in a time of great prosperity and partly in a time of great depression, it has signally failed, under all circumstances, to yield its promised results, and that the time has now come when it ought to be thoroughly revised, if not totally repudiated.

Some oppose it on account of the fundamental principles upon which it is based, and others only on account of its methods and details. I oppose it on both grounds, and as the whole subject is necessarily involved in the consideration of this bill, I shall avail myself of this opportunity to state some of the reasons for my opposition; and in doing so I shall not attempt to discuss the merits of the particular plan of revision now proposed, except in a very general way.

My objections to the bill do not require a discussion of its provisions in detail, for while there are many reasons why it should not become a law, the great and controlling reason with me is that in my judgment it is the duty of Congress, in the discharge of its constitutional obligations, and in obedience to the demands of the country, to proceed immediately to revise and modify the existing tariff in the ordinary way. While the intelligent representatives of every industry in the country are almost unanimous in their complaints against the unjust and incongruous provisions of the present system, and many of them are demanding immediate relief from its hardships, it is no time to resort to measures which, however they may be intended, can produce nothing but delay and prolonged agitation to the great injury of every interest involved.

This is not a bill to facilitate the revision of the tariff. It is a bill to pay out of the public Treasury about \$200 per day for a period of six or seven months, to compensate and defray the traveling and other expenses of a commission to perform duties which we are sent here to perform, and which the people are paying us to perform. It is a bill to create unnecessary offices and to incur unnecessary expenses; and, worse than that, it is a bill to postpone a revision and to take the question, for a time at least, away from the forum to which the Constitution has committed it, and send it to an irresponsible roving commission whose report cannot possibly be considered and disposed of during the existence of this Congress.

Mr. KASSON. Will it interrupt the gentleman if I ask him a question?

Mr. CARLISLE. Not at all.

Mr. KASSON. I want to ask my friend and colleague upon the committee if this revision has been a duty demanded of Congress, and can be well done by the Committee on Ways and Means, why has it not been done by them in the last three Congresses, when men of the gentleman's views have been in power here?

Mr. CARLISLE. I will state in reply to the gentleman a fact very well known to him and to the whole country, that there never has been a time since this House came under the control of the Democratic party when there has not been a very large majority on this side of the House in favor of revising the tariff system; and the efforts in that direction have been defeated in every instance by an almost unanimous vote on the other side of the House, acting in conjunction with a small minority on this side. The records of Congress bear me out in this assertion.

Mr. Chairman, if this measure shall be passed it requires no gift of prophecy to foresee that there will be no revision of the tariff or any relief from its admitted hardships in particular instances for the next two or three years. All legislation must be suspended, and all consideration of the subject must be postponed until these executive appointees have informed the legislative department what its duties are, and then we are to be graciously permitted to resume our constitutional authority to determine how our own constituents shall be taxed.

What is this wandering commission to do? Is it to assume the right to fix and determine the policy of the Government with respect to the amount of revenue it will raise by the imposition of duties on imports, a question which necessarily involves the whole financial policy of the country? It is perfectly evident that it cannot possibly propose a scheme or plan for the revision of the tariff without first determining how much money ought to be raised; and it is equally evident that it cannot even approach the consideration of that question until it has determined when and how the public debt shall be paid, what the ordinary expenditures shall be, what shall be appropriated for pensions, for public buildings, for the improvement of rivers and harbors, and, in fact, occupied the whole ground embraced within the scope of Congressional power over these great subjects. In view of the magnitude of the interests involved in the determination of the questions which are inseparably connected with the revision of our customs-revenue system, and especially in view of the favorable circumstances under which we can now enter upon the consideration of the subject, it is not extrava-

agent or intemperate to say that the surrender of our control over it, even temporarily, would be an inexcusable dereliction of duty.

But it may be said, and has been said in substance by the gentleman from Iowa, that the proposed commission can collect evidence in relation to the condition and necessities of the various industries of the country, and without undertaking to decide what amount of revenue shall be raised, or what particular rates of duties shall be imposed, can determine what principles shall or ought to govern us in our legislation upon the subject; that is, whether we shall impose taxes for the purpose of raising revenue for the Government or simply for the purpose of increasing the profits of capital engaged in certain industries, or for both of these purposes. Here again the commission would be treading upon ground which belongs exclusively to Congress. The power to tax the people is the highest prerogative of sovereignty, and the right to determine upon what principles and for what purposes taxes shall be laid and collected—if these be open questions under the Constitution—is one which we can neither surrender nor delegate without virtually yielding the principal power itself. I do not assume that the action of the commission would absolutely bind Congress or actually deprive it of any power it now possesses over these subjects, but I do assume, what every gentleman here very well knows, that its report is expected to have, in fact, a controlling influence over our deliberations when we come finally to make a revision of the tariff. If this is not the intention and expectation, then the whole scheme is utterly devoid of any intelligent purpose except mere delay.

There is but one really substantial ground upon which this measure, or any measure of a similar character, can be justified, and that is the assumed incapacity of the majority in Congress to deal with the subject. After proclaiming everywhere that it carried the Presidential election in 1880, and succeeded to power in this House, by reason of its superior capacity to deal with this question, is the majority here ready, as soon as it resumes control over all the departments of the Government, to confess openly and publicly that it is wholly incapable of perfecting such an ordinary act of legislation as the revision of the tariff? Disguise it as you may, gentlemen, that is what this bill means, and it will be so understood by the country. It is a confession, in the face of the constituency which sent you here, that you are not competent to perform a part of the duties which the Constitution of the country and the necessities of the situation impose upon you.

I believe that this Congress is entirely competent to perform this duty, and I shall not abandon that opinion until a majority of its members have deliberately pronounced their judgment to the contrary. I believe that its committee charged with the consideration of all matters relating to the revenues and finances of the Government can, within a reasonable time, collect all the information necessary to enable this House and the Senate to legislate intelligently and fairly upon this subject, and that we who have been chosen by the people, and who are directly responsible to them, are better qualified than any nine men appointed by the President, and responsible to nobody, to determine what shall be the financial policy of the Government, and upon what principles taxes shall be imposed upon our constituents. This is our right and our duty. It must come to this at last, no matter what any commission may say or do, and I shall beg the indulgence of the committee while I state the reasons why, in my opinion, we ought to commence this work at once and not leave the present law, with all its inequalities and incongruities to harass and oppress the industries of the country two or three years longer.

It would be difficult if not impossible to devise a tariff system more unequal and unjust than the one now existing. It would be a high compliment to the ingenuity of its authors to say that they had purposely made it as bad as it is; but the truth is that it owes much of its iniquity to the fact that since its enactment great changes have taken place in the actual and relative commercial values of the articles affected by it, as well as in the relations which the several articles bear to each other in the various mechanical and manufacturing industries of the country. As it now stands, this tariff either ignores or violates almost every rule that ought to govern in the distribution of the burdens of taxation among the people. By imposing the highest rates of duty upon the lowest grades and cheapest classes of goods, it places the heaviest burdens upon those who are least able to bear them.

Whether the object be revenue alone or protection alone, or revenue and protection combined, and whether the duty is ad valorem or specific or compound, I hold that the only just and equitable rule in the adjustment of duties upon manufactured articles is to regulate the rate according to the value of the article to be taxed; and if there are departures from this rule they should be limited to those cases where, for reasons of public policy, less than the average rates are imposed upon articles of absolute necessity in common use among those who are least able to bear the burdens of taxation. As a general rule the manufactured article of greatest commercial value is the one upon which the largest amount of labor has been expended, and consequently if the object be to protect labor, the rule, as I have stated it, accomplishes that purpose, so far at least as a tax can protect labor.

Time will not permit me to go into an extended examination of

the present tariff law, to show how uniformly and flagrantly this equitable principle of taxation is violated in almost every one of its schedules; but even at the hazard of devoting too much of my hour to a single point, I will call the attention of the committee to some of its inequalities, and it will be seen that in every instance the discrimination is made upon the wrong side; it will be seen that this system, which our friends on the other side tell us has for its principal object the protection of labor, imposes the highest rates on the articles which the laboring people are compelled to buy and use, and the lowest rates on the finer grades of goods, which are purchased and used by people in better pecuniary circumstances.

Let us begin with woolen goods; and for the sake of brevity I will omit the specific rate and give the equivalent ad valorem rate as it is officially reported to us from the Bureau of Statistics for the last fiscal year.

On dress goods, women's and children's wear, worth at the place of production 17.3 cents per square yard, the duty is only a fraction less than 70 per cent., while on the same kind of goods, but of finer quality, and worth \$1.75 per pound, the duty is less than 63½ per cent. On the coarse woolen blankets, such as the people of small means are compelled to use, worth 54 cents per pound, the duty is 90½ per cent., but on the fine blankets, worth \$1.37 per pound, the duty is 71½ per cent. On flannels, worth 44½ cents per pound, the duty is only a fraction less than 103 per cent., while on the finer flannels, worth \$1.64 per pound, the tax is 65½ per cent. On woolen hosiery, worth 55 cents per pound, the law imposes a duty equivalent to 89½ per cent. ad valorem, but if the article is worth \$2.41 per pound the duty is less than 56 per cent.

On all woolen goods not otherwise provided for in the law, costing at the place of production less than 40 cents per pound, the duty is 84½ per cent., but if they cost \$1.47 per pound the duty is 69 per cent. On coarse hats of wool, worth only 65½ cents per pound, the specific duty imposed is equivalent to 96 per cent. ad valorem, but on the finer qualities, costing \$2.15 per pound, the duty is only a little more than 58 per cent. In the schedule relating to cotton goods we find that plain bleached cottons, worth on the average 12.4 cents per square yard at the place of production, are subject to a duty of 44½ per cent., while bleached cottons, worth 14.3 cents per square yard, are taxed only 35 per cent. Printed or colored goods, worth 14½ cents per square yard, are taxed over 88 per cent., but if they are worth over 25 cents per square yard, which includes all of the very finest and very best goods of that character, they are taxed only 35 per cent. On jeans, denims, drillings, &c., bleached and worth 14.3 cents per square yard, the duty is nearly 45½ per cent., but on the same kind of goods not bleached or colored and worth 21.2 cents per square yard, the duty is less than 33 per cent.

If we turn to the schedule relating to the metals we find the same general rule, or rather violation of rule, prevailing. One kind of band, hoop, or scroll iron, worth 2.3 cents per pound, is subject to a duty of 65½ per cent., while another kind, worth exactly the same, is taxed 54½ per cent. Cut tacks, brads, and sprigs, worth 4.2 per thousand, are subject to a duty of 59½ per cent., but if they are worth 17 cents per thousand they are only taxed 17½ per cent. Halter-chains, trace-chains, and fence-chains, articles of necessity and in common use among the farmers of the country, worth 4.3 cents per pound, are taxed 58½ per cent.; but smaller and finer chains, worth nearly 6 cents per pound, are taxed 51 per cent.; while the most highly finished and costly of all, worth 10½ cents per pound, are taxed 35 per cent. Iron wire, worth 3½ cents per pound, is subject to a duty of nearly 71½ per cent., while wire of the same kind, but of a different size, worth \$1.08 per pound, is taxed less than 19 per cent. Bars, &c., of steel, worth 14½ cents per pound at the place of production, are taxed less than 34½ per cent., while railway bars of steel, worth only 1.6 per pound, are taxed over 76½ per cent. Steel wire, worth 3½ cents per pound, is taxed 65½ per cent.; but if it is worth 27.3 cents per pound it is taxed less than 23 per cent.; and the most costly and valuable of all, worth 42 cents per pound, is subject to a duty of a little over 27 per cent. The finest quality of salt imported, worth 3 mills per pound, pays a duty of less than 40 per cent., while the coarse salt in common use for preserving meats, feeding cattle, &c., and worth only 1 mill per pound, is taxed a fraction less than 64½ per cent. The finest and most expensive carpets imported into this country, worth \$2.24 per square yard, are subject to a duty of 50 per cent., while druggets, bookings, &c., worth 40 cents per square yard, are subject to a duty of nearly 96½ per cent., and carpets, worth 68 cents per square yard, pay a fraction less than 76 per cent.

Mr. CANDLER. Will the gentleman allow me to ask him a question?

Mr. CARLISLE. Certainly.

Mr. CANDLER. What is the duty on wool, on the raw material which enters into the manufacture?

Mr. CARLISLE. I am unable at this moment to state the duty on the different classes of wool. The gentleman from Massachusetts is very well aware of the fact that the duty is regulated according to the class of the wool. The gentleman will allow me to say that he seems to misunderstand the purpose of this part of my argument. I am not now making an argument to show that the duties on these goods are too high, although I think they are far higher than they ought to be. But my only purpose at present is to show the unequal

rates of duties on the different classes of these goods, in order to establish my proposition that there is a discrimination against labor and those who are obliged to live on the wages of labor.

Mr. CANDLER. The rate of duty runs from 50 to 90 per cent.

Mr. CARLISLE. I will soon come to consider, in a general way, the effect of the tariff on different articles, and then we will inquire why it is that our friends from Massachusetts are so sensitive upon the subject of the duty on raw material, especially when, according to the gentleman from Iowa, [Mr. KASSON,] a duty on the manufactured article actually reduces its price.

I have stated only a few of the many instances in which the present extraordinary tariff discriminates against labor and against those who are dependent upon the wages of labor for the means of subsistence, and I submit them without comment for the consideration of gentlemen who believe that a revision ought to be postponed. Let them stand if you will, gentlemen, until the tide of public opinion rises so high as to sweep them all away, without discrimination between the good and the evil in the system. Under this tariff the rates of duty run from less than 10 per cent. all the way up to 780 per cent.; from revenue to protection, and from protection to absolute prohibition. Considerably more than two-thirds of our annual importations are subject to these various rates of duty, the average on all dutiable goods being, for the last fiscal year, nearly 43½ per cent.

For what purpose and for whose benefit are these enormous and unequal rates of duty to be perpetuated, even for two or three years longer? I need not enter upon an exposition of the financial condition of the Government to show that there is no longer any public necessity for the large revenues annually collected from the people, because that is generally admitted, and your committees are all at work, some of them endeavoring to devise means to prevent so much money from coming into the Treasury, and others considering various projects which have been referred to them to take as much as possible out of the Treasury.

But it seems that revenue is not the principal object for which taxes are to be imposed upon the people, and many of the gentlemen who advocate this bill are candid enough to tell us so. They tell us that under the constitutional power to "lay and collect duties," &c., it is entirely competent and proper for Congress to lay duties which are not to be collected, but which will be the means of prohibiting, either wholly or partially, the importation of certain articles, and thus prevent the Government from realizing revenue from that source; and this they contend is justifiable upon the ground that it is the duty of the Government to use its taxing power for the purpose of fostering certain kinds of industry. I am one of those who believe that the power of taxation can be legitimately employed only for public purposes, or, in other words, that the object of all taxation should be revenue—revenue only, if you please—but if, with this primary object in view, the taxes or duties can be so adjusted as to aid our industries without imposing any burdens upon the people beyond what otherwise would have been necessary, there is nothing in the policy advocated by those who demand a reform in the tariff to forbid their encouragement or protection to that extent, and I think it can be demonstrated, so far as facts and figures can demonstrate any proposition upon such a subject, that such a policy would afford all the protection that any legitimate and well-conducted industry needs in this country.

Mr. KASSON. Let me ask the gentleman from Kentucky, then, whether he admits the policy of protection is a legitimate one in the adjustment of the tariff?

Mr. CARLISLE. I say that the duty and the power of the Government extend only so far as to impose a tax for the purpose of raising revenue for public purposes. But I hold at the same time that no tax or duty can be possibly imposed without affecting to a greater or less extent some or all of the industries of the country; and for my part I would rather help them than hurt them.

Mr. KASSON. I think the gentleman hardly appreciates my point, which was, whether he admitted the principle of protection as right in the adjustment of the tariff to any extent?

Mr. CARLISLE. If the gentleman means to ask whether I recognize a principle that would impose a duty above the revenue point merely for the purpose of giving what is called protection, my answer is in the negative. If we were called upon now for the first time to declare a principle or inaugurate a policy upon this subject, I should not hesitate to announce my adherence to that creed which demands the largest liberty in trade, that doctrine which opens the channels of commerce in all parts of the world and invites the producer and consumer to meet on equal terms in a free market for the exchange of their commodities, for I sincerely believe that all commercial restrictions are in the end injurious to the interests of the people.

Mr. WHITE. Let me ask my colleague from Kentucky whether he is not aware of the fact that the hemp-growers of the State of Kentucky have asked for protection on their production of hemp, and the short-horn raisers for protection for their short-horns, and our whisky men for protection on their high wines?

Mr. CARLISLE. If I had time to enter into a colloquy with my colleague I would answer his questions cheerfully upon the single condition that he would answer one or two for me, but it is evident that I will not be able to conclude my remarks within the time limited by the rules of the House, and therefore cannot take time to

answer questions unless they are directly in the line of my argument. I believe that prohibitions and embargoes in times of peace, whatever may be their avowed purposes, are inconsistent not only with the first principles of political economy but with the spirit of the age in which we live. The relations of different nations to each other are far different now from what they were a few centuries or even one century ago. The railroad, the telegraph, the steamship, and other improved means of communication and transportation, have narrowed the boundaries of the world, and have almost consolidated all its civilized peoples into one great commercial community. Under these conditions no one nation can long maintain a policy which separates it, even partially, from other nations in matters of trade; or if it does, the resulting injury must inevitably fall most heavily upon its own people. As a general rule people cannot afford to sell where they are not permitted to buy what they need with the proceeds of their sales. To adopt regulations the necessary effect of which is to compel the citizen to sell in one market and buy in another, would impose a great hardship under any circumstances, but it is immeasurably aggravated when he is compelled to sell in a cheap market and buy his necessary supplies in a dear one. This is one of the evils from which the American farmers, and in fact a large part of the American people, are suffering to-day; and it is an evil which this House ought to proceed immediately to correct, so far as it can be immediately corrected without permanent injury to the legitimate interests that have grown up under it.

One of the favorite arguments of those who advocate the present system in this country is, that by building up manufacturing establishments and thus giving employment to larger numbers of laborers a greater demand and better home markets are created for the products of agriculture, and that in this way the farmer is compensated for the temporary increase in the prices of the articles he is compelled to use. This argument is founded on the assumption or admission that it is advantageous to the agriculturists of the country to have a steady and reliable home market in which they can sell their products at remunerative prices. This is undoubtedly true, and therefore if the existing protective system has in fact a tendency to supply the farmer with a convenient home market for a larger proportion of his annual products than was consumed here before that system was inaugurated, then it has, in that respect at least, been beneficial to him. But, on the other hand, if the farmer has been compelled under the protective system to send a larger percentage of his products to a foreign market than he did under the revenue system, then he has not been benefited, but has been injured even according to the arguments of the protectionists themselves. Now, what are the actual facts in relation to this matter? Fortunately we have very full and accurate official statistics showing the production and exportation of our principal agricultural products at different periods in our history, and from them it conclusively appears that under the protective system the proportion of such products forced to seek a foreign market has been very largely increased.

In 1840, when we had a protective tariff, the production of cereals in this country amounted to 615,525,302 bushels, of which there were consumed at home 602,326,353 bushels, and exported 13,199,049 bushels, or 2.1 per cent.

Mr. KASSON. I think the gentleman is mistaken in the statement that we had a protective tariff in 1840.

Mr. KELLEY. The tariff of 1842 was a protective tariff which was substituted for the previous free-trade tariff and which revived the industries of the country.

Mr. CARLISLE. Very well; but, Mr. Chairman—

Mr. KELLEY. The tariff of 1833, if the gentleman will allow me to interrupt him, was undoubtedly protective, but from that time the scale of duties was gradually reduced.

Mr. CARLISLE. What was the amount of the reduction?

Mr. KELLEY. The language of the act was as follows:

From and after the 31st of December, 1833, in all cases where duties are imposed on foreign imports by the act of 14th July, 1832, or by any other act, which shall exceed 20 per cent. on the value thereof, one-tenth part of such excess shall be deducted; from and after the 31st day of December, 1835, 1837, and 1839, respectively, a further deduction of one-tenth of such excess shall be made; and from and after the 31st of December, 1841, a further reduction of one-half of the remainder of such excess; and from and after the 31st of December, 1842, the residue of such excess shall be deducted.

I do not want a free-trade tariff designated as a protective tariff.

Mr. CARLISLE. The average rate of duty in 1840 was over 30 per cent., which I consider protective. In 1870 and 1880 we had a protective tariff. There can be no doubt about that, and I will come to those periods presently. In 1850, after the tariff had been greatly reduced by the act of 1846, the total production was 887,453,967 bushels, of which we consumed at home 851,502,312 bushels and exported 15,951,655 bushels, or only 1.9 per cent. In 1860, when the tariff had been still further reduced by the act of 1857, the production was 1,239,039,945 bushels, of which the home market took 1,216,984,810 bushels, and there were exported 22,955,135 bushels, or 1.8 per cent., showing a decrease with each passing decade. Now, coming to 1870, when we had a high protective tariff, we find that the total production was 1,629,027,600 bushels, of which 1,571,737,179 were consumed at home, and 57,290,521 bushels, or 3½ per cent., were exported and sold in foreign markets. These figures show that from 1850 to 1860 the production of grain increased 45.1 per cent., while the exports

increased only 43.9 per cent., and that under the operation of the high tariff from 1860 to 1870 production increased only 31.4 per cent., while the exports increased 149½ per cent., and they demonstrate the fact that while the increased demands of the home market more than kept pace with the increase of home production during the revenue-tariff period, they fell very far behind during the protective period.

I have not been able to procure complete statistics of the production and exportation of all the cereals for 1880, but in the report on internal commerce for that year there will be found tables showing the production, home consumption, and exportation of wheat and Indian corn, the two great agricultural staples of this country, for a number of years, and from these tables it appears that the percentage of these products which is annually being compelled to go abroad for a market has been rapidly increasing since 1860.

The exports of Indian corn in 1860 amounted to less than one-half of 1 per cent. of the product, but in 1880 they amounted to 6.34 per cent., while the exports of wheat in 1860 amounted to 2.40 per cent., and in 1880 to 34½ per cent. of the entire product.

Mr. KASSON. I would like, if the gentleman would allow me, to ask him in this connection if the proper way to test the consumption is not to make the calculation on a per capita basis and not the amount exported. And also I would ask the gentleman if he has taken into consideration the increased production of our cereals by reason of the development of agricultural machinery in 1860, which developed agriculture in the West enormously and produced the surplus?

Mr. CARLISLE. In response to the gentleman from Iowa, I will state that I am now simply dealing with an argument which asserts that the protective system itself has created a home market for a larger proportion of our agricultural products than existed before; and I am showing by the statistics that in fact a much larger percentage of such products is now compelled to go abroad for a market than in 1850 or 1860, when we had a revenue-tariff system.

Mr. KASSON. But does that meet the argument unless you take notice of the great increase from the source which I have stated and the surplus arising from the introduction of improved machinery, a surplus which could not be consumed at home or disposed of abroad?

Mr. CARLISLE. I am simply discussing, as already stated, the effect of protection upon the home market, and gentlemen must admit that if, for any reason, the facts do not support the proposition they have advanced their plea for the system, so far as it is based on this ground, must be abandoned. I invite the careful attention of gentlemen to these statements. If they are erroneous in any particular the error can be easily exposed, but if they are correct, then a decent respect for the intelligence of the farmers and agricultural laborers in this country demands that they shall no longer be expected to listen with patience to the home-market theory of the protectionists. Why, sir, Old England, situated four thousand miles from the great wheat and corn fields of the West, consumes annually more of their products than New England, manufacturing New England, situated within our own borders.

Our surplus agricultural products, which were forced by the absence of a home demand to find a foreign market, amounted during the last fiscal year to over \$730,000,000, being 82½ per cent. of our total exports, while our manufacturers export less than one-third of 1 per cent. of their product. They have an ample home market for their products at high prices, and too often they have the exclusive and absolute control of it. These agricultural products were necessarily sold in open competition with the products of the poorest paid laborers of Europe and Asia; and yet our farmers are constantly told that they must continue to submit to the exactions of a high protective system as the permanent policy of the Government, in order to enable our manufacturers to compete in the markets here at home with the products of what is called pauper labor in other countries. While the American farmer is sending his surplus products three or four thousand miles to a market, and competing there with the labor of the lately emancipated serfs of Russia, and the half-naked and half-fed swarms of Hindoos in India, whose wages amount only to a few cents per day, gentlemen should not be surprised at his inability to appreciate the wisdom and justice of a system which taxes his clothing, his agricultural implements, his means of transportation and many articles of his food, in order that some other American producer, not more meritorious than he, may be able to conduct his business at a large profit.

Let gentlemen examine all the consular reports and other evidence showing the state of labor in different countries, and they will find that the agricultural laborer in Europe and Asia, with whom our farmers and agricultural laborers are forced to compete, is the worst fed, the worst clothed, and the poorest paid in the world. The wages received by those who are employed in the mechanical and manufacturing industries in the Old World are far higher than the agricultural laborer there can ever hope to earn, and yet we have a system of taxation based upon the theory that it is the duty of the Government to protect one class of our producers against competition with the best paid labor in the world except our own, and to leave another class open to competition with the poorest paid labor in the world. And this is justified mainly upon the ground that the

object is to keep up the wages and elevate the character of American labor. So far as this purpose is honestly entertained, so far as it really constitutes the ground upon which any system or policy is supported, and so far as the system or policy is reasonably calculated to promote such a purpose, it must enlist the warmest sympathies not only of every man who appreciates the hard fortunes of those who are compelled to earn a support for themselves and families by the labor of their hands, but also of every man who desires to preserve and strengthen the foundations upon which our system of popular government rests. Ignorant and ill-paid labor is a blight and a curse in any country. It would be a fatal social and political poison in a country like ours. Sir, those who attempt to arouse the apprehensions or excite the indignation of the American laborer by telling him that there is a purpose upon the part of those who advocate a reform in the tariff to degrade him by reducing his wages, depriving him of employment, or denying him any advantage or privilege which he now enjoys, are either trying to deceive him or are deceived themselves. No man or party could avow such a purpose and stand for a moment against the enlightened public sentiment which everywhere prevails on this subject.

I think it is entirely safe to say that while there is a very general feeling of dissatisfaction with the existing system of unequal and unjust tariff taxation, there is no disposition anywhere to strike a radical, much less a fatal blow, at any of the great mechanical or manufacturing industries of the country; nor is it necessary, in my judgment, to strike such a blow in order to afford a reasonable degree of relief to the people. We cannot, as responsible legislators, close our eyes to the fact that under this system, whether it was originally wise or unwise, large and valuable interests have grown up; that great masses of capital have been withdrawn from other pursuits and embarked in manufacturing enterprises, and that labor, following, as it always does, where capital leads, has been to a large extent diverted from its previous channels, and has permanently identified itself with these various interests. In any revision that may be made proper regard should be had for the welfare of these great interests, and they should be carefully considered, not alone, not as something separate and distinct from the other industries of the country, not as the especial favorites of the Government, having peculiar claims upon its bounty, but in connection with every other legitimate interest in the country, all being recognized and treated as equally entitled to our favorable consideration.

The unskilled and unpretending laborer who guides the plow and gathers the harvest is as much entitled to the protection of the law and to the encouragement of the Government as the scientific artisan who has mastered all the mysteries of his craft. Each one of the busy millions who helps to create and distribute the varied products of this wonderful land of ours has an undoubted right to demand an equal participation in all the advantages conferred by the laws of his country; and I repudiate every definition of American industry or American labor which excludes a single honest and useful occupation. Whoever challenges the right of the humblest citizen, whatever may be his trade or occupation, to an equal participation in the benefits conferred by the Government so long as he bears an equal share of its burdens, denies the equality of man; whoever asserts that one class of men or one species of industry has a right to exact tribute from another for its own benefit, or has superior claims upon the consideration of the Government, asserts a doctrine utterly at war with the first principles of our political system. To call such a doctrine the "American doctrine," and to announce it in high-sounding and patriotic phrase, is simply an attempt to hide its deformity beneath a rhetorical and sentimental garb, and will deceive no one who looks beyond the surface.

While there is no party here that would injure labor or impair the security of capital, there always will be, and in my opinion there always ought to be, a party in this country pledged to the establishment and maintenance of a constitutional and equal system of taxation. Whatever measure of encouragement or protection such a system, honestly and fairly administered, may afford to any industry, agricultural, mechanical, or manufacturing, it will be justly entitled to receive; and whoever properly considers the great natural advantages enjoyed by this country, the variety of its soil and climate, its wonderful capacity for the production of food and raw material, the unparalleled ingenuity, enterprise, and endurance of its people and the favorable geographical position we occupy with respect to the other great manufacturing nations of the earth, will be compelled to admit that a policy which gives to these various industries a fair chance to compete with others on equal terms in all the markets of the world is all that any of them need, and all that they ought to demand. Why, sir, we are three thousand miles from any nation that could possibly become, under any circumstances, a formidable rival in our own home markets; and now, if it is to be confessed that with all the advantages I have indicated, with nearly a hundred years of experience and development, and, as the gentleman from Iowa has stated, with a protective legislative policy during a large part of that time, our manufacturers are still unable to supply our own people with the necessities and comforts of life at as low a price and of as good a quality as they can be procured elsewhere, is it not time to pause and consider whether this protective system is not a failure?

As long ago as 1816, when the tariff act of that year was pending in this House, Mr. Clay, in the course of the discussion, expressed the opinion that in three years articles of necessity could be made as cheap at home as they could be imported, and he advocated the passage of the bill on that ground. I read from the proceedings of the first session of the Fourteenth Congress, page 1272, what he then said on this subject:

Mr. Clay said that the object of protecting manufactures was that we might eventually get articles of necessity made as cheap at home as they could be imported, and thereby to produce an independence of foreign countries. In three years, he said, we could judge of the ability of our establishments to furnish these articles as cheap as they were obtained from abroad, and could then legislate with the lights of experience. He believed that three years would be sufficient to place our manufactures on this desirable footing and others would not hesitate to enter into the business, because they would look to that liberal and enlarged policy which they might anticipate from the Government at a future period.

Sixty-six years have passed since this declaration was made by the great champion of the protective system, and our manufacturing industries have been extended and increased until the variety, character, and value of their products surpass the wildest dreams of the early protectionists; but we still hear the same arguments, the same appeals, and the same predictions that were made at the beginning. The bill which Mr. Clay then advocated became a law, and remained in force, not merely for three years but for eight years, and then the duties were increased. At the expiration of four years more, in 1828, they were increased again, and from that time until the present, with the exception of comparatively a few years, the protective policy, to a greater or less degree, has been the policy of those in control of the Government. The introduction of labor-saving machinery, the increase of the facilities for transportation, the superior training and education of labor itself, and the wonderful progress made by our people in the useful arts and sciences, have all combined to diminish the cost of production very far below what it was sixty years ago; and yet our manufacturers are demanding more protection now than they did then. The home market, too, has grown to such enormous proportions that smaller percentages of profit on the gross value of the product are more remunerative now than larger ones were at any former period of our history. Under these circumstances it seems to me that if the time can ever come when we are to enter upon a course of legislation which will ultimately relieve the unprotected industries from the burdens imposed upon them for the benefit of the protected ones, and test the capacity of our domestic manufacturers to supply the home trade at fair prices, that time has arrived now, and we ought to take advantage of it.

The promise that the protective system would within some reasonable period enable the domestic manufacturers to sell their products to our own people at as low prices as prevail elsewhere has been made so often heretofore, and is likely to be repeated so often hereafter, that it becomes worth while to inquire how far it has had such a tendency in the past, in order that we may form some opinion as to its probable effect in the future. In other words, let us inquire as briefly as possible whether such a system as we now have is beneficial to the great body of the people who are compelled to purchase and use manufactured articles, or only a comparatively small number who have invested their capital in particular enterprises. That the prices of such articles are generally lower now than twenty or thirty years ago is undoubtedly true, but I deny that the protective policy has brought them down. That it has not done so, but that on the contrary it has retarded the process of reduction in this country, is conclusively shown by the fact that the diminution of prices here has not been so great under this system as it has been in other countries, and especially in Great Britain, the country which is constantly held up to us as an example of the evil effects of what is erroneously called free trade. The very object of protection is to increase prices. If it did not have that effect it would be of no possible advantage to the manufacturer, and he would not want it.

We are accustomed to hear some very strange and inconsistent arguments upon this subject from the advocates of the protective policy, arguments which no degree of skill in dialectics can possibly reconcile with each other. We are assured that the inevitable effect of a protective tariff upon an article which is or can be produced at home is to cheapen its price, and at the same time we are assured with equal earnestness that the raw material should be free of duty in order to reduce its cost to the manufacturer and to enable him to use it profitably in his business. In brief, we are told that a duty on the raw material increases its cost to the manufacturer, but that a duty on the manufactured article reduces its cost to the consumer. [Laughter.] When the consumer demands a reduction of duty he is informed that it would not reduce the price to take it off, but when a duty is proposed to be put upon the raw material it is immediately protested against as imposing an unjust charge upon the manufacturer who is compelled to use it.

Mr. KELLEY. Will the gentleman permit me to suggest that it is raw material which cannot be or is not produced in this country to which that argument is applied?

Mr. CARLISLE. I so stated a moment ago.

Mr. KELLEY. The duty on wool as raw material operates to benefit our farmers, and counts in the ad valorem duty on woolen goods.

Mr. CARLISLE. The gentleman admits, then, that the duty on wool increases the price of the article. [Laughter.]

Mr. KELLEY. I think not, sir. I think it has led to so great a production that the price, notwithstanding the duty, is down.

Mr. CARLISLE. Now, Mr. Chairman, I am glad the gentleman from Pennsylvania has introduced the subject of wool and woolen goods. Whenever a proposition is made to reduce the enormous duty on woolen goods, the gentleman from Pennsylvania very well knows—no one knows better—that we are invariably met with the statement that a large part of that duty was imposed to compensate the manufacturer for the high rates on wool, which is his raw material; that is, to compensate him for a duty the effect of which, according to one part of the argument, is to reduce the price of the article he has to buy. [Laughter.]

[Here the hammer fell.]

Mr. KASSON. I hope there may be unanimous consent that the gentleman's time be extended.

The CHAIRMAN. The Chair hears no objection.

Mr. CARLISLE. Now, sir, wool is produced in great abundance in this country, and can be produced to almost any extent that may be required. During the census year 1880 our woolen manufactures consumed 220,244,269 pounds of domestic wool and only 73,324,812 pounds of foreign wool, and more than one-half of the latter was carpet wool, subject to the lowest rates imposed upon any class of the article.

Mr. KELLEY. And another portion being the finest combing wool, subject to the higher rates of duty.

Mr. CARLISLE. Wool is therefore very clearly one of the articles the cost of which would be reduced by the imposition of a duty, if there is anything in the argument made on that subject by the advocates of protection, and yet none can be found who are willing to try the experiment of reducing the duties on the manufactured product and leaving them on the raw material from which it is made.

Mr. KELLEY. And I hold that the price of woolen goods, quality for quality, is greatly reduced in this country; and when I get the floor I shall take the opportunity to speak upon that point.

Mr. CARLISLE. I hope the gentleman will explain it, because I assure him that it needs explanation.

Mr. HERR. Is the gentleman in favor of repealing the tariff on wool?

Mr. CARLISLE. Not entirely; but there should be a reduction. I assert that no manufacturer, no friend of the protective system, can be found, notwithstanding his constant reiteration of the argument that the duty reduces the price, who is willing to take the tariff off the finished product and leave it on the raw material. In other words, there is no gentleman to be found among them who has sufficient confidence in his theory to subject it to a practical test. [Laughter.] Notwithstanding their assertion that the imposition of a duty reduces the cost, they all want free trade in raw material, whether it be produced at home or abroad, and free trade in labor, no matter where it comes from. [Applause.]

An examination of the subject will show that whenever a general and permanent reduction of prices has taken place it has been the result of causes entirely independent of the protective system. I have already indicated some of these causes. Those who attribute every good thing to protection and charge every bad thing to what they denominate free trade appear to have forgotten entirely that improvements in machinery, the multiplication of the means of transportation, the discoveries made in the arts and sciences, and, in short, the general progress of the human race and the natural and necessary increase of the productive forces, have all contributed to augment the annual store of the world's goods and to reduce their prices to the consumer. If the protective system had never been dreamed of the general result would, in my judgment, have been substantially the same, although it may be true that the products of some particular industry at some particular place, remote from the seaboard or the centers of trade, have been ultimately cheapened by that system. But the question we have to consider is whether general justice has been done and the general welfare promoted by the system.

Mr. KELLEY. I dislike to interrupt the gentleman, but he refers to the general progress of the human race in connection with our development, and I should like to ask him whether that progress has disclosed itself under free-trade influence in Ireland, India, or Turkey, as it has in protected America and France?

Mr. CARLISLE. Why not add Germany and Italy?

Mr. KELLEY. Bismarck led Germany into the bogs of free trade and is now leading her out. Therefore I did not include her because she has not got fairly on her feet in her protected industries. I did not include Italy because until quite recently she has made no attempt at protection.

Mr. CARLISLE. The whole purpose of my argument has been to show that the protective system, as such, has not operated to reduce the prices of manufactured articles. It may be true, and it is true, that some countries have made more progress than others; and it may also be true that here and there you will find a country which has made great progress under the protective system, and you will find other countries which have made equally great or greater progress without that system. But the whole purpose of my argument on this

branch of the subject is accomplished when it is shown that the protective system has not reduced the prices of manufactured products.

One of the most highly protected industries in this country is the manufacture of steel rails, and if the system can be beneficial in any case it ought to have exhibited here its very best results. Protected by law against foreign competition by a duty of over 76 per cent., and protected against all domestic competition by numerous patents, the eleven establishments engaged in that business have had a magnificent opportunity to demonstrate their capacity to supply the home demand at prices prevailing elsewhere, and what has been the result? I select this industry for illustration, not because it is less meritorious than others, but because it has been amply protected, and because it is the favorite theme of those who justify the policy under which it has been carried on.

Here is the report on the iron and steel production of the United States for the year 1880, made to the Census Bureau by its special agent, Mr. Swank, and I shall call the attention of the committee to the effect which this high rate of protection has had upon the manufacture and prices of Bessemer steel rails. Mr. Swank is the secretary of the American Iron and Steel Association, and the editor of its organ, the *Bulletin*; and it is not unjust to him to say that his report is doubtless as favorable to their interests as he could honestly make it. From this report it appears that the number of hands employed in the Bessemer and open-hearth steel works during the census year 1880 was 10,835; the wages paid amounted to \$4,930,349; the amount of capital invested, including all the real estate, was \$20,975,999; total cost of material used, \$36,826,928; and the total value of the product was \$55,805,210. Deducting the total cost of labor and materials from the value of the product there is left the sum of \$14,047,933, which is a small fraction less than 67 per cent. on the whole capital invested. It thus appears that while capital retains in its hands, after paying the whole cost of production, nearly 67 per cent., labor received less than 9 per cent. of the value of the product.

Until 1870 the duty on Bessemer steel rails was 45 per cent. ad valorem, but in that year the duty was changed by act of Congress to a specific rate of \$25 per ton; and now let us see what has been the effect as to the reduction of prices. Here is a table showing the prices of steel rails in England, free on board, at the usual ports of shipment, from the year 1864 to the year 1882, and the prices of American steel rails in gold during the same years. From this table it will appear that, prior to the year 1870, the English prices of steel rails were falling at the rate of from \$5 to \$3 per ton per annum, and had reached the rate of \$50.37 per ton in that year. During the next year, after the new duty had taken effect here, the average English price increased and was \$54.99 per ton. During the year 1872 it was \$67.64 per ton, and in 1873 it was \$80.05 per ton. Then the general depression in trade began to affect the prices so that they fell to \$68.05 per ton in 1874, and have continued to fall, with some fluctuations, until they are now, as appears by the last number of the *Bulletin*, \$31.10 per ton. The price of American steel rails in 1870 was \$91.17 per ton, and they went up constantly until 1873, when they reached \$103.91 per ton in gold. During the general depression which prevailed in this country from the fall of 1873 to the close of 1878 they continued to fall here until they reached, at the lowest point, \$42 per ton in gold, but they are now, according to the authority just quoted, \$57 per ton for immediate delivery, being \$25.90 per ton more than the English prices, which is only \$2.10, less than the amount of the duty. It will also appear from this table that the domestic manufacturer of steel rails has at all times added to the price of his product a very large part of the duty imposed upon foreign importations, and in many instances has gone beyond it. So that in fact the effect of this duty has undoubtedly been to prevent the consumers of steel rails in this country from receiving the full benefit of the reduction in prices which has taken place elsewhere.

Mr. KELLEY. Has not the Government received nearly \$20,000,000 on Bessemer rails brought into this country from England?

Mr. CARLISLE. I believe it has during a period of about eighteen years.

Mr. KELLEY. And has not the price of rails steadily diminished? And now let me add another question in this connection: Has not the English market for steel rails, and the demand for these rails which has sprung up in this country, more than duplicated our capacity to produce them? And as the price has fallen there we have extended the works in this country until this year, I believe, as was the case last year, America will produce more Bessemer rails than England.

Mr. CARLISLE. I have already shown the effect of the duty upon the price of rails here, and have quoted authority which will not be disputed, showing that the price of steel rails in England was being reduced year by year at the rate of from \$5 to \$9 per ton previous to 1870, when the new duty was imposed in this country, and that then the prices there and here began to increase and continued to increase until the great depression in the trade, which began in 1873. I cannot attempt to take up the various other highly protected manufactures in detail to show that in all of them our experience as to the effect of the system upon prices has been substantially the same as in the one to which I have called attention.

My friends and colleagues on the Committee on Ways and Means, the gentleman from Illinois [Mr. MORRISON] and the gentleman from Virginia, [Mr. TUCKER,] have both discussed this subject with great ability in speeches made here in 1876 and 1878, in which they supported their arguments by reference to a large number of protected articles, and I refer gentlemen who desire further information on this subject to those speeches. They have never been answered and I think cannot be. Their investigations of the subject demonstrated the fact that as a general rule the domestic manufacturer of protected articles adds nearly the full amount of the duty to the price of his product, and thus compels the consumer to pay a bounty to him instead of a tax to the Government.

But it is sometimes argued that even if it be admitted that the imposition of a high rate of duty increases the price of the domestic product, still it is better to submit to it than to abandon protection, because in that event some other manufacturing country, as England, for instance, will throw large quantities of its goods upon our markets and sell them at extravagantly low prices, until our own establishments are all ruined, and that, when this has been accomplished, prices will be raised even higher than under the protective system. My objection to this argument is that its premises have never been established. It is based entirely upon two assumptions, neither of which has any semblance of fact for its support. In the first place it is assumed that an abandonment or material modification of the protective system, as distinguished from a revenue system, would inevitably result in the destruction of the manufacturing industries in this country; and in the second place it is assumed that there would be no rivalry or competition for our trade; that all the manufacturing nations of the earth, except one, would stand quietly by and permit that one to take exclusive possession and control of the American markets and put prices up at its own will and pleasure. The first of these assumptions will be disposed of, I think, when I come hereafter to consider the questions of labor, interest, and taxation, which are the only elements in the cost of production that can reasonably constitute grounds for the alleged inability of American manufacturers to compete with their foreign rivals. As to the second assumption, that England or some other country would monopolize our trade and control our prices, it may be safely asserted that such a thing never has been done in the markets of any independent country since international commerce existed, and it never can be done while the great highways of the earth and sea are free to all nations.

The markets of a politically dependent country, such as Ireland or India, might be seized and controlled by the dominant power, and all others might be excluded from them; but no league, combination, or confederacy could possibly be formed that would give to one nation the exclusive right to trade with fifty millions of wealthy and prosperous people, living under an independent government of their own. Such a prize would be far more valuable than all the mines of precious metals now known to mankind. What do we see going on all around us to-day? We see a great commercial war raging all over the civilized world, a war for the possession of the markets in every country where there is anything to sell or anybody to buy; and this contest keeps the prices down except in those places where local or municipal regulations such as protective tariffs, licenses, and tonnage dues keep them up. The ports of China and Japan, after being closed for ages against the armed navies of the world, have been literally forced open and kept open by the adventurous spirit of commerce as it passed around the earth in search of new markets, and the result is that although the manufacturing industries of those far off Asiatic countries are almost in their primitive condition so far as the use of machinery is concerned, their people are supplied with American and European fabrics at reasonable prices, and, no matter what the theory may be, there is no reason to believe that the fact will ever be otherwise. The highest rate of duty imposed by the Chinese Government upon any class of cotton goods is 5 per cent. ad valorem, and the highest in Japan is 6 per cent., and even these rates, which would be spurned as insignificant by American protectionists, apply to a very small number of articles. This is about as near absolute free trade as any country can approach without a total abolition of all duties, and yet no one nation can seize upon the markets of China and Japan and put up prices as it pleases. But it is unnecessary to dwell on this subject. Every gentleman who has given a moment's thought to it must know that our markets can never be controlled by any one nation, and that therefore the apprehensions of gentlemen who think otherwise are entirely groundless.

If our manufactures really need protection at all against foreign competition in our own home markets, it is proper to inquire why they need it and to what extent they need it, and I think such an inquiry, fairly conducted, will conclusively show that the present rates are far higher than any circumstances could justify. But it is constantly asserted that the present rates of duty on manufactured goods must be maintained for the protection of labor in this country, and I desire to say a few words on that subject before considering the interests and necessities of the manufacturers themselves. After a very careful examination of the statistics of labor and wages in all the mechanical and manufacturing industries at the different census periods and under the various tariff systems, I think the advocates of protection may be safely challenged to prove that their policy has

been beneficial to the laboring-man. Let us see how his interests have been affected.

In the census year 1860, when the average rate upon all dutiable goods was 19 per cent. ad valorem, and the rate upon all goods, dutiable and free, less than 15 per cent., there were employed in all the mechanical and manufacturing industries in this country, consisting of more than six hundred different branches, 1,311,246 hands, whose wages amounted to \$378,878,966; the capital invested was \$1,009,855,715; the cost of material was \$1,031,605,092, and the total value of the product was \$1,885,861,676. Labor received a little over 20 per cent. of the value of the product. In 1870, after nearly ten years of high protection, the number of hands employed was 2,053,996, and the wages paid amounted to \$775,584,345; the capital invested was \$2,118,208,769; the total cost of material was \$2,488,427,242, and the value of the product was \$4,232,325,442. The excess of the product over the total cost of labor and material was \$968,313,855, which was 45.7 per cent. on the whole amount of capital invested. Labor received only a little over 18 per cent. of the value of the product, nearly 2 per cent. less than in 1860.

Mr. KELLEY. Will the gentleman permit me just there to throw out a suggestion that in the latter instance capital paid for the steam-engine and the machinery, and they were not drawing wages? That will debit the one account and credit the other.

Mr. CARLISLE. Certainly. The machinery is a part of the capital, and the bone and muscle and skill are parts of the man; and I undertake to show here simply what proportion of the joint product they each receive under the two systems.

The full statistics of the manufacturing industries of the United States for the census year 1880 are not yet completed, but we have in Mr. Swank's report, before alluded to, the figures which I have already stated, from which it appears that, taking the iron and steel industries all together, the percentage of the product received by labor was 18.7, while there was left in the hands of capital, after paying all the costs of labor and material, a sum equivalent to 21.57 per cent. upon the amount invested. It appears that the average annual wages of each employé, including what is called the administrative force, such as clerks, superintendents, foremen, &c., who receive large salaries or high wages, was \$397.51, being a weekly average of \$7.57, or \$1.26 per day. In the manufacture of woollen goods, in 1880, the average annual compensation per hand for labor and services of all kinds was \$293, being \$5.65 per week, or 93½ cents a day. In this industry, labor received only 17.7 per cent. of the product, while there was left in the hands of capital over 35 per cent. upon the investment. It appears, from the statistics of the cotton manufactures, that in that industry the average annual pay of the employés was \$242.89 each, or \$4.67 per week, being 78 cents per day; that is, the employés, skilled and unskilled, in this protected industry, including, as in the other cases, all the administrative force, receive as a weekly compensation for their services just 27 cents more than our consular reports show as the weekly wages of the unskilled agricultural laborer in poor, downtrodden Ireland, which, my friend from Iowa says, has been ruined by free trade.

In the production of pig-iron in 1880 labor received only 14.3 per cent. of the value of the product, while in 1860 it received 21.7 per cent., and in 1870 17.9 per cent. In the manufacture of nails and tacks, during the year 1870, labor received only a small fraction over 16 per cent. of the value of the product, whereas in 1850 it received 23½ per cent., and in 1860 24½ per cent.

But the relation of the cost of labor to the product of the manufacturing industries of the country and the effect which the protective system has had upon it, if in fact it has had any effect, can be ascertained better by presenting this subject in another aspect. Let us take all the manufacturing industries in 1850, as reported in the census, and we find that the hands employed numbered 966,969, and the total wages paid were \$236,745,858, or \$244.83 in gold, or its equivalent, to each hand. In the year 1860 there were, as before stated, 1,311,246 hands employed, and the wages paid were \$378,878,966, or \$287 in gold, or its equivalent, to each hand, while in 1870 the hands employed were 2,053,996, and the wages paid amounted to \$775,584,345 in currency, being an average of \$358.12 to each hand; but the currency was worth, according to the reports from the office of the Secretary of the Treasury, only 85.6 cents to the dollar, so that the \$358.12 in currency was equal to \$306.55 only in gold. It appears from these figures that the increase of the annual wages of each hand in gold was 18 percent. from 1850 to 1860, during what is sometimes denominated the free-trade era, while from 1860 to 1870, the period of the highest protection we have ever had in this country, the increase was a little less than 7 per cent.

But let us see whether there was in fact any actual increase of wages in the year 1870 over the wages of 1850, and how the real substantial interests of the laborer in the manufacturing establishments of the country were affected. In the report of Hon. H. C. Burchard, Director of the Mint, laid before us at the beginning of the present session of Congress, we have a table showing the prices of the various articles in common use among the people for a period of fifty-six years, from 1825 to 1880, both inclusive. And from this table and one that follows it in the same report it appears that the prices of the necessities of life were 32.8 per cent. higher in gold in 1870 than they

were in 1850; that is, it appears that it required in 1870 \$132.80 in gold to procure for the laborer and his family the same quantity of the necessities of life that could have been procured for \$100 during what gentlemen call the free-trade era, twenty years before.

Mr. HASKELL. Will the gentleman allow me to ask him a question?

Mr. CARLISLE. If the patience of the committee is not exhausted, I shall cheerfully yield to any gentleman who desires to ask questions.

Mr. HASKELL. The gentleman says that in 1870, under the protective tariff, the necessities of life, which are the productions of the American farmer, were 33 per cent. higher than in 1850 under a low tariff.

Mr. CARLISLE. I did not state that the prices of agricultural products had increased 33 per cent., but that the prices of all the necessities of life, taken together, had increased nearly to that extent.

Mr. HASKELL. I thought the gentleman did.

Mr. CARLISLE. I did not state anything in relation to the productions of the American farmer considered separately, but I referred to all the necessities of life.

Mr. HASKELL. The necessities of life are those which the farmer produces, and which the gentleman says were 33 per cent. higher in 1870 than in 1850.

Mr. CARLISLE. I did not undertake to state how much agricultural products alone had increased in price. There are other necessities of life in this country besides bread and meat. It appears therefore, Mr. Chairman, that the purchasing power of the laborer's wages in 1870 was only \$230.76 as against \$244.83 in 1850, so that he really received \$14.07, or nearly 6 percent., less than when he was nominally paid a smaller amount of wages. I have here the statistics of labor and wages in all the various branches of mechanical and manufacturing industries for the three census periods mentioned, and if time would permit could take them up in detail and show substantially the same result in each, but this brief statement which groups them altogether is sufficient to show the general result. In some of them the wages were actually better in 1870 than in 1850, both as to amount and purchasing power; but taking them altogether, which is the only correct method of ascertaining the general effect of a policy, the result appears as I have stated it.

The gentleman from Iowa asked the question during his remarks, why it is, if the protective system is not beneficial to the laboring classes of this country, that so many people are coming here annually from the old countries in Europe? The fact is, Mr. Chairman, that the wages of labor in the protective countries of Europe are lower, much lower, than in England, and that a larger number of people are coming here from those countries, according to their population, than are coming from England.

But the question might be answered by asking another. If the protective system is so beneficial to labor, why is it that the laboring classes and the enterprising young men of New England are deserting the protected industries of that section and going by the thousands to engage in the unprotected industries of the great West? Is it because there is a duty of about 40 per cent. on the cotton goods and an average duty of over 60 per cent. on the woollen goods produced in New England? Or is it because there is a duty of less than 13½ per cent. upon the wheat and less than 9 per cent. upon the corn produced in the West? Not at all, sir. It would be as erroneous upon my part to claim that this perpetual movement of population from New England to the West is to be attributed solely to these causes as it would be upon the part of gentlemen on the other side to insist that the thousands of people who are annually coming from the overpopulated countries of Europe to seek homes and employment on our shores are actuated by any considerations relating to our tariff system. It has no connection with the subject, and they do not stop for a moment to consider the rates of duty imposed by our laws upon imported goods.

There are many considerations which influence people to leave their native countries and come to America, but among them all our tariff system is the last that would suggest itself to the mind of the emigrant. Free institutions, cheap homes, equal social and political privileges, opportunities for the acquisition of wealth and for intellectual development, are attractive to civilized men all over the world, and if the circumstances surrounding them at the places of their nativity deprive them of these advantages they will naturally seek them elsewhere. Wages are generally higher here than in Europe, and they ought to be higher. It seems to me, Mr. Chairman, that there is a strange confusion of causes and effects in many of the arguments which we are accustomed to hear on this subject. To say that the protective system increases wages, and to say at the same time that protection is necessary in order to compensate for this increase, is simply to assert that the system requires protection against its own consequences. The truth is that the difference which has always existed, and must always exist between the rates of wages here and elsewhere, constitutes the principal ground, and about the only plausible ground, upon which protection can be asked. It is not the result of protection, but it is the ground upon which you ask protection, gentlemen.

Now, let it be conceded, Mr. Chairman, that the domestic manu-

facturers may justly claim such a discrimination in their favor in the adjustment of duties upon manufactured goods imported into this country as will compensate them for the difference between the rates of wages which they are required to pay for labor and the rates paid in competing foreign countries, in order to place them, in this respect, upon an equal footing with the foreign producer in our home markets; and then let us inquire to what extent the discrimination would have to be made in order to accomplish this. In the first place, however, it must be remembered that a discrimination which simply compensates for the difference in the cost of labor still leaves the domestic manufacturer a large advantage over his foreign competitor. The mere cost of transporting the foreign product to our markets, with the cost of ocean insurance and other charges, constitutes, without the duty, a large measure of protection, and this protection increases as the distance of the home market from the seaboard increases.

But, passing over this important consideration, let us see what is the rate of duty necessary to equalize the cost of production, so far as the wages of labor constitute a part of that cost; and in making this inquiry I shall include the cost of all the labor employed in the production of the finished article, beginning with the material in its crudest form. Our protectionist friends sometimes complain that we confine our statements to the cost of the labor necessary to convert the material from its last preceding form into the finished product, and that we omit the cost of the labor necessary to convert it into the various other forms through which it has passed. I think it can be clearly shown that in all cases where a separate and distinct duty is imposed upon the article at its various stages of manufacture, as for instance a duty upon iron ore, another upon the pig, another upon the bar, and so on to the last stages of manufacture, it is entirely correct when considering the last duty to consider only the cost of labor entering into the last manufacturing process, because the duty upon the previous forms or stages fully protects the labor represented by them; but in order that there may be no possible ground for complaint, I will include the cost of all the labor from the very beginning and compare it only with the duty imposed upon the finished article. Let us take for illustration a familiar article, merchant bar iron, an article in relation to which we have the most authentic evidence showing the cost of labor in its production.

According to the statistics of the production of iron ore, as given us by the census of 1880, the amount paid for labor of all kinds was \$1.35 for each ton produced. It requires two tons of ore to make one ton of pig iron, so that the cost of labor in the quantity of ore necessary to make one ton of pig iron is \$2.70. According to the same authority, the blast-furnaces in the United States produced during the last census year 3,781,021 tons of pig iron, and paid for services of all kinds the sum of \$12,680,703, or \$3.35 for each ton. It takes 1.3 tons of pig to make one ton of bar iron, so that the total cost of labor in the pig necessary to produce one ton of bar is \$4.35. The various products of the rolling-mills are so intermingled in the census reports that it is impossible to ascertain from the tables what it costs for labor to produce a ton of merchant bar iron by itself, but during the present session of Congress, when the committee appointed by the New York tariff convention came before the Committee on Ways and Means, they were accompanied by a gentleman who stated that he was the president of the Amalgamated Iron and Steel Workers' Association of the United States, a labor organization; and, in response to a question put by me, he said that the amount paid to labor for making one ton of merchant bar iron was \$13. Accepting that as a correct statement, we have the following figures:

Cost of labor in two tons iron ore.....	\$2 70
Cost of labor in one ton pig iron	4 35
Cost of labor in one ton bar iron	13 00
Total	20 05

Now, Mr. Chairman, the duty on merchant bar iron under the existing law is \$33.60 per ton, or \$13.55 more than enough to pay the cost of all the labor expended in its production from the time the crude material leaves the earth until it is sent from the mill as a finished article. And, besides this, there is a duty of 20 per cent. on the ore, equal to \$1.10 for two tons, and a duty of \$7 per ton on the pig, making the aggregate duty upon all these forms of product \$43.80.

Mr. KELLEY. I would inquire of the gentleman whether he has not omitted a large class of labor involved in the transportation of the materials to the points of consumption and distribution, the coal, the lime, &c. ? I simply submit the question whether he has not made an omission there.

Mr. CARLISLE. Of course there is some labor expended in the transportation of the material to the market, as there is in the transportation of all other productions to the market. There is also some labor expended in the production of the coal and other material used in the manufacture of these various forms of iron; and if the gentleman could furnish me with correct figures on that subject I would cheerfully include them, because the cost of such labor in a single ton of bar iron is so inconsiderable that it would not affect the general result of my argument to any appreciable extent.

Those who advocate a high protective policy on the ground that it is necessary to enable the manufacturer to pay the increased cost of labor in this country have never claimed, so far as I know—and

certainly they cannot prove—that the difference between the cost here and in England is more than 50 per cent.; that is, the cost of labor here in a ton of bar iron being \$20.05, is \$6.68 more than it is in England, and in order to enable the manufacturer to pay this he is protected at the expense of the consumer to the extent of \$33.60, or more than five times as much. It appears, therefore, that 19.8 per cent. of the duty is required to pay for the difference in the cost of labor, and that 80.2 per cent. is appropriated to capital.

It seems to me that if anything connected with this subject can be demonstrated these figures, which cannot be successfully disputed, demonstrate the fact that the argument which we have heard so long and so often in favor of the present protective duties as a necessary support to certain kinds of American labor is without any solid foundation. When it is shown that less than two-thirds of the duty will pay for all the labor and less than one-fifth of it will pay the entire difference between the cost of labor here and elsewhere, gentlemen must certainly look for other grounds upon which to sustain their policy.

Mr. HEILMAN. I reckon the gentleman is more familiar than I am with the manufacture of bar iron in his city. Will he tell me how many manufacturers of bar iron have made fortunes in his city? Mr. Phillips, the largest manufacturer in his city, was well-nigh insolvent, though he did business to the amount of millions annually. What is the fortune he has made with this protection?

Mr. CARLISLE. I might ask the gentleman, if it is true that the manufacturing industries of this country failed, what benefit has the protective system been to them? [Laughter.]

Mr. HEILMAN. I will include the manufacturers in the city of Cincinnati. Of the iron manufacturers in Cincinnati, how many of them have made fortunes under this protective system?

Mr. CARLISLE. I have no inclination to go into a discussion of the private affairs of Mr. Phillips or of the corporation which succeeded him; but I am somewhat familiar with the affairs of that institution.

Mr. HEILMAN. I think you are.

Mr. CARLISLE. I will make this general statement, however, that for nearly thirty years, including about seventeen years of low tariffs, that establishment prospered and made money. But when the original proprietors died and it went into the hands of men who had less experience in the business, and when the great depression in the iron trade came on it failed, notwithstanding the high protective tariff.

Mr. HEILMAN. There are a great many others of the same kind. [Laughter.]

Mr. CARLISLE. A great many others. And I believe that one of the inevitable effects of this protective system is to encourage inexperienced and incompetent men to embark their means in these enterprises, not only to the injury of the great body of other manufacturers who are carrying on legitimate and well-conducted establishments, but to the injury of the investors themselves. Under this system periods of depression necessarily occur by reason of the extravagance, mismanagement, and overproduction which it encourages, and then the accumulated earnings of years in the hands of laborers and proprietors alike are swept away almost in an instant.

Mr. HEILMAN. That is a very grave charge.

Mr. CARLISLE. It is true nevertheless.

Mr. HEILMAN. The gentleman, I know, is familiar with the iron question, and I would like to ask him—

Mr. CARLISLE. I have answered the gentleman's question. A great many of these manufacturers have failed, and a great many of them will continue to fail, under the protective system, or under a revenue system, or any system that can be devised. All of these various kinds of business are at all times subject to the vicissitudes of trade, to the law of supply and demand, and to all the other causes which affect the profits realized by the industries and upon the commercial transactions of the country.

I desire to say at this point that while these interruptions are not at all disagreeable to me, what I propose to say to the committee during the remainder of my time consists mainly of the presentation of facts and figures which cannot be so well understood unless considered in a connected form. Gentlemen therefore will oblige me by not interrupting me more than is necessary. Besides this, I have already trespassed so long upon the patience of the committee that I feel it incumbent upon me, in justice to the committee and to myself, to bring these remarks to a close at as early a moment as possible.

Mr. Chairman, the only other grounds commonly relied upon in support of the existing system are that protective duties are necessary in order to compensate for the alleged difference between the rates of interest and taxation here and in other countries, especially in England, which is the great seat of manufactures, whose competition is most to be feared. Let us examine these grounds. At my request a statement has been prepared at New York, under the supervision of A. S. Hatch, esq., of the firm of Fiske & Hatch, showing the average commercial rates of interest at the banks and in the open market for the years 1880 and 1881 at London, Paris, Vienna, Berlin, Amsterdam, Brussels, and St. Petersburg, and the open market rates at Frankfort and Hamburg, and from this statement, which I will append to my remarks, it appears that at London, taking bank discounts

and loans in the open market, the average rate for 1880 was $2\frac{1}{2}$ per cent., and for 1881, $3\frac{1}{8}$ per cent.; at Paris, in 1880, it was $2\frac{1}{2}$ per cent., and for 1881, $3\frac{1}{8}$ per cent.; at Vienna, in 1880, it was $3\frac{1}{4}$ per cent., and in 1881, $3\frac{1}{2}$ per cent.; at Berlin, in 1880, it was $3\frac{1}{2}$ per cent., and in 1881, $4\frac{1}{2}$ per cent.; at Amsterdam, in 1880, it was $2\frac{1}{2}$ per cent., and in 1881, $3\frac{1}{8}$ per cent.; at Brussels, in 1880, it was $3\frac{1}{4}$ per cent., and in 1881, $3\frac{1}{2}$ per cent., and at St. Petersburg in 1880 it was $5\frac{1}{2}$ per cent., and in 1881, $5\frac{1}{2}$ per cent. From the Financial Review, for the present year, an annual publication devoted to banking, commerce, and investments, I find that the average rate for call loans at New York in 1880 was 4.9 per cent., and for commercial paper 5.3 per cent.; average, 5.1 per cent.; for call loans, in 1881, 3.8 per cent., and for commercial paper, 5 per cent.; average, $4\frac{1}{2}$ per cent.

Now, if we take the very highest rate for the two years at New York, which is our financial center, and compare it with the very lowest rate in the financial centers of Europe, it will be found that $2\frac{1}{2}$ per cent. covers the entire difference in interest; but in order to avoid any possible ground of complaint I will assume that the difference is 3 per cent. The question then is, what rate of duty can the American manufacturer fairly demand in order to compensate him fully for this difference in the rates of interest? The statistics show that in 1850 the annual products of all the mechanical and manufacturing industries in the country exceeded the whole amount of capital invested more than 90 per cent.; that in 1860 the excess was over 85 per cent., and in 1870 over 99 per cent. But in order to make a proper allowance for any excess in the amount of capital that may be required here over the amount of capital that may be required in the same industries elsewhere, let us assume that the average annual products of these industries exceed the capital invested only 50 per cent. Assuming this as a basis, then a rate of duty which enables the manufacturer to add 2 per cent. to the price of his product gives to him the additional 3 per cent. on the capital invested. Thus, capital being \$100,000 and product being \$150,000, 2 per cent. on this last sum is \$3,000, which is equivalent to 3 per cent. on the capital.

It is thus shown, Mr. Chairman, that a rate of duty equal to 2 per cent. ad valorem is all that any industry in this country can reasonably ask on account of the difference in the rate of interest here and abroad.

As to the rate of taxation, the advantage is on the side of the American manufacturer as against his English competitor, and he needs no protection whatever on that account. There was a time, perhaps, during the war, when heavy internal-revenue taxes were imposed on the gross values of manufactured products, that the rate was against our producers, but it is not so now.

On this subject I beg leave to read from a speech made in this House by Hon. H. C. Burchard, on the 4th of June, 1878. Mr. Burchard then said:

To my surprise, I found that taxation is in our favor. In this country the subject of taxation is often spoken of. I often see it discussed in the papers. They say that on account of the high taxation in this country we must have a high rate of tariff. But taxation here is not higher than the taxation in England. Our national, local, and municipal taxation added together does not equal that of England, either per capita or per dollar of its wealth; but, to the contrary, the taxation is much greater in England than in this country. I have figures here that I have taken from the American Almanac, and I find that the taxation in this country, national, State, local, and municipal, as given by the census and latest returns, is much less than the national, municipal, local, &c., taxation in England.

The true value of the real and personal property of the United States in 1870 was reported by the Superintendent of the Census to amount to \$30,068,518,567.

The taxation of the United States for the last years obtainable is, (American Almanac, 1878:)

National revenue.....	\$279,000,587
States taxes.....	49,760,934
Local taxes, (census 1870).....	212,540,223

Total..... 531,301,744

Per capita, (population 44,000,000).....	\$12.10
Per cent. on wealth.....	.012

A late valuable speech of the distinguished gentleman from Pennsylvania, Mr. KELLEY, contains a paper read by Mr. Ernest Seyd before the British Society of Arts, which presents the following statement of the wealth of the United Kingdom:

England's amount of wealth—assets.

1. Lands, say.....	£2,000,000,000
2. Houses, say.....	1,200,000,000
3. Movable household goods, say.....	600,000,000
4. National debt, £800,000,000, (not to be added).....	
5. Railways, public works, &c.....	800,000,000
6. Active capital of £900,000,000, of which in goods.....	400,000,000
7. Currency, £170,000,000, (less bank-notes current, £22,000,000).....	148,000,000
8. International wealth.....	1,100,000,000
Total.....	6,248,000,000

Which equals \$31,240,000,000. The taxation of the United Kingdom is, national, \$392,825,180. The local reported for England in 1873 was \$121,475,665 on a population of 23,660,000, or \$5.09 each, equal on population of kingdom to \$172,000,000. Per capita on 34,000,000, \$16.60. Per cent. on wealth, .012. The burden of taxation is therefore in favor of the American as against the English manufacturer.

Nothing can be added to this statement except to bring the figures down as near the present time as possible, and in doing this I give the gentlemen who differ from me the benefit of the statement that taxation in the United Kingdom has decreased per capita since 1873.

I assume, too, that local taxation in the cities, towns, and counties in the United States remains the same per capita as in 1870, when there is every reason to believe that it has been materially reduced by the extinguishment of debts and the funding of loans at lower rates of interest.

The local taxation in the United States in 1870 amounted to \$212,540,223, or \$5.51 per capita on a population of 38,558,371.

The same amount per capita in 1880, on a population of

50,155,783 makes.....	\$276,358,364
State taxation in 1880.....	56,379,679
Customs duties collected.....	186,522,064
Internal revenue.....	124,009,373

Total..... 643,266,480

This is \$12.80 per capita on a population of 50,155,783. The statistics of wealth in the United States, taken by the Census Bureau in 1880, have not yet been compiled, but the best estimate that can be made shows the total value of real and personal property to be about \$43,300,000,000. On this basis taxation was 1.37 per cent. in 1880.

Now let us turn to Great Britain and see what the amount of taxation was there per capita and on wealth at the same time. The local taxation in Great Britain for the year ending March 1, 1874, as appears from the Statesman's Year Book, was £29,265,595, or \$146,327,975, being \$4.55 per capita on a population of 32,124,598. The same amount per capita in 1880, on a population of 34,505,043, makes the sum of \$156,998,245.65.

The customs and excise duties for the year ending March 1, 1880, were £66,842,103, or \$334,210,515, making a total of \$491,208,760.65. This is \$14.53 per capita, or \$1.71 more than in this country. The aggregate wealth of Great Britain in 1878 was £6,248,000,000 according to Mr. Seyd; but according to the estimate of Mr. Giffin, in a paper read before the Statistical Society of London, it was £6,643,120,000. The average of these two estimates is £6,445,560,000, or \$32,227,800,000, in 1878. Mulhall, who however is not very good authority, states that the wealth of the United Kingdom increased less than 2 per cent. during the whole decade from 1861 to 1871, but assuming that it increased 2 per cent. in two years, which I think is a fair estimate, the total wealth in 1880 was \$32,872,560,000. On this the taxation was $1\frac{1}{2}$ per cent.

Now, sir, the result of these investigations as to the extent which the cost of labor and the rates of interest and taxation affect the total cost of production in this country, as compared with others, shows very clearly that any rate of duties on imported goods which will enable the Government to collect the amount of revenue it must have from that source will secure to our manufacturing industries all the protection they can possibly need. Our manufacturers therefore are in no danger from any policy that is likely to be inaugurated at this time, or at any time in the near future. They ought not to complain if our legislation is so directed as to give them equal opportunities, and equal advantages with all the other industries of the country.

It is no part of the duty of the Government to use its powers for the purpose of giving advantages to any particular interest over another; but in legislating upon subjects which come within the scope of our power and duty, the best policy is that which will most rapidly develop and utilize all the productive forces of the country. There are many ways in which this can be done without violating any principle of good government or doing injustice to any part of the people. One of the most efficient means of stimulating production is to increase the facilities for carrying on trade and commerce, because men will not produce if they cannot profitably dispose of the products of their labor. Every restriction upon trade has, therefore, to a greater or less extent, a tendency to diminish production and to prevent the distribution of the comforts and necessities of life among the people. We are all agreed, however, that a certain amount of revenue necessary for the support of the Government must be raised by the imposition of duties upon imports, and so far as such duties may have a tendency to interfere with a free exchange of products, the consequences are unavoidable. But the interference should not extend beyond the actual necessities of the case. Unnecessary restrictions destroy markets, ruin commerce, and, as I have said, impair and diminish production. Artificial inflations of prices, no matter how they may be accomplished, reduce the demand, arrest consumption, oppress the poor, and ultimately paralyze the productive power of the country. What, then, is the true policy of legislation upon this and all kindred subjects? I think that a policy which gives to all a fair chance in the great contest for wealth, and for social and political distinction, is the only one that will fully develop the material resources of the country and awaken all the energies of its people; and more than that, it is the only policy consistent with the principles of free government. We are not without the benefit of experience upon this subject, not English experience, but American experience.

There never has been such a period of general prosperity and growth in this or any other country as that extending from 1850 to 1860, when we had, not free trade, but a tariff for revenue with such incidental protection as necessarily resulted from the imposition of

moderate duties upon imported goods; a tariff under which the average rates during the whole period on all dutiable articles were less than 23 per cent., and on free and dutiable only 19 per cent. It was the golden era in our history notwithstanding the financial disturbance in 1857, from which the country recovered in a single year. Agriculture, manufactures, commerce, the arts and sciences, the social condition of the people, and the advance in population and aggregate wealth, made such progress as has never been made before or since. There have been other periods when particular or special industries, fostered by law at the expense of others, have temporarily prospered to an extent beyond the general average of the decade I have named, but grouping all our great interests together, and viewing them as the common possessions of the whole people, we can find nowhere else in all the history of industrial progress a period so well calculated to arrest the attention of a legislator who desires to promote the welfare of the whole country.

Mr. Chairman, it is our duty to legislate for all, and not for a part; to encourage all if we can, and to injure none if we can avoid it. Such a course will develop every industry of the country, do justice to all its people and demonstrate to the world the wisdom and beneficence of the free institutions under which we live. We have now an opportunity to enter upon such a course, and we ought not to let it pass away from us.

I owe the committee many apologies for the unusual length of my remarks, and profound thanks for the patience with which it has listened to them. [Great applause.]

Chinese Immigration.

SPEECH

OF

HON. EDWARD K. VALENTINE,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. VALENTINE said:

Mr. SPEAKER: There has been no question before Congress since I have been a member of the House that has attracted more attention than the one now under consideration. Unusual attention has been accorded the gentlemen who have spoken on the pending bill, and I am glad, Mr. Speaker, to note this fact, as the step about to be taken in the adoption of this measure is one that attracts not only the attention of this country, but that of a civilized world. Should this bill become a law a distinctly new departure will be taken by the United States; a limitation will be placed upon the coming to this country for specified purposes of a class of people from a foreign nation now at peace with us and maintaining with us commercial relations by treaty stipulations.

While, Mr. Speaker, it must be admitted that the passage of this bill is a new departure on our part, I yet insist that the object sought thereby is not a new one in the policy of this Government. The Government of the United States from its very foundation has maintained a policy of protection to its laborers and its material

industries by levying a tax upon importations of goods from foreign countries. This method has been found beneficial to the whole people, and sufficient amply to protect our laboring classes from the effect of foreign cheap and pauper labor. Now we are called upon to deal with the pending question in a fashion much the same. While England and other European countries have contented themselves with sending agents and gold into this country with a view of influencing our citizens to the adoption of free trade, China with its 450,000,000 souls has pursued an entirely different course. China makes no complaint at our tariff laws, (she has but little to sell in our markets,) but she sends by the thousands her pauper, uneducated, and antagonistic laborers to compete directly with the laborers of this country. And this—the protection of American industry from an unfair and inimical competition—is, as I understand it, the question to be met and acted upon by this House in the consideration of this bill.

The question of the exclusion of the Chinese from this country is not a new one. It has been agitated for several years, and it had grown to such importance in 1880 that both, ay, all, political parties found it necessary to place a plank in their platforms upon the question—a plank in sympathy with the protection of labor, a plank in sympathy with the idea of restricting the immigration of the Chinese. A bill on this subject passed both Houses of the Forty-fifth Congress, but met with a veto from the President for the sole reason that it was in violation of existing treaties between this Government and the Chinese Empire. Since that time a new treaty has been entered into between China and this Government touching this subject, namely:

ARTICLE I.

Whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or

suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

ARTICLE II.

Chinese subjects, whether proceeding to the United States as teachers, students, merchants, or from curiosity, together with their body and household servants, and Chinese laborers, who are now in the United States shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation.

ARTICLE III.

If Chinese laborers, or Chinese of any other class, now either permanently or temporarily residing in the territory of the United States, meet with ill treatment at the hands of any other persons, the Government of the United States will exert all its power to devise measures for their protection and to secure to them the same rights, privileges, immunities, and exemptions as may be enjoyed by the citizens or subjects of the most favored nation, and to which they are entitled by treaty.

ARTICLE IV.

The high contracting powers having agreed upon the foregoing articles, whenever the Government of the United States shall adopt legislative measures in accordance therewith such measures will be communicated to the Government of China. If the measures as enacted are found to work hardships upon the subjects of China the Chinese minister at Washington may bring the matter to the notice of the Secretary of State of the United States, who will consider the subject with him; and the Chinese foreign office may also bring the matter to the notice of the United States minister at Peking and consider the subject with him, to the end that mutual and unqualified benefit may result.

From the language of this treaty it will be seen that we have the right to "regulate, limit, or suspend," but not the right to prohibit. It is argued by gentlemen that the provision of this bill which suspends the coming of the Chinese laborers for twenty years is in violation of this treaty. It will be observed that the treaty requires that the suspension be reasonable. What is reasonable? What may seem reasonable to us may not seem so to the Executive, and what may be determined as reasonable by the United States may seem unreasonable to the Chinese Empire. Amendments are pending to suspend for ten and for fifteen years. If either of these should be determined as more reasonable than twenty years, I shall be content, and vote for the bill. But to my mind twenty years is not unreasonable.

One of the grandest of the ideas that constitute the policy of this Government, an idea adopted early in our history and maintained to the present day, is encouragement to immigration. For more than a century we have stood with outstretched arms, bidding the rich, the poor, the down-trodden of every nation welcome to America. To the farmer we have promised freedom and a home, to the artisan, the mechanic, the laborer, freedom and good wages. In return all that we have asked has been that he should obey our laws, that he should help us maintain the liberty of our institutions, and that he should contribute his share to the securing of the education of his own and his neighbor's children, that the stability and the perpetuity of our Republic might be assured. Should we ask these things of the Chinese, who is there audacious enough to say that we would receive them? In our invitation to the foreign-born we do not wish to favor those of one nation to the exclusion of another; but when the immigrant has arrived here, we desire that he become a citizen of America. We cannot consistently invite to citizenship a race of aliens who can assimilate neither our thoughts nor our customs. Such a race is the Chinese. The thirty years of their coming and going has demonstrated this.

Nearly all of the Chinese in this country are upon the Pacific slope, a large majority of them being in the State of California. It is therefore the people living in that locality who are most directly interested in this bill, and in the interpretation to be placed upon the word "reasonable." Every one here, those opposed as well as those who favor the bill, admit that the nature and habits of the Chinaman are such that he can and does labor in this country at wages wholly inadequate to the support of our own laborer. Therefore the Pacific States and Territories are deprived of that immigration which other portions of the Union are enjoying. Suppose the amendment offered by the gentleman from Iowa [Mr. KASSON] to suspend for ten years shall prevail, what will then be the effect upon the immigration to the Pacific States? The laborer who desires there to better his condition, to make for himself and family a home, to educate his children, will be deterred from so doing by reason of the shortness of the suspension, rightfully arguing the uncertainty of future legislation, and the probability of his being brought in competition with this servile pauper labor about the time he has gained a foothold and an opportunity. No, Mr. Speaker, when we consider this term of suspension in the light of the facts and the duty we owe the people of the Pacific States, we certainly must say that twenty years is not unreasonable.

It is argued by some gentlemen that the passage of this bill is wholly unnecessary, that we have not too many laborers in the United States, that there are not too many in California. Now, Mr. Speaker, I agree that there are not too many laborers in this country, but I insist that there may be too many of a certain class. I refer to servile labor. This country has had a sufficient lesson upon the question of servile labor. It has cost us so many valuable lives and so much of our treasure to get rid of one class of servile labor that no

really patriotic citizen can tamely submit to even an approximate repetition.

The gentleman from Ohio, [Mr. TAYLOR,] speaking upon this subject a few days ago, referring to Chinese cooly labor, said:

How is it that this labor is injuring anybody? The truth is, as I apprehend, that these men come here not to stay. I do not suppose that they intend to assimilate, that they intend to make this their home. I am inclined to think that the statement of the gentleman from California [Mr. PAGE] was correct, when he said that if they did desire to become naturalized it was for the purpose of carrying on their business more safely. I am inclined to think and am informed and understand the fact to be that these men are selected from the families to which they belong—and they are lovers of families in China—one of a family is selected to come here and earn something and carry it back and better himself and his family. Now if he does that, is he doing this country any harm?

My answer to that question is, yes. He who doth the humblest of its citizens harm doth harm the country. The American laborer, be he native or foreign born, is expected to, and does, maintain a family. He educates his children. He pays cheerfully his tribute to the support of local, State, and national Government. He supports our churches, our institutions of education and charity. More than this: he stands ready at all times to defend his country against its enemies even to the sacrifice of his life. With all these duties of citizenship and civilization heavily upon him, is it fair, is it just, is it reasonable to compel him to compete with a race of men who can have none of his responsibility, who can appreciate none of his patriotism, and to whom his comparative refinement is a matter neither admired nor understood? The gentleman from Ohio further says, "Protect labor by a tariff against the foreign laborer. That is right." And so I say. I agree with the gentleman in this particular. I believe it to be the duty of the American Congress so to protect the industries of this country that the laborer may be enabled to secure for himself and family a living and an education, fitting them to perform their part of the duties required of the citizens of a great republic.

But, referring to the Chinese laborer in this country, the gentleman further said, "He comes here and sells his labor, which is worth twice as much as he gets for it." And then he proceeds to argue that this is right, humane, and just to our citizens; that the pauper labor may be brought from a foreign land in bands, in hundreds, in thousands, and placed in direct competition with our own citizen labor, without infringing upon the latter in even the slightest degree. I am at a loss to understand how the gentleman can harmonize these two statements. I utterly fail to do so. He argues that it is right to protect the American laborer against the foreign laborer by the imposition of the tariff, and then proceeds to the conclusion that it is right to permit this foreign laborer to come here to compete, leaving family at home, carrying back money earned, never contributing to the support of our Government, and at no time possessing a desire to become one of us. I say exclude such a class, from whatever country they come or propose to come. The gentleman further said:

My own district—and in that respect I am not unlike other gentlemen here, some of whom I see are sympathizing with this bill—my district is full of men that work in the mines and that work in the mills. Do I suppose that these Chinese in California interfere with their labor? Go and ask them what they think of my wish in that regard.

Now, sir, suppose some enterprising Yankee should go to England and hire five or ten thousand laborers for a term of five years, procuring their services so cheaply as to enable him to underbid the present employes in the mines and mills spoken of by the gentleman as being in his own district. Suppose that these temporary immigrants had left their families in England and intended living here only during their employment, having no lot or sympathy with us or our institutions. Suppose that their coming displaced an equal number of the gentleman's constituents, who were compelled to lose their employment or to work for an amount wholly inadequate to the support of their families and the education of their children. What would be the wish of the honorable gentleman in that event? What would be his duty to his constituency then? What would be his duty to the country as a Representative in this House? How many better immigrants of the laboring classes would seek homes in his district? And yet, Mr. Speaker, should this state of affairs exist there to-day it would be utterly unworthy of a comparison with the terrible state of affairs now existing in California and other Pacific States.

Imagine, if you can, two rooms 10 by 25 feet, 7 feet high; two rooms which constitute the interior of a house with a flat roof, covered with clothes-lines. On one side of the partition that divides one room from the other seven Chinamen are at work laundrying clothes; on the other side are a dozen of them, some asleep, some cooking their rice, some awaiting their turn in the laundry-room. These people labor in squads of seven, and when one squad leaves another goes to work, so that they utilize every hour of the day, and every day of the week. This picture is hasty and incomplete; but so far as it goes it is a faithful representation of the labor and the laborer you are asking the intelligent men of this country to compete with.

But the gentleman from Ohio says, "Do not hire them if you do not desire them to stay."

Among the encomiums that can be placed upon the commercial life and characteristics of this nation, there is none more beneficent than the assertion that capital and labor are here entirely free. Capital is free to offer, labor free to accept or reject. There is no compulsory wage, there is no compulsory wage-earner. So long as this freedom can be maintained our comparative peace and prosperity will

be guaranteed. Can this freedom be sustained by the introduction of Chinese labor? Competing against degradation, can the American mechanic or artisan place his labor upon the market with the faith that he will receive a civilized price for it?

Mr. Speaker, this question of capital and labor is an old and embarrassing one; it is a question upon which we may be called to legislate in many ways. In all our legislation let us seek so to ally the one element and the other that a mutual support will be guaranteed. For capital it may be said that it is heartless, that no legislation is needed for its protection, that it exists to enlarge itself, that it will purchase labor at the lowest possible price. So long as this capital finds in the market naught but intelligent labor this nation may fairly count upon prosperity; but when this capital searches out and employs servile and degraded labor the equilibrium is destroyed. My friend says, "Do not hire them;" capital says, as it will forever say, "We shall secure the cheapest labor possible." What will the gentleman do? Will he introduce a bill prohibiting capital from employing servile labor? He will then destroy the freedom of capital. Will he propose to regulate the wages which the Chinaman shall receive? He will then destroy the freedom of labor.

There is only one way. The gate, it seems to me, must be closed. Commercial sense demands it, patriotism demands it, civilization demands it, charity demands it. We can legislate now to prevent an evil which, once introduced, I fear no legislation could eradicate. It is our opportunity to do justice to the American laborer, and injustice to no one. It is our opportunity to secure to our labor respectability and to its posterity education and refinement. It is our opportunity once more to guarantee to every poor man and to every poor man's boy a great and glorious possibility of power and nobility and renown.

Chinese Immigration.

SPEECH

OF

HON. DANIEL ERMENTROUT.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. ERMENTROUT said:

Mr. SPEAKER: The debate on this bill has taken a wide range, involving the origin, characteristics, and history of races; involving much of sentiment and glittering generality. Parallels have been attempted to be drawn between the Mongolian race as it exists here and alien races on other soils; notably and in two instances, by gentlemen who have addressed the House, in the case of the Moors in Spain and their expulsion. No such parallel can be justly drawn, because the conditions are not similar. The Moors acquired Spain by conquest for purposes of empire. They went there to stay, taking with them their household gods. They were a race cast in an entirely different mold from the cast-iron mold of the Chinese. The civilization of the Chinese has been so hardened by the baking of thousands of years that all the forces of all other civilizations have failed to make any impression upon theirs.

He who will read in the pages of Irving's Conquest of Granada of Moslem wealth, valor, and intelligence, of the chivalrous gallantry which prevailed between the sexes, and of the luxury that was common among them, will conclude that he who mentions them in the same breath with the degraded coolie or the still more degraded being exhibited in the stalls of Chinese prostitution in San Francisco has read history to little purpose. We are called on to face no such results as followed the expulsion of the Moors from Spain by the operation of this bill. It does not call for expulsion; it is a bill to exclude a servile class from further entering into competition with American labor on our own soil. As has been so often said, 30 per cent. of the adult male population of California are of these laborers. What is their contribution to the permanent material, social, moral, and political prosperity of the country compared with that of all other classes in equal degree of immigrants to this country? Not a drop in the bucket. As against the 9,000,000 other laborers in the land it is impalpable. The fruits of their labors are hoarded and transplanted to their homes in China; even the bones of their dead find no abiding place but there, and there are their hearts also. They buy no lands here, they beget no children here, they build up no homes here, and without these all history teaches us love of country can take no firm root in the bosoms of any people.

These causes, inherent in the Chinese themselves, would be sufficient reason for the bill. But more. Of all duties devolving on the legislature of a free nation none is more imperative than the elevation of the social, moral, and political condition of those who earn their living by manual labor. The emancipation of the negro slave

knows no higher justification, in its moral aspect, than the elevation of labor. Why? In this free country to elevate labor is to elevate the national character. It is to elevate ourselves. The men who in this country have done most good in their day and generation, who have risen to the highest eminence and left the deepest impress in its better sense upon America, yes, upon all humanity, have risen mainly from the ranks of humble toil. To-day the country, as the logical and natural growth of that sentiment, is full of large and powerful organizations, having for their cardinal principle the elevation of labor. Over-zealous individuals may adopt wrong methods and act inopportunistly in the enforcement of such object. But the underlying thought is right.

I affirm that no sincere lover of American liberty will hesitate to cut out of our system and our national, moral, political, and social life any and every thing that prevents the workingman of this country from advancing to knowledge, from securing to him the fruits of his labors, whether they be more leisure for mental improvement, enhanced social advantages, benefits, and privileges, or more personal and family comfort. For these things this Government, all legitimate government, was ordained by the Almighty. These alone make it worth loving, defending, perpetuating.

Now, let loose upon the American adult male population 30 per cent. of Mongolian adult males. You who live away from the Pacific slope take this home to your State, your city, your township, your school district. You will then realize somewhat the loud call that comes to us from the Golden Gate. Not alone from the Golden Gate, but from every toiler in America, for such a calamity is not only possible, but probable, if this immigration is allowed to go on, fostered and protected by law.

The existence of the Morey letter, about which so much has been said, is proof that it voiced the opinion of somebody. It will not do to deny that there are large and influential interests in this country, represented by individual as well as corporate capital, which would go to any length they dared to employ their labor without dealing directly with the worker himself. This opportunity is afforded in the Chinese coolie system. It is a contract system for letting out the labor of convicts and slaves. They say the Chinese Empire will be insulted by the passage of this bill. No just grounds exist for this. The arguments of the gentleman from Maryland [Mr. McLANE] and of the gentleman from Virginia, [Mr. TUCKER,] in my judgment, are conclusive that this bill does not violate either the spirit or letter of the treaty in the clause providing that the limitation or suspension of Chinese immigration shall be reasonable. A suspension of twenty years is reasonable, because necessary, in the unanimous judgment of a community which has had experience. The permission to suspend was the act of the Chinese Empire in the most solemn form known to the law of nations.

There is therefore no ground for being insulted, but if insult must come, I prefer that the whole world should be insulted rather than the free citizens of America. I believe that in voting for this measure we are protecting the people upon whom the country must rely for its protection in war and prosperity in peace. We are not only obeying the dictates of the highest American statesmanship, but that divine instinct of self-preservation implanted in every human bosom, which is above all statesmanship; which is ever a truer guide for the national conscience than the metaphysical abstractions of political sentimentalists.

Army Appropriation.

SPEECH

OF

HON. HENRY L. MOREY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 5, 1882,

On the bill (H. R. No. 5559) making appropriations for the support of the Army for the fiscal year ending June 30, 1883, and for other purposes.

Mr. MOREY said:

Mr. SPEAKER: I have proposed an amendment to this bill providing for the payment of the Morgan raid claims, in accordance with the findings of the commissions appointed by the States of Indiana and Ohio to examine and report on the same. I claim, sir, that this ought to be done, and that these particular claims growing out of that expedition ought to have been paid long ago, and that they ought now to be paid without further unnecessary delay. Any legislation that will facilitate and hasten the transaction of the public business, and which at the same time conserves public and private rights, is desirable, and ought to receive the favorable consideration of this body. The amendment which I offer is, I submit, of that character, and ought to be adopted.

The Government ought to deal justly with its citizens and mete

out speedy and inexpensive justice to its people. Those who contributed their substance to its defense ought not to be made weary with waiting for that which is justly due to them by every consideration of justice and equity. Nineteen years have passed since John Morgan, the famous guerrilla chief, made his great raid through the States of Indiana and Ohio, sending terror before him, plundering as he went, and leaving disaster, ruin, and loss to many of the citizens of those States in his wake.

The officials of both those States, as well as their citizens, were confronted by an emergency that demanded every sacrifice by the individual citizen and prompt, vigorous, and aggressive action by the authorities as well. The exercise of all the powers incident to a state of war and demanded by the presence of a great and impending danger were justly invoked to ward off the imminent peril that confronted the people, the State, and the Government itself. Those who contributed their property, their horses, cattle, hay, and corn, or of whatever kind, to expel the foe from our soil and defeat the objects the raid was intended to accomplish in behalf of the confederacy, the Morgan raid claimants, ought to be reimbursed for their losses, and they ought to be reimbursed at once, as soon as the same can be done consistent with justice both to the Government and the claimants themselves. The amendment I propose, in my judgment, will accomplish that end.

The expedition of John Morgan compassed results which, if attained, would have tended to change the whole course of the war, to add to its horrors, especially to the North, and to postpone that triumphant end of all hostilities in favor of the Union to which all patriotic citizens looked forward so earnestly. During its progress the campaign in Pennsylvania and Maryland, which made Gettysburg one of the most renowned battle-fields in all history, was had. The whole world looked to the issue of that battle between the two great armies of the North and South in the East. On its issue depended the realization of the bold conception of the confederate generals that would have transferred the seat of war from Southern to Northern soil, and would have visited on our people in the North its countless horrors and disasters and the loss and destruction of property that follow in the wake of an army in the field.

The objects of Morgan's raid contemplated a "counter revolution in the Northwest," to be recruited from the ranks of the Knights of the Golden Circle and Sons of Liberty; the capture of Cincinnati itself, with its immense supplies of Army stores and equipments; the prevention of re-enforcements being sent to our armies and the disheartening of the friends of the Union throughout the North by invading her soil and bringing the armies, with all the horrors that follow in their track, to her doors. The States of Indiana and Ohio were not prepared with organized forces to meet and resist this invasion. Nor did the United States have within reach forces for that purpose. The public safety was in the hands of these people; the public defense depended upon them. The militia were called out, and such United States troops as were available were ordered to the scene of action. Volunteers were called for, and Morgan had no sooner crossed the Ohio River than he was both confronted and pursued by the Union forces and volunteers thus collected together. Cut off from his base of supplies, it was necessary that he should forage in the country. That was his object and his purpose. He intended that the loyal citizens of Indiana and Ohio should provide his command with good horses, not jaded and worn out by long and hard campaigning; that the scanty supplies of his soldiers should be replenished from the granaries and bins of her people.

The property of the people who lived on the line of his march was taken not only by Morgan and his men to enable him to press on in his intrepid and daring undertaking; it was taken everywhere by our own Government and by the State militia to enable them to harass, hinder, and delay him and in the end to capture or drive back his force, which threatened not only the homes and the property of those who resided in those counties through which he took his course, but the safety of the whole people and the interests and good of our whole country. The sacrifices of these people were for the whole country. In Indiana property of her citizens was taken or destroyed by the confederate forces to the amount of \$331,288.17, and in Ohio the amount of property taken by the confederate forces or destroyed by them was \$428,160. These great losses sustained by our people fell with crushing weight upon some, and were grievous and burdensome to all who sustained them. They have not been reimbursed to the losers except in a few cases. Where the United States were shown to have recaptured the lost property and to have had the benefit of it, the claimants were repaid by the Government.

This large amount of property taken and destroyed by the enemy in these two States in their great raid, aggregating more than three-quarters of a million of dollars, is a contribution, a patriotic sacrifice, by patriotic citizens, to the common defense in which all were interested and the benefit of which all enjoyed alike. A large amount of this great loss was for horses taken from our citizens by Morgan, and which were actually captured back by the United States forces and appropriated and used by the Government, and for which the owners have never been paid because the particular claimant is unable to furnish the proof that his particular animal was so recaptured and appropriated by the Government.

But, sir, all men knew—because it is history—that a mere remnant, a mere handful of Morgan's men, escaped capture. But a few

horses were taken by them back into Kentucky. Morgan's horses and Morgan's men were captured by our troops, and the horses that Morgan took from our people were taken in turn and used by our own troops. They, too, ought to be paid for, because the Government in the end got the use and benefit of them.

While it may be true that the Government will not reimburse its citizens for property captured or destroyed by an enemy in time of war, it certainly will not hesitate to pay the owner for that property if it afterward captures it from the enemy and appropriates it to its own use.

But, sir, I only refer to their greater losses by the act of the enemy to impress upon this House a sense of its duty, of its imperative obligation to reimburse its citizens for the property which the Government itself took from them in its extremity; and in its effort to overthrow and capture the enemy whose daring had enabled him to conceive and attempt to achieve results which would have been fraught with disaster to the people of the North, and would have greatly retarded the Union cause. Since, sir, we cannot have pay for the property taken by the confederate forces, or destroyed by them, let me invite your attention to the amount and value of the property taken by the Union forces in pursuit.

In the State of Indiana the United States and State forces took property of its citizens to the amount of \$82,286.31, and in the State of Ohio the United States and State forces took property of the citizens amounting in value to the sum of \$148,057.

Why have these claims not been paid? Is there any good reason why they have not? Is there any good reason why they should not now be paid? Sir, I think there is not. They cannot be said to be excessive. The aggregate of all losses both by confederate and Union forces is less than \$1,000,000. Morgan is said to have had more than six thousand men north of the Ohio River. They were veteran soldiers on the march. There are many men on this floor whom experience teaches how difficult it is to stay the progress of a column of armed men. Many times their number were called into service and equipped to retard and pursue him, and, sir, when we consider the vast number to be mounted, and the vast amount of supplies to subsist the pursued and the pursuers, the small aggregate of their claims must, sir, be an evidence of their justness and moderation.

But, sir, when we turn from a consideration of their aggregate amount, and consider the small aggregate of claims for property taken by the Union forces, and the remarkably small amount of each individual claim, it must be apparent that there is every reason to consider the Morgan-raid claims just and reasonable.

I will, sir, call attention in detail only to those of my own State, which was the greater sufferer. In both States commissioners were appointed to investigate these claims, to hear testimony, to ascertain and find the fact and amount of the respective losses. These commissioners were appointed in 1864 in Indiana and in 1865 in Ohio, I believe. And, sir, their investigations and settlements were made with a view to the payment of these claims by the respective States.

The gentlemen composing the commissions were men of high character and ability. They had the interests of their States to protect, as well as to do justice to their citizens, and there can be no question that it was fairly done, and that their findings are entitled to the fullest weight and credence. The claims allowed by the commission in Ohio are as follows:

County.	No. of claims.	Aggregate.	Average.
Butler.....	34	\$5,691	\$168 60
Clermont.....	164	20,929	121 50
Clinton.....	2	256	128 00
Warren.....	1	85	85 00
Hamilton.....	154	20,094	130 50
Other counties in the State where losses occurred.	1,324	101,002	76 29

In Ohio especially, and I think in Indiana, the commission adopted the rule in fixing the valuation of the property taken to fix it no higher than the value given in by the owner for taxation in the spring before the loss. And to carry this rule into effect, I am informed, the tax returns were brought before the commissioners for that purpose. This testimony was taken while the facts were fresh in the memory of all parties. Their reports were made years ago and are a part of the public records.

My amendment to the bill provides that their findings and reports shall be taken as correct and that the claims be paid. It has been suggested that the size of the individual claims in the counties of Butler, Warren, Clinton, and Clermont, which are in my district, are larger than the average of claims in the other counties in Ohio. This, sir, can be accounted for by the two facts that in those counties we raise the finest horses and produce the most conscientious of men; men who can stand the tax test.

But, sir, the experience of the Quartermaster-General in dealing with these Morgan-raid claims has corroborated the correctness of the work done by these commissioners. I am told that in nearly every case passed on by him his allowance has been in accordance with the allowance made by them, or nearly so. But, sir, these claims should be so settled on the score of economy. The average value of

all claims allowed by the commission in Indiana is less than \$90. In Ohio it is about ninety dollars. Now, sir, the expense of investigating these claims by the Quartermaster-General averaged the last year about forty dollars to each claim; the year before it was about thirty-five dollars. The expense to the claimants is about the same. It has been stated, I believe during this debate, that the expense to the Government of settling claims through the Quartermaster-General's Office is about 55 per cent. of the claims.

These claims are of small amounts. The claimants are scattered through nineteen counties in Ohio, and I am unable to say in how many in Indiana, in the line of Morgan's march.

About half of them have been paid in nineteen years, at a cost to the Government and the claimants equaling in the aggregate the claims themselves. When will the balance be paid at the rate we are proceeding?

In the bill passed at the present session of Congress appropriating money to pay such of these claims as the Quartermaster-General had examined and allowed, during the last year, were included but three claims from my district, and it suffered greater loss by that raid than any district in Ohio or Indiana.

Is it not economy to settle these claims at once, to say nothing of the justice of their payment. They were ascertained by the States that then expected to pay them. Conservative and just men passed upon them, and every principle of right and justice demand that their payment should not be longer delayed.

Chinese Immigration.

SPEECH

OF

HON. WILLIAM M. SPRINGER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882,

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. SPRINGER said:

Mr. SPEAKER: In the few moments' time allowed me it would be impossible to consider or even refer to all the provisions of this bill. The first section, in brief, provides for the suspension of the immigration of Chinese laborers into this country for twenty years. It has been asserted by gentlemen on the other side of the House that this suspension is unreasonably long and is in violation of the spirit of the treaty recently executed between this country and the Emperor of China. That treaty provides that the Government of the United States might suspend but not prohibit Chinese immigration, but that the suspension should be for a reasonable time. Who is to determine the question of what is reasonable? Manifestly by the very terms of that treaty that question is remitted to the Congress of the United States. We are clothed with authority to determine that question for ourselves. Why suspend Chinese immigration at all?

We hold that such immigration not only tends to degrade American labor, but actually endangers the peace, safety, and perpetuity of the Government itself. If such immigration is attended, or may be attended, with such consequences, I hold that a suspension of it for fifty years, or even a hundred, would be reasonable, and if I should vote for any amendment of this bill it would be to make the suspension for a greater number of years even than are provided in the bill under consideration; but the bill having passed the Senate, and not desiring that it should return to that body, and its immediate passage being demanded by the almost unanimous voice of the people of the Pacific coast, I shall do nothing to retard its immediate passage, hence will vote against all amendments, however specious they may be, preferring the bill as it is to the hazard it may encounter by sending it from House to House on trivial points of difference. This bill should be passed at once. Every member opposed to the immigration of the Chinese into this country should vote against all amendments to it and insist upon its passage in the form in which it now stands.

The gentleman from Iowa [Mr. KASSON] has pointed out certain sections of the bill as requiring onerous conditions in reference to passports, and has offered an amendment striking out all the provisions of this bill upon the subject of passports and authorizing the President after conference with the Emperor of China to prescribe the conditions upon which passports shall be issued. I am opposed to this amendment. Every government should exercise for itself its discretion as to the issuing of passports and as to the presence of aliens in its midst. I am opposed to conferring this power upon the President in consultation with the Emperor of China or any other emperor. The provisions of this bill in this respect will work no hardship to those who desire to comply with the law. It may be some inconvenience to those who desire to evade it, and as the law will only be a terror to evil-doers and can work no hardship to those

who seek in good faith to observe its provisions, I shall vote for it as it is.

My colleague from Illinois [Mr. TOWNSEND] has referred to the position of the two great parties of the country upon the question of Chinese immigration. It is unnecessary for me to restate the positions which he has announced. I agree with him fully upon that subject. The Democratic platform pledges the party to the amendment of the Burlingame treaty, and declares in favor of prohibiting Chinese immigration. There is no room for misunderstanding this platform. Contrast its clear-cut, unmistakable provisions with the platform upon this subject adopted by the Republican party at the Chicago convention in 1880. That platform declared in favor of reasonable and humane restrictions, and deals in "glittering generalities" upon the subject, enabling every one to place his own construction upon it; and hence, I am not surprised that more than one-half of the Republican members of this House apparently will vote against this bill, and insist that they are standing upon the Republican platform, while the other half, led by the gentleman from California, [Mr. PAGE,] will support the bill, insisting that they alone are standing upon the platform of the party. Gentlemen upon that side of the House may differ as to the construction of their platform; I am not amazed at it. It looked both ways upon this question, and the party in this House is voting both ways upon it.

The distinguished gentleman from Pennsylvania [Mr. CURTIS] has drawn the lines finely upon this bill so far as its effects upon American labor are concerned. Those who desire to secure the greatest protection possible through the law-making power to American laborers must vote for this bill. But there is another, and I think more conclusive, reason for excluding Chinese immigration from this country. The honorable gentleman from Ohio, [Mr. TAYLOR,] the successor in this House of the late President of the United States, General Garfield, sounded the alarm, as he called it, to other immigrants who sought homes in this country. His warning does not apply, and I trust that the great tide of immigration from Europe which has been pouring in upon us will not be lessened in the least by the warning which he has given.

We welcome European immigrants. They come among us for a very different purpose from that which actuates the coming of the Chinese. We have room to spare for all the peoples of Europe who may seek homes among us. Some come to us fleeing from the oppressions of arbitrary power. Let them take refuge under theegis of our Constitution and free institutions; and I especially welcome at this time and invite to our shores the Hebrews who are fleeing to-day from the most outrageous persecution which religious fanaticism ever devised. Let them come to America. We will open our stores, our shops, our broad fields for their labor. They come leaving home and nationality and everything behind them. Henceforth they are of us and for us. They will add to our wealth, to our numbers, to our greatness. Their children will be American-born citizens. They themselves will soon comply with our naturalization laws, and renouncing all allegiance to every prince or potentate, will take upon themselves the obligations of American citizens. Their destiny will be our destiny. Their earnings will contribute to our national wealth, and their arms will be raised with ours at any time in the future when our country may be assailed, for the purpose of defending our institutions against all enemies, foreign or domestic.

In the late war, in fact in all the wars in which our Government has been engaged, naturalized citizens have been in the front ranks in the heat of battle, and have rendered as valiant and important service in the defense of the Government as those who are native-born. Consider for a moment what would have been our condition to-day if we had excluded European immigration? We do not desire to exclude, but, on the contrary, will welcome it as one of the most important elements of our growth and future greatness. But contrast this immigration with the coming of the "heathen Chinese." I will not dignify it by the name of immigration; it is an invasion. The Chinese come among us as aliens; they remain among us as aliens; they accumulate their earnings as aliens and send them back to an alien soil; they despise our institutions; they are ignorant of our laws and evince no desire to understand them; they mock at our religion; they yield only a nominal obedience to the authority of our Government, and remain as perfectly under the jurisdiction of China as if they continued upon her soil; they assimilate with us in nothing—neither in religion, in language, in nationality, or in our hopes and aspirations for the future weal of our country. Their coming among us is the coming of strangers to live upon our substance and draw wealth from the privileges they enjoy, only to return again to their native country.

Let this immigration continue, and what will be the result? There are 450,000,000 of their countrymen behind them. Twenty millions of them could be precipitated upon our soil within the twenty years covered by the provisions of this bill. We have but 50,000,000 of our own people; unless we stop this invasion the Chinamen may in time be the most numerous race upon the continent. History may then repeat itself in our country. The nations which have preceded us and which have passed into history in a great many instances lost their existence by just such immigration as this. Instance the invasion by the Goths and Vandals of the Roman Empire; of Great Britain by William the Conqueror; the immigration of the Spaniards and and Portuguese into South America, and of Cortez and his followers

into Mexico; the immigration of the pilgrims and the Huguenots into this country, before whom the Indians then occupying the land have gradually disappeared.

From all these lessons of history we are admonished that the further immigration of the Chinese into this country is dangerous to the existence of our civilization and the institutions of our country. I might cite a still more striking example of history in the present dominating power in China itself. The original Chinese Empire was limited on the west by the great wall built for the purpose of protecting the empire against the invasions if not the immigration of the Tartars and other peoples in Middle Asia, but the great wall was inadequate; the Tartars came down in hordes and occupied the land. Soon they became the dominating class and seized upon the Government itself, and the Chinese cue or "pig-tail," the characteristic of the conquering race, is now the insignia of honor of Chinamen everywhere. Shall we allow the Tartar and the Mongolian to continue their eastern march until what is now called the United States of America shall disappear from the map, and the empire of new China take its place? Do we hesitate, then, about suspending such immigration for twenty years? Do we stand here quibbling about whether it should be for five, ten, or fifteen years instead of twenty? I hope not. Let us make it twenty years. At the end of that time we can make it twenty years more, if those who then occupy the seats in this Congress shall deem such further suspension necessary.

Gentlemen upon the other side of the Chamber have extolled the virtues of the Chinese, have pointed out the fact that they are skillful, quick of apprehension, and faithful in the performance of contracts. I will not enter into a discussion of the comparative worth of Chinese civilization and intelligence with our own. The more you claim of virtue, the more you claim of skill, of intelligence for the Chinaman, the more I fear him and deprecate his immigration. It is enough to know that they are intelligent enough to have well-defined convictions as to their own institutions, and believe them to be superior in every respect to our own.

They will not yield their convictions. They regard us as the barbarians, and only live among us to sap wealth from our resources and strengthen their power as an alien colony in our midst. Suffice it to say that I am satisfied with the superiority of our civilization, with the superiority of our institutions, with the superiority of our people as a race over them. And I hold the interests of our own people and the preservation of our own Government as the first and highest duty of every American citizen, and especially of the representatives of the people.

Chinese Immigration.

"Shall principles be subservient to policy?"

SPEECH

OF

HON. A. A. HARDENBERGH,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1882.

On the bill (S. No. 71) to enforce treaty stipulations relating to Chinese.

Mr. HARDENBERGH said:

Mr. SPEAKER: Within the shadow of the Dome which surmounts the Capitol in which we are to-day assembled the chosen representatives of earth's greatest of republics, quiet in their demeanor, generous in their hospitality, accredited from the eldest to the youngest of civilizations, may be found, not more than a score in all, the members of a legation awaiting with keenest anxiety yet greatest forbearance the result of our legislation as to the present and future interests of the Occident with the Orient.

It is a strange and wondrous story, novel in human history, because through all the ages its counterpart was never known, as the pathways of human progress have been written slowly yet certainly amidst all the mutations of human governments since "peace on earth and good-will to men" was proclaimed as the sequence of His mission who came to gather in the higher and holier service of brotherly love the nations that so long had wandered from its precepts, and to bind to a common service for the welfare of humanity the noble and the peasant, the freedman and the slave. These accredited representatives, but three of whom are at all conversant with the language of our empire of freedom, while they know not yet what your decision may be, find themselves in strange contrast with the embassies of other nations, whose real sympathies are not as greatly with our own as theirs whose hopes and prayers and purposes breathe no words of a real kindness, yet upon whom we are accustomed to look as the admirers of our civilization and our progress.

When in the Forty-fifth Congress it was my duty to take issue upon the bill then pending, to restrict the immigration of the Chinese, it was my privilege to say that that bill was one which must attract the attention of the entire country from the novelty of its provisions and the sweep of its effects. Never before had it been found necessary to prohibit immigration to our shores, whether from the Orient, whose civilization dates back thousands of years anterior to our own, or from those of Europe's shores who, weary with the exactions of despotism, seek a refuge under the more genial influences of the institutions of freedom. The question embraced within the bill is simply this: Is freedom incompatible with any race, and may it not extend its all-conquering arms to every condition of man?

With us the dread arbitrament of war has lifted to the dignity of freedom more than four millions of a race who were born to servitude, and we have given them welcome to all the purposes and pursuits of citizenship, and in its sequence we have witnessed the astounding fact of a representative of the "despised race" occupying temporarily the Vice-President's chair in the Senate of the United States! Shall we argue from this that our institutions are not adapted to every phase of our common humanity? If it be true that the boundless continent is ours, for what is it ours I ask you—in part for freedom and in part for serfdom, or ours for humanity? Sir, in the brief lifetime you and I have seen, we have been the witnesses of prejudices founded upon nationality and upon creed.

They ran their brief career, but found no lodgment in the popular heart, for they were contrary in spirit to the great principles which underlie the structure of our Government. By the passage of this bill we violate our treaty obligations and confess our inability to maintain the cardinal principles ingrafted in our Constitution. The spectacle at least is strange. Fifty millions of freemen, bound by the ties of a common interest, founded on liberality and progress, must now announce to the world, as "they enter upon their second centennial, that one nation, and that the eldest of the earth, must be forever excluded because our institutions are inadequate to their presence among us."

Sir, I have an affectionate regard for my brethren of the Pacific coast. I have studied their interests as connected with legislation during my service here. California has many for her inhabitants who left their homes and firesides in New Jersey to aid in laying the foundations of that wondrous State, and have since won honors from her people and written their names in boldest characters upon the history of her development and her progress. Yet for all this I cannot, even for California, give consent by my voice or my vote that any single portion of my country shall close its ports to the wanderers of earth, no matter from what clime they may come or beneath what sky they may chance to have been born.

The flag that floats on every ocean, and is swept by every breeze, commanding a world's respect as it finds a greeting in every port of the Occident or the Orient, should never be made to confess by any act of ours that while it was the emblem of freedom the limits of that freedom were circumscribed, and the majority of the race in the height of our progress be refused protection beneath its ample folds. The scene to-day is, as I have said, the most wondrous of history. Fifty millions of freemen, bound in the ties of thirty-eight sovereign and independent States, call us to the performance of an imposing duty. Oceans only are our boundaries, and the broad sweep of our young yet all glorious empire, confronting the monarchies and despotisms of earth, is known and feared of all men. Upon the sky itself seems written the story of our progress as connected with the welfare of humanity.

Mark you, Mr. Speaker, a page of its history, whatever its earlier civilization, beyond the hour when here the Indian warrior wooed and won his dusky mate, beyond the recent unearthed memorials on the western plains which Hayden and King in their researches have unfolded to your gaze, there was evidently a race who trampled these shores unknown to us and to our institutions. What were the almighty purposes which led to their extinction we may not know more than we may why the mastodon of your Smithsonian Institution is now a myth; but this we do know, proved by the world's great history, that that nation which refuses the common dictates of humanity to another, whatever its condition, must pay the penalty of that disobedience to a diviner law, which is but the law of justice and of right.

On the one hand you seek to guard your ports from the incursions of a barbaric race because of a possible interference with labor. Is labor thus to find its apology as it tramples upon the rights of others? Statesmanship finds its greatest duty and its highest privilege as it seeks to harmonize labor with capital, and capital finds only its reward as it finds harmony with honest and industrious labor. By the sweat of thy brow shalt thou earn thy bread was written alike for you and for me. God hath made of one blood all nations of the earth, and he who dares as statesman or as citizen to reverse this decree shall pay the penalty of an almighty wrath. Can this young Republic, proud in her vaunted strength, afford all this? For what was written that sublime Declaration on which her institutions are founded? For what the victories and triumphs of a revolutionary war?

Is there no God in history? Sir, we had one stain left which would not decorate the garland of our magnificent triumph, as beyond the seas we had reared the standard of man's new equality—of freedom's

birth-place and of freedom's home. One cloud on the bright horizon of our fate still remained. For more than eight decades of years we were its apologists, lest the structure we had reared might be shattered. We sought to battle for the shackles of the slave to preserve in glorious harmony the independence of the States, distinct as the billows, yet one as the sea, in harmony with the sovereignty of the whole. Justice, equity, humanity pleaded in vain. Its boundaries, sought to be restrained, were invited to expansion. The utterings of the heart-broken were heard in Heaven, if not on earth.

The immortal years might give record to a nation's wrongs, but they could never smother the prayers of the enslaved, storm-tossed, and tempest-ridden, as from the vials of His wrath were poured out upon the troubled waters the oil of consolation which bade the slave ascend to the dignity of freedom and offered upon his ransom the heritage of liberty. Do you—will you remember its cost? It was argued here in this Hall as a divine institution. Pulpit and platform gave it their acquiescence. States lingered in their confessions; politicians gave it hesitation, yet still went on the struggle, for though slowly yet surely the mills of the gods do grind. Four thousand millions of treasure and a million of human lives were needed in its solution, in that awful, terrible, yet majestic struggle. Earth had known none such since that which gave establishment to the divine decree that of the city which had denied His mission no single stone should be left upon another.

It has been our mission for more than fifty years to seek admission to the ports of China in the interests of civilization and of progress. Christianity knocks at her doors for entrance. For centuries that request has been denied. It now finds acquiescence, and the sublime teachings of Him who died that a world might live find entrance to the walled empire, and the religion of the cross hastens to wondrous achievements. This day, representatives of the empire of freedom and of Christianity, I fear you may close those portals to this Union, gifted by an almighty power, in view of the blessings you enjoy. Contrary to the instructions of the fathers, contrary to the teachings of that sublime declaration which gave announcement to the world of the establishment of human freedom founded upon the lessons of the cross, you now enact that your institutions are a failure and a farce.

Labor will ever assert its own standard in our midst. It knows its own rights because of its intelligence. When we apologize for it we do but degrade it. In the great battles of life the race is not always to the swift nor the battle to the strong—it is to the vigilant, the active, and the brave. Its best protection is found in an honest and economical administration, that its blessings, like the dews of Heaven, may fall alike upon the "high and the low, the rich and the poor, unseen and unfelt, save in the richness and beauty they contribute to produce." Pandering to prejudices will not promote its higher success. Secure by proper legislation its harmony with capital, and as you draw the one by honest confidence from its hiding-place you give elevation and dignity to the other, for you give stability and progress only to your institutions, as you disseminate the wealth of active industry and prevent that accumulation of wealth in the hands of the few, which leads to national weakness and decay. An heir of toil myself, I can have no sympathies disconnected with its protection and elevation.

Let me not be misunderstood. I am opposed to the importation of cooly labor. I would make by law all such contracts void, but I would not close my country's ports to the inhabitants of whatever clime who may seek acquaintance with the institutions of freedom. This bill violating our treaty obligations is an admission to the world of our weakness, not our strength, of our fears and not our hopes, and cannot receive my sanction. While England holds within her dungeons dark, without a trial and without excuse, the citizen who claims my country as his home, I will not say to the unoffending wanderer from China, "Depart from us for this wrong you have never sought to commit." I will violate with you no treaty obligations. The rather would I give you a lesson that a nation of freemen can respect their promises.

It has been pronounced here that sentiment is but the bugbear of our action. Be it so, but remember that through all the ages sentiment has ever been the underlying power which has decided the destinies of man. It was sentiment when corruption and extravagance had shorn of its strength the nation which had achieved the conquest of a world, which hurled the Goths and Vandals upon her capital and gave to Alaric the title of her conqueror. It was sentiment which sought to rescue from infidel hands the Saviour's tomb and swept over Eastern Europe into Asia the Crusaders with an avalanche. That same sentiment of wrong meted out by a nation whose forms were meant for justice might embolden across the Kamshatka Sea, from a nation of 470,000,000, a reserved force of one-tenth their number that might crush your institutions upon the Pacific coast and rear upon their ruins an altar, dedicated to that humanity and to that justice which your boasted civilization has denied them.

In the vindication of human right I will know no party. I cannot believe that the generous constituency which thrice has honored me with a seat upon this floor will disapprove my vote. I cannot give by my vote to England a commercial trade which of right belongs to us. I would not consign to Spain, to whom this embassy is alike accredited, the legation which by all the obligations of states-

manship, of solemn treaty, and of that liberal spirit of Christianity which should guide us in all our relations with the nations of the earth, is entitled to its residence here.

Mr. Speaker, in all my service here I have sought to render to those who have honored me with this high commission a faithful, honest service. A party man, that party's choice, I have nevertheless aimed at the welfare of my entire people of the seventh district of New Jersey. Party spirit has had its part in this discussion. Upon the broad principle of human right I know no party. My faith has been nurtured in that school which gave authenticity to the creeds propounded by Jefferson and vindicated by Jackson and his compeers in council. My vote shall be cast against this proscriptive bill.

What if your action here shall close to us the ports of China? What if you find unprotected your citizens who within the limits of its vast empire have found a temporary residence? What if your missionaries whom you have sent as the representatives of every creed to plant the standard of the cross, shall be forced to retire, and the teachings of that volume upon whose sacred pages triumph immortality, be to you forever withdrawn. Give then for your answer to an astonished world that American policy must be regulated by her political degeneracy. My convictions I cannot, will not yield; and if it shall be deemed I have erred, I am ready and willing to make whatever sacrifice this vote may cost.

If we would seek to entitle ourselves to the respect and admiration of the world, we must take no step backward, but rather forward, that shall compel that respect for our national manhood which, except for just cause, shall prevent assaults upon our honor in the imprisonment of our citizens; but proceeding right onward and upward in the march of our great destiny, great in our freedom and free in our greatness, a beacon-light to the struggling nations of the earth—

Till the war-drum throbs no longer,
And the battle flags are furled
In the parliament of man,
The federation of the world.

Government Regulation of Railroads.

When trade is at stake it is your last intrenchment. You must defend it or perish.—*Earl of Chatham.*

SPEECH

OF

HON. ROGER Q. MILLS,

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 30, 1882,

On the subject of Government regulation of railroads.

Mr. MILLS said:

MR. SPEAKER: The people of the United States are calling upon us to exercise the power vested in Congress to regulate their domestic commerce. From every quarter of the country complaint is made against abuses in the management of our railway system. There is scarcely any injury that could be inflicted upon a people more annoying in its nature or more hurtful in its effects than the constant pillage to which their products are exposed when moving along the public highways to the place of exchange. Commerce is a necessity to the human family, and it is a necessity that increases with the growth of their civilization. In the wise economy of nature, the different countries of the world are made to vary from each other in the productions to which they are specially adapted. One yields its greatest products to the labor of the husbandman, another to the miner, and a third to the manufacturer. Each has in its stores something with which to reward the hand of the toiler, something that contributes to the comfort and happiness of the human family. In each when man labors in harmony with the laws of nature he produces the greatest results with a given amount of toil, and his product is always in excess of his own wants; but there is always somewhere in the world some one who wants what he has to spare, and has something to give in exchange for it. It is an unerring law of our being that our wants always keep pace with our capacity to satisfy them. To meet these wants the public carrier has been called into existence, and he is coming and going between the consumer and the producer to-day as he has been through all the centuries that lie behind us.

When we look back along the line of authentic history we see the carrier of the world's commerce keeping fully up with the demand of the product he has been required to transport. The hand of the dial does not reveal more unerringly the progress of the sun as he mounts from the horizon to the zenith than the history of the carrier does the advancing paces of the world's civilization. In the primitive ages the patient and plodding camel was adequate to all the demands of the oriental merchant who traded across the desert. It

marked an advance in Asiatic civilization when the carrier of commerce coasted along the southern borders of the great sea from Tyre and Sidon to Cairo and Carthage. The instrumentalities of exchange have kept pace with the progressive development of the forces of production, and have always been found adequate to the task of transportation. The old modes of transportation pass away with the old modes of production, and the steam-engine makes its appearance with improved machinery for increased production. The steam engine is to-day the king of the highway. It economizes time, shortens distance, and reduces the cost of transit.

It is a law of commerce that as surplus products must be exchanged it is to the interest of both producer and consumer that the exchange should be effected as quickly as possible and as cheaply as possible. The railway, with its auxiliary the telegraph, meets this demand more fully than any other means of exchange ever devised by the ingenuity of man. The wonderful rapidity with which it has grown during the life-time of the present generation is proof conclusive that it answers more completely the demands of commerce than all the other agencies ever known to man. We have to-day in the United States more than 100,000 miles of railway. The rapid payment of the public debt is throwing upon the market vast sums of money that are seeking profitable investment in railroads, and the system is growing larger day by day. The railroads of the United States excel in length of miles all the railroads on the continent of Europe, notwithstanding its people outnumber ours more than five to one. I have no doubt that the internal commerce carried by our railroads and distributed among our 50,000,000 of people is greater in volume and value than that carried by all the railroads of the continent and distributed among its 260,000,000.

Our railroads have wrought a great revolution in the movement of our commerce, but that is not all of the great good they have achieved. They have brought our distant populations into closer proximity—set them face to face with each other—and reunited and strengthened the ties of social and political union. In the light of social and commercial intercourse rendered possible by them we have been made to realize that we are the sons of the same sires, fellow-citizens of the same great commonwealth of States, inheriting the same history, and working out for ourselves and our children the same great problem of free government. Notwithstanding the fierce civil strife through which we have but recently passed, we are to-day by the instrumentality of railroads in a very great measure united in bonds more powerful and more enduring than we have ever been in the past. Our railroads have multiplied our military power by the facilities they afford for the rapid movement and concentration of all the forces of war. With 100,000 miles of railroads ramifying every portion of every State and Territory in the Union, with 8,000 engines daily drawing 13,000 passenger-cars and 600,000 freight-cars through every neighborhood of this vast country, who could measure arms with us on our native soil?

Who can estimate the power of a people who have a hundred thousand miles of commercial highway over which is annually flying more than twenty billions of domestic commerce, and yet able to share from their great abundance provisions to feed and raiment to clothe millions more in foreign lands? But, Mr. Speaker, while we stand and gaze upon this beautiful picture with transports of delight, we are called upon by the people to hear the grave complaints that are coming up from every quarter of the country. It is charged that the management of this power created for the public good is laying its hands in spoil upon the people's products; that it is extorting excessive rates for transportation; that it is discriminating among citizens, imposing heavy burdens on some, and conferring special favors on others; that it is combining its corporate powers to make all efforts at competition impossible of success; that it is manifesting a criminal indifference to the lives and persons of those who are compelled to travel upon its lines; and that large numbers of persons are annually killed and wounded by the neglect to keep its road-beds in proper order and its service in proper discipline. These are grave charges, and it is our duty as faithful Representatives to inquire into the manner of its administration and prevent such abuses by statutory laws.

No people will remain quiet while their highways of travel are habitually obstructed, their lives and persons imperiled, and their property subjected to systematic pillage. No people who are conscious of the power of public opinion will submit in silence while they are made to bear onerous burdens imposed on them for the gratification of the rich and powerful favorites of those who oppress them. To be contented they must be animated by the hope of receiving and enjoying the just rewards of their toil. When disappointed in that, discontent raises its head and speaks without selecting its words or bating its breath. The sense of injustice is keen and irritating, and when abuses have been designated and called by name and are still persisted in without any effort for redress, resistance is provoked and sometimes revolution ensues. We have but to look back to our national origin for the proof of this statement. The blood that was spilled in the riot at Lexington was the beginning of a revolution that followed unjust exactions imposed upon the commerce of the people of the colonies. They complained of the wrongs they were compelled to suffer, but a stupid ministry refused to hear, and the price of their refusal was the loss of a continent to the British Crown.

Following close upon this came another revolution, peaceful in its

nature, but it, too, was produced by obstructions and hinderances to the movement of the domestic commerce of the States which the confederation was powerless to prevent. The bond of confederation was rent in twain, and "a more perfect union" was formed out of the dissevered fragments; and it was invested with all the powers necessary to regulate the commerce among the States. To-day they are again subjected to greater abuses than their fathers ever endured, and they are calling upon us from one ocean to the other to exert the power vested in Congress for their protection against abuses by railroad companies. They are in earnest, and they mean to have reform. If this term of Congress refuses to heed their complaints they will send others here who will. Those who are opposed to any interference with the regulations of the railroads contend that Congress has no power to act. If they can convince the people of the United States of that fact, they will very soon do as their fathers did in 1787. They will amend the great charter and grant the power in such clear and unmistakable language that it will no longer remain in the domain of doubt. But there is no necessity for any enlargement of the power now possessed by Congress. Its authority is already full and ample.

I will not take the time to discuss the question of constitutional power. It is not now an open question. Repeated decisions of the highest court have exploded all the doubts that ever invested the subject. That question is ended and that difficulty is out of the way. The Supreme Court have decided that Congress can regulate all commerce taken up in one State and put down in another, and the Legislature of each State can regulate all commerce taken up and put down within its own borders; that the term commerce embraces persons and property, passengers and freight, and that it covers the instrument used in making the exchange as well as the thing exchanged; that the regulation is not confined to the instrumentalities used when the Constitution was made, but that the power keeps pace with the progress of the age and people; that it advances from the horse to the stage-coach, from the flat-boat to the steamboat, and from the railroad to the telegraph, and that wherever there is commerce there is a power to regulate it, and that the power to regulate is a power to fix a maximum charge for carrying freight and passengers. It is perfectly clear to my mind that if Congress does not have the power to regulate the transportation on railroads among the States, and the Legislatures do not have the power to regulate it in the State, railroad corporations do not and cannot have it, because they derive their existence and every power they exercise from national or State legislation. If neither Congress nor the Legislatures have the power, they could not grant to others what they did not have themselves.

It will be seen by an examination of the history of Congressional action that it has been the opinion of our predecessors from the first that Congress had such power, and it was its duty to exercise it. It has repeatedly regulated commerce by enacting laws for its safety and for its cheap and speedy transit. It has provided for the removal of obstructions in rivers and harbors; it has forbidden the erection of bridges over navigable waters; it has prescribed a code of regulations for boats on our rivers and vessels on the high seas; it has provided for surveys of rivers and harbors that channels of communication may be improved; it has provided for buoys, light-houses, and life-stations to secure persons and property on board of vessels; and it has provided for licensing the safe and condemning the unsafe vessels. It has not only continuously regulated commerce by providing for its safety, its freedom, its dispatch, and its immunity from illegal interference, but, under the impression that the people of the United States had some interest in their public highways, it has been granting public lands and public money from the very beginning of our Government to aid in the improvement of public highways.

We have given more than a million acres of public land to aid in the construction of military wagon roads. We have given more than 4,000,000 of acres to aid in the building of canals. Would Congress have done this if they believed these were not public highways but the private property of individuals? If the public had no interest in canals and roads and Government had no power to regulate the safety of the people's products passing over them, why should the people's land be given in aid of their construction? The Federal Government has given 296,000,000 acres of the public land to aid in the construction of railroads, and the State of Texas has added to that over 35,000,000 more. Why was this immense donation of the people's lands made to aid in the building of railroads if not for the benefit of the people's commerce? In addition to the donation of land, the Government has expended over \$60,000,000 of public money in improving rivers and harbors; over \$9,000,000 in improving canals; over \$17,000,000 in improving wagon roads, and over \$100,000,000 in aid of railroads; and yet it is contended that the public have no interest in them, but that they are the private property of the corporations.

The area of public lands granted by State and national legislation to railroad corporations is twice as great as the settled area of the thirteen colonies at the time of the Revolution; greater than the settled area of the whole country at the time of the second war with Great Britain, in 1812, and greater than all New York, Pennsylvania, Ohio, Michigan, Indiana, Illinois, Wisconsin, and Minnesota. All these States, giving homes to more than 20,000,000 of people, contain an area of less than 280,000,000 of acres, while the lands given

away to railroads is over 300,000,000 of acres, and yet the public have no rights that the companies are bound to respect. Of the lands granted directly to corporations over 15,000,000 of acres have been sold by them at an average of \$5.28 per acre. It is rising in value every day, and it will not be beyond a reasonable estimate to value their whole grant at \$5 per acre. The railroad property of the United States for the year 1881 is valued by its owners at \$4,500,000,000. When we remember that the public have given them in lands \$1,500,000,000 and not less than five hundred millions in money, bonds, and other gifts from Government and people, their own investment represented in the gross sum will not exceed two and a half billions, and not less than five hundred millions of that is fictitious or watered stock.

The New York Central at one time watered its stock over \$53,000,000, the Erie over \$70,000,000, and the Union and Central Pacific over \$90,000,000. What amount the other corporations have increased the nominal value of their stock is not known to the public. But it is known that that policy has prevailed to a very considerable extent in the railroad management of the United States. The \$2,500,000,000 of their own investment brings them an annual net income of \$255,000,000, or more than 10 per cent. clear profit on their investment. If we include the amount of their donations from Government and people, watered stock, and all other additions to their capital, their net earnings, over all expenses, is more than 5 per cent. And these figures are from their own report. What other industry in this country employing large capital makes anything like such profit? Large money-holders are anxious to-day to secure Government bonds at 3 per cent. Our 4 per cent. bonds are at a premium of 20 per cent.

What profit do our farmers make? I have had this subject investigated. I have conferred with the best informed, and the highest estimate given me is 3 per cent. profit. It is the greatest of all our industries. It has more wealth invested, it employs more people, it produces and sends to foreign lands 85 per cent. of all our exports. It is the chief support of all our trade at home and abroad; and yet it seems to be regarded as a legitimate object for plunder by American statesmen. The manufacturer plunders him by compelling him to pay two prices for what he gets from others. The railroads plunder him by compelling him to pay two prices on the carriage of what he sells and buys. The American Congress is to-day resounding with importunate appeals for protection to American industry; but those beautiful words have no application to him. Bending like Issachar under the enormous burdens piled on his back by others, he is looking anxiously for a deliverer. His emancipation must be found in the ballot—

A weapon that comes down as still
As snowflakes fall upon the sod,
And executes a freeman's will
As lightning does the will of God.

So eager was the desire of our people to push forward and build up our system of railway communication, that we might have the benefit of quicker and cheaper transit, that they disregarded all precautions, and aided and encouraged by most liberal bounties its growth and development throughout all parts of the country. The people, through their Federal Government, State governments, counties, cities, towns, and individuals, have contributed lavishly to swell the coffers of the companies. All of this extraordinary effort was expended, as it seems, under a vain delusion that they were contributing to open up commercial highways for the public good. The railroads have become so extensive, so wealthy, so powerful, and all the elements of their strength are so easily concentrated that they have concluded to declare their independence of all power of supervision and control and test the strength of the people. The boldest of these corporations, and the most reckless in its management, is that one that has received from the people a gift of more than forty millions of acres of land and \$64,000,000 in bonds, that are to-day worth \$75,000,000, upon which the Government has already paid them forty-five millions in interest, and will pay over a hundred before it is done.

In the complaints made of the management of our railroads, it has been shown that they have exerted their power of regulation most ruinously in many sections of the country. At railroad centers they adopt one of two extremes. They will combine if that is possible and keep up high rates of transportation. If that policy is not adopted they will try the other extreme, a ruinous competition, until the stronger freezes out the weaker, and then rates will go as far above what is right as they went below during competition. To make up for these losses incurred in the process of freezing out, the local shipper who lives along the line and has no choice of roads, but is bound to use the one upon which he lives, is charged double and triple to enable the company to make good the losses sustained by the war of the stronger against the weaker. The local shipper is made the insurer against all losses sustained by the struggle. This imposes upon him an extortionate tax and one from which he ought to be relieved, and relieved by the Government.

My colleague [Mr. REAGAN] in the last Congress stated on this floor that the charge for a car-load of freight from Saint Louis to Galveston by way of Palestine, a distance of 871 miles, was \$60, while from Palestine to Galveston, 201 miles, less than a fourth of the way, it was \$90. From Saint Louis to Galveston the charge is seven-tenths

of a cent per ton per mile, while from Palestine to Galveston it is 44 cents per ton per mile, or more than six times as much as the haul from Saint Louis to Galveston. Can any one see any principle upon which such a charge can be justified? Can any one doubt the propriety of Congress interposing to prevent so flagrant an injustice when within its jurisdiction? This is not an exceptional case. It is symptomatic. It is an indication of disease throughout the whole system. The small shippers along the line are made to bear burdens enormously disproportionate to those borne by the larger shippers on long hauls and from competing points. This is a great wrong and works a great injury. It is an injury not only to the person paying the charge but to the whole community, whose business is also injured by the discrimination; for persons having commodities to ship will haul to the competing point when accessible in order to get the low rate, and will sell and buy in that market to the injury of the business of their own neighborhood. Men who settle upon a line of road, build houses and invest their capital in business relying upon the facilities for transportation afforded by the road at their doors, find their business destroyed or materially injured by the discrimination against them and in favor of the competing point.

The Representative from Nevada in the last Congress gave us some startling facts about the management of the great line that passes through his State to the Pacific. He showed us by the receipted bills of the company that the charge for a car-load of coal-oil from New York to San Francisco, 3,400 miles, was \$300; to Reno, 3,094 miles, \$536; to Winnemucca, 2,925 miles, \$716; to Battle Mountain, 2,865 miles, \$750; to Palisade, 2,813 miles, \$780; to Elko, 2,781 miles, \$800. In every instance the rule was observed—the shorter the haul, the higher the charge. And in every instance the charge included the whole through rate from New York to San Francisco and back to the place of destination. Elko, a station 619 miles nearer to New York than San Francisco, is charged \$500 for a car-load more than San Francisco. But this is not all of the iniquity, though it is enough. The discrimination is made against the commodity, as well as the place and person. A car-load of machinery from New York to San Francisco is charged the same as a car-load of oil—\$300; but a car-load of machinery to Reno is charged \$252 more than a car-load of oil to the same place. A car-load, whether of one or the other, is fixed at ten tons of 2,000 pounds each. Does it not require the same amount of steam to haul each? Does not each produce the same wear and tear of machinery? Then why these arbitrary distinctions? Is it because a car-load of machinery is more valuable than a car-load of oil, and will bear more? Is it simply the result of the universal law to charge all the traffic will bear? Or have the directors of the road and the manufacturers in San Francisco entered into an agreement that no manufactories shall be built on the line of the road, but everybody west of the mountains shall be compelled to pay tribute to the monopolists of San Francisco? If the road can afford to haul a car-load of machinery to San Francisco, a distance of 3,400 miles, for \$300, why cannot they haul a car-load to Reno, 306 miles nearer, for \$300 instead of \$818?

I see in a San Francisco paper that this road has entered into a contract with the large sugar refiners in that city to put a rate of 2 cents a pound on refined sugar from New York, which is prohibitory. This is another tariff for protection. The result of this is that the sugar market west of the mountains is a monopoly. The Government, through that disreputable swindle, the Hawaiian treaty, permits a sugar monopoly at San Francisco to import Hawaiian sugar free of duty, and refine it and sell it 2½ cents per pound higher than the sugar imported into New York that pays a duty of 65 per cent. Under that sham the Government gives to these San Francisco refiners about two millions of the people's money every year. The people of California are paying to-day 2½ cents per pound more than we pay in the East. Now, by the combination of this line with the sugar refiners the people on the Pacific slope and the Southwest must buy their high-priced sugar or do without. This company is not in such financial distress that it is compelled to commit such an act of extortion. They have received in clear profits since their commencement \$157,917,632.52. Their profits last year were over \$21,000,000. Fifty-three per cent. of their entire earnings were net. Their average rate per ton per mile for carrying freight was over 2 cents, while the average rate of the trunk lines going west from New York was under 1 cent per ton per mile. The whole of the incorporators when it started were not worth over \$150,000; they are now worth over \$200,000,000.

With all this immense wealth, nearly all of which was given them by the Government, they are yet so poor and needy that they must extort every dollar they can, in every way they can, from the people who are compelled to use their road for the transmission of their commerce.

Are not these facts sufficiently appalling to awaken Congress to a sense of its duty to a plundered and enslaved people? Is it not enough to call into exercise the power reposed in us to make these outrages impossible in the future? Such wholesale pillage of whole States and communities has never been known in all history. The pillage of Sicily by Verres, of Rome by Crassus, and of India by Hastings and Clive shrink into the dimensions of petty larceny when compared with the rich spoils of the transcontinental robber. He cannot say like Clive, when called to account before the bar of the English Commons, that considering his opportunities he was aston-

ished at his moderation. In answer to the complaints of the people, the proprietors of this road boldly maintain that this highway is their private property, and that they have a vested right to use it and abuse it as they please. They denounce the people of the United States and their representatives as communists because they express a desire to have the highways of their commerce made to serve the purposes for which they were created at such an enormous expenditure of public treasure. If they are wise in their day and generation they will address themselves to the correction of the gross abuses of their management, and cease to provoke fifty millions of people to a trial of strength.

Let us return from the Sierra Nevadas to the Alleghanies and look upon another high-handed and heartless outrage in the plunder of the people of the oil region of Western Pennsylvania by the five confederated trunk lines running out from Portland, New York, Philadelphia, and Baltimore. This case has been mentioned in this House before, but that shall not deter me from bringing it again before the eyes of an insulted people and invoking from their Representatives the full measure of the condemnation it deserves. In a number of counties in Western Pennsylvania a large body of people have hitherto found profitable employment in taking oil from the great reservoirs in the mountains and shipping it to domestic and foreign markets. The published price for carrying oil to New York from the place of production was \$1.40 per barrel, nearly twice its value. But a special rate was given to the Standard Oil Company at 85 cents per barrel. At the great difference in the cost of carriage between the oil company and all others, it was simply impossible for any one to compete in the market with the favorite of the roads. This great industry, that had given remunerative employment to so many willing laborers and comfort to so many homes, found itself confronted with threatened destruction.

Before abandoning all hope of relief from the peril in which the combined corporations had placed them they resolved to make an effort to reach their market by a different channel. They purchased the right of way over the land between their locality and Williamsport, a distance of one hundred and four miles, and laid down a six-inch pipe to make connection with the Reading Railroad at that point. The Reading road was willing to afford them facilities so that they could reach the market and still compete with the trunk line favorite. On the 1st of June, 1879, they were ready to begin the movement of oil to market. On the 4th of June by previous call the representatives of the trunk line and their protégé met at Saratoga and again reduced the charge of transportation for the oil company from eighty-five cents to twenty cents per barrel, and fearing lest that would not be sufficient to strangle the effort of their victims to save their property which they had dedicated to destruction, they again reduced the freight to fifteen cents per barrel, and then again to ten cents, while to all others they kept the rate at \$1.40 per barrel. They were determined that the Standard Oil Company should have a monopoly of the market. They were determined to blast with bankruptcy every agency that interposed to rescue them from the destruction to which they had devoted them. Like the serpent of the sea they drew their coils around the bodies of their wretched victims, and, lifting their heads on high, hissed away with ominous warning every one who had a heart to feel or an arm to strike.

Is not this cruel and barbarous deed enough to kindle indignation in every bosom not lost to every feeling of humanity? Why do we hesitate and doubt and debate? Why are measures of relief strangled in committee? Are we here the representatives of the people who created this Government for their protection, who give their blood as the price of its ransom in war, and support it with the tithes of their toil in peace, or are we here the servants of railroad corporations? If we are in fact the representatives of the people, let us act like faithful men and discharge the duty that is pressing upon us and remove from their shoulders the burden that is breaking them down. From every point of the compass, north, south, east, and west, the mutterings of discontent are coming to us. But if there were no other complaints in all the broad land, and this one stood all alone in the solitude of its unenviable notoriety, it is enough, and more than enough, to cause us to interpose the authority of law to prevent such impositions upon the people in the future. Many evils will present themselves as railroad power extends and develops that will require the attention of the Federal and State Legislatures. They will have to be treated as they arise. We can see far enough into the problem now to satisfy us of the existence of evils that require present remedy.

Among these the first in importance is the excessive rate charged for transportation. To remove this, Congress ought to prescribe a maximum rate of charge both for passengers and freight. Any attempt at regulation that falls short of this will be found wholly inadequate to remove the evils of which the people complain. The other remedies proposed seem to me to be only dallying with the question, without meeting it boldly and overcoming its difficulties. The injury complained of is excessive charges for transportation; the remedy for that, and the only remedy for it, is to prohibit it and to enforce the prohibition by adequate penalties. The malady is too serious to be treated with salve and liniments. It is constitutional and must be eliminated from the system. Railroad companies must be required to carry freight and passengers at fixed maximum rates,

and reasonable rates. In case of freight the rate of charge should be fixed by the amount and distance it is carried, and in case of passengers by the distance they are carried. The rates now charged both for passengers and freight is beyond all reason. The amount of the annual net earnings of the roads proves this to the satisfaction of all fair-minded men. The rule of the companies is to charge "all the traffic will bear." They extort from the people every cent they can get without injuring their own business. The adoption of such rule of charge is the declaration of the right of pillage. That is of itself enough to call for the interposition of Government to arrest it and prevent the continuance of the wrong. Railroad companies should be paid, like all others, the reasonable value of their service. As they are public corporations, created by government for public purposes, unable to live an hour or exercise a function without public authority, it is the right and duty of the representatives of the public to determine what is the reasonable value of their service, and prohibit them by proper penalties from exceeding the rate when so prescribed.

Before this controversy is settled that issue will have to be determined; and before that is done the people will have to measure arms with the railroad power and decide who is the stronger of the two. With a Congress willing to act there is no difficulty in reaching the desired result. There are two ways by which it can be done. It may be done under the power to regulate commerce or it may be done under the power to lay and collect taxes. Of the two I prefer the latter, because the power is plenary and the remedy can be made thorough and complete. Under the former the power to regulate commerce does not reach State commerce, while the power to tax reaches everything but land and persons. Let Congress classify all roads into first and second class roads for the purpose of taxing their gross earnings as it formerly did. Let it exempt certain roads from payment of taxes, as it exempted certain incomes under the same law. Let all roads that transport passengers at a rate not exceeding 2½ cents per mile, and freight at a rate not exceeding 1 cent per ton per mile, and do not discriminate between persons and places, but charge all according to the amount and distance carried, be classified as first-class roads and their gross earnings exempt from taxation. And all roads that charge more than 2½ cents per mile for passengers, or more than 1 cent per ton per mile for freight, or discriminate in charges against persons or localities, shall be classified as second-class roads and taxed 20 per cent. of their gross earnings. This tax would make all the roads in the United States first-class roads.

This is a legitimate way of removing that evil, and it will prove as effective as it did with the wild-cat banks when their circulation passed away under the 10 per cent. tax imposed upon it by Congress. Would the rate given pay the companies a reasonable profit on their investment? I am satisfied it will be more than fair. The companies of course will not be satisfied with anything that limits their charge. They want to continue to exact "all the traffic will bear," and that is precisely what I do not want them to be permitted to do. Many roads in the United States do not charge that rate, either for passengers or freight, and yet they make large profits. The roads from New York, Boston, Philadelphia, and Baltimore to the Western cities do not charge that rate, while our roads in the South charge double that rate, because there is no competition to prevent it. By the census reports of 1880 the average annual rate charged in the United States for local freight was 1.6 cent per ton per mile, and through freights 1 cent per ton per mile, and the average rate of charge for passengers was 2½ cents per mile. It will be seen that the roads that have active competition must have come very considerably under these rates to bring down the average from 5 cents per mile for passengers in Texas to 2½ cents per mile in the United States, and the freight charge of 4 and 5 cents per ton per mile in Texas to the average of 1.6 cent for local, and 1 cent for through freight in the United States. When we look at some of our Texas roads and see that over 50 per cent. of their entire earnings are net, we see a broad margin for reduction of charges. But it is said that local freights cost more than through freights, because the cars are not unloaded and are kept and detained by the shippers. This is justifying one wrong by another. It is the duty of the companies to have warehouses sufficient to accommodate their business, and to load and unload their own freight as all other common carriers do, and to charge for keeping the freight of their customers as other warehousemen do. They impose that duty on their customers, and then make that imposition a justification for excessive charge.

If this regulation is not adopted I will cheerfully vote for my colleague's bill, but I will do so with the conviction that it is only the half-way house on the line of march. This may be all that we can get now. In fact I think it is more than we can get. But if the people are true to themselves they will get the full measure of redress before many years. If they are not true to themselves they must endure the suffering.

There is another gross abuse that must be corrected. Congress is paying railroad companies more than twenty times as much for carrying the mail as they charge individuals for carrying the same amount of freight. Some weeks ago I called at the Post-Office Department and selected at random forty-four railroad routes, in every part of the country, and requested the officer in charge to give me the rate of pay per ton per mile for carrying the mails on these roads.

He tabulated the statement and gave it to me, and I had it printed in the RECORD of the 22d of February. By this statement and the table from Poor's Railroad Manual, published with it, and the statement from the Census Bureau which I have given above, it will be seen that while the railroads are receiving from individuals an average rate of 1 cent per ton per mile, they are receiving from the United States 27½ cents per ton per mile for carrying the mails.

Is there any good reason why the Government should pay twenty-seven times as much for carrying its freight as individuals pay? I called the attention of the House to these figures when we were making the appropriation to pay railroads for carrying the mail. I called the attention of the gentleman who had charge of the bill to the fact and asked him to give the House the reason for the very considerable difference in rate of pay. The only reply I received was that I was wide of the mark. That answer will not do. The statement I made was the statement of the official records of the Government. It was given to me in writing by the officer in charge of those records. The figures are true and cannot be disputed, wild as they may seem. The facts are as stated and it is a wrong that must be corrected. The pay of railroads for carrying the mail is far beyond the value of the service rendered and ought to be very greatly reduced. The roads to which the Government has granted lands are directly subject by their charters to Congressional regulation in the amount of pay for carrying the mails. Their charters require them to carry "at such price as the Congress may by law direct." Notwithstanding the Government has given the Union and Central Pacific road and its branches a land grant worth \$200,000,000, and over a hundred millions in money, they are paying it and its branches, on an average, over 60 cents per ton per mile for carrying the mail when its average rate for freight to individuals is 2½ cents per ton per mile, which brought to them for the year ending June 30, 1881, over \$29,000,000. Their net earnings over all expenses was over \$21,000,000 for the year 1880, the Government contributing to that end by paying them nearly \$1,200,000 for carrying the mail. How much further is this plunder of the public Treasury to go before the people will call a halt?

There is one other point to which I wish to invite the attention of Congress. During the census year 1880, there were 403,153 persons in the employment of the railroad companies of the United States. Of that number 2,460 were killed and 5,658 were wounded. The total casualties of the year were 8,118. What is to become of the families, the wives and children and dependent relatives of this large number of persons annually slain in the employment of the roads? What is to become of the still larger number who lose arms and legs and are otherwise disabled? What is to become of those dependent upon them? Are they all to be thrown upon the charity of the world? This is but one year's list of casualties. What the total for the last twenty or thirty years is I know not, but whatever it is it is growing greater day by day, and their condition demands the serious consideration of Congress. The Government takes care of those who were dependent upon its fallen and disabled soldiers, and it is right that it should; and I know no good reason why railroad corporations should not take care of the dependent relatives of those who lose their lives and those who are disabled in their service. They receive their injury in the company's service and in the line of their duty, and too often by reason of the neglect of the company to keep its road in proper repair. They have a much higher claim on the company than on the public. They cannot be aided by the national or State government, and they have a claim somewhere, and in my judgment their claim is upon the companies, and it is a just one, and should be enforced by law. We cannot turn away from this question. It will not down at our bidding. Turn as we may it will confront us and demand a response. My answer is that the roads shall be required to take care of them; to keep a pension-roll and bear upon it the name of its dead and disabled employés and those dependent upon them, and pay them a pension as the Government now pays to the dependent relatives of those slain and the disabled in the line of duty while in its service.

If the whole eight thousand casualties required the payment of \$8 per month to each it would only be a charge of three-quarters of a million per year, while the net profits of the road are two hundred and fifty-nine millions per annum. This is the statement of their earnings as they give it. It is probably much larger than that, but if the amount required of them to keep up their annual pension-roll was three times as large, it is still small compared to their net earnings; and more than that, it is just, and they should be required by law to pay it.

Before any considerable reform can be had on this or any other subject of legislation, the public will must be made manifest. It must speak, and speak in terms that admit of no evasion. The reason, and the only reason abuses have fastened upon the administration of government is that the public will has either been asleep or upon some distant journey. The people of the United States have been by the direction of adroit but false leaders watching each other to prevent some imaginary evil, while the money-changers have erected their stalls in their capital and bartered away the public liberties for gold. A large number of the presses are but subsidized mouthpieces of the allied money rings that have taken possession of the Government. The press is the channel through which the people communicate with each other. It is the highway over which infor-

mation travels. It is the crucible where the truth and the falsehood, the real and the sham, the gold and the dross, are tried by the fire of free, full, open discussion. So impressed was our fathers of its importance as an instrument for the preservation of a free and prosperous people, that they planted its liberty on the Constitution and threw their bulwarks around it for its defense. In those days the proud motto it carried at its mast was:

The people's press the people's rights maintain;
Unawed by influence and unbribed by gain.

Now, how many influential papers do we see daily advocating monopolies, defending abuses, and exerting all their abilities to mislead the public and lull all its apprehensions, while the grossest enormities are being perpetrated in the name of the public welfare. The people must use extraordinary diligence to inform themselves, and when they have determined what is best for the common welfare they must speak with earnestness. They must call out the men who aspire to represent them, and require them to pledge conformity to the wishes of the constituency. They must declare in their primary meetings that they demand reform; that they demand the emancipation of their commerce, foreign and domestic, from the ruinous pillage to which it has been subjected for years; that they demand reduction in taxation and reduction in the expenditures of Government; that they demand that the public treasure gathered by taxation shall be expended in an honest and economical administration of Government and payment of the public debt; that the earnings of the masses shall not be taken from them under special pretexts and given to swell the fortunes of a few. They must attend their public meetings, take the proper interest in their public affairs, and make their representatives understand that they intend that the Government shall be administered for the public welfare, and not used as an instrument for public plunder.

The Permanent Development of the Northwest.

It is a greater credit to know the ways of captivating nature and making her subserve our purposes than to have learned all the intrigues of policy.—Glanville.

SPEECH

OF

HON. M. C. GEORGE

OF OREGON.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 30, 1882.

On certain memorials from the Legislatures of Oregon and Washington Territory and petitions from citizens thereof relative to the improvement of the Columbia, Willamette, Snake, Yamhill, Cowlitz, Umpqua, Alsea, Siuslaw, and Coquille Rivers, Yaquina and Coos Bays, and of Port Orford for a harbor of refuge.

Mr. GEORGE said:

Mr. SPEAKER: In submitting these memorials and petitions from the Legislative Assembly of the State of Oregon and the Territories of Idaho and Washington and the citizens thereof, I desire to accompany the same with some remarks on the permanent development of the northwest portion of these United States.

The memorials presented relate to the improvement of the Columbia River at its mouth and along its length and that of its tributaries, and the harbor entrances at Coos Bay, Yaquina, Coquille, Alsea, Umpqua, and Siuslaw, and the harbor of refuge at Port Orford.

Of these I shall speak consecutively; but first a few general thoughts concerning this section of country and the policy of improving its natural thoroughfares.

The great Northwest embraces all of Oregon and the Territory of Washington, and such portions of Nevada, Idaho, Montana, and Utah Territories, and of British America, as are drained by the Columbia River and its tributaries, and contains nearly 300,000 square miles—a grand scope of country greater than Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Delaware, Pennsylvania, Ohio, Indiana, and Illinois, where nearly twenty-three million of people reside. Let this section of country have the facilities for acquiring population such as Colorado and other Western States now have, and which we shall shortly possess, and give us the same ratio of recent growth as Colorado, then in less than twenty-five years we will have a population exceeding that of the vast scope of eastern country, to which reference has been made. Put your finger on a map northwest of Chicago, pass it thence easterly to include Detroit and Toledo and Cleveland and Buffalo and Montreal and Boston; thence follow down the coast and include New York and Brooklyn and Philadelphia and Baltimore; thence westerly and include Cincinnati and Saint Louis; and then to Chicago again, and although you have outlined a scope of country which includes all the great cities of America save New Orleans and San Francisco, and an area where over twenty-three million of people reside, yet you have traced a

country only about seven-eighths the size of the great Northwest of the Pacific.

The area of the State of Oregon is equal to all of New England and two-thirds of the Empire State thrown in. Those have a population of nearly seven and a half millions, with fifty members in the House of Representatives; and were our State settled as thickly as Massachusetts, we would have over twenty-one millions of people, or a number equal to more than two-fifths of the present population of the whole of the United States.

Our State is larger than the great States of New York and Pennsylvania combined, and is much larger than either Ohio and Pennsylvania or Indiana and Illinois laid side by side. Oregon is half as large as France, about twice as large as Old England, over six times as large as Switzerland, about eight times the size of Holland, and nearly nine times as large as Belgium. Were Oregon settled as thickly as Ohio, our population would be over seven and one-half millions; or as Pennsylvania, we would have over eight and one-half millions; or New York, over ten millions; or Switzerland, over thirteen millions; or France, about eighteen millions; or Holland, about twenty-seven millions; or our mother country, England, probably over fifty millions, or as many as are now in all of the United States of America. These facts are almost startling. Such are comparisons for the State of Oregon, only. What, then, would they be for the whole of the basin of the Columbia or the great Pacific Northwest? Gather together all there is of England, Scotland, Belgium, Holland, France, Denmark, and Switzerland, where over 85,000,000 of people dwell, and it does not equal the water-shed of the Columbia and its tributaries. And all those countries have their mountains and timber and their barren and waste lands and are growing, increasing, and developing yet, and will continue for ages to come, notwithstanding heavy annual depletion from emigration. Such being our condition as to size, the question naturally arises, "are we of the Northwest capable of furnishing sustenance and

PROSPEROUS, HAPPY HOMES

for the teeming millions of the future?" I unhesitatingly answer that we are. Why not? Our soil and climate are as good as theirs, if not far better, on an average. The three essential conditions exist: first, a climate warm enough to ripen crops and secure the comfort of man and beast; second, a soil of natural fertility; and third and last, sufficient moisture to render the soil productive. Our climate is that of a happy medium, neither too hot nor too cold—a priceless favor conferred by those strong thermal currents from the equator, laving our shores as far north as Alaska—our northern latitude, insuring us cool summers, and these currents supplying our winters with warmth, and the happy combination circling about our snow-capped mountains, wafted to and fro by the breezes of the sea, giving us in midsummer our delightful weather and our cool and refreshing, invigorating and sleep-producing nights.

The climate of our coast is governed by the Pacific Ocean, the prevailing westerly winds modifying the heat of the summer and the prevailing southerly winds tempering the rigor of the winter. Eastern people can scarcely realize these facts, for our center line of latitude is that of cold, northern Maine. Never during my residence in the Willamette Valley of over a quarter of a century do I remember of passing through as severe a winter as I last year experienced, after the 10th of January, in the city of Washington, a point six degrees south of our latitude. While our children were gathering the bright and beautiful spring flowers and the blossoms of peach, pear, and cherry trees were turning into green and growing fruit, the children of the East were perched on sleds, muffled for the dreary, cutting cold, coasting down the hills and inclines of the streets over the icy frozen snow. Cast your eyes over a climatic map exhibiting the extreme northern line of wheat production, for instance, and you will find that while on the eastern shore it touches near the mouth of the Saint Lawrence, at latitude 50°, with us it runs over six degrees farther north and beyond the most northerly point, in British America reached by the Columbia River.

The truth is we often but little realize our vast advantages. If our ocean navigation is perchance prevented by ice from connecting with our railroads for a few days of an occasional year we regard it a terrible stroke to our commerce; yet your great eastern cities, with scarcely an exception, are frequently frozen in, your boats and ships ice-bound at your docks for weeks or months, and many of your trains snow-bound on the land.

AS TO FERTILITY OF SOIL,

were comparison to be made, we might select the rich agricultural State of Illinois. Yet our Northwest has from three to four times the fine open wheat-land of that State, and a much better average yield; and take our soil throughout and it will be found superior to that of either Ohio, Pennsylvania, or New York, while no one could think of comparisons with rocky New England. The truth is there is little land in our vast region that is not good for something, either adapted to wheat, barley, oats, hay, pasture, fruit, vegetables, timber, mining, or something else.

Where is there a State that can equal that magnificent crescent-shaped wheat belt crowding upon the foot-hills from The Dalles, around the great bend of the Columbia to the Yakima and beyond? This, with a few other contiguous valleys, as estimated by the efficient supervisor of the census of our State, will produce a surplus of wheat

that will require over seven hundred ships annually to carry it to a foreign market, and this, bear in mind, is but a small portion of our entire wheat-producing area, and our foreign export wheat trade is springing up, as it were, by magic. Only thirteen years ago Colonel John McCracken, of Portland, shipped the first direct cargo to Liverpool, and the wheat men of that great mart noted the shape, size, and weight of its grains with astonishment, and wondered from whence it came. Should the farmer of our country ever discover coming from the thresher such wheat as many eastern farmers place on exhibition as choice samples in the Agricultural Department, he would almost regard his crop as blighted, and his season's work as lost.

Hon. Philip Ritz, of Washington Territory, in a letter to the able and venerable member from Georgia, [Mr. STEPHENS,] in 1878, while speaking more generally of the great billowing sea of rolling hills now covered with bunch grass, and known as the Plains of the Columbia in Oregon and Washington, said:

I have gone over this great body of wheat country in several directions, and have estimated it carefully by townships, by sections, and by acres, and, having left out a fair proportion for rough land suitable only for grazing purposes, and estimated the wheat yield at a low average for that country, I find the ultimate capacity of these great plains for the production of wheat to be fully 100,000,000 bushels per annum.

Or enough to load nearly 1,500 ships.

Farming has but just commenced in this country; yet last year there was 1,000,000 bushels of surplus. And to show the capacity of the soil it is only necessary to state that it is not uncommon for large fields to average forty, fifty, and even sixty bushels per acre; in some instances one hundred bushels per acre have been grown. This yield may seem incredible to many, but nevertheless it is a fact, and what is more remarkable, there has not been a failure of a crop for twenty years where the land has been put in proper cultivation and seeded in good season. Another very remarkable fact about the soil is that the same fields have produced uniformly the same great crops for twenty years in succession without any fertilization. This led to an analysis of the soil, which shows it to be composed of the very elements that will produce the most perfect crops of wheat in abundance and in unlimited succession.

It is very largely made up of volcanic ashes and carbonate of lime, the proportions being almost the same as the great wheat-fields of Chili and the island of Sicily and the country bordering on the Bay of Naples, which has been the granary for Southern Europe for ages and has furnished Rome with wheat for more than two thousand years. These facts, with a mild and healthful climate, render this country of great commercial importance.

Let me give you a single instance of rapid and surprising development, for such has been the order of things especially in the supposed unproductive region of Eastern Oregon and Washington. Ten years ago a certain tract of 2,300 acres near Walla Walla, now owned by Dr. Blalock, would scarcely have sold for ten cents per acre. This year its average yield of wheat was 35 bushels per acre, and on 1,000 acres of it 50,000 bushels were raised. Samuel Edwards, on land near by, harvested an average of 71½ bushels of 62 pounds weight from 30 acres. But a few years ago the wheat product of Oregon was put down by statisticians under the head of "miscellaneous." In 1880 the census revealed our State as ahead of twenty-one others and standing seventeenth on the list of States in quantity and first in quality, and yet it to-day is but in its infancy in this industry. Our wonderful growth is illustrated by the following figures:

OREGON.		Bushels.
1860.....		1,820,278
1870.....		4,659,654
1880.....		12,951,009
WASHINGTON TERRITORY.		
1860.....		230,737
1870.....		554,549
1880.....		4,122,358

The existence of the third and last requisite—sufficient moisture to render the soil productive—I believe is generally admitted, at least in the Willamette Valley, where the web-foot nickname given us indicates our abundant blessing in this particular. While these

THREE PRIME CONDITIONS

exist in the great Northwest, we find it also adapted to the operation of those three laws which sway human existence, to wit, love of life, desire for health, and passion for wealth—for there life can be most prolonged, health best secured, and wealth most easily acquired. Through our climate we avoid the heat and attending evils of scorching eastern suns and the extremes of cold, chilly, and desolate winters—the mortality reports showing this to be the healthiest section of the United States. Our rich and diversified industries afford fine opportunities for wealth, and "diversity is certainty."

We know that our climate is health-giving and harvest-producing, having been attested by many of us for thirty years past without failure. We know that the natural resources are as valuable and as various as its area is vast, thus adapting it to multiplied industries and modes of living.

Our climate and our productions vary. This is a great advantage. Southern Oregon is different from the Willamette Valley in many respects, and the Puget Sound country varies widely from Eastern Oregon. In fact, no two sections, valleys, or localities are entirely similar, and our varied productions will soon be carried along the slopes and fertile valleys of our sea-coast and the lines of our rivers and railroads all over our country, passing from one climate to another, giving us not only the easiest and cheapest facilities of exchange, but also the diversity of want and supply most favorable to commerce, and rendering each part dependent on the other; and the Columbia River and its tributaries, as a grand continuous and natural system, rami-

fies this vast space of territory in connection with and aided by our ever expanding railroad system.

FRUIT-GROWING, WHEAT-RAISING,

grain-producing, lumber-making, iron-smelting, coal-mining, stock-raising, ship-building, wool-growing, fishing, commerce, manufacturing, and general agriculture, are some of the great industries in which we can lead, and the elements of our present and future prosperity. These resources are given us by a bountiful Creator, and to develop them is the work of our people: rich soil, fine climate, an intelligent population, an internal capacity to develop a home market, and splendid facilities for foreign ones in the future.

We of the Northwest are on the great line and latitude of immigration. From New York and Boston westward the line extends, and for years the leading growth of this nation has been along this extension, increasing in regular ratio towards the West, until it reaches the rate of nearly 300 per cent. in a decade in Kansas, over 300 per cent. in Nebraska, over 400 per cent. in Colorado, and nearly a thousand per cent. in Dakota. None of these sections can possibly equal this great Northwest in all of the essential elements for prosperous and contented homes, yet they lie along the line of railroad communication and they thrive. While we are on the natural line of immigration and commerce, yet this railroad communication does not reach us; it deflects to the south, and our sister, California, has reaped the harvest, and only by our people turning out of their direct line and running the gauntlet of the enticing blandishments of all the other States and Territories across the continent, and undaunted by the direful forebodings of the ocean voyage and the reported awful danger of crossing the "dead-line"—the Columbia River bar—have we been able to secure immigration, isolated as we have been.

Our country has had to depend for her population upon two classes of immigrants—one composed of those brave and hardy pioneers who took their lives in their hands and for many months endured the fatigue and dangers and deprivations of the long, lonesome, weary journey across the "plains," over the deserts and the wild region of the savages to people the far Northwest. Over thirty years ago my father, with his family, made that journey from Ohio to Oregon, carrying him who now addresses you, and who had been so fortunate as to have been born in that now famous "land of statesmen" and "nurse of office-holders."

The other class of immigrants of whom I have spoken are those who, since the completion of the transcontinental or overland railroad to California, have made the journey to San Francisco in the cars, and thence up the coast to this Northwest by ocean steamers.

Yet, notwithstanding all these difficulties and disadvantages now shortly to be removed by direct railroad communication, we have made a decade growth of about 100 per cent., while the average increase of the United States, in their wonderful development, has been but 30 per cent., and, strange as it may seem, we have grown as rapidly in proportion as our sister State, California. The truth is that all these States and Territories along the belt—Kansas, Colorado, Nebraska, Wyoming, Utah, Dakota, and California—have received large immigration to which we were entitled and would have secured with railroad communication.

BUT ALL THIS WILL BE CHANGED

in the high future. With the completion of the North Pacific, with direct connection with the Union Pacific, over eight hundred miles, principally of sea-voyage, will be saved, and then over two-thirds of the fifty millions of people of these United States will be a hundred miles nearer us than to any other portion of the Pacific coast region, and from five to six hundred miles nearer the rapidly-growing Japan and China trade. Three great means of access we shall have within two years—the Northern Pacific, the Union Pacific, and the Southern Pacific, three great transcontinental competing roads.

Immigration will follow these lines of rail, according to an unvarying rule of both the Old and the New World. The stream of commercial development of the United States, and for that matter the world, is between the thirty-eighth and fifty-fourth parallels of north latitude, the severity of the American Atlantic winter driving it far south in the east, and the mildness of the climate on the Pacific, under the influence of the warm ocean streams, allowing it to go to the northward, as like causes along the European coast have done with the Old World; and this great stream of commerce, making allowance for the climatic and other influences of the interior of our country, will center through our great Northwest on or about the forty-fifth or forty-sixth parallel. The steady tread of man as he advances or emigrates has in all ages been along lines of latitude, rather than longitude. In America the natural channels to carry man and his trade—the rivers—the Ohio, the Missouri, the Mississippi, and their tributaries, run southward. Vast mountain ranges lie along their sides, and it would seem that trade and emigration would flow in that direction. The mutual trade or exchange of the products of the colder with the warmer climates would seem to require it. But man, in his obedience to some other and higher law or circumstance, leaping all obstacles, bridges the rivers, tunnels or scales the mountains, builds roads of steel or iron, or digs canals, and carries himself and his trade east and west, and along these man-made channels has flowed the mighty stream of commerce.

It was estimated, a few years since, that more than four times the

commerce crossed the great bridge at Saint Louis than passed up and down the Mississippi River underneath. If rivers

RUN EAST AND WEST

like our Columbia, which bursts through one of the great mountain barriers, commerce will undoubtedly follow them; but if they run north and south the great commercial line hitherto has crossed them. We of the Northwest are along this line, on this belt of latitude, or rather, this somewhat isothermal line around the world, along which the tides of commerce and progression, enlightenment and civilization have ever been rolling. In the United States along this line centers our most dense population, and here we find all of our really great cities. Along this belt are printed all the great newspapers of America and the world, and growth and wealth and prosperity ever attend it. Tracing this belt to Europe, we find it embracing the most enlightened, creative, conquering and progressive nations—such as England, France, and Germany. It is the great highway of nations, and along this line "the star of empire" has taken its course. This channel emigration pursues in America with but little deviation, and while toward the southward it could find a more mild climate, richer soil and more luxuriant growth of delicious fruits and vegetables, emigration hitherto has not gone there, neither has it come from such countries in the Old World. In the last decade nearly 3,000,000 emigrants landed in the United States, and of this number only 50,000, or but one-sixtieth part, came to the Southern ports, and the overwhelming percentage of those arriving at Boston or New York drove irresistibly onward toward the West and Northwest. The great growth of Eastern cities is among the more northerly ones, and increases as you go westward. Boston, Chicago, Cleveland, Toledo, and the more northern towns have excelled Baltimore, Cincinnati, St. Louis, and the more southerly. Indianapolis has doubled in ten years, and so has St. Paul, and Minneapolis is four times as large as in 1870. All this seems to be in pursuance of immutable laws of nature and the universe. The aggressive, ever stirring, conquering people are advancing along these lines.

Now behold our favorable position, situated as we are on the line of commerce around the globe. Take for instance our more southern navigation to China and Japan. From various causes it comes as far north as the forty-sixth parallel opposite the mouth of the Columbia, and then bears to the westward throughout the voyage. By the new overland railroad route by way of Granger and Baker City, Portland will be many miles nearer Chicago, Saint Louis, and New York than San Francisco, and the transcontinental route to Japan and China will be at least five hundred miles shorter via the Columbia River than by the old way of San Francisco. Along this line of progress and growth there is rolling onward toward us of the Pacific a ceaseless tide of immigration, an irresistible stream pouring over the plains of Kansas, Nebraska, Colorado, and Dakota, and rolling rapidly toward the golden sunset of the west. It is coming, coming, and when the flood-gate barriers are opened by the hand of capital and labor and avenues of steel have united us with the East, who can tell what the grand future has not in store for the Northwest? While speaking of growth by immigration westward, I have been struck by the novelty and force of an idea advanced by an able and well-informed writer and an old pioneer of Oregon. He says:

IF OUR PILGRIM FATHERS

had landed at the mouth of the Columbia or the Golden Gate, instead of Plymouth Rock, can any man believe that their posterity would ever have settled the country east of the Rocky Mountains as long as they could get land enough here to keep them from starvation? The terrible cold, the excessive heat, the frightful hurricanes, the long winters, and the thousand and one other "drawbacks" over there would have turned back the tide of immigration from this coast as long as there was ground enough here for a man to stand on. Providence wisely ordered that in settling America the most uninviting part of it should be settled first, and settled by a people whose austere manners, rugged constitution, and rigid theology better harmonized with the discouraging features the New World presented than they would have done with more delicate organizations reared on this coast. The Pacific coast was reserved for an improved posterity.

But as the latter portion of the feast is generally the best, so, indeed, "Time's noblest empire is the last." How different would have been their situation had our Pilgrim Fathers landed in the Northwest instead of Plymouth Rock. There an abundance would soon have blessed their labors, while at Plymouth Rock their lot was one of danger, starvation, and exposure, and many were the lives lost amid the fearful rigors of New England winters. On the Pacific their cattle could often have grazed the year around without food from the hand of man, while through famine and cold they perished on the Atlantic. The dangers, difficulties, and exposures of the pioneer who settled that northwest country were all in going across the continent; but in New England their troubles began upon their arrival. Again, it took a hundred years and more for them to surround themselves with many of the blessings and comforts of life which were realized by our northwest pioneers in the brief space of a few years.

RESOURCES AND PRODUCTIONS.

As people come our country develops and our productions increase. Even now we are a very great producing section. Wheat is one of our greatest staples, and its production has increased nearly fourfold in the last ten years. Our surplus is sent abroad, and while we demand cheap transportation our policy is also to build up our home markets and to encourage the presence of manufactures in all possible, legitimate ways, thus retaining our productions, as far as possible,

like healthy blood to circulate throughout our body-politic, giving health and vigor to every part.

We are unusually endowed with facilities by nature, as abundance of the raw material for building or manufacturing can be supplied, and the power is everywhere available, in the thousands of waterfalls and streams and the coal and wood for fuel, unexcelled by any State in the Union.

The superintendent of census in our State estimated that our area of good timber on the Pacific Northwest, which only grows on the best of soil, capable, when denuded of its timber, of producing anything, exceeds that of Michigan, Wisconsin, and Minnesota, the great lumber-producing region of America; and he further calculates that the day is nigh at hand when our lumber industry will reach the figures of the pineries of the Upper Mississippi and the lakes.

Over many acres of our rich lands are forests of yellow fir, cedar, pine, spruce, hemlock, and in smaller quantity oak, maple, cottonwood, ash, dogwood, and alder. The fir is the staple, both in the quantity and the uses to which it may be applied. It is successfully used for the construction of large and durable ships, for houses, furniture, fencing, and heat, and for other purposes of civilization. Cedar in sufficient quantity exists to supply the demand for material calculated to withstand the moisture of the climate. The bark of the hemlock is of excellent quality for tanning, and is used for that purpose. For wagons and farm implements the oak is in use, much of which is as firm and elastic as the oak obtained in other countries.

The cottonwood, found in large tracts along the streams, makes good rails, and is a source of industry for the manufacture of barrels. Staves of this wood are sent by the ship-load to San Francisco. Elegant and durable furniture is made from our maple, alder, fir, and ash.

In every portion of the wide extended territory west of the Cascades may be found huge firs, as high as from two hundred to three hundred feet, and straight as the line of a plumb.

Chestnuts and walnuts, rivaling those found elsewhere in size and fullness, have been grown by cultivation, and most of the trees growing in the forests of the Atlantic States will thrive in the Pacific Northwest if transplanted.

Underneath these extensive forests and rich soil in many places are valuable coal-mines and iron-beds which will soon be brought into requisition, and vast smelting works and forges and rolling-mills will light the darkness of our nights and roll the iron bands that shall bind our various sections together and us with our sister States. With the presence of the skilled laborers and artisans drawn from abroad consuming our flour and our beef and our vegetables, with all the advantages of home markets, quick returns, and high prices, and avoiding the annual drain upon our country's producing capacity and money supply, saving all unnecessary cost of transporting our products abroad and our imported manufactured articles, we can then not only become independent in fact and mutually advantageous to ourselves, but we can even turn the scales, and, availing ourselves of our superior situation, naturally become the manufacturers for others, drawing their raw material from them and returning the manufactured article. The importance of this policy none can overestimate.

Be this as it may, to-day the subject of great interest to us is that of sufficient and cheap transportation—facilities for carrying our people and their products, and of cost when carried. Commerce follows two great competitive channels, the

NATURAL WATER-COURSES

and the artificial railways; and while private capital will build the latter, to the General Government alone our country looks for the improvement of our water transit—our rivers and our harbors. The development of a new country depends much on the cheapness of its transportation. Freight and fares should be regulated with regard to the cost and risk of the service rendered, and not upon the fatal opposite principle adopted by greedy, avaricious, and little minds, of how much the producer can stand and yet live and produce. When such a dangerous policy prevails the people justly become agitated and restless, and restraining legislation is demanded, and serious conflicts between the government and the powerful creatures of that government become imminent. So the part of true political wisdom is to pursue such courses as time, experience, and reason have repeatedly suggested. The uniform lesson has been that water-ways are the natural competitors of railways—not that they always carry the trade, but that they compel the railways to keep their rates of charges within due bounds. Take illustrations from the East. Four wealthy, powerful trunk lines of steel rails run from the interior to the seaboard of the Atlantic, possessing, with others, a power of forming a vast "pooling" combination to control the rates of

THE CARRYING TRADE

and keep them uniform; yet, notwithstanding, there is a periodical rise and fall in their charges. However much we may regard railways as masters of the situation who may raise their rates at pleasure in the winter when all the water-ways are frozen, yet, as spring opens the free lakes and the Erie Canal—that crowning work of De Witt Clinton—yes, even days and weeks before, as they compete for the carrying of grain which they know will soon have an opportunity to go by a free water-course, down tumble the rates. It is not near so practical a question to the producer to know whether a water-way does carry the products when parallel with railways as to know that

it can carry them. This very fact keeps rates within reasonable bounds, and with far greater potency than all other powers combined. The lakes and the Erie Canal affect not only the parallel lines, but also all lines to the seaboard, to Boston, Philadelphia, Baltimore, and elsewhere as well as the route to New York; for although these several points have no direct water communication with the West, yet, as they are competing points, a fall in freights to one affects all. Then again, competition with the Mississippi River, more especially since the improvement of its mouth, affects nearly the whole of the interior. It regulates the cost of transportation on all the railroads to the seaboard (now far cheaper than ever before known) and increases their direct export trade; and so will the improvement of the water-ways of our great Northwest—the Columbia River, the Snake, the Clearwater, the Willamette, the Umpqua, and their several tributaries, together with our harbors at Yaquina, Coos Bay, and Port Orford, and our small rivers.

The grand sweep of the regulating and competitive influences which the opening up of all these rivers and harbors would produce could scarcely be overrated, and it would be felt the year round, as our rivers are seldom closed by ice, and never for a sufficient length of time for the effect to be serious. The Columbia River moves along its course of over 1,200 miles with a mighty and irresistible stream, cutting its way through the Cascade Mountains—a continuation of the Sierra Nevadas, over which California has to climb. When it is improved, it will be a great, broad, open, deep and free highway for the use of all, and its influence cannot help but be grandly beneficial. A free river and a deep and safe channel to the sea and over the bar is and should be the policy of the Northwest.

IMPROVEMENT OF THE MOUTH OF THE COLUMBIA—THE RIVER OF THE NORTHWEST.

An expenditure of a moderate sum upon its entrance will insure a wonderful improvement, and will render it better than the harbor entrance of any great American city. Nature has revealed in its history a most significant lesson.

Ages ago its mouth was like a great bay, reaching from the bluff-bound Washington Territory line to the bluffs south of Clatsop Plains. The prevailing and strong winds, during most of the year, along the coast, come from the south or southwest. This has caused, for the greater portion of each year, a strong shore current of water which carries sand and silt up the coast to the northward. The effect has been to fill in what was once a bay, and to build up, through the long lapse of time, the low, sandy bottom now known as Clatsop Plains. The presence of vast quantities of shells and the remains of sea-life everywhere in and on the plains, and the numberless sand dunes are some of the strong corroborating facts demonstrating this growth. The effect of this action has been to deflect, as the sand plains grew, the channel or channels of the mouth gradually over toward the north bluff bank. In the course of time a natural limit for the plains was reached; but the same causes have continued to operate under the surface of the water, and a still further submarine spit growth has resulted, and has, through succeeding years, formed what is now known as Clatsop Spit, and which still has a constant growth in the same general direction, under water.

It will be seen that this regular growth under the unvarying law is a great natural aid to the improvement of the river entrance, for it is a primary proposition among engineers the world over that the width of the mouth of a stream should be so regulated that it shall bear a proper ratio to the volume of water discharged, and it is a principle of common sense, as well as of science, that the narrower you make a river's mouth, so long as you do not unduly impede the necessary flow of water, the further out into the ocean the inevitable bar will be, the farther down it will be to it, and the deeper will be the channel-way through it. The reason is manifest: a good strong current will overcome the opposing elements of the sea and carry the sand and silt much farther out into the ocean, and cause a much deeper channel through this deposit, acting on the principle of the nozzle placed on the end of a hose. It is this principle which gives to the Golden Gate its good name. There the bluffs on each side, a mile only apart, insure a straight channel out to sea, with the bar, like a half moon, reaching around from shore to shore, and seven miles out in the ocean to where the center and most forcible part of the current cuts through the bar—through the center of this half moon—and there, through the cut, it is thirty feet deep at low water, without change or variation. Widen the passage-way of the Golden Gate, and thus lessen the force of the current, and the bar will form nearer in and the channel through it will shoal. Widen it still more, and ill-defined shoals and crooked and shallow channels would be the inevitable result, and the well-merited reputation of the Golden Gate would then be gone, never to return until the gate-way could again be narrowed.

But to the history of the mouth of the Columbia. This narrowing process nature is constantly carrying on. Our first knowledge comes from the plat made by Broughton, under Admiral Vancouver, who visited the Columbia in 1791. Its claim to accuracy in some respects is disputed; but this much is certain, that Clatsop Spit had grown out until there was but one channel, straight to the sea, with a bar of the same general half-moon shape as at the Golden Gate, with twenty-seven feet at low-water through its center and between five and six miles out to sea. This with an average rise and fall of tide of over seven feet gave over thirty-four feet on the "bar," as it is called. Clatsop Spit had grown until there were but two miles between its

end and the opposite bluff, Cape Disappointment, and there was no Sand Island. No additional survey was made until forty-eight years later, that of Sir Edward Belcher, in 1839. During this time the spit continued to grow, and in all human probability, as it narrowed the passage-way, still continued to improve the depth over the bar.

But another cause had ere 1839 entered as an important factor. This long and growing spit had acted as an ever-increasing under-surface dam against the waters of the mighty Columbia. As it extended northward, driving the channel before, much surface water escaped over it, until at some period between those surveys of 1791 and 1839, when possibly with an unusual flood-tide and a consequent vast body of accumulated back-water in the river, and perhaps a storm combining, the ebb breaking over this underlying spit cut a new channel or swash across it, and two channels to the sea had formed instead of one, the part of the spit cut off becoming what is now known as Sand Island, and the splendid work of nature for years was destroyed in a brief period. Like a good tree that had sent forth its limb and borne thereon its blossoms and grown its fruit until the limb had become so long and so heavy that it broke—the work of time was gone, only to be renewed by slow and steady growth again, and instead of one straight channel, with twenty-seven feet at low tide, two crooked channels, since known as the north and south channels, with probably twenty feet of water, was the result. But nature again renewed her work of building up the spit. The same great, powerful agency which produced this growth caused Sand Island to move also in the same direction; but the combined effect of this force and the river channels deflected the course of Sand Island a little inward, much more so than the spit. This process continued until Sir Edward Belcher made his survey of 1839.

The movement of Sand Island, together with the peculiar conformation of Baker's Bay and Cape Disappointment, had in the meanwhile the effect to swing the north channel around from its former westerly direction and turn it southerly or down toward the south channel. The growth of the spit was forcing or throwing the south channel in a more northerly direction, so that when Belcher surveyed it he found much of the water of the south channel flowing over into the north channel, with a bar at the point of junction of twenty-one feet at low water; but in the thus strengthened north channel, and nearly three miles further to sea, there was about twenty-four feet. Clatsop Spit had probably been cut off about a mile and one-half back, and in 1839 and 1841 Sand Island, the portion cut off, still blocked the entrance-way of the river.

The next survey was by Admiral Wilkes, in 1841. In the mean time a very rapid growth of Clatsop Spit of nearly half a mile had united completely all the waters of both channels at the point of junction seen on the map of 1839, and the increased force of current gave a bar between four and five miles out at sea, with twenty-six feet at low water. This map shows the same relative northerly movement of Sand Island, although the island was still in the entrance-way between Cape Disappointment and Point Adams.

We now arrive at a more variable period, revealed by the next survey in 1851. Clatsop Spit shows another growth of a few hundred yards; but the middle sand bank, or Sand Island, which in 1841 occupied more than three-fourths of the mouth of the river between the cape and the spit, and which had hitherto much the same effect in narrowing the channel-ways as an extended spit, had moved inward until but little more than one-half of the intervening space was occupied by it, and, being elongated in the direction of its general course, had again caused two bar channels instead of one. The successive surveys from then until now disclose the continuous operation of this great, powerful agency—southerly winds and currents—a constant growth of the spit and the steady movement inward of Sand Island. This has not, however, improved the bars or channels, for Sand Island has still parted the waters, causing two channels, and as the island has moved from the mouth of the river nearer to Baker's Bay it has thus widened the passage-way of the mouth far more than the growth of the spit has contracted it. As a result, the maps all show crooked, shallow channels amid shifting sands, and displaying successive changes in depth, width, and direction at the freak of every wind or tide or storm. This is the period that has given to the Columbia bar its bad name.

The inward movement of Sand Island has caused a gradual shoaling of the north channel before it.

Lately the slow and more northward advance inward of the island and the growth of the spit have again had the effect to cause a swash from the south to the north channel, somewhat similar to that of 1839 and 1841, which gives assurance of some better entrance, at least temporarily.

Colonel Gillespie, the able and competent engineer in charge, seeing the danger of Clatsop Spit swashing off again as it grew out; seeing how nature was constantly building up a bank and narrowing the entrance, and realizing the necessity of preserving and sustaining the spit and building up and maintaining a bank thereon; in other words, as nature sent out its limb from the tree and grew its heavy cluster of fruit upon it, to support it, prop it up, and maintain it, recommended the erection of a strong pile-dike or jetty along upon the inside of the spit, with piles sunken by hydraulic process and inlaid with mattresses and stones between, dumped from a tramway thereon or from scows, thereby not only strengthening and maintaining the spit from ever breaking off again, but also

turning into the proper place to aid in its proper work the vast body of water now wasting its scouring force over the spit, thus utilizing all the scouring capacity of the ebb tide and without interfering with the flood. The sand would fill in and back up around the jetty until it would be one solid, immovable, and durable wall forever, the immense body of fresh water protecting the wood from the teredo until the packing sand insured its complete protection. Colonel Gillespie thought that eight thousand feet of pile-dike would be sufficient, which, however, if not, could be extended at will. This work, he estimated, would cost but \$430,000, and he recommended it all to be made at one appropriation, and urged the expenditure with great earnestness. He stated in his report that he had no doubt but that the maintenance of a deep-water channel was dependent upon the building up of Clatsop Spit, and the holding of it in position where it now is.

General Wright, Chief of Engineers, referred this recommendation to the advisory board of engineers in New York, which, however unintentional on the part of this able and distinguished officer, was like sending it to its graveyard. This learned board in their report reviewed the history of the mouth of the Columbia, yet probably through lack of careful personal examination of the locality and personal observation of the phenomenon, did not realize the deep significance of that history—the operation of the powerful forces and principles which I have attempted to outline—at least I find no reference to it in their report. They state “that the growth of Clatsop Spit has unfortunately been associated with a great deterioration of navigation over the bar;” and that “the present extent and position of Clatsop Spit” (alluding to its running north and south) “constitutes a hurtful feature of the outlet; and that it would be a beneficial change if it were set back in the place which it formerly occupied, in a direction nearly west.”

It seems surprising to me that a learned board, called upon to advise the Chief of Engineers of the United States, and who pass in judgment upon the plan of a Government engineer of character and standing, who had been three years in personal charge, supported by able and experienced assistants, (all personally familiar with the locality and surroundings,) should have been so mistaken in their facts and so misled in their conclusions; for, while it will readily be admitted that in 1841, when there was twenty-six feet at low water and a good channel, that Clatsop Spit did not, in its main body, extend so far north as it does to-day, when we have crooked channels and much shallower water; yet this fact should not have misled the board, for Clatsop Spit had then been broken off and the part broken off—Sand Island—formed still a part of the general extension of the spit, serving, as I have before stated, as an extended spit toward the opposite bluff, blocking the passage-way of the mouth of the river and narrowing the channels on each side thereof until the aggregate channel-way was only about one mile in width, on a line from the spit to the bluff, whereas to-day along the same line, although the spit has grown much further, yet the old part of the spit cut off—Sand Island—having moved inward from the entrance, the mouth of the river in channel-way is a half mile wider than then. Neither have the channels come together beyond as they did then, to thus unite their scouring force upon the bar on the outside.

While the spit has constantly grown, the gain in thus narrowing the river mouth has been lost through the moving inward of Sand Island from the entrance-way. At that time Sand Island occupied more than three-fourths of the intervening space between the spit and the opposite bluff; but to-day, after the lapse of forty-one years, scarcely one-fifth is occupied by the now elongated middle sands.

The great cause before referred to, while building up the spit and causing its constant growth toward the opposite bluff and to that extent narrowing the river's mouth, has also driven Sand Island further into the widening river, and thereby out of the entrance-way, and thus really widened the mouth, and therefore the facts referred to by the board on examination strengthen Colonel Gillespie's plan. These facts show conclusively that the growth of the spit has by no means been the cause of the deterioration of the entrance bar, but that the deterioration has been caused by the widening effect on the mouth by the inward movement of Sand Island, and that had the growth of the spit not occurred the condition would have been that much worse.

Again, the aggregated channel-way of the mouth of the Columbia is not only now divided all the way out to and over the bar, thus destroying much of its otherwise united force on a single cut through the bar which it possessed in 1841, and much of its water now wasting over the spit, but it is also to-day one-half mile wider on account of the inward movement of Sand Island.

Then, again, take the Vancouver survey of 1791, when the Columbia had the best channel and bar ever known, thirty-four feet at high water, and one straight channel to the sea. Clatsop Spit, before it had broken off, was then nearly one mile longer than it is to-day, and therefore one mile nearer the opposite bluff, and its sand was piled up much higher than now. How, in the face of these facts, the board could say that the growth of Clatsop Spit had been associated with a deterioration of the bar, or how they could advise that it be “set back” is more than I can comprehend. With all deference and earnestness I submit, even to secure the same situation we had in 1841, that it would afford no remedy whatever to set back the spit and thus widen the entrance unless Sand Island be “set

back" to narrow it. But, inasmuch as the great, overpowering forces of nature, the southerly winds and currents, have moved the spit and the Sand Island forward for years or ages, forces which will continue for all time to come and long after the distinguished board shall have been gathered to their fathers, I respectfully submit that it will require something more potent than a board of engineers in the city of New York, however able, to "set back" either of them.

The board speak of returning Clatsop Spit to its former position, "in a direction nearly west," and all through their report assume that Clatsop Spit in 1841 ran east and west, instead of north and south, as it really did. They evidently have confounded the bar in the maps of 1841 and 1792 with Clatsop Spit, when they are entirely different—Clatsop Spit being the accumulation of sand-growth, caused by the southerly winds and currents, and the bar being the great half-moon bend of sand and silt which settles from the river water or is thrown up by the ocean tides at the points where the two forces meet and spend themselves in part against each other. This is ever the result the world over—a belt of sand wherever a strong river current meets the tidal forces of the ocean. The bar, then, like all other well-defined bars—like the present one at San Francisco, for instance—was in the form of a great elongated half moon, an elliptic or bow, whose ends touched the shores on each side of the mouth.

At the Columbia in 1792 and in 1841 the bow, or, more properly speaking, the bar, existed, one end touching Cape Disappointment, and curving out in the ocean the other end touched Clatsop Spit. As well say that Cape Disappointment then extended out west as to say that Clatsop Spit did. As well confound the bar and Cape Disappointment as the bar and Clatsop Spit. Simply because they both were composed of sand and touched each other should not mislead a board of engineers. Therefore when the board say that Clatsop Spit should be set back and placed east and west, they not only, in my judgment, advise the impossible, but would put it back where it never was.

If a sand bank is desired out there, running westerly as it did in 1791 and 1841, let us aid and sustain nature in building up Clatsop Spit until the river currents are so driven to the northward as to wear away enough of the submerged portion of Sand Island, and a deep single channel washes out to sea, over a bar seven miles or more out with twenty-six, twenty-seven, or thirty feet of water at low tide, and we shall have the sand belt, but not till then; yet it will be the bar and not Clatsop Spit. This is the true idea for the Columbia. We want but one bar channel and then we will have a good one.

As the plans of Colonel Gillespie were disapproved, it becomes a matter of interest to learn the assigned reasons. They were:

First. That the pile-dike "would be too short to effect the purpose." Very well, I answer, then extend it.

Second. But they say, "If extended far enough to be effectual it would consolidate Clatsop Spit in position and extent," just what is needed, "and constitute a hurtful impediment to a future improvement of the channels."

How sound this conclusion is let an intelligent and deeply interested people answer; for there can be no reasonable doubt, in view of the history of this great river, or the foregoing facts which I have carefully taken from the maps of the Engineer Department, but that our policy should be to support and maintain Clatsop Spit as its growth proceeds, and that the protecting pile-dike should be extended accordingly.

There need be no fear of the spit growing too far. There would be if it were growing toward the inner bay, for then the same troubles might arise as have arisen at other points on our coast; but as it is growing northward directly toward the bold bluff of Cape Disappointment (and the pile-dike and river current would prevent it doing otherwise) it will force the current of the Columbia over until stopped by the bluff, when no encroaching sand-spit can endanger the channel, as the powerful current itself at the right place and unable to go beyond would let the sand-spit come just so far and no farther. The current force of this river is very powerful. To give some idea of what the Columbia can do in a "fresher," I quote from a letter from Professor W. D. Lyman in a recent Scribner:

During the flood of last summer the Columbia rose at Umatilla about forty-five feet; at The Dalles, fifty-one; at the Upper Cascades about sixty; while at Portland, twelve miles from the junction of the Willamette and Columbia, the former was backed up to a height of twenty-eight feet above low-water mark. At Vancouver, where the ordinary width of the Columbia is a mile and a half, the flood extended to a width of six miles. To give some idea of the immensity of waters ensuing from the snows of our great western mountains, I might add that at The Dalles the mass of water superimposed on the low stage of the river was fifty-one feet thick, a mile wide, and moving at the rate of nine miles per hour. For several days it rose at the rate of an inch an hour. Its hourly increase was therefore enough to make a large creek, while its daily increase was just about equivalent to such a river as the Hudson.

I believe it to be true that the Columbia River carries off a volume of water almost equalling the great Mississippi. It has been estimated that the volume of water in the Spokane, a river that empties into the Columbia, at Spokane Falls about seven hundred miles from the mouth of the Columbia, is greater than that of the Ohio at Cincinnati. Though not so wide as the Mississippi the channel of the Columbia, fed by the rains of winter and the melting snows on mountain ranges in summer, is of great average depth and its current rapid and strong. And this mighty stream, freer from sediment than any other American river, flowing out of one mouth only, (and not a half dozen,) would form a grand, deep, straight channel, with a

bar, as I verily believe, in time ten miles out at sea, with abundance of water to float any vessel over it in almost any weather. As it is now, vessels not of the largest draft are at times detained for weeks—even months—awaiting water enough to pass out with their cargo. And this brings me to the last objection, and that is:

Third. The idea of the board that no improvement of any kind was necessary—which by the way was equally incorrect. Let me quote the following dispatch, which I clipped, recently, from the Bulletin of San Francisco:

The Eureka, which arrived here [Portland] yesterday, reports eighteen vessels off the Columbia River bar. Twenty vessels, loaded and cleared, are lying in the harbor ready to cross out;

and this dispatch is but an illustration of what is frequently occurring at this point. The loss of the Great Republic is a significant illustration of another evil closely allied with the present condition of the bar. While not wrecked on the bar, and aside from all consideration of carelessness, yet a straight channel to the sea (which is always the counterpart to a good bar when the body and current of the water is sufficient, as they are in the Columbia) would have saved the noble vessel whose hulk now rests on Sand Island to attest the dangers of crooked channels immediately inside as well as over the bar.

From a list of vessels foreign-bound crossing the Columbia River bar from June, 1881, to January, 1882, carefully compiled by the Astoria Chamber of Commerce and presented to Congress to-day, it will be seen that of eighty-six vessels, drawing from fifteen to twenty-two feet and having a total value of nearly seventeen million dollars, sixty-five were detained from one to forty-two days, and that the total direct loss thereby for demurrages of vessels and interest on cargo amounted to \$45,413. This list omits the large coasting trade in steamships and sails to all points between Puget Sound and San Francisco, neither does this include the loss for detention of vessels coming in over the bar, some of which have been compelled to wait outside as long as thirty days at a time.

From the same detailed statement it appears that in the last four years the loss from wrecks on account of crooked channels and lack of water on the bar, simply, and not counting the costs to other vessels for repairing damages caused by striking on the bar, has amounted to \$518,724.

In addition to the above I have just been advised by the president of the Astoria Chamber of Commerce of the complete wreck of the bark Corsica, of eight hundred and sixteen tons, drawing nineteen and a half feet, while being towed out over the bar, March 1, the vessel having struck seven times and become a total wreck; loss of vessel, \$32,000; cargo of wheat, \$46,838; total, \$78,838. He adds:

The Reporter lately came in with railroad-iron after lying off the bar forty days.

The larger class of vessels loaded with railroad material for the Willamette Valley and Columbia Basin have been compelled to go to San Francisco, and thence to be lightened in smaller coasters, or to Puget Sound, and thence transmit across the land by railroad at largely increased expense. And yet the New York board thought, nearly two years ago, that no improvement was needed, but time has proven otherwise. Why, Mr. Speaker, the commerce of the Columbia suffers now, all told, enough in one year to equal the entire amount asked for by Colonel Gillespie.

On this whole subject my personal knowledge of the locality and careful investigation induce me unhesitatingly to declare my belief that the three gentlemen in the city of New York constituting the board were wrong and Colonel Gillespie was right; and the engineer in charge still stands by his recommendation, and the people of the great Northwest stand by his report.

It will be seen by any one who takes the trouble to examine the maps of the barred harbor entrances of leading maritime ports the world over that the Columbia is peculiar to itself. Its capacity for permanent and great improvement is far greater than that at New York, or the mouth of the Mississippi, or the Delaware. While San Francisco has much the deepest water over its bar of any leading port in the United States—thirty feet at low-water, and probably a mean rise of four feet more—yet the Columbia River once equalled it, and can be made to equal it again. How much more might be done no one can determine; but this much is certain, that more fresh water scours out over the mouth of the Columbia River than over any other single bar in the United States. Nature is gradually doing the work for us, and all we have to do is to confirm and maintain her work. Clatsop Spit, in its growth, is to-day in constant danger of again breaking off. Let the work of improvement be commenced immediately, for delays are dangerous.

In thus contracting the channel and throwing the bar or sand deposit far out into the deep ocean, unlike many other prominent places where improvements are being made, the sand deposit will be constantly subject to cross or littoral currents which greatly assist in wearing away and removing the bar deposits. These strong shore currents, I am informed, do not exist at the South Pass of the Mississippi, nor at New York where Sandy Hook and Long Island deflect them away, nor San Francisco, where the bar (fortunately not in need of the scouring force of these currents) is eight miles inside of a line from Point Reyes to Pescadero Point.

President Hayes, in one of his messages, after visiting this wonderful country and learning of its necessities, earnestly recommended

the permanent improvement of the channel at the mouth as an "urgent need." It is the present inlet and outlet of nearly the whole of the Northwest; and in urging the importance of the improvement of the mouth of the Columbia let me say that it is the only river in this great commercial Republic which will receive at favorable periods a deep sea-going vessel one hundred and twenty miles into the interior.

I shall now try to give some idea of the present and prospective

COMMERCE OVER THE BAR;

and, first, as to the growth in my own State alone:

Comparing our productions in the year 1880 with those of 1870—during which time our population doubled nearly—we find that in 1880 we produced nearly twelve million bushels of wheat, an increase of over fourfold; and the last year it was estimated at nearly fourteen million. We have nearly doubled in the last two years. Was anything like this ever known before?

In 1880 we produced nearly four and one-half millions of bushels of oats, a twofold increase; of barley, nearly nine hundred thousand bushels, over fourfold increase; of wool nearly six million pounds, or nearly sixfold increase. During the same time our manufactures nearly doubled.

It is, however, in wheat production, as seen, that we excel. These figures give us over seventy bushels to each inhabitant. Our pre-eminence in this respect is seen by comparison with the rate per inhabitant generally in this country, that being about eighteen bushels; in the Middle States a little over three bushels, and in New England about one-fourth of a bushel. This immense yield is from a small fraction of our tillable soil only, and even the whole of Oregon is but a small fractional part of the grand section—the Northwest. A memorial to Congress presented from the Washington Territorial Legislature estimates in eastern Washington alone a wheat capacity of 42,000,000 bushels annually. As the late Bishop Haven said, in the *Zion's Herald*:

It is a great country, and should I express my mind fully about it I would be suspected of writing in the interest of some railroad company or land speculators.

Take the salmon industry: while it was said that the English commissioner agreed to surrender Oregon "because a country in which a salmon does not rise to the fly could not be worth very much," yet on the river there are thirty-five canneries which during this last year packed for export 540,000 cases, worth over \$2,700,000. On my way here, standing on the deck of the steamship *California*, which by the way had to wait two days to get over the bar, Mr. Lienwebber, a prominent citizen of my State, informed me that \$785,000 gold coin had been paid out that season to fishermen for fish caught in the waters within the range of our vision.

The immense tonnage of the Columbia, present and especially prospective, calls for increased facilities for shipment; larger vessels, deeper draft, more tonnage capacity. Our coasting trade with San Francisco employs iron steamships, every few days, of over 2,000 tons. The average draft of our grain fleet to Europe is probably eighteen feet, but these are often delayed to the great annoyance and expense of all interested therein. The voyage is so long that economy requires the largest and deepest vessels which we cannot now procure. Even if they could not carry a full cargo up the river after entering, should they desire to ascend as far as they could go they could transfer or lighter, as heretofore, in part; and on return to Astoria could finish cargo, and thus materially benefit the transportation interests of the people. You of the East whose capital is doing so much to develop our country are deeply interested in all these matters. Your people who contemplate emigration are also. The commerce of the world is concerned. It is of the greatest importance that your vessels and the ships of the world can safely reach their destination in our Northwest, and safely and profitably depart. These ships last year carried out over that bar, in value, over \$14,000,000 of exports. What will it not be in the development of the high future? Another thought: improve the river and large steam vessels will take the place of sail, and instead of the greater proportion of vessels coming in ballast and charging higher rates through lack of cargoes, large immigration will follow on these lines, thus not only diminishing the cost of wheat carriage but causing the upbuilding and development of our country.

On entering the Columbia we find the prosperous and rapidly growing commercial seaport Astoria, a distributing point for a vast scope of country teeming with all the grand elements of present and future wealth. Here is the center of the vast lumbering and salmon interests, and vessels entering generally lighter for the up-river passage, and complete cargo on return. The improvements to be made above the shipping point of Astoria are generally classed as those of the

LOWER COLUMBIA AND WILLAMETTE.

The present principal distributing point for this northwest country, generally, is Portland, Oregon, over one hundred miles farther inland, at the head of ship navigation. From this point northward to Puget Sound, excepting a small gap soon to be completed, the North Pacific Railroad extends. Southward the Oregon and California and the Oregon Central Railroads traverse the Willamette Valley, and will soon connect with the Central Pacific to San Francisco. From this point easterly extends the Columbia River through the gateway of the Cascade Mountains, along which the Oregon Railway and Navigation Company has nearly completed a railroad which forms part of the line of the Northern Pacific, and extends on easterly through

the fine wheat lands of the fertile valley of the Walla Walla, and crosses the Snake River into the rich but undeveloped valley of the Pelouse; and the Northern Pacific, branching off northeasterly almost to the line of British Columbia, extends on toward the Eastern States. With this line of the Oregon Railway and Navigation Company will soon connect the Oregon Short Line, which extends off in a southeasterly direction to the Union Pacific Railroad. To this distributing point most of the ocean vessels for the Columbia River ascend and descend with whole or part cargoes. Over this distance, by some conveyance of water or rail, by river or ocean craft, all the imports and exports coming or going through the mouth of the Columbia for the immense area of the northwest beyond this distributing point, must go, and the cheaper it can be carried the better. Experience suggests that deep-draft ocean vessels propelled by steam carry their foreign cargo up and their return cargo down, or such portion of cargo as the depth of water in the river permits, cheaper than by any other method of conveyance; and every facility for transmission by deep-draft vessels inures to the benefit of every producer and consumer whose freight passes over this distance and route.

It is claimed that wherever transportation, interstate and foreign, is carried part way by water and part way by land, deep-water transportation, being the cheapest, will be utilized as far as possible, and that commercial towns or the points where exchange is made from one method of transit to the other will be as near to the producer and consumer on the line over which the freight must necessarily pass as it is possible to secure reasonable water-carriage, and that another immutable law governing transportation is that ocean-going vessels, urged onward in competition by the capital of commerce, will crowd as near to the great body of producers as possible, and that for these reasons New York outgrows Boston, Philadelphia thrives one hundred and twenty-six miles inland, so does New Orleans. Montreal, six hundred and twenty miles from the ocean, excels Quebec. Chicago is another great illustration. Hamburg, the great maritime city of the continent of Europe, is 60 miles up the Elbe from the ocean; Bremen is 40 miles inland; Calcutta, 80 miles; Canton, 80 miles; Glasgow, 21 miles; London, 60 miles; and Baltimore is over 200 miles inland.

Be that as it may, we know that great towns and many of them are the outgrowth of great countries. They are the great distributing points for trade and commerce, and advantages for one equally inure for the benefit of the other, and whatever helps one builds up the other. The greater portion of vessels that come into the Columbia River have cargoes for producers and consumers beyond Portland, and load with cargoes from the same section, and those people interested demand every facility for cheap transportation. It will be interesting to know also that the channel-way is almost entirely through mud bottom, and I believe no loss of vessel has ever occurred. The obstructions are at Hog's Back, Walker's Island Bar, St. Helen's Bar, Mouth of Willamette, Post-Office Bar, and Swan Island Bar. To remove these obstructions we have two systems: annual dredging and contraction, protection or other devices for permanent improvement, or a combination of both, which seems more reasonable. The system of dredging has been resorted to in Glasgow until the Great Eastern can float where formerly was only a channel of 3½ feet. Also at Montreal, where 31 miles of continuous dredging changed a channel of 10 feet in depth to 25 feet, and vessels now carrying from 3,000 to 4,000 tons of freight daily ascend where formerly those of 400 tons were compelled to lighter. This was done at the immense cost of \$1,200,000, but it allowed deep vessels to ascend cheaply 160 miles further; and where only 129,000 bushels of wheat were shipped from Montreal before the work commenced, in 1879 nearly ten and one-half million bushels were shipped from that port. To-day to insure a channel 100 feet wide and 20 feet deep at low water in the lower Columbia and Willamette, as estimated at my request by Captain Powell, engineer in charge, only 137,418 cubic yards of mud and sand over an aggregate distance of 14,400 feet, or 2½ miles, will have to be removed. Vessels are now constantly annoyed and always have been by these bars, and compelled to lighter both ways at great expense. That the importance of this ocean traffic may be fully realized, allow me to present a few interesting facts:

The value of imports to Portland for the years 1880 and 1881.

Country.	1880.	1881.
From England.....	\$311,664	\$431,257
From Australia.....	15,902	24,234
From Hong-Kong.....	84,808	137,234
From British Columbia.....	13,533	10,213
From Hawaiian Islands.....	60,198	26,690
Total.....	466,100	639,310

The freight exports from Portland during the year 1880 of wheat were 1,762,515 bushels; in 1881, 4,076,508 bushels; of flour, in 1880, 180,663 barrels; in 1881, 374,480 barrels.

This wheat and flour was exported principally to England and Ireland, and to Belgium, France, British Columbia, Hawaiian Islands,

and Hong-Kong, besides large amounts exported on board the fine iron steamships which run to San Francisco, now every four days, and there reshipped as California wheat, the amount of which I have been unable to learn. San Francisco being now a better entrance, ships prefer to come there, and we transfer much of our foreign exports down to that port, thence to be reshipped abroad, all of which can be saved by improving the Columbia Bar and lower river.

Vessels entered at the port of Portland.

Owned by—	1880.		1881.	
	No.	Tons.	No.	Tons.
Americans.....	9	7,011	13	10,440
Foreigners.....	40	35,619	114	98,941

Vessels cleared from the port of Portland.

Owned by—	1880.		1881.	
	No.	Tons.	No.	Tons.
Americans.....	32	26,913	29	27,073
Foreigners.....	48	39,611	118	101,639

This shows a great increase in the last ten years, as in 1871 only eleven foreign vessels were cleared. The coastwise arrivals in 1881 were 139; tonnage, 236,604. Clearances, 99; tonnage, 202,382.

Portland in 1864 did the first work on this improvement. It built a dredge-boat, and after using it awhile turned it over to the Government. The city has now imposed a tax upon its citizens of \$34,000, to be expended by the Government in this important work. The entire estimate of the Engineer Department for present plans is \$133,000, three-fourths of which they calculate can profitably be expended this ensuing year—a very small sum compared with the benefits to be derived, and the interests of the immense section concerned demand its expenditure.

By comparing the rates of ship charters and adding to the difference charges for lighterage, it seems that on wheat alone, owing to these delays and difficulties on the way to the sea, during the last year our wheat producers lost upward of a quarter of a million dollars.

As the freight of the Willamette Valley and Eastern Oregon and Washington has to pass over this channel-way, it cannot escape the tribute these bars levy, and the only safety lies in their removal.

CANAL AND LOCKS AT THE CASCADES.

One of the most important public works now in progress in this country is the construction of locks around the Cascades of the Columbia River. It is one of the keys which unlocks the great bars to the wonderful development of Eastern Oregon and Washington and large portions of Idaho and Montana, also of a portion of British Columbia, about half the size of Oregon, rich in mineral, timber, and agricultural wealth, whose trade will naturally flow into our borders. Look at the situation. A high, rough, mountain range traverses the western coast of these United States from Mexico on the south to the British Possessions on the north. This range is known as the Sierra Nevadas in California and as the Cascade Range in Oregon and Washington, dividing as it does the great Northwest into two sections of territory, and thereby excluding the greater of these sections from all connection with the Pacific seaboard.

Now, Mr. Speaker, mark this, that at only one point along this extensive mountain barrier is there a gateway between the great interior section and the Pacific Ocean. At this one point, on the boundary between Oregon and Washington, the Columbia River—freighted with the waters of the immense water-shed of the eastern section, waters from Wyoming, Nevada, and Utah from the south, and Montana and British Columbia from the north and Idaho from the east—breaks in its onward progress through this mountain range on its way to the deep water of the ocean. But while nature has done this much, the course of the river is obstructed by rapids at the Cascade, a place about half way through the pass. Around these rapids the Government is now constructing a canal, with lockage extensive enough to carry the largest-sized river steamers.

The Government engineers estimate that they can profitably expend \$750,000 this ensuing year, all of which should be appropriated. Within two years at this rate the river at this point could be opened for navigation for the busy period of the year, and the grand gateway thrown open for the free passage of commerce. As in a great funnel centering at this opening comes the trade from the North Pacific down from Northern Montana, and from the Union Pacific from Wyoming on the south, while almost due north railroad surveyors are now looking for a line from the grain fields of the Yakima along the mountain foot-hills and down the Klickitat or White Salmon River to the gateway, and soon railroads will be extending almost due south from The Dalles along the Des Chutes and the John Day Rivers, gathering the trade even to the California and Utah line. Easterly along the Columbia River and now almost continuously

through the mountains extends the Oregon Railway and Navigation Company's road on the southern side, while on the northern side from The Dalles east the Northern Pacific will ere long be built.

Open the barrier and allow freight to reach The Dalles, that thriving distributing point east of the mountains, and even the wagon freighter could meet the river boats, for the freight will then be through the mountains. There the steamers from the seaboard towns could tap the region where great activity in railroad building already prevails, as it is easy to build railroads above The Dalles, though very difficult below. From the gateway in the mountains, like diverging rays, extend most of the roads in operation or process of construction, and this is largely true on both sides of the mountains, for last year over three hundred and fifty miles of railroad were built in the Northwest, and this year nearly five hundred more will be completed. The Columbia, however, is the great artery either to carry the trade and commerce or to regulate the cost of transportation, and the policy that wise foresight demands is the opening of a deep ship-channel as far up as possible, and a channel for the largest-size river craft for the remainder. This policy not only develops the country but also necessarily all cities—distributing points—along its line. The Erie Canal not only was one great factor which made the Empire State but New York City also. So with Chicago to a large extent was the Illinois and Michigan Canal, connecting Illinois River with Lake Michigan; so with Toledo was the Wabash Canal from the Wabash River to Lake Erie, and so with Cleveland was the Ohio and Erie Canal. All the testimony taken before the Congressional committees this and previous Congresses shows conclusively that the great competition which the railroads cannot overcome is the grand system of natural and artificial water-ways in this country.

Even the great trunk lines of the East in all their ramifications are governed by the quantity moving and the price of freight upon the lakes and Erie or Welland Canal or the Mississippi River. See what effect the opening of the water communication through the Mississippi had upon the transportation interests of the grain-growers of the West. First, the direct export of wheat abroad from Saint Louis, by way of New Orleans, was increased from a merely nominal amount in 1876 up to nearly sixteen million bushels in 1880; and, second, the cost of that transmitted by rail to New York was reduced nearly one-half.

In England various parliamentary committees have reported that the most effective competition with railroads comes from water communication both natural and artificial.

I mention it as a very significant fact that the Pennsylvania Railroad Company, probably one of the wealthiest and most skillfully managed railway corporations in this country, now controls through purchase and lease nearly four hundred and fifty miles of canal navigation; and not only have they deemed it wise and business-like to buy these competing canals but also, as many heavy, bulky articles could thereby be more cheaply transported, they have greatly enlarged, improved, and are now using these canals. So the day will come when the bulky wheat of the grain fields of the plains of Eastern Oregon and Washington and Idaho will float by barge or steamer down the Columbia to tide-water.

Mr. Nimmo, jr., in his valuable report on the internal commerce of the United States, says that where water competes with rail it is the real governing force in regulating rates for bulky, heavy freight, like wheat, for instance, although on many other articles the effect is hardly appreciable.

The following facts show the direct importance of artificial water-ways or canals in the carrying trade. The grain receipts of New York were:

Receipts by—	1876.	1878.	1880.
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
Canal and Hudson River	31,766,400	62,561,600	71,089,815
Rail	59,047,953	85,350,079	95,414,822

But the indirect benefits in controlling railroad rates are very much greater, and it must also be borne in mind that the Erie Canal boats only carry to-day about two hundred and forty tons each, and the canal is only open on an average two hundred and twenty days in a year.

This canal was originally constructed by the State of New York, at a cost of \$7,602,000, with a capacity for boats of seventy-eight tons burden. It has subsequently been enlarged at a total cost of \$44,000,000. The total expenditures thereon for construction, maintenance, repairs, with interest to the year 1866, were \$140,430,953. The total receipt from tolls up to that date with like interest amounted to \$181,828,604, leaving a direct net profit from the Erie Canal of \$41,397,651. The indirect profit to New York and to the great West has been absolutely incalculable.

The transportation interests of the people of Eastern Oregon, Washington, and Idaho, connected with the improvement at the Cascades, is already great and rapidly growing. This last year, as near as I have been able to learn, the surplus crop of wheat that was compelled to seek its market through this pass has been about 112,000 tons. During the fiscal year ending June 30, 1881, the total freight

from and to the city of Portland in river steamers was 268,045 tons. To give an idea of the wonderful increase constantly going on since, allow me to state that during last July it was 38,590 tons, as against 16,058 tons the same month the year previous, and during August 63,521 tons, as against 22,714 tons; September, 58,578 tons, as against 25,656 tons; October, 81,179 tons, as against 30,230 tons, or a total of 241,758 tons, as against 94,658 tons for the like period the year before, or a growth of nearly threefold in one year.

So rapid has been the increase of products to be transported, so much more so than the increase of facilities, that for several years there has been a perfect blockade of freight at busy seasons when it has to be transferred at the portages.

The importance of water communication through this gateway and the competitive effect it will have cannot well be overrated. To-day a gigantic and powerful corporation controls all rates and fares through this outlet. The charges for transportation service over and along this river and around its portages have hitherto been excessively burdensome upon the production and consumption of this young and sparsely settled country. This immense burden the people of Eastern Oregon, Washington, and Idaho have long borne, and these pioneers who are settling that vast territory are entitled to have opened the grand water highway which the God of nature has given them. They are entitled to the benefits of cheap transportation and to the development which it will bring. Nor do I believe that it is not to the interest of all engaged in transportation that this river be opened, for we observe elsewhere that one of the inevitable results of water lines is the incidental increase in traffic by rail. One of the most prosperous railways in the United States is the one which for five hundred miles competes along the banks with the Erie Canal and the Hudson River. The competing rates develop the productions and consumption of a country, and the railway makes greater profit on increased freight at lower rates. The business developed by water lines creates traffic in articles requiring speedy transport and articles that can bear rail rates. The railway passenger traffic is solely benefited by the growth of the country. While, therefore, free rivers directly benefit the entire section, the railroads competing share in the general prosperity, and wise foresight on the part of railroad management must see this result.

The present plan is to secure low-water transportation during the busy boating season, generally lasting about six months, by completing the present lock and canal and the utilization of the natural river bed up to the foot of the present lock by the removal of reefs and projecting points, which plan can be easily adapted to an all-the-year-round system subsequently. It has received the unqualified approval of an able board of engineers, composed of such competent and distinguished men as Colonels Stewart, Williamson, Houston, and Gillespie, and General Weitzel. This last-named engineer had charge of the improvements on the locks at Louisville, on the Ohio, and also those around the falls at Saint Mary.

It should be mentioned that with commendable wisdom, in view of the continued enlargement of other canals demanded by increased traffic, these locks are being constructed with sufficient capacity probably for all time to come.

The low-water plan can also be adopted with equal success at The Dalles as at the Cascades, and be equally utilized as the high-water plan progresses. The river can be improved by blasting, and the removal of rocks for about twelve miles to the foot of Celilo Falls, where low-water locks can be constructed.

Captain Powell, Lieutenant Price, Captain Poe, and myself, with others, on the 23d of September, 1880, ascended in an ordinary steam ferry-boat to the Big Eddy, four miles above The Dalles, without difficulty.

The Dalles is over two hundred miles from the sea; beyond we have good all-the-year navigation on the main Columbia nearly two hundred miles, and in connection with Snake River the navigable water extends to Lewiston, Idaho Territory, and thirty miles beyond, making in all 369 miles of navigable water before any obstruction is reached; and with the exception of various places which are susceptible of improvement along the course of the river, through a country at present almost entirely unsettled, there is navigable water nearly six hundred miles further, and reaching nearly two hundred and fifty miles into a rich and fertile region of British America; and, Mr. Speaker, these miles count, the Columbia River being without the numerous curves and crooks of the Mississippi, which in a general course distance between Saint Louis and New Orleans of about seven hundred miles, or a little more than the general course distance from the Columbia River Bar to where the river crosses the British line, measures about twelve hundred miles in crooked river channel.

It will doubtless be interesting to know in this connection that a valley route has been made by nature from the Pacific toward the Atlantic—the route adopted by the North Pacific Railroad—and that along this line two of the great rivers of the country rise together and, flowing in opposite directions, cut through all mountain barriers, and empty respectively into the Pacific Ocean and the Gulf of Mexico. Mr. Ritz, to whom reference has hitherto been made, informs me that within the distance of one step he has been able to drink from springs whose waters respectively run to the east and to the west. Near this place, to accomplish mining purposes, the head

waters of the Missouri have actually been turned into the Clark's Fork of the Columbia—the waters of the Gulf of Mexico into the Pacific Ocean—and it may not be visionary to predict that the day may come when, through the discoveries of engineers' surveys and the plans of engineering skill, water-way transportation may along this line unite the products of the Gulf with those of the Pacific.

THE UPPER WILLAMETTE AND YAMHILL RIVERS

drain the Willamette Valley, a valley larger than Vermont or New Hampshire, nearly as large as Maryland, larger than Massachusetts or New Jersey, nearly three times as large as Connecticut, five times the size of Delaware, and ten times as large as the State of Rhode Island. Were this valley populated in proportion to the valley of the Ohio it would have 550,000 people; or the valley of the Susquehanna, over 725,000; or the Merrimac River, 1,076,000; or as the Hudson or the Delaware Rivers, over 2,000,000; and were the valley settled as thickly as Massachusetts, it would support 2,500,000 people. This is the heart of the present settlement of the State. Oregon has already expended several hundred thousand dollars in opening the Willamette River by canal and locks to navigation at certain stages of water, from Portland as far up as Eugene City, one hundred and seventy-two miles by river. From this valley this last year by river and rail over 111,110 tons of freight were transported. The General Government, during the last ten years, has made small annual appropriations to improve various bars and places, namely, at Rock Island, Polalley, Yamhill, Union, Beaver, and Lone Tree Bars, McCloskey's Chute, Eola Bar, Rocky and Humphrey's Rapids, Long Crossing, Buena Vista, Fickels, Pine Tree, Bruce's and Stewart's Bars, and Half-Moon Bend, and other places, and to remove snags which accumulated along the heavily timbered river from annual freshets. The Engineers' Department recommend an appropriation of \$10,500—a very moderate sum, indeed.

YAQUINA BAY,

the outlet of the Yaquina River, drains one of the finest fruit-growing and stock-raising regions of the Northwest. The hills, gradually drooping from the coast range to the ocean, were once covered with immense forests, which years ago were destroyed by a desolating fire, giving boundless range for stock of all kinds, with undergrowth sustenance for winter without need of other feed, while the sunlight and air have chemically improved the naturally rich soil until it has become an inexhaustible field for fruit, grass, and vegetable productions. The valleys are all fertile and rich in native clover and other grasses. The best dairy region in the United States will sometime be developed in these coast-range valleys. In the bottoms fine green timber give employment to the mills, while croppings of coal and other minerals indicate the presence of untold wealth.

While upon the subject of forests allow me to refer, generally, to our great resources in this respect. These coast-range forests embrace an area of about seventeen million acres; and this is at least equal to from ten to twenty times as many acres of the best timber lands of Wisconsin or Michigan or Pennsylvania. It is, to the Pacific States, a richer source of future revenue than all our mines have been in the past or all our grain fields of the present. The rainfall of the Pacific States reaches its maximum in these mountains, which, with the fogs and mists of the sea, account for the astounding growth of the forests.

The Central Oregon Pacific Railroad is now in process of construction. This railroad, connecting the Willamette Valley with the Yaquina, was originally started through contributions to the extent of \$30,000 from the people of the valley interested. The plan and purpose of the road is to extend across that valley tapping the Oregon Central and Oregon and California Railroads, and crossing the Willamette River, thus utilizing as far as possible its navigation and these roads as feeders. The one hundred and thirty miles to be built this year will reach and pass the Willamette Valley, and give an outlet to counties which produce a large proportion of the wheat crop of Oregon, and of the wool, cattle, lumber, and fruit which are now staple exports. It is to be extended over the Cascades into the heart of Eastern Oregon—the pasture of the present and the grand granary of the future—and on eastward nearly six hundred miles to intersect or meet a transcontinental line running westward. The completion of the plan would insure a direct outlet to all those central and productive portions of Oregon, with all the advantages of competitive influence. Its importance would be very great. When the harbor is improved and this road built, it will be a direct competing line with all other lines now controlled by a single corporation; and the less the Government appropriates to open the harbor the longer this competition will be delayed. To complete the proposed plan for the harbor improvement will require \$415,000. By appropriating \$200,000 this year and a like sum next year the improvement can be completed in two years. In view of the building of this railroad from the inland to the sea, the first one hundred and thirty miles of which will be at a cost of \$25,000 per mile, or \$3,250,000, it is obvious that the question presented to Congress is not one of expenditure to benefit a locality merely. As the \$400,000 will evidently be appropriated in continuous sums within the next few years, would it not be the part of wisdom to complete the work promptly rather than delay relief?

This road is being built on the faith in the improvement by the

United States of the harbor entrance at the mouth of the bay. The people of the Willamette Valley in the interior counties have expressed through the press and by public meetings and otherwise great interest in this work. I have in my hand long lists of subscriptions in aid of this improvement.

There is one channel straight to the ocean and whose bar is much protected by an outward reef some distance to sea. The heavy seas at this point come from storms far out on the ocean and are from the west, and the reef on the outside breaks the force of those waves. A safe entrance can be effected either to the north or south of the reef. In addition there are two more channels—one very small, to the north, and one quite large, to the south; the one to the south opening in depth by the prevailing hard southwesterly winds of winter, and, varying in depth with their severity, affects of course the middle channel, it shoaling as the south channel opens. During the last summer, owing to the absence of these winds, the south channel nearly closed and the middle channel opened to nearly twenty feet at high tide. The plan of improvement is to close the south channel entirely and permanently by a jetty 2,500 feet long on the south side of the entrance, and thus utilize over the middle channel the scouring capacity of this entire distance of waste water. The present bar evidently is underlaid with soft sand and rock projecting from the headlands of the north side, and at present covered with sand which the proposed improvement will doubtless scour away, when the ledge can easily be removed by blasting. From personal observation I have no doubt of success. After passing over the bar the channel is about twenty-four feet deep to Newport, and from three hundred to six hundred feet wide, and is never obstructed by ice.

To the northward a short distance is the projection of Cape Foul-weather, where, on the south side, an ocean vessel of any draft can load during the calm of summer months, and where, on the other side, a safe harbor of refuge from winter storms could be afforded with a reasonable expenditure. Fifty thousand dollars has already been appropriated by Congress for the work at Yaquina. The memorial of the last Legislature of my State petitions for \$200,000. The engineer in charge asks for \$50,000 for this year. On the faith that Congress would continue the improvement, the railroad company have already purchased steel rails, the duty upon which amounts to \$168,644, and during the present year will probably amount, all told, to over \$420,000. Thus it will be seen that the improvement is really not costing the Government a dollar, even if the full sum required be appropriated. Not one dollar of this duty would come into the Treasury, except on the belief that the harbor will be improved so that shipment can be made and the railroad thus utilized. The General Government can well afford to expend this duty-money on this improvement.

COOS BAY AND COQUILLE.

This section abounds in natural resources of almost every variety. In area it is nearly half as large as Connecticut, much larger than Delaware, and is twice as large as Rhode Island, where 276,000 people reside, and in richness of soil and salubrity of climate is unexcelled by any country. Immense tracts of the finest fir, ash, spruce, myrtle, oak, and cedar abound along all the many streams that empty their waters over the entrances of Coos Bay and Coquille River. It has been estimated that the area of land covered with timber suitable and available for manufacture into lumber in the vicinity of Coos Bay alone cannot be less than 100,000 acres, and this land will produce from 100,000 to 200,000 feet to the acre.

One mill at Marshfield cuts 60,000 feet of lumber per day, or 1,000,000 feet per month. It employs 40 men and disburses \$8,000 monthly for logs and labor.

One stove factory at Empire City uses upward of 1,500 cords of stove bolts per year. Ship-building is also a leading industry. Coos Bay has already established a reputation as the principal ship-yard in Oregon; in fact, it may be said to be the only point in the State at which the construction of vessels has assumed the form of a regular business. Over fifty vessels of all classes have been constructed here, and although some of them have been in active service for many years they are still in a good state of preservation, showing less signs of decay than vessels of the same age built elsewhere. This fact is so apparent that it is now generally admitted that the timber in this region, for ship-building purposes, combines in a greater degree the qualities of strength, durability, and buoyancy than the timber of any other locality known. The quantity of timber here adapted to this business is practically inexhaustible, and the timber suitable for spars is of such a superior character and so plentiful and easy of access that when a larger class of vessels are able to enter the harbor, the fleets of the world may be supplied with spars from the forests of Coos Bay.

The vessels constructed there are rated A 1, and it is safe to assert that there are no better vessels afloat than those which compose the fleet now plying in the coal and lumber business of the bay, the best of which were built there. Some of these vessels are twenty years old, and are still doing good service and apparently as sound as ever. The ship Western Shore, of about two thousand tons capacity—the largest vessel built on the Pacific coast—which was launched from the North Bend ship-yard, ranked as a superior sailer as well as a staunch and serviceable vessel. It is also now well settled that the cost of ship-building there is a small per cent. less than at the eastern ship-

yards for vessels of the same capacity. From these considerations it is reasonable to conclude that this important branch of industry is still in its infancy. Fifty-three vessels have been built at Coos Bay, with a total tonnage of 23,200. From the earliest settlement of the coast of Southern Oregon the port of Coos Bay has ranked second only to the Columbia River in the amount and value of its exports.

The following table will be of interest:

Year.	Value of coal and lumber exported.	Value of other exports.	Total value.
1871	\$367,697 50	\$17,517 50	\$385,215 00
1872	315,167 75	22,640 00	337,807 75
1873	385,230 00	21,179 00	406,409 00
1874	351,137 00	19,253 00	370,390 00
1875	380,110 00	23,751 00	403,861 00
1876	471,116 50	24,070 00	495,186 50
1877	445,270 00	23,000 00	468,270 00
1878	440,000 00	22,000 00	462,000 00
1879	400,000 00	22,000 00	422,000 00
1880	380,500 00	19,000 00	399,500 00
1881	440,500 00	23,000 00	463,500 00
Total	4,976,727 75	237,410 50	4,616,781 75

The record of arrivals and departures of Coos Bay shows a steady increase from the time when business was first opened there till 1876, at which time the coal market of San Francisco became flooded with coal from Puget Sound and foreign ports. This coal being carried in a larger class of vessels than that from Coos Bay, and at a correspondingly lower rate of freight, reduced the price of coal and caused a falling off in the commerce of this port.

While vessels of thirteen feet draft and under have no difficulty in taking cargoes, except from temporary delays caused by rough weather, such vessels cannot compete with those of greater capacity in the coal trade, and unless their harbor is so improved as to accommodate a larger class of vessels their trade in coal cannot increase, and nothing but the superior quality of Coos Bay coal for domestic purposes will prevent its suffering total annihilation.

The small depth of water on the bar caused the Henryville, Eastport, Utter City, Newport, and North Pacific mines (representing a capacity of about eighteen hundred tons daily) to almost totally suspend operations for the last four years, and they are still shut down with the exception of the Newport and Eastport mines, which have commenced shipping since the depth of water has been increased by the present improvement; the increase in depth being, as reported to me by Captain Littlefield, local engineer in charge, from six to eight feet already, which he believes can be made permanent by the extension of the jetty. The Southport mine, however, shipped regularly all the time, having chartered a steamer for the purpose.

The quantity of coal that is conveniently accessible to the waters of Coos Bay is almost incalculable. Within ten miles there are not less than 75,000 acres of good coal land, which will produce from the strata generally worked 450,000,000 tons of coal. This is an estimate of the production of only one seam, while in some parts of this coal field there are known to be as many as six workable veins. The area of lands known to contain coal, but not fully prospected, lying in the vicinity of the bay, may be estimated at 250,000 acres, and at no great distance east a vein of eleven feet is reported, and said by persons who have tested it to be of a superior quality, suitable for the manufacture of gas and use in the foundry or forge.

With such improvement of the harbor as is now contemplated, the coal of Coos Bay can successfully compete with any other part of the world.

Fine beds of coal have been discovered also in the Coquille Valley, about sixty miles from the mouth of the river. Along this stream the cedar abounds. This makes the best of finishing lumber, selling at San Francisco at \$50 per thousand feet. Here there are splendid forests of myrtle, a very hard and fine wood for furniture, of beautiful colors and capable of a very fine polish. Logs can be run down the river for one hundred miles. It is navigable for river craft about forty-six miles. Naturally there are no shoals or ripples in this stream, but in some places the drift has caused dams that have overflowed the finest of farming land, doing extensive damage. Many snags have settled along the river bed and have impeded navigation seriously, and should be removed. From personal observation I believe that a few thousand dollars would be of great assistance to the commerce of the river. This is their only available outlet. As near as I can ascertain, about 400,000 bushels of grain were produced along the Coquille Valley last year, and their new industry, salmon fishing, after supplying enough for local requirements, furnishes upward of two thousand barrels for export.

One of the most significant facts, that should be taken into connection with the improvement of the entrances to these fine, rich sections of our State, is that by an easy grade through these sections a direct outlet to the sea is afforded for all of that fine scope of country, in size equal to Massachusetts, Connecticut, and Rhode Island, known as Southern Oregon.

From Roseburg much of the surplus products of that section are now shipped by railroad to Portland, a distance of two hundred miles, and thence by river and ocean around to San Francisco. The

distance from the navigable waters of Coos Bay to Roseburg, tapping the Coquille Valley, by a route perfectly practicable for a railroad, is eighty miles. The opening of railroad communication on this route would practically place Umpqua and Southern Oregon, a fine grain and fruit producing region, within one-half their present distance from San Francisco. The distance by way of Portland (the route by which all exports and imports from that region for San Francisco are shipped) is about eight hundred and seventy-five miles; while from the same point by way of Coos Bay the distance is only four hundred and fifty-five miles.

Though a railroad is already projected on this route, and its construction is only a question of time, the proposed improvement of Coos Bay entrance would hasten its completion and greatly enhance the benefits that would be derived from it by residents of the interior as well as of Coos and Coquille.

The commerce of Coos Bay now furnishes regular employment for two steam-tugs in towing over the bar, and there are six small steamers employed in carrying passengers and freights on the bay and its tributaries. If the improvement already commenced be completed the business of the bay will be increased fourfold within five years, thus adding permanently to the wealth and prosperity of the State and nation.

For some time past vessels at both Coos Bay and Coquille have been subjected to the annoyance, expense, and loss of long detentions on account of the conditions of the bars. Where the coal business is so large, representing investments of millions and unlimited capacity, and valuable lumbering interests, employing many men and maintaining lines of steamers and sails, great suffering and loss is consequent upon every detention. The large amount paid for towage and the unavoidable delay and risks caused by the present bars render freight so high as to reduce the value of their industries very considerably, and absolutely prohibits the production of perishable articles for export altogether.

The trouble with the bars at these places comes from nearly the same cause, namely, an encroaching sand-spit from the south caused by the sand blown by the winds of the summer. These sand-spits have driven the channel at Coos Bay and at Coquille over toward the bluff rocks of the south side, the contour of which is such as to render what was before a straight and direct channel to the sea tortuous in the extreme and of unnatural contraction, and more especially at Coos Bay, at one time turning the outer channel almost parallel with the shore line and thus shoaling it and greatly destroying its usefulness. Through the operation of these causes at Coos Bay the ebb force of the waters of South Slough and the bay proper have largely neutralized each other and thus weakened the scouring force. The object of the improvements at these places is to so direct the ebb as to cut off these spits and again give straight channels to the sea.

At the Coquille the Government has already appropriated \$10,000 and the engineers recommend \$25,000 for this year, and the citizens have raised and expended about \$3,000. Over 865 linear feet of jetty have been built and from a private letter from the engineer in charge I learn that much good has already been accomplished. He is clearly of the opinion that there is no river entrance from Port Orford to Yaquina so susceptible of cheap and easy improvement as the Coquille.

At Coos Bay the sum of \$70,000 has been expended by the General Government and the estimate by the engineers for this year is \$60,000. The citizens of Coos Bay have contributed of their private funds toward stripping the debris from the stone quarry in the rear of the jetty, and Captain Littlefield has employed the winter months most economically in piping and sluicing off the sand, dirt, and gravel at a cost of only one cent per cubic yard, which work, if deferred until dry weather, would cost the Government \$1 per yard. The high tides prevailing remove the washings to the sea and leave the ledges of rock bare for blasting. Citizens who thus contribute of their means are deserving of recognition.

Since the engineers commenced these works I am informed that at both Coquille and Coos Bay they have ascertained the existence of rock foundations for the jetties where it had been supposed there was only sand, and therefore that the cost will not be near the sum originally estimated. These Government works are urgently demanded by the interests of commerce, and I hope and ask that this Congress will appropriate the amounts recommended.

HARBOR OF REFUGE AT PORT ORFORD.

At present there is no harbor between San Francisco and Puget Sound where a vessel can enter in the heavy southern storms of winter, when three-fourths of the disasters along our coast occur. A harbor of refuge is therefore a commercial and maritime necessity and of great national importance. Under an act of Congress the board of engineers for the Pacific coast have twice, after careful deliberation, decided that the \$150,000 appropriated by that act should be expended at Port Orford in the construction of a marine asylum for ships. Its central location, midway from San Francisco to Puget Sound and in the extreme western portion of the United States, and on the track of all vessels going up and down the coast; its freedom from prevailing northwest coast fogs, protected as it is by the projection of the Coast Range Mountains immediately to the north; its ample roadstead and deep water, good bottom and splendid facilities for obtaining material for construction—all these remarkable peculiarities com-

bined to influence the final decision of the board in its favor. It is already designated on the United States Coast Survey as the best and most capacious summer harbor on the coast.

Not only will the proposed expenditure provide for a harbor of refuge, increasing in capacity with each appropriation for extension of the breakwater, but it will benefit the general public and the entire Pacific coast by opening up the richest of coal, iron, lumber, and agricultural sections. A practicable route by easy grades has been surveyed for a railroad from Port Orford through to the Coquille Valley, and thence to Roseburg in the heart of the Umpqua section of Southern Oregon, and I am informed that the route is also practicable into Rogue River Valley or down the coast and into the State of California. In fact its proximity to the State line makes the location of this harbor of great advantage to Northern California. The commerce of the Pacific coast is rapidly increasing, as the following figures, in addition to those heretofore given, show:

Arrivals and departures at San Francisco.

Year.	Arrivals.		Departures.	
	Vessels.	Tons.	Vessels.	Tons.
1880.....	2,729	834,634	2,758	845,380
1881.....	3,049	960,347	3,045	956,189

This is coastwise commerce only. The growth of shipping from the Columbia has been given, and that of Puget Sound has increased over 100 per cent. in the last year. Owing to the prevailing winds and currents much of the Asiatic commerce for San Francisco passes up near this point going and returning.

It will thus be seen that the prosecution of this work, at least to the degree of making one of the several harbors probably needed in time along this coast for its rapidly growing and soon to be immense coasting trade, becomes a national necessity. Our Government should wisely look forward and provide for our ever-increasing wants.

We must not only take into consideration the present commerce but its probable growth ere any harbor can be made ready in the due course of time generally taken to complete great public improvements.

A number of vessels have been wrecked that could in all probability have been entirely saved had a harbor of refuge existed at the time at Port Orford. I might instance the cases of the Star King, the Western Bell, the Grace Darling, where seventeen persons perished, and the sad loss of the Brother Jonathan, with her two hundred human lives. The great majority of vessels lost have been south of this point, and the prevailing winds would have doubtless enabled many to have reached an asylum for ships at Port Orford.

The last Legislature of the State which I have the honor to represent upon this floor, by unanimous vote, memorialized Congress for immediate and ample appropriations for this work.

THE ALSEA

is an exceedingly rich and productive valley, isolated almost entirely from other sections—a mountain barrier on one side and an ocean on the other. The tide ebbs and flows about fifteen miles inland. A small appropriation for the removal of rocks and obstructions and for other improvements will be of great assistance to the people. The spruce forests here will prove of great value. There are also immense bodies of cedar, cherry, maple, ash, alder, and fir. Valuable lead mines exist along the coast. Over 60,000 bushels of grain were produced last year. The memorial presented asks for the sum of \$10,000. The opening of this settlement and the consequent sale of the public lands would reimburse the Government for the amount required to improve the river.

THE UMPQUA RIVER

for seventeen miles between Scottsburg and Gardner affords the only means of transportation. Except over the bars at Brandy Island, Echo Island, and at the mouth of Dean Creek, there is plenty of water at low stage to meet the necessities of the commerce of the river, and to remove these obstructions and the Fisk Rocks just below the steamboat landing at Scottsburg, and provide for buoying the river below Gardner, and for essential surveys, the sum of \$12,000 was last year recommended by the Engineer Department. This expenditure, in my judgment, would result in a permanent beneficial improvement.

SUSLAW RIVER.

I also present a large petition from the citizens of Siuslaw Valley, asking for a survey and mapping of the bar at the mouth. This is a rapidly-growing settlement, in a fine agricultural, stock-grazing, and timbered country. Vessels drawing thirteen feet can ascend the river for twenty-five miles from the ocean, and there are no sand-bars or snag obstructions to the head of tide-water, thirty miles from the mouth. Their request is reasonable and should be granted.

Now, Mr. Speaker, I have referred as briefly to our special interests as possible. It will be noticed that our public improvements are principally external, rather than internal. They concern largely the shipping of the world by affording it increased facilities in its search for our products. While there are rivalries among us, they are only those of young, vigorous athletes, and the more they wrestle for trade

and commerce the greater will be the growth. Within the scope of the coast range of the Pacific Northwest we find on the east the great commercial centers of Boston and New York and Philadelphia and Baltimore, each the better for the competition from the others, and we have room on the Pacific for ample ambition in this direction.

All our rivers and harbors should be improved. The practical bearing of the policy of improving our grand system of water-ways and harbors draining every portion of the Northwest and carrying its volume of production and trade toward the seaboard, as an extension of the great belt and latitude of commerce, development and immigration, is fraught with the most promising consequences to the nation at large.

Our coast in one respect is not as highly favored as the Atlantic; our harbors, both barred and otherwise, are not so numerous; our coast range of mountains, in close proximity to the sea, turn only the small and short streams over our bars, and their scouring capacity has to be increased by governmental improvements, and our limited harbors should be improved as rapidly as possible.

A LIBERAL POLICY

should be pursued, and the improvements, like the foundations of lasting and powerful structures, should be strongly and deeply laid, and permanent—a liberal policy not only to our Pacific coast rivers and harbors, but I stand ready to join hands with all men of progress on the policy of liberal internal improvement and development throughout the length and breadth of the land. That man or that party that stands in the way of the permanent development of this country will go down before the onward roll of American progress. From every part of this great land comes up the cry for increased facilities for cheap transportation. The people demand it and they will yet be heard in no uncertain tones. Why, Mr. Speaker, in our last year's river and harbor bill for the whole of these United States we scarcely excelled the sum which France, only one-fifteenth the size in area of the United States, expended in a single year, on one only of her rivers—the Seine—between her capital and the sea.

The policy of internal improvements has governed all the progressive nations of the earth. In the case of France, just mentioned, liberal governmental aid has been given to all important avenues of transportation. Public facilities for interstate exchange gave her the wonderful recuperative power recently exhibited after the Franco-Prussian war left her lying bleeding and prostrate. As the United States is greater in territory than France, so is this same policy the more important to our national development. With our Atlantic on the east and Pacific on the west, with our lakes on the north and our Gulf on the south, and all their various tributary streams—with our great Mississippi and its Missouri and Ohio and numerous other streams ramifying the interior of this country like so many national veins and arteries for the flow of commerce—what a grand and comprehensive system it presents for future growth and greatness. I believe in the policy of using the public revenue—the money of the people for the benefit of the people, and my firm conviction is that a judicious expenditure of the public money for improvements calculated to cheapen and facilitate the trade of this great country by developing its commerce, stimulating its productions, and increasing its wealth does not thereby add to our taxation but rather actually diminishes the burden of our people.

The General Government has given liberally of its means and of its public domain to build up gigantic railroads, owned and enjoyed by private individuals, and now it should in duty bound expend its means to improve our water-ways and supply competitive influences for the benefit of the public. Congress under the Constitution has power to regulate commerce among the several States, and it can do it most effectually by a liberal improvement of our vast system of water-ways, and thus to a large extent obviate necessity for national regulation of interstate commerce or for State or national authority exercising their undoubted supremacy over corporate monopolies in the exercise of created functions in matters of public concern.

On the Pacific our hope is that our ocean traffic may improve, under wise national aids toward ship-building, the improvement of refuge harbors in the interest of commerce, and through probable changes in the manner of ocean transportation. Steam is rapidly driving the sail from off the seas. Capital is proposing to carry our surplus products, under the advantages claimed for shorter and quicker routes, either by way of Wilmington in Southern California, thence by rail to Galveston, and on to Liverpool or Queens-town by steamer, or by way of the contemplated Darien, Nicaraguan, or Tehuantepec route—that destined pathway of nations where Raleigh, over three centuries ago, told his queen were the world's gates. The dream of three centuries we hope soon to see realized. Then will the grain of the Pacific be thousands of miles nearer its market, and the products of the basin of the Columbia can then be mutually exchanged with those of the valley of the Mississippi. I feel that a bright future awaits the shipping producers of the Pacific Northwest.

Mr. Speaker, progress and development seem to be the order of our country and our age. Within the life-time of the gray-haired about me many of our most useful inventions have been perfected—telephones and fire-engines, gas and electric lights, sewing-machines and steamships, photographs and telegraphs, and the whole of our great railway systems. Great has been the growth of the new world,

but its grandest progress has been in these United States of America. The thought at first seems almost incredible that not six of the generations of the sons of man, counting them by the Bible age of three-score and ten, have passed away since Columbus parted the veil that hung before this continent and unlocked our golden gates that the banner of civilization and progress might be borne herein. May the progress of the future be as grand as that of the past, and may contentment, happiness, and prosperity ever be the lot of the good people of this land.

Tariff and Tax Commission.

SPEECH

OF

HON. GEORGE W. JONES,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1882,

On the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. JONES, of Texas, said:

Mr. CHAIRMAN: The bill under consideration assumes the constitutionality and expediency of a protective tariff. The policy of protection is old and familiar, but is now presented under conditions greatly to the advantage of its advocates. So much so, its opponents hardly know where to make a stand or what practical issue to join. A national debt, in round numbers \$1,900,000,000, must be provided for. Our annual expenditures have increased from millions to hundreds of millions. It is estimated that pensions will aggregate 1,000,000,000 in the next twenty years. One-half of this sum comes of the arrearage pension act, for which the soldier and taxpayer are alike indebted to the Democratic party. No one can question its paternity. It was passed by a House largely Democratic. But in apology for the Democrats it may be said that, charged by the Republicans with rebel sympathies during the war, and suspected of indifference toward the Union soldier, it was necessary for them to refute the slander and repel suspicion by a signal display of devotion to the Union and of gratitude to the soldiers for saving it. And the act has the merit of disinterestedness, for it is well known that Democratic partisans share but little in its benefits.

Without further statement of the situation it is apparent that our annual expenditures for the next twenty years will probably average \$350,000,000. The present tariff yields in round numbers \$200,000,000, and the excise or internal revenue \$137,000,000. It is generally agreed that excise is odious to the American people and bearable only so long as imperious necessity extorts it. Already we have a bill on the Calendar to put it in process of extinction. No one thinks seriously of resorting to direct taxes. What, then, shall be done? We must increase the revenue by tariff or diminish the expenditures or in part do both, or else have recourse to some financial element not now employed. Have we such resource? I think we have. The credit of the Government wisely utilized and economically devoted to the use and benefit of the whole people is as potent to relieve in peace as it was to serve in war. But if we so employ it we shall supersede national banks, lessen the necessity for tariff, and thereby weaken the argument for protection. This touches the perpetuation of the national debt and incidentally banks and protection.

The debate has taken a wide range, and free trade and protection have been ably and exhaustively presented in all possible phases. Yet, when we come to analyze and compare notes and collate arguments, the practical difference is not discernible. The elaborate and exhaustive speech of the distinguished gentleman from New York [Mr. HEWITT] is admittedly standard authority on the free-trade side. On page 21 of his speech he says:

Thus it is apparent that a tariff with incidental protection and a tariff for revenue only are in effect identical and are convertible phrases.

This is the conclusion reached after a thorough survey of the whole field. Further on he says:

I have thus established my fourth proposition, which is that a tariff designed to produce an adequate revenue on the average of years will give all the protection which American industry needs.

Page 20:

Now, if it be conceded, or can be demonstrated that these rates are sufficient to compensate for the difference in the wages of labor, we have simply to apply them in order to meet the demands of those who insist and concede that the tariff must afford adequate protection to American labor.

Now, the only time when the competition of foreign products is to be dreaded is when prices are low and foreign nations seek to flood our market with their surplus products. At such times it is the part of wisdom to preserve our home market for our own industries, if possible.

Page 18:

But the difference in wages does exist, and there are branches of industry which

cannot be carried on without an equivalent compensation in the form of protective duties or of a bounty from the public Treasury.

Page 19:

It will be sufficient for me now to say that as between Great Britain and the United States the rate of wages on the average is about 50 per cent. higher here than there.

Page 17:

Happily, in considering the situation, we are relieved from all the necessity of discussing the vexed question of free trade or protection. That question, important as it is, is not now involved in the work before us. I have already pointed out that interests have grown up under the existing tariff, which has lasted for twenty years, of such a vast and complicated nature, and employing such a large proportion of our population, that any interference which would tend to dislocate industry, that would be likely to impair its efficiency, and not advance the substantial elements of its prosperity, growth, and increase, would not only be an act of folly but would produce results so disastrous to the whole community that no party or set of men who might undertake it would be sustained by the popular approval, but would be consigned to oblivion at least for a generation.

It thus appears that all this debate is a war of words so far as Democrats and Republicans, as such, are concerned. Both affirm that the tariff must be sustained to meet the necessary expenditures of the Government and so long as maintained the duties shall be so adjusted as to afford adequate protection to American industry. It follows, therefore, that so long as we shall have a high tariff it will be protective. No one can reasonably doubt that in the revision of the tariff interests affected by it will combine and prevail to have the duty so adjusted as to afford all the protection that may be demanded.

Now, Mr. Chairman, I do not deny the potency of legislation, but I question its constitutionality and deny that it is just to tax one section or industry to protect or enrich another. The power to levy and collect taxes, lay import duties, &c., is qualified by the object contemplated, and that is to raise revenue for the support of the Government. Discrimination for protection violates the spirit of the Constitution and works injustice to those on whom the burdens fall. The tariff ought to be revised in the interest of revenue and for the relief of industries which it now oppresses. I oppose the bill. It means delay and protection. Our late census returns afford all necessary statistical information, while the reports of the Treasury show the workings of the present tariff. Why delay, unless to give politicians time to hedge and class interests time to consolidate power? Is it necessary for Democrats to have time to repeat their rôle on the currency?

Is it now on the tariff as it formerly was on questions of currency, that Democratic constituencies are not agreed, and that there is great danger of demoralization and fatal disintegration if the questions involved be fairly and squarely presented before the party machine shall have prepared them to acquiesce? Why evade responsibility or shirk duty? All are agreed that the tariff should be revised. The Democrats said so during the last Congress, and though they had control of both Houses did nothing. The Eaton bill passed the Senate but died in the House.

Delay is all the protectionist wants. The present tariff works to suit him. Neither side proposes to resort to any other method or resource for raising revenue. In fact, the gentleman from New York, [Mr. HEWITT,] as if to atone for something in the past and to dispel all doubts and fears of his Democratic friends for the future, goes out of his way to attack and ridicule inconvertible currency, the only real and effectual resource to the people against banks, protective tariffs, and capitalized combinations. On page 8 he says:

In the absence of any legislation the work of production will proceed in a natural channel, and all that legislation can by any possibility do will be to divert labor and capital from the direction which they would have taken under natural laws. I feel it necessary to make this statement because many persons who have not given much reflection to this subject seem to think that there is some potency in legislation which can add value to the forces of nature. This fallacy underlies a great many of the propositions which are made in regard to money as well as industry. It is the key to the flat-money delusion, and it is the explanation of the mistake which is made by those who advocate protection for the sake of protection.

Now, collate this paragraph with those already quoted and it would seem that the gentleman is afflicted with the distemper he attributes to others. In the same breath as it were he denies the potency of the law to protect and invokes its power to protect and sustain "interests grown up under the existing tariff of such a vast and complicated nature," &c. What flat contradiction! Which side is he on? But he is not crazy. There is method in his madness. On page 23 he says:

I am absolutely in favor of the abolition of the duty on wool, and I am confirmed in this view by the opinion of the largest wool manufacturers in the United States. If the wool-growers have removed from them the burdens of the extra price they pay on everything they consume they will receive ample indemnity for any sacrifice they may make in the reduction of the duty on wool.

Special benefits to the manufacturer and general blessings to the producer. God bless the wool-grower in Texas; but the Government must take care of the manufacturer in New York.

And such is the doctrine of the great Democratic champion on this floor. It is the key to his speech. Free trade for the farmer and producer, and protection for the manufacturer and capitalist. Nor was that gentleman purposeless in his satire on the people's money. On page 12 he says:

The resources of the country have been overstrained and exhausted by the expenditures of the war, and by the delirium of an inconvertible paper currency which produced an unnatural exhilaration in the industrial system.

On page 15 he says:

We may conclude that the benefits of a sound currency are now so fully understood that nothing short of the exigencies of a great civil conflict, apparently and happily now impossible, will ever be permitted to disturb or banish the metallic money of the Constitution and of the fathers. But we shall not again experience the stimulus which was given to confidence and enterprise by the resumption of specie payments. That work is done, and, as I hope, with the coming decision of the Supreme Court in regard to legal-tender issues, will never be encountered again.

No doubt the gentleman is confirmed in this view by the opinion of the greatest bankers in the United States. Such is the language of the hard-money Democracy of to-day. How different from that of the soft-money Democracy of yesterday! But the party has been drilled, and the people have been drilled; and now the mask is thrown off and the wolf in sheep's clothing is discovered. Formerly we were told that the financial disasters of 1872, 1873, 1874, 1875, and 1876 were produced by contraction and the manipulations of the currency by the money-dealers; and that the only remedy for their cure and prevention was for the people to resume and exercise their right to control the volume of money, to guard against inflation and contraction, securing stability in volume adequate to the money needs of the country, thus maintaining steadiness of value and protecting alike creditors and debtors against contractions and inflations. Now we are told that the people never had such power, and that the forthcoming decision of the Supreme Court will forever dispel the delusion. It may be that the machine drill has done its work so effectually and the national banks have so thoroughly consolidated power as to render resistance futile; and it may be that all who attempt resistance shall sink beneath the turbid billows of obloquy.

The signs of the times may not be as auspicious as could be wished, but the Greenbacker has an important advantage not heretofore held, and that is a fair, square issue with the Democratic party. There is no middle ground. The Greenbacker affirms the constitutional power and its practical efficacy to make and regulate money. This the Democrats and Republicans deny. The Greenbacker affirms that this power wisely and patriotically exercised would enable the Government to turn much of the current expenses and national debt into paper currency, whose serviceableness as money would support it in circulation without interest, answering all demands for paper currency, thus superseding the necessity for national banks and reducing the demand for taxes and tariff. This the Democrats and Republicans deny.

In support of the views of the Greenbacker, in the discussion of the bill to facilitate the refunding of the national debt in the Forty-sixth Congress, I said:

In any condition of the Government financial legislation in its nature is of vital importance. Money is the life-blood of civilization, and its equal and uniform circulation is as essential to equity and prosperity as that of the natural blood to health and enjoyment of life. It pervades every governmental function and permeates the entire body-politic. Whatever affects it reaches every condition and interest in society.

On the 1st of February, 1880, our national indebtedness aggregated \$2,188,191,000, a sum quite equal to one-sixth of the entire stock of gold and silver in the world. To provide for the payment of this immense debt consistently with the national faith, and yet distribute its burdens equitably, and so as to have them rest as lightly as possible upon the productive industries of the country, is the paramount problem in American politics. In our endeavors to solve it in the interest of the whole people we cannot guard too well against empiricism on the one hand and temporizing conservatism on the other, and yet bring to the subject that courageous surrender of the mind which the gravity of the duty demands. Fortunately for the country the questions involved in the proposed legislation received appropriate consideration and treatment by the Forty-fourth Congress, as will be seen by reference to the Report of the Silver Commission, volume 1, page 1:

"IN THE SENATE OF THE UNITED STATES."

"March 2, 1877."

"Mr. JONES, of Nevada, from the monetary commission created under the joint resolution of August 15, 1876, submitted the following report:

"The commission created under the joint resolution of August 15, 1876, submit the following report:

"The resolution creating the commission and defining its duties was as follows:

"Resolved by the Senate and House of Representatives, That a commission is hereby authorized and constituted, to consist of three Senators, to be appointed by the Senate; three members of the House of Representatives, to be appointed by the Speaker; and experts, not exceeding three in number, to be selected by and associated with them, with authority to determine the time and place of meeting, and to take evidence, and whose duty it shall be to inquire—

"First. Into the change which has taken place in the relative value of gold and silver; the causes thereof, whether permanent or otherwise; the effects thereof upon trade, commerce, finance, and the productive interests of the country, and upon the standard (of) value in this and foreign countries;

"Second. Into the policy of the restoration of the double standard in this country; and, if restored, what the legal relation between the two coins, silver and gold, should be;

"Third. Into the policy of continuing legal-tender notes concurrently with metallic standards, and the effects thereof upon the labor, industries, and wealth of the country; and

"Fourth. Into the best means for providing for facilitating the resumption of specie payments."

"The commission as organized consisted of Messrs. John P. Jones, Lewis V. Rogy, and George S. Boutwell, of the Senate; Messrs. Randall L. Gibson, George Willard, and Richard P. Bland, of the House of Representatives; Hon. William S. Groesbeck, of Ohio, and Professor Francis Bowen, of Massachusetts. George M. Weston, of Maine, was appointed secretary.

"The sessions of the commission were held in the city of New York until the reassembling of Congress in December last. They have since been held in the city of Washington.

"Immediately after the creation of the commission circulars were issued to bankers, publicists, and commercial men in this country, and to eminent financial authorities in Europe, and (through the State Department) to the representatives of the United States in foreign countries. These circulars contained interrogatories which were intended to elicit the widest possible information upon all topics cov-

ered by the resolution of August 15, 1876. The chambers of commerce in the leading cities in this country were invited to furnish, and did furnish, lists of the persons most likely to be able to give information.

"A large number of persons appeared before the commission, who were orally examined. In addition numerous written papers from various sections of this country were received in answer to the circulars of the commission. These papers, as well as the oral testimony taken down by stenographers, are reported herewith.

"Our ministers abroad have exhibited a patriotic and intelligent zeal in collecting official and other information in the countries to which they are accredited. The documents which they have furnished are very valuable, and some of them not attainable except through official applications. Some of our ministers have added able and interesting original papers. All these documents and contributions are herewith submitted.

"The commission are much indebted to the Secretary of State for his prompt and courteous co-operation in facilitating their communication through his Department with our ministers abroad. They are also indebted to the Bureau of Statistics, which promptly and courteously furnished all the information asked for.

"Several gentlemen in Europe, eminent as financial authorities, have addressed communications to the commission, which are among the submitted papers. One of these gentlemen, M. Cernuschi, appeared personally before the commission and furnished important and valuable information, which will be found in the reported testimony. The thanks of the country are due to him and to the other distinguished citizens of foreign nations who have made these disinterested efforts in the elucidation of a question important to the welfare of mankind."

It thus appears that the commission in purpose and work embraced finance in its widest range. And surely the thanks of the country and of mankind are due the commissioners for the very able, exhaustive, and disinterested investigation and elucidation of the questions covered by the resolution creating the commission. And certainly the information obtained and the conclusions reached could not be more strongly commended to the consideration and acceptance of their countrymen.

"Germany and the United States demonetized silver in 1873. * * * Manifestly, the real reason for the demonetization of silver was the apprehension of the creditor classes that the combined production of the two metals would raise prices and cheapen money unless one of them was shorn of the money function. In Europe this reason was distinctly avowed."—*Report of Monetary Commission*, page 4, volume 1.

Such is the language of the commission. It is bold, direct, and unequivocal. The information furnished is of the most important character. It establishes two propositions:

First. Demand and supply, the exclusive factors of value, govern money value; and hence whatever diminishes supply or prevents its increase benefits the creditor classes and money-holders by raising the purchasing power of money and augmenting the value of credits. On the contrary, whatever diminishes demand or increases supply benefits the debtor and wealth-producing classes by raising prices and diminishing the value of credits. Classes naturally take sides in accordance with their interests.

Secondly. The dangerous influence which the creditor classes and money-holders exercise upon financial legislation.

To these forces the commission refers the origin and success of the scheme of demonetization soon after the discovery of gold in California and Australia:

"At that time gold promising the more abundant yield was selected for demonetization. The creditor classes and those having fixed incomes boldly demanded it in order, as they frankly avowed, to protect themselves against the anticipated rise in general prices. Under their appeals several nations in Europe, notably Germany and Austria, in 1873 demonetized gold. It is probable that the movement in that direction would have become universal in Europe but for the resistance of France. It was changed, at least as early as 1865, into a movement for the demonetization of silver. * * * But this change from demonetizing gold to demonetizing silver was more of form than of substance. The object aimed at by both was through a disuse of one of the money metals to protect the creditor classes and those having fixed incomes against a fall in the value of money and a rise in general prices. This is the pith and marrow of the monetary discussions of the last twenty-five years."—*Report of Monetary Commission*, page 15, volume 1.

Yes, and it is the pith and marrow of the money question of to-day. The same motives and interests actuate creditors in demanding the demonetization and abandonment of paper money as influenced them in demanding the demonetization of gold or silver, one or the other, as fluctuating supply affected their interests. The cause is clear, the reason plain. Whatever diminishes the demand for money by supplying its uses and taking its place checks its rise and diminishes its value.

In the language of the commission:

"It is the limitation of the quantity of money, without any reference to the cost of its production, that regulates the value of each unit of money, whether fiat or metallic. In the case of fiat money the limitation is imposed by law. In the case of metallic money it is imposed by nature. The effect of limitation upon the value of money is precisely the same in both instances. In the one case the limitation is regulated by the wisdom and justice of man; in the other, it is regulated by the variable and uncertain obstacles which nature opposes to the production of the metals. The value of money, of whatever kind, is measured by the cost of obtaining it after it has been produced, and not by the cost of its production, and this value is indicated by the general range of prices."—*Report of Monetary Commission*, volume 1, page 35.

The hard-money theory that nothing but gold and silver can be money photographs a dismal future for mankind.

"The gold yield of Australia and California was at its maximum in five years ending with 1856. The aggregate production of both metals was also at its maximum during the same period. Since then the combined annual production of the two metals, instead of augmenting, has diminished."—*Ibid.*, volume 1, page 14.

"It is true that new sources of supply may be discovered, but it is only barely possible that they will be discovered and made available within any near period. It has been said that, 'unlike agriculture, there is but one crop in a mine;' and it may also be said that the greater the number of mines and gold fields worked out, the less chances there are of finding new ones."—*Ibid.*, page 15.

"An increasing value of money and falling prices have been and are more fruitful of human misery than war, pestilence, or famine. They have wrought more injustice than all the bad laws which were ever enacted."—*Ibid.*, page 16.

"If metallic money becomes insufficient, by reason of demonetization of either of the precious metals, or from any cause, one of two things must happen:

"The commercial, industrial, and numerical progress of mankind must be arrested, and if the decrease of money shall be a continuing one and cover a long period of time it must end in an absolute check to progress and possibly the destruction of existing social and political institutions. Or, what is most probable, relief would be sought in an extension and perpetuation of existing systems of inconvertible money, which owe their origin to the pressure of expanding population and commerce against the restrictive bounds of a stationary and perhaps declining aggregate supply of the two metals.

"A shrinkage of money and falling prices always have had and always must have a tendency to concentrate wealth, to enrich the few and to impoverish and degrade the many. This tendency is subtle, active, and portentous throughout the world to-day."—*Ibid.*, pages 24, 25.

The alternative thus presented is—

INCONVERTIBLE PAPER MONEY.

It is the horn of the dilemma to which the logic of events has brought us, and on which hang not only the existing social and political institutions of our country, but the hopes of freedom and equality throughout the world. Thanks to the commission for the issue so sharply, so plainly defined; and since there is no other escape from the inexorable logic of demand and supply, surely the philanthropist and patriot will not hesitate to explore the alternative in all phases and bearings. This is what the commission did, and after the most thorough, philosophic, and exhaustive investigations, reached the conclusions expressed in the following passages of the report, volume 1, page 9:

"There can never be practically two money standards whose units of account differ in value in any country at the same time. It is all-important that the value of the standard should be unchanging. It is not important that the material which represents the value should be unchanging. It is of little consequence of what the material consists, if it be portable, divisible, and indestructible, or, if destructible, that it can be replaced with facility. There should never be any hesitation in changing the material of money for the purpose of maintaining its value undisturbed.

This passage embraces two fundamental and vital propositions:

First. There cannot be two money standards differing in value; in other words, if there be two differing in uses, or the one based on the other, the superior absorbs and controls the inferior, and by its own volume exclusively regulates value, and hence bank-notes and Treasury notes not full tender do not affect the value of money. They produce contractions and expansions at the bidding of the superior, but in their subservience to their superior, are always guarded against any diminution of this power. Upon this point I repeat the language of the commission, volume 1, pages 6 and 7.

The two metals together fill but scantily the measure of the money needs of the world, and they can only fill it upon the condition that both are money in the fullest sense; and nothing is such money if it be restricted in its legal-tender function.

On pages 36, 37, 38, and 39 this subject is elaborated by the commission, volume 1, page 36:

"Prices, notwithstanding the use of banking expedients and credits, governed by the volume of money.

"It is sometimes maintained that a compensation can be made for a shrinkage in the volume of money by an increase of such banking expedients as checks, bills of exchange, and clearing-houses. These expedients are now resorted to, and, because profit is found in their use, always will be availed of to the utmost possible extent. It is manifest, therefore, that, whatever the proportion or percentage they bear to the volume of money, it cannot be increased except through an increase in that volume. And it is as manifest that, when the volume of money is diminished, these expedients must diminish, and prices must fall in a corresponding ratio. Money is the primary and governing force, whose functions cannot be suspended by any device whatever, and whose volume or existence does not depend on banking expedients, while these expedients grow out of money and could not exist without it."

This proposition is so plain and so universally attested by experience that it is deemed unnecessary to add further in its demonstration. Its importance, however, cannot be overrated. It accounts for the partiality of the creditor classes and those controlling money for bank and Treasury notes without the legal tender, and their abhorrence for fiat or full legal-tender paper money. Secure behind the "obstacles which nature opposes to the production of the mines," if they can only maintain the metallic basis, decreasing volume assures their triumph and rule.

EFFECTS OF A DECREASING VOLUME OF MONEY.

"While the volume of money is decreasing, even although very slowly, the value of each unit of money is increasing in corresponding ratio, and property is falling in price."—*Report of Monetary Commission*, volume 1, page 53.

It is estimated by the commission, as a consequence of increase of demand in excess of supply, that from 1809 to 1848 money increased in value 145 per cent., volume 1, page 55:

"A loan of money made in 1809, if repaid in 1848, would have been repaid with an addition of 145 per cent. in the purchasing power of principal and interest, besides all the interest paid. Those who have loaned money to this Government since 1861 have already received nearly as much in the increased value of their principal as in interest, and all the probabilities are, in respect to the 4 per cent. thirty-year national bonds now being negotiated, if they are redeemed in gold, that more profit will be made by the augmentation in the value of principal than through interest. Indeed, the signs of the times are that the bonds of a country possessing the unbounded resources and stable institutions of the United States, payable in gold at the end of thirty years without any interest whatever, would, through the increase of the value of that metal, prove a most profitable investment. * * * A shrinking volume of money transfers existing property unjustly, and causes a concentration and diminution of wealth."

The second proposition embraced in the passage quoted from page 9 is so fundamental and pivotal and so vehemently decried and furiously denounced as humbuggery by the creditor classes as to deserve special consideration.

"We are apt to believe what we most desire to believe." The creditor classes will naturally seek to persuade themselves and convince others that the proposition is fallacious, for if its truth be established they will be stripped of pretense and forced to avow the real motive of their opposition to paper money, or else yield to the cause of justice and humanity. The proposition assumes that the money material is not of itself money, but becomes such only when induced by law with the functions of money. It discards the theory that money is wealth. It accepts as true the views of the inconvertible-paper or fiat-money school, which are very fairly stated by the commission:

"The views of this school are that utility, accompanied by limitation of quantity, is the basis of exchangeable value. That this utility may either depend upon such intrinsic qualities as would render the thing possessing them valuable to man in isolation as well as to man in society, or upon such intrinsic, artificial qualities which society may confer upon any article, however intrinsically valueless by endowing it with the power of performing the money function. That the evident fact that this function does not inhere in and cannot be conferred on any article so as to make it either valuable or useful to man in isolation, while it is essential to the very existence of society demonstrates that money value is not derived from the useful, intrinsic qualities of the material upon which the money function may be conferred. They also call attention to the facts that the usefulness to the individual of any article depends solely upon the intrinsic qualities which it may possess, and is not at all diminished by its existence in unlimited quantity, but that money, on the contrary, becomes entirely useless unless its quantity be limited. They conclude from these facts that the money value of the material of which money is composed rests solely upon the purely artificial and extrinsic qualities conferred upon it; that this value is inseparable from society, and grows out of its need of and demand for an instrument of valuation and exchange.

"They maintain that money is not in itself wealth, but a set of counters for computing and exchanging wealth, or, as was said by Bishop Berkeley, 'a ticket entitling to power and fitted to record and transfer this power;' and that 'it is of little consequence what materials the tickets are made of.'—*Report of Monetary Commission*, volume 1, pages 40, 41.

Such are the views of the Greenback party. The argument may be reduced to

a syllogism: things equal in uses are equal in value. Articles endowed with equal money functions are equal in monetary uses. Therefore, paper and metal of equal legal tender are equal in monetary value.

Mr. Justice Strong, of the Supreme Court, delivering the opinion of the court in the legal-tender cases, (12 Wallace, page 543,) uses the following language:

"Making the notes legal tenders gave them a new use, and it needs no argument to show that the value of things is in proportion to the uses to which they may be applied."

The views of the metallic school are stated by the commission with equal fairness:

"The especial merits claimed for this system are, that its workings are entirely automatic, that the money value of the commodities upon which it is based depends upon their useful intrinsic qualities and is measured by the average cost of their production, and that their volume depends upon the yield of mines, and not upon the caprice of legislation. They claim that the province of the Government is not to create money, but to coin it, and thereby give to it the best authentication of purity and weight."—*Report of Monetary Commission*, volume 1, page 39.

This theory rests upon two fundamental propositions:

First. Money is of itself wealth, and

Second. That it is limited to the wealth of the mines.

These propositions, if true, involve the gravest considerations.

It needs no argument to show that society cannot exist without money, and it is equally plain that those who own and control money govern society; so that those who own and control the mines hold the key to the power that rules all nations, and are themselves virtually the masters of mankind. This cold-blooded theory assumes that nature denies the creative power to man, as something above his capabilities, especially those of the masses of mankind, but has endowed gold and silver with this divine creative attribute, and hid them in the recesses of the earth, to enrich and enoble the lucky finder, and to give him power and dominion over the earth and all things therein. This doctrine is doubtless pleasing to those who have gold and silver, and whose credits and incomes entitle them to gold and silver. It subjects labor and wealth in all other forms to their pleasure, not to say caprice. It teaches that the natural tendency of civilization is to a moneyed aristocracy, the perfection of political science. This may be delightful to those who expect to be of the aristocracy, but appalling, indeed, to those whom it condemns to drudgery, penury, and want. After careful investigation and thorough examination of the arguments in support of this theory, the commission reached the conclusion stated on page 29, volume 1:

"The demand for the precious metals as commodities is believed by many to be still essential to their general and ready acceptance as money. If this is true, it is a misfortune. The happiness and prosperity of the world, if not wholly dependent upon, are largely influenced by the steadiness of the value of money, which cannot exist without steadiness in its volume. The demand for the precious metals as commodities is fitful and irregular, and always affects the volume of money in the most injurious direction—that of decreasing it. History shows that a deficiency of money is more probable and more to be feared than an excess, and this deficiency is caused in a great measure by the insidious and constant encroachments upon the precious metals of other demands for them than as money. When the magnitude of the world's interests and equities, which rests on steadiness in the value of money, is contrasted with the comparative unimportance of the uses of the metals as commodities, it becomes apparent that the subjection of the value of money to disturbance from the demands for gilded signs and looking-glasses, for bangles and breastpins, is an evil which the benefits derived from such uses but poorly compensate."

This argument to a fair and unprejudiced mind is overwhelming and conclusive; but to a mind obscured by prejudice or biased by interest it may be as "sounding brass and tinkling cymbal." "A man convinced against his will is of the same opinion still;" and it is felt that there is but little hope of reaching the head or heart of one who cannot or will not understand the difference between the tool and the uses served by it. It certainly requires no argument to show that the tools which serve equally the highest use of which either is capable are always equal in value, the lesser uses being merged in the greater. Who would contend that a horse is unserviceable for the plow because not suitable for the turf? Who could think that the woodman's ax is unserviceable and valueless because the metal of which it is composed is not capable of being used as a surgeon's knife? But, driven from the field of argument, the votaries and myrmidons of Mammon arrogate to themselves the prerogative of defining the views and purposes of their opponents. They are always sure to make them so extravagant as to render them ridiculous. They proclaim aloud that fiat money has no basis, and is therefore valueless; whereas, like gold and silver coin, it rests on the obligation of the Government to receive it in payment of all public dues and the fiat of the Government making it a legal tender in payment of private debts, without which gold and silver would cease to be money.

The basis is broad indeed, covering the present and prospective wealth (including the gold and silver) of the people of the United States. It is the credit of the Government, co-extensive with the demand of the Government upon the people for support, and with the people's need for a medium of exchange. It anticipates the revenues of the Government, and, like bonds, is bottomed on taxes. In the case of bonds the Government collects the taxes and pays the creditor. In case of fiat money the holder collects the taxes and pays himself. The bonds bear interest. Fiat money by its serviceableness as a medium of exchange supports itself, thus relieving the people of the taxes necessary to carry the bonds, and at the same time furnishes them a circulating medium equal to gold and equally serviceable as a medium of exchange, and thereby saving to the people the wealth which they would otherwise have to give for a medium of exchange. Experience attests what reason demonstrates. The first \$60,000,000 issued by the Government during the war, and made of tender equal with coin, maintained par throughout the war. The act of May, 1878, modifying and virtually repealing the resumption act of 1875, fixes permanently in the volume of money \$346,000,000 of our present greenback circulation.

In the language of the chairman of the Committee on Banking and Currency, [Mr. BUCKNER,] "it cannot be withdrawn, redeemed, or destroyed."

"THUS FAR GREENBACKS CONQUER."

From the 1st day of January, 1879, it became absolute money—that is, a legal tender in all payments; since which time it has commanded a slight premium over gold owing to its greater convenience, its uses being equal. Thus, by a single act of Congress, \$346,000,000 of our national indebtedness was virtually extinguished and \$346,000,000 of money equal to gold added to the wealth of the nation. Contraction was partially arrested, and as a legitimate consequence the country has experienced corresponding benefits.

During the year 1879, the Treasury received more than \$40,000,000 of gold and silver in exchange for absolute fiat money; and yet it is trash, and those who advocate it lunatics!

The question here thrusts upon the mind, Why not profit by experience, yield to the demands of patriotism, monetize the credit of the people, and extinguish instead of refunding any part of the national indebtedness?

[Aside: the creditors will not let us; it would ruin our party.]

The pretense that it would be repudiation can avail nothing, for recent experience shows that the creditors will not only receive it but greatly prefer it, even to coin—especially silver. Besides, if issued and placed in the Treasury, coin in exchange for it would accumulate much faster than it would be required to accommodate capricious creditors. Certainly the Government can enter the market

and purchase the bonds, just as any bank in Europe or America might; of this there can be no doubt. And such being undeniably the case, there cannot possibly arise any trouble between the bondholders and the Government. The bonds are in the market and being sold daily.

Sir, this pretense is too transparent to hide the mighty power that will scruple at no pretext and hesitate at nothing that will serve to obstruct or baffle any attempt to utilize the credit of the nation for the benefit of the whole people.

Why, sir, if the Government were to monetize its credit and pay off its indebtedness, the effect on credits and incomes would be much greater than if Australia and California were to open anew their mines and add two billions to the volume of gold and silver. Interest prompts the contest, and its magnitude gives gage of the desperate struggle. It is not enough to overcome resistance; the motive for it must be extinguished.

But the creditor classes insist that Congress cannot constitutionally make anything but gold and silver a tender in payment of private debts. If this be true, what a powerful fortress for them! For if the power be annihilated, then the control of the money volume is in their own hands. This is indeed a momentous question, for without this power we can hardly be esteemed an independent nation.

"It is one of the admitted advantages of our present system of irredeemable paper that it shelters us from the recurring demands for gold by the Bank of England. The London revolution of 1866, when one of the banking-houses (Overend & Gurney) went down with liabilities of \$90,000,000, was scarcely felt here. With a currency of gold, or paper convertible into gold, we should feel instantly every change in Europe, and especially in England."—*Report of Silver Commission*, volume 1, page 115.

In the *Hipburn-Griswold* case, (8 Wallace, 615,) Chief-Justice Chase delivering the opinion of the court:

"It is not doubted that the power to establish a standard of value by which all other values may be measured, or, in other words, to determine what shall be lawful money and make a legal tender, is in its nature and of necessity a governmental power. It is in all countries exercised by the government. * * * Making the notes legal tenders gave them a new use and it requires no argument to show that the value of things is in proportion to the uses to which they may be applied. (Supreme Court United States, 12 Wallace, 543; 12 Wallace, 567; Justice Bradley concurring.) I do not say that this is a war power or that it is only to be called into exercise in times of war; for other public exigencies may arise in the history of a nation which may make it expedient and imperative to exercise it. But of the occasion when and of the times how long it shall be exercised and enforced, it is for the legislative department of the Government to judge. Feeling sensibly the judgments and wishes of the people, that department cannot long (if it is proper to suppose that within its sphere it ever came) misunderstand the business interests and just rights of the community."

"It would be sad, indeed, if this great nation were now to be deprived of a power so necessary to enable it to protect its own existence and to cope with the other great powers of the world. No doubt foreign powers would rejoice if we should deny the power. No doubt foreign creditors would rejoice. They have from the first taken a deep interest in the question. But no true friend to our Government, to its stability and its power to sustain itself under all vicissitudes, can be indifferent to the great wrong which it would sustain by a denial of the power in question, a power to be seldom exercised, certainly; but one, the possession of which is so essential, and it seems to me, so undoubted."—*Report Silver Commission*, volume 1, page 569.

"The actual and legal money of the United States is now, and has been since 1862, paper issued by the Government. It owed its origin to exigencies growing out of civil war and to the belief that it was necessary for the preservation of the Government. The law authorizing its issue has been decided by the highest judicial tribunal to be warranted by the Constitution. It owes its value to the demand of the population of the country for money and not to the indefinite promise to redeem it in coin."—*Ibid*, page 104.

After a careful review of all the authorities the Secretary of the commission [Mr. Weston] sums up the conclusions reached on page 187, volume 1, as follows:

"There must be admitted to be some hazards in making the concession which the precedent of the legal-tender paper of the civil war, and the decision of the Supreme Court thereupon compel to be made, that exigencies may arise when it will be 'necessary and proper' for Congress, in order to execute its expressed powers, to force the currency of paper by law. Whatever the hazards may be, there is no escape from them. It is, however, true that the exigency which existed in the only case which has occurred of the exercise of this power, was real, and that the patriotic motives and high intelligence of those who determined that the necessity for it existed are unquestionable. For the future it will moderate if it does not wholly dispel alarms, to remember that sentiment of justice and of respect for private rights are nowhere so strong in this country as among the masses of the people, and that while they have often been the victims they have never been the perpetrators of frauds by means of monetary legislation. * * * If Congress can demonetize silver it can demonetize gold, or both gold and silver, and can monetize any substance or any form of paper. Narrowing money to gold is for the intended, although really doubtful, advantage of creditors."

No clamor was raised, no remonstrance was heard, when Congress exercised this power in the interest of creditors by demonetizing silver, thereby decreasing the volume and increasing the value of money; but now when this same power is invoked to replenish, supply, and restore the equilibrium between the creditor classes and those having fixed incomes on the one hand and the debtors and the wealth-producing classes on the other, unable to deny the authoritative force and conclusiveness of the decision of the Supreme Court, they have not hesitated to assail the Republic in its very vitals by traducing and denouncing the Supreme Court, charging that it was packed after the decision in the *Hipburn-Griswold* case (8 Wallace) so as to secure the final and conclusive decision rendered in the legal-tender case, (12 Wallace;) notwithstanding the act of Congress providing for an additional member in the Supreme Court was passed more than six months before the decision in the first instance, and notwithstanding the further fact that Mr. Justice Grier, who concurred in that decision, resigned soon after it was rendered and thus created a vacancy that was filled as in ordinary cases.

If the Supreme Court be not exempt a member of Congress cannot expect to escape vituperation and anathema, and the public must expect that no means will be spared to baffle, divide, evade, obscure, deceive, mislead, or divert the people. Every guise in partisanship will be assumed, every pretense worn, and every pretext plied.

The people will be told that money in itself is wealth, and therefore an equivalent in wealth for debt; and therefore it would not be just to compel creditors to receive paper money which of itself is valueless.

This intrinsic-value sophism was exploded by Dr. Franklin, in his reply to the English Board of Trade, in 1760. He said:

"Gold and silver owe their value chiefly to the estimation in which they happen to be held among the generality of nations. That their intrinsic value was not so great as that of iron, a metal in itself capable of many more benefits to mankind. What makes three pence of silver pass for six? Even here in England it is indebted to the legal tender for a part of its value."

This is indeed very simple; yet many minds, because of custom, do not readily understand it.

A familiar example:

The market value of 412½ grains of silver is eighty-three cents; in money value one hundred cents. Whence comes the difference? Unquestionably it is the obligation of the Government which money implies—to receive it at one hundred cents

in payment of dues. This obligation would be as potent to raise one grain of silver to one hundred cents. The value is derived not from the material but from the money function which the Government confers upon it. It cannot be unjust to the creditor, because the Government is bound to make it good to him in the taxes and revenues of the Government. The Government to the extent of its liabilities is the creditor of the whole people; and surely no just-minded man will complain that he receives of his debtors what his creditors will receive of him. But obstinacy appeals to precedent, French assignats and confederate currency being shining lights; and yet how little worth. Analysis discovers the absence of credit, the substance of money.

Were this Government to pass a law making confederate money receivable in payment of all Government dues and a legal tender in all payments it would be at par with gold before the morrow's sunset. But "sophistry cleaves close to hide sin's rotten trunk." Conceding the existence of the authority in the Government and its potential capabilities, our opponents decry against its exercise, assuming that it is fraught with the greatest perils to society, because of the want of virtue and intelligence among the masses of the people. Its exercise in Russia, Germany, and England creates no distrust and excites no alarm, because these are monarchical and aristocratic governments, securely fortified against abuses of the power. We accept the issue. We assert that nowhere in the world are sentiments of justice and respect for private rights so strong as among the masses of the American people.

Sir, are we not the only example in ancient or in modern times of man's capability of conquering without enslaving his brother? Our Government rests on the virtue and intelligence of the people. Every element of disintegration has been eliminated. Pessimists may croak, fanatics rave, and ambition machinate, but the love and valor of the great masses of the people, whom it blesses and protects, will preserve and transmit it to succeeding generations. No government is as solid in its foundations or assured in its existence and perpetuation as ours. Our future is, indeed, auspicious. A wonderful destiny awaits us. Stretching from ocean to ocean, comprising two billion acres of land of unrivaled fertility, varied in climate and boundless in the elements of national wealth and power, our country is destined soon to occupy toward Europe the position of superiority now and so long held by her toward her mother country, Asia. We must needs have financial autonomy. Our increasing population and expanding commerce require the supply of money to be in equal step with demand. Our credit is equal to the requirement; shall we monetize it and meet the demand, or shall we longer continue subject to the demand for gold by the Bank of England, and leave our wealth-producing classes still a prey to foreign and domestic syndicates? The danger of abuse is chimerical. The creditor classes are benefited by increasing demand and diminishing supply. As already shown, credits (bonds) have increased in value 100 per cent. since 1861, thus doubling the wealth of the holders, besides the interest paid. It is estimated by the commission that future bonds will augment more in value than in interest. Therefore creditors will oppose any issue of money. Add to their forces the law-makers. The past is certainly not calculated to excite fears that Congressmen are apt to vote pay back. As money shrinks in volume their pay increases in value.

The influence may not be acknowledged, but it will be felt. Add the entire official corps, State and Federal, and we have an array of forces potent surely to resist supply. On the other hand, debtors will be interested in promoting supply and diminishing demand, whereby the weight of their debts will be diminished. Diminishing supply and increasing demand have often driven them to bankruptcy and ruin, but they have rarely impressed financial legislation. Such are the forces for and against. Between them we have the great body of the people holding the scales. Their only interest is in steadiness of volume, which cannot be maintained without equilibrium between demand and supply. How simple, how natural the equipoise; creditors and debtors acting and counteracting—the people, whose only motive is equity, holding the scales—a tribunal formidable to Shylock only.

Mr. Chairman, these were then my views and such are now my views of the potential wealth which resides in the national credit. I then believed that if utilized as indicated refunding was unnecessary. Experience, observation, and mature reflection confirm that opinion. I now believe that by a proper use of the national credit we can counteract monopolies, abolish internal revenue, reduce the tariff, and supersede national banks.

There is a bill now upon our Calendar to extend national-bank charters expiring during the current year. It is said their circulation amounts to \$50,000,000, and unless the bill pass will be retired, producing a corresponding contraction, from which it is gravely apprehended serious derangement of values will ensue, injurious to commerce and hurtful to the general welfare. What a commentary upon the banking system? Who is safe with such power lodged in the hands of capitalized combinations? Why not let it retire and replace it with United States currency? The present national-bank circulation is estimated at \$364,000,000. What formidable power in hands interested in its abuse! Can contract or expand at will, and always will do so whenever opportunity offers to speculate upon the people, to whom it is wholly irresponsible.

Let us for a moment glance at the system. Five persons associate themselves together and present their agreement with a United States bond at the Treasury, and thereupon become a national bank. The Secretary of the Treasury receives their bond on deposit, and delivers to the bank without charge for material, printing, or engraving, 90 per cent. of the value of the bond in national-bank notes guaranteed by the Government, made receivable for all dues except customs, and a legal tender for all public payments except interest on the public debt. No wonder they are as good as gold. Bottomed on the credit of the Government, and by its fiat made money, they are inevitably at par. The Government receives and pays them out as coin, and gives them general circulation throughout the United States. And yet their friends daily deride fiat money and boast of their superiority as currency. The Government pays semi-annually the interest on the whole amount of their bond, less 1 per cent. per annum tax on circulation; so that if the bond be for \$100,000 the bank receives \$90,000, still owns the bond, receiving the interest thereon, and has a clear gain of \$90,000. In other words, the bank is out \$10,000, and yet receives interest on \$100,000; so that if the rate of interest be $4\frac{1}{2}$ per cent., allowing 1 per cent. per annum tax, the bank realizes 35 per cent. interest on the \$10,000 balance of the bond. Any wonder that we have Jay Goulds and Vanderbilts and millionaires springing up as if by the magic of Aladdin's lamp!

Nor is it a marvel that this formidable power now controls and

directs the two great machine parties that have so long divided the people. Both resisted awhile. The Republican was the first to yield. The Democratic resisted obstinately, but the overwhelming pressure at Cincinnati compelled a surrender at discretion. The wonder is that the people have so long submitted to partisan leadership, and acquiesced in the rise and growth of this mammoth power. Our country so abounds in the elements of wealth and the ready means of easy thrift and livelihood, that the people can increase and prosper despite almost anything in the power of Government to impose. But how long they will do so can be foreseen only by those who can calculate the duration of prejudice and the force of "pride of antecedents." Congress could easily establish a safe, stable currency, and could without the least risk of inflation of values issue one or two hundred million dollars annually in payment of current expenditures, and thus lighten so much the burdens of taxation.

The Government circulates \$364,000,000 of its credit for the benefit of national banks. Why not for the people? Paper money is important if not indispensable to the commercial requirements of our country. The existence of banks affirms it. The currency should be safe and stable—guarded against fluctuations in value. The Government alone can provide such currency and give it general circulation throughout the United States. That the Government can do so no one in his senses will deny. Whether it shall be done in the interests of the people or for the benefit of associated capital is the only question, and the people alone can decide it. Money is power; whoever wields it rules. It is the highest prerogative of sovereignty. It belongs to the people. It is for them to say whether they will resume and exercise it for themselves and posterity, or abdicate by acquiescence in its possession and enjoyment by private institutions, called national banks.

Tariff and Tax Commission.

SPEECH

OF

HON. SAMUEL W. MOULTON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1882,

On the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. MOULTON said:

Mr. CHAIRMAN: The bill to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws now under consideration is an anomaly in the history of our legislation.

The second and third sections of the bill explain its object and scope, and are as follows:

SEC. 2. The President of the United States shall, by and with the advice and consent of the Senate, appoint nine commissioners from civil life, one of whom, the first named, shall be president of the commission. The commissioners shall receive as compensation for their services each at the rate of \$10 per day when engaged in active duty, and actual traveling and other necessary expenses. The commission shall have power to employ a stenographer and a messenger; and the foregoing compensation and expenses to be audited and paid by the Secretary of the Treasury out of any moneys in the Treasury not otherwise appropriated.

SEC. 3. That it shall be the duty of said commission to take into consideration and to thoroughly investigate all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and industrial interests of the United States, so far as the same may be necessary to the establishment of a judicious tariff, or a revision of the existing tariff, upon a scale of justice to all interests; and for the purpose of fully examining the matters which may come before it, said commission, in the prosecution of its inquiries, is empowered to visit such different portions and sections of the country as it may deem advisable.

The nine persons to be appointed are to be selected by the President. The President is known to be in favor of a high protective tariff, has heretofore been connected in an official capacity with its operation and the collection of duties under the present exorbitant law. He has never in any practical way recommended the reform of the present tariff, and we have every reason to believe that he is in full sympathy with the desires and wishes of the protectionists upon this question.

We may assume that the persons to be appointed to frame a tariff bill will be in accord with the protectionists, and that the result of the labor of the "nine" will be a one-sided *ex parte* report for the advantage of the power that appoints and controls them.

No one for a moment can suppose that any fair presentation of the tariff question will be made by the commissioners. The protected manufacturing monopolies will receive consideration, but the rights of the laboring classes, the toiling millions, will go unheeded and uncared for.

The reformation of the tariff lawfully and properly belongs to the representatives of the people in Congress. The interests of the people are confided to Congress. The members are elected by the people whose wants and interest they are supposed to understand certainly.

much better than any nine persons selected from a particular class and who are not elected by nor responsible to the people for their acts.

Besides, the report when made would be of very little service to this or any succeeding Congress. From the manner of the appointment of the commissioners and their known bias in favor of protection and against a tariff for revenue sufficient only for the public expenses, no honest revenue reformer would place any confidence in any conclusion the commission might come to; and the work of reformation of the tariff would have to be performed by Congress at last.

This discussion from the beginning has taken a much wider range than the scope of the bill under consideration. All the speakers who have preceded me have discussed the questions as though the tariff was really under consideration and to be passed upon now. And I must say that the discussion has shown in many of the speakers a thorough and comprehensive knowledge of the whole question in all its philosophic and economic conditions.

This knowledge that a large number of the members of Congress in both Houses have shown to possess on all the phases of the tariff question demonstrates that no commission is necessary to furnish Congress information on any branch of the question. In my judgment the only object of those who advocate a commission is delay and to indefinitely postpone the greatly-needed reformation.

Every government possesses the inherent right to raise revenue from its people for its maintenance. Without this power no government could exist; but this power should only extend to legitimate public expenditures limited by law. In absolute monarchy and despotism the people are taxed at pleasure, and the power is only limited by the desire of the ruling despot. Happily this is not our form of government.

Under the Constitution of the United States, article 1, section 8, it is provided that Congress shall have power to lay and collect taxes, duties, imposts, &c. This power has always been construed as limited to the wants and necessities of the Government and for public purposes only. This was the understanding of the fathers, and the Supreme Court of the United States has decided accordingly whenever the question has been presented to that tribunal. In the case of *The City of Topeka*, 20 Wallace, pages 665, 666, 667, 668, the general question was considered, and it was decided that a tax could only be levied for public purposes and not for any particular individual, class, or interest. This decision is a very instructive one and properly defines the limitation on the taxing power, and explodes the idea of the protectionists that one class of the people may be taxed for the benefit of another.

This case originated as follows, as is stated in a very able review of it:

In 1872 the Legislature of Kansas passed a law authorizing counties and towns of that State "to encourage the establishment of manufactories and such other enterprises as may tend to develop" such county or city by the direct appropriation of money, or by the issue of bonds to any amount that the local authorities might consider expedient; and under this act the city of Topeka created and issued its bonds to the extent of \$100,000, and gave the same "as a donation," a majority of voters approving, to an iron-bridge company, as a consideration for establishing and operating their shops within the limits of the city. The interest coupons first due on these bonds were promptly paid by the city out of a fund raised by taxation for that purpose, but subsequently, when the second coupons became due, and the bonds had passed out of the possession of the bridge company by *bona fide* sale to a loan association, the city meanly repudiated its obligations, on the ground that the Legislature of Kansas had no authority under the constitution of the State to authorize the issue of bonds, the interest and principal of which were to be paid from the proceeds of taxes, for any such purpose as the encouragement of manufacturing enterprises. Legal proceedings to enforce payment were thereupon commenced by the bondholders in the United States circuit court, and judgment having been there given for the city, the case was appealed to the United States Supreme Court, where with only one dissenting voice (Judge Clifford) the judgment of the lower court was affirmed, the opinion of the court and the principles upon which it was based being given by Mr. Justice Miller. From this opinion attention is asked to the following extracts, reference being made, for the benefit of those who desire a more complete statement, to the report in full, 20 Wallace, pages 655-668.

"It must be conceded," said Justice Miller, "that there are rights in every free government beyond the control of the State. A government which recognized no such rights, which held the lives, the liberty and the property, of its citizens subject at all times to the absolute disposition and unbounded control of even the most democratic depository of power, is after all but a despotism. It is true it is a despotism of the many, of the majority, if you choose to call it so, but it is none the less a despotism. * * * The theory of our governments, State and national, is opposed to the deposit of unlimited power anywhere. The executive, the legislative, and the judicial branches of these governments are all of limited and defined powers. There are limitations of such powers which grow out of the essential nature of all free governments—implied reservations of individual rights, without which the social compact could not exist, which are respected by all governments entitled to the name. * * * Of all the powers conferred upon the government that of taxation is most liable to abuse. Given a purpose or object for which taxation may be lawfully used, and the extent of its exercise is in its very nature unlimited. This power can as readily be employed against one class of individuals and in favor of another, so as to ruin the one class and give unlimited wealth and prosperity to the other, if there are no implied limitations of the uses for which the power may be exercised. To lay with one hand the power of the government on the property of the citizen, and with the other bestow it upon favored individuals to aid private enterprises and build up private fortunes, is none the less robbery because it is done under the forms of the law and is called taxation. This is not legislation. It is a decree under legislative forms.

"Nor is it taxation. Beyond a caviil there can be no lawful tax which is not laid for a public purpose. * * * It may not be easy to draw the line in all cases so as to decide what is a public purpose in this sense and what is not. But in the case before us, in which towns are authorized to contribute aid by way of taxation to any class of manufacturers, there is no difficulty in holding that this is not such a public purpose as we have been considering. If it be said that a benefit results to the local public of a town by establishing manufactures, the same may be said of any other business or pursuit which employs capital or labor. The merchant, the mechanic, the inn-keeper, the banker, the builder, the steamboat owner are equally

promoters of the public good, and equally deserving the aid of the citizens by forced contributions. No line can be drawn in favor of the manufacturer which would not open the public Treasury to the importunities of two-thirds of the business men of the city or town."

It would seem to follow from the principles of the foregoing case that taxation of any kind can only be resorted to for public purposes, and that under the Constitution and laws, national or State, a tax for the protection of one class of the community at the expense of another is unwarranted and against the principles of natural justice and right.

The decisions in many of the State courts also fully sustain this doctrine.

The form of taxation for the support of the Government is matter of experience and dependent to some extent upon circumstances, and the wishes and interest of the whole people should be considered so far as practicable.

All taxes should be uniform and just in their operation upon persons and property.

The great objection to a protective tax is its necessary unequal and unjust operation. It is giving to one class what is taken from another.

A tariff is a tax on goods imported from foreign countries or exported to them.

A revenue tariff is a tax on foreign importation of goods for the purpose of raising the necessary means required to defray the expenses of the Government.

On the hypothesis that a tariff is to be the instrumentality to raise the revenue for the support of the General Government, we say that we are in favor of a tariff for revenue, adjusted and arranged in its details with a view to equality in the public burdens, and also to the encouragement of productive industry in our own country as far as practicable, without producing monopolies or giving unjust advantages to any. The proper adjustment of a tariff measure is a matter of detail. Inequalities in the public burdens are to be avoided; monopolies should neither be created nor favored, and unjust advantages should not be given to any in raising the revenues for the support of the Government.

Since the formation of our Government the revenues for the most part up to 1862 were collected by a tariff on imports. This form of taxation our people are familiar with, and when properly and judiciously adjusted to the legitimate wants of the Government affords no grounds of complaint. In 1789 Congress enacted the first tariff law. It was uniform in its operation, and was declared to be temporary only, and was limited to seven years, and the ad valorem duty was only 8½ per cent. In the year following it was increased to 11 per cent. Two years later it was raised to 13½ per cent. The next tariff law was that of 1816, just after the war of 1812. The average rate of duties under this law was 30 per cent. ad valorem. In 1824 there was an additional increase of the tariff to 37 per cent. In 1832 there was a further increase of duties, and with it the great historical event, nullification. Subsequently, in 1833, Mr. Clay introduced his compromise tariff bill, which was a sort of sliding scale of decrease, so that in 1842 the tariff on foreign imports was only about 20 per cent. ad valorem. Under the administration of Mr. Polk there was a further reduction of the tariff.

From Mr. Polk's administration to the beginning of the war in 1861 the tariff was simply one for revenue only. The average duties during that time were 17½ per cent.; on dutiable goods alone 22½ per cent. One of the important features of the tariff bill of 1846 was that it distinguished between goods that could be produced at home and those that could not, the latter being substantially free. The Morrill tariff of 1862, as was said at the time, was justified by the pressing necessities of the Government; and the people acquiesced in this high protective tariff upon the promise and understanding that when the condition of the country would permit, this tax that has pressed so grievously upon the people and operated so unjustly against the industrial and laboring classes should be modified and reduced so that its operation should be uniform and just to the people of the whole country. But this understanding with the people on this question has by the protectionists and monopolists of the country been wholly disregarded, and instead of a reduction there has been an increase of the tariff on many articles, amounting in some cases to prohibition, as will fully appear by the tables that I shall submit.

There is another important fact that may be stated in this connection. Protectionists, as a sort of excuse for asking for protection, have said and say now that they only desire protection in the infancy of their business, and that as soon as they are fairly under way and able to withstand competition they will surrender the right of further protection. Now, the fact is that in the entire history of protection not one case can be found where the parties protected have ever consented to an abatement of taxation upon the ground that protection had done its work.

The war tariff of 1862 is a good illustration of the fact that the party protected, whatever the circumstances may be, will never voluntarily relinquish any of his rights under the law however unjust it may be to the people. The war tax as we have seen was exorbitant and in many cases prohibitory, ranging from 40 to 200 per cent. ad valorem. No protectionist desires any reduction, and the bill under consideration is for the purpose of further protecting his interest by delay.

The following tables show the tariff upon some of the common articles of use and are here given so that the people may see what the present tariff is, and keeping in view the fact that the consumer pays this tariff in increased prices on what he buys and that this increase of price goes into the pocket of the protected manufacturer. The importer pays the tariff in the first instance, but it is always charged over to the purchaser by adding it to the price.

Articles enumerated.	Rate of duty.	Value per pound, yard, &c., exclusive of duty and freight.	Amount of duty per lb., yard, &c.	Average rate per cent. of duty.
Clothing wools:				
Worth less than 32c. per lb.	10c. per pound and 11 p. c.	.237	.126	53.17
Worth over 32c. per lb.	12c. per pound and 10 p. c.	.378	.157	41.76
Carpet wools:				
Worth less than 12c.	3c. per pound	.112	.03	26.62
Worth over 12c.	6c. per pound	.194	.06	30.86
Dress goods:				
Value less than 20c.	6c. per yard and 35 p. c.	.160	.119	79.46
Value over 20c.	8c. per yard and 40 p. c.	.309	.204	65.81
Blankets, worth 60¢@80c. per lb.	40c. per pound and 35 p. c.	.682	.638	94.13
Flannels, worth 60¢@80c. per lb.	40c. per pound and 35 p. c.	.61	.614	100.53
Cloths	50c. per pound and 35 p. c.	1.412	.994	70.40
Clothing, ready made	50c. per pound and 35 p. c.	2.873	1.649	57.42
Hats, worth over 80c. per lb.	50c. per pound and 35 p. c.	1.732	1.105	63.86
Yarns, worth 40¢@60c. per lb.	30c. per pound and 35 p. c.	.561	.50	88.49
Leather, tanned	25 p. c.			25.00
Gloves and mittens	50 p. c.			50.00
Other manufactures of leather	35 p. c.			35.00
Cottons, plain bleached, worth less than 20c. per square yard.	5¢c. per square yard.	.121	.055	45.47
Spool thread	6c. per dozen and 35 p. c.	.151	.113	74.62
Earthenware	25, 40, 45, and 50 p. c.			41.93
Silk goods	60 p. c.			60.00
Linen goods	30, 35, and 40 p. c.			35.00
Bar iron:				
Medium size.	1c. per pound	.022	.01	45.43
Large and small sizes.	1½c. per pound	.028	.015	51.90
Chains, ordinary size	2½c. per pound	.043	.025	58.25
Cotton machinery:				
Iron	35 p. c.			35.00
Steel	45 p. c.			45.00
Horseshoe nails	5c. per pound	.084	.05	59.57

Woolen yarns valued 60 cents and not over 80 cents per pound	88

The following table is given by Mr. J. S. Moore, showing that the tariff is framed to operate against the poor and in favor of the rich; that the tariff on luxuries used mostly by the rich is comparatively low, while the tariff on many of the necessities of life is exorbitant:

Rate of duties collected in 1880 in ad valorem, taken from official returns.

Articles of luxury:	Per cent.
Laces, cords, gimps, and braids	35
Diamonds	10
Embroideries	35
Fancy articles	35
Richest kind of cut glass	40
Jewelry	25
Musical instruments	30
Champagne, in pints	47½
Champagne, in quarts, \$6 per dozen	50
Still wines, in bottles	32½

Now, let me place against the above what I deem articles of necessity, and see what duty they paid:

Duties paid in 1880, calculated in ad valorem, taken from official returns.

Articles of necessity:	Per cent.
Cleaned rice	85
Epsom salts	76½
Chicory	102½
Spool thread	76½
Window-glass, common	from 53½ to 73
Band and hoop iron	75
Boiler-plates	69
Horseshoe nails	90
Locomotive tires	79½
Steel rails	99
Castor-oil	148
Croton oil	136
Paris white	240
Balmoral alpaca	91
Blankets valued at 36½ cents per pound	89½
Woolen hosiery valued at 60 cents per pound	100½
Bunting valued at 23 cents per pound	121

Free trade has been defined to be "the free exercise of human power and faculties in commercial and professional life; it is the liberty of labor in its grandest proportions. It is the freedom of exchange of commodities between man and man irrespective of residence or nationality, unfettered by any artificial restrictions."

A protective tariff is a tax levied for the purpose of protecting parties interested against the competitions of international trade. A tariff on imports protects the home manufacturers by adding the amount of the tax to the cost of the foreign product. A tariff on exports protects the home consumers by checking the exportation, increasing the home supply, and reducing the price. Incidental protection is that which is given by discriminations in the distribution of the tax among the various articles on which the tariff is levied. One product can only be bought with another; that is the universal law of trade.

Now, if we take our productions to a foreign country we get the products of the foreign country in return, and if the foreigner brings his goods here he must take our productions in return. This is exchange, commerce, trade; all parties are benefited. The cheaper and easier his productions are obtained, the greater the quantity consumed.

What reason is there why the people should not buy where they can purchase the cheapest, and sell where they can get the best price for the productions of their labor? The right to do this is fully recognized in the internal commerce of the country. The people have always been jealous of any artificial obstruction to the freest commerce between the States, and have resisted every attempt to impose restriction upon it. Many of the States are remote from each other, and the production, climate, soil, and circumstances of the States are entirely dissimilar. The internal commerce between the States cannot be accurately known, but it probably amounts to over \$12,000,000,000 by rail alone, and perhaps equally as large by water and other means of communication.

It has been said that we have no need of a foreign market; that our home market is sufficient for all purposes, and this alone we should look to and protect. Upon this subject, Mr. Philpott, a very able writer, presents the following views:

THE HOME MARKET.

We shall see how protection has kept its promise to give us a home market for our crops. The following table shows the value of the wheat grown in the United States, the value exported, and the proportion exported for the years named:

Years.	Grown.	Exported.	
	Value.	Value.	Per cent.
1850	\$125,000,000	\$643,745	$\frac{1}{2}$
1860	170,000,000	4,076,704	$2\frac{1}{2}$
1870	350,000,000	47,171,229	14
1880	425,000,000	190,546,305	36

We have a home market for only 64 per cent. of our wheat, and depend on a foreign market for 36 per cent. of it, whereas in the old "free-trade times" we had a home market at the very worst for 97½ per cent., and depended on a foreign market for only 2½ per cent. We export fifteen times as large a proportion of our wheat as we did then, and retain only two-thirds as much of it.

Of corn we grew in 1860 \$600,000,000 worth and exported \$2,400,000 worth, or four-tenths of 1 per cent. In 1880 we grew \$702,000,000 worth and exported \$53,000,000 worth, or 7½ per cent. The proportion exported was eighteen times as large, after submitting to protection eighteen years in the hope of having a home market for it all. Of provisions we export eight times as much as in 1860, and, although I am unable to give the amount, our home consumption has certainly not increased eightfold. The population has increased only 65 per cent., and we certainly don't eat five times as much meat as we did then. Supposing that the home consumption has doubled, the export has increased four times as fast. The cotton produced, the export, and the amount retained by the "home market" is almost exactly the same for 1860 and 1880, the export being in each case three-fourths of the crop. In 1870, when our agricultural exports were only half what they are now, they amounted to 15 per cent. of "all farm productions, including betterments and additions to stock," as shown by the census of that year. The population, and consequently home consumption, have increased only 25 per cent. in that time, and consequently the proportion exported must be about 24 to 25 per cent. The "home market" covered only about 75 per cent. And half of that the farmers themselves consume, since they are half the population. It has been demonstrated over and over again that the really protected manufacturers are not over 5 per cent. of the population. They therefore furnish a "home market" for 5 per cent. of 75 per cent. of our soil products, or about 4 per cent. of the whole. For this we pay two prices for every rag, and every pound of iron, sugar, and salt we buy, and the result of eighteen years of that policy is that we are more dependent than ever on a foreign market, depending on it for the sale of 25 per cent. of our products, or six times as much as the protected paupers can be induced to take. We get all our prices here in Iowa from Liverpool for our hogs, cattle, wheat, corn, butter, cheese, alcohol, glucose, flour, oat-meal, and walnut lumber. Every important industry we have in Iowa, agricultural or manufacturing, is as utterly dependent on a foreign market as it could possibly be with absolute free trade, and much more so than it was twenty years ago.

Come to look the matter over, the home market is not "nominated in the bond." It is only a verbal promise, like that made to the workmen. The farmers who paid their money for a home market and the workmen who paid theirs for an increase of wages neglected to bind the mill-owners in writing or to have the consideration included in the statute. If the workmen demand higher wages or the farmers better prices they are coolly told to go where they can get them. Is not this just the least little bit one-sided?

The great desideratum of a country which produces, like our own, immensely more than is required for home consumption is a foreign market for its surplus production. This has been the great struggle among nations, and continues to-day among all civilized countries with unabated vigor.

No country in the world has a greater interest in finding foreign markets for our immense productions of every kind than the United States, and no country in the world has done more by vicious legislation, protective and prohibitory restrictions upon trade and commerce to shut out and destroy foreign markets for our surplus productions than the United States. Our present relation with Canada is a good illustration of the effect of this vicious legislation.

The population of the British North American provinces is about five million. The country is contiguous to us on the north; the inhabitants are mostly English-speaking and industrious. Now, if the province were a part of our own country it would be conceded at once that unrestricted commerce with them would be of vast advantage to all parties and no one would be injured. What is the reason why the same result should not obtain, the province merely being a separate territory from our own, not more so than the States are separate from each other, so far as commerce and trade are concerned? That the governments are different can make no difference in matters of commerce.

During the reciprocity treaty with Canada, there being little or no restriction upon trade between the two countries, the exchanges were about \$100,000,000 in value.

In an evil hour and by the efforts of the protectionists in 1866, the

reciprocity treaty was repealed, and there was a return to the old restrictive policy. And Canada, to protect herself against this exclusive system, has returned to protective duties to keep out our productions from her market. In 1866, when our population was less than forty million, and communication between us and the provinces much less available than now, our exchange, as we have seen was over \$100,000,000 per annum.

Now, when we have over fifty million people and greatly increased in wealth and means of communication by rail and otherwise, under the present protective and restrictive policy our exchanges are only about \$40,000,000. Without restriction there can be no doubt that our commerce with Canada would be to-day over \$200,000,000. But our short-sighted policy of protection has very effectually closed this great outlet and market for our surplus production against us. And the correlative fact may be stated that this policy benefits nobody but the protected manufacturer and monopolist, and is a positive injury to the country at large. It is the dog-in-the-manger policy.

What has been said of Canada may be said with equal truth of Mexico on the south of us. Railroads are now being built from this country into and through Mexico for the purpose of facilitating commerce between the two countries. Mexico is a rich country, and desires to trade with us if she can exchange her productions for ours. The people of Mexico want many of the productions of our country, which are produced in great abundance, and are worthless to us without a market. Our people are equally desirous of obtaining the productions of Mexico, especially those that cannot be produced by us. Everybody can understand that free trade between countries so situated would be of vast advantage to the industrial and laboring classes of both countries, each wanting a market for its own surplus production. But our Government, prompted by the protected classes, has imposed duties ranging from 33 to over 200 per cent. upon products imported from Mexico. Of course this restriction substantially closes the Mexican market against us. Mexico cannot trade with us unless we can take her productions in exchange. This we cannot do, because the high tariff raises the price of the imported articles and no home market can be found. Therefore, by our restrictive policy we surrender the Mexican market to Great Britain under the liberal system adopted by her.

Our entire exchange with Mexico during the last fiscal year was a little over \$19,000,000, when, if the restrictive policy were removed and reciprocity of trade were established, the exchanges between the two countries would not be less than \$200,000,000. Thus the Mexican market is substantially lost to us and much of the surplus industry of our country is rendered worthless upon our hands.

What has been said of Canada and Mexico is substantially true of our commerce with the South American States. There is a vast country very near us and many of her productions in the shape of raw materials are desired by our people. Many of our productions the South Americans desire. But a protective tariff prevents importation from that country to a very great extent and thereby we are prevented from finding a market there for our exportations, and to the injury of both parties.

Now, under the protective tariff, how and where are we to find markets in which we can dispose of our domestic products? Protection adds to the price of the articles protected nearly to the extent of the rate per cent. of protection. It raises the price of the protected article greatly above the price of the same article in the markets of the world. Of course our manufacturers cannot send their productions abroad and compete in the markets of the world only at ruinous losses.

The consequence of this is that our productions are left upon our hands and without a market and comparatively worthless. This is usually followed by failures, panics, strikes, and great commercial distress, such as we have often experienced under this unnatural system of restraints upon commerce.

One of the remedies for this condition of things is, in the language of Patrick Henry, "to make commerce as free as the winds of heaven." When not handicapped by restrictions we can successfully compete in the markets of the world in everything that is the result of agriculture and in most articles of manufacture in this country. No one denies this except the interested class and those employed by the monopolists to advocate their interests.

The protected class say that unless Government protects us by a tariff and thereby enables us to charge a higher price for our goods we cannot go on and must close our business. Foreign competition must be shut out or we die. Suppose this is true. Upon what principle of justice has the iron, steel, cotton, or woolen manufacturer the right to compel the citizens of the whole country to pay them a gratuity, bonus, or premium to enable them to do business and make enormous profits at the expense of the people.

No one disputes that the tariff that is put upon the foreign article and paid in the first instance by the importer is added to its price, and this the consumer has to pay for the benefit of the protective class.

When a government enacts laws of this character, and compels its citizens directly or indirectly under the guise of a protective tariff or otherwise to contribute to the profit of particular classes, it is infamous and downright robbery.

No people can long be contented under laws of this character. It has been sometimes contended by the protected class that the for-

eigner, whose goods are imported, pays the tariff. A greater fallacy was never uttered. Merchandise is purchased of the foreigner in the open markets of the world and imported here, and the tariff is added to the price; and the consumers, who are mostly the agricultural and laboring classes, pay the increased price to the extent of the tax both on the foreign and corresponding domestic production.

There is another important fact in this connection growing out of the protective system that especially affects the interest of the farmer. The following table compiled from the report of the Treasurer shows the total value of the agricultural products of the country, including petroleum exported for the year 1881, namely:

Value of exported commodities for 1881.

Animals, living	\$16, 112, 393
Breadstuffs	269, 933, 744
Raw cotton	247, 695, 746
Fruits	4, 442, 721
Hay	233, 529
Furs, unmanufactured	5, 444, 767
Hops	2, 016, 979
Naval stores	2, 638, 817
Oil-cake	6, 284, 364
Mineral oil	40, 315, 590
Animal oil	1, 151, 774
Vegetable oil	1, 696, 472
Provisions	151, 528, 268
Seeds	1, 062, 786
Tallow	8, 809, 628
Tobacco	20, 868, 884
Spirits of turpentine	2, 414, 719
Hides and skins	883, 787
Rough timber	3, 319, 443
Total	784, 755, 413

Eighty-four per cent. of these exports are carried across the Atlantic in foreign vessels. Now, it is the price of grain and the other agricultural productions in the foreign market that regulates the price of the same productions here. It is the London and Liverpool markets that regulate prices in New York. This is a fact that the protectionist attempts to conceal, and by various false statements attempts to delude the people and have them believe that it is the home market and demand that regulates the price of our production.

The farmer pays the foreigner for freight on his productions to the foreign market. This is necessarily deducted from his profits. Now, freights are enhanced by the fact that by reason of our prohibitory protection laws the ships of the foreign freighter often cross the ocean in ballast instead of bringing a cargo of goods, which but for the high tariff would be brought here, and thereby enable the carrier to lessen his charges for freight.

In addition to this the purchase of ships in a foreign market by an American to be used here is absolutely prohibited under our navigation laws, and we are compelled to surrender the foreign carrying trade to foreigners. This operates greatly to the disadvantage of the farmer, and the prices of his productions are lessened from 15 to 30 per cent. by reason of his being compelled to ship his merchandise in foreign bottoms, and the high tariff that largely reduces importation, and forces the foreign shipper to come here in ballast.

This system of protection, continued since 1802, together with vicious navigation laws and shipping regulations, has driven our merchant marine from the ocean substantially as to the foreign carrying trade. By reason of the fact that nearly everything that enters into the building of ocean steamers is prohibited by a high protective tariff, it costs nearly double to build such vessels here as it does in England, Wales, Norway, Sweden, and some other European countries.

The following from the New York Post, in a recent number, states this point very clearly:

Not a single ocean-going steamship bearing the American flag runs from the great commercial city of the continent. Here is the hard fact from which we start. This marine destitution exists notwithstanding a restrictive law in favor of American shipping such as is found in no other country. Our protective philosophers have fostered other American manufacturers by high tariffs, but in respect to the manufacture of ships we go a great deal further. We allow foreign goods to come into our ports upon the payment of duties; and they compete with our own industries to this extent, that if the home article cannot be furnished for the cost of the foreign article with the duty added it will be undersold. But we prohibit the importation of ships on any terms whatever. Two things and two things only we do not allow to enter the country from abroad, even under a tariff—ships and indecent books. This rule has been in force about ninety years and still we have no ocean-going steamships. Upon the face of things is it not unreasonable for our correspondent to contend so stoutly for a system which is proved to be ineffectual? If prohibition of this sort has not given us ships, if with prohibition our shipping interests have languished and almost died, what ground is there for a protest against the removal of prohibition as against something that will injure these interests? If the restrictive policy has failed, as it unquestionably has, does not common sense suggest the trial of another plan?

The imports and exports of the United States for the last fiscal year amounted in value to the sum of \$1,675,024,318. Of this vast amount there was carried in foreign vessels \$1,377,556,017, and in American vessels \$508,080,633; 84 per cent. of our entire foreign commerce was transported in foreign vessels, and 16 per cent. only in American bottoms. In the year 1856, 75 per cent. of the foreign exports and imports were carried in American vessels. From that year to the present time there has been a gradual decadence of American shipping, and we have seen that in 1881 there was only 16 per cent. of our foreign commerce carried in American bottoms, and during the last year there was a decrease of over 1 per cent. in the foreign carrying trade by American vessels. We are substantially driven from

the ocean. The amount paid by our people for freight and passage money to the foreign carrier is estimated to be 10 per cent. on the gross amount carried. This would make the amount paid by our people the last year to foreigners the sum of \$137,755,601. This large sum might and ought to have been earned by our own countrymen. But this sum was wholly lost to us by our erroneous policy of restriction and prohibitory laws; and in this connection we may mention that it has prevented the employment of thousands of our needy citizens in the capacity of clerks, sailors, ship-builders, and laborers, and their places have been filled by foreigners. This is one of the results of the beneficent system of a high protective tariff. This is the feast that American citizens have been invited to by the protectionist and monopolist.

The decade ending with 1861, under a tariff for revenue only, presented one of the best and most prosperous periods of our history. All classes of our citizens were equally protected in their rights. The laborer received his just reward. All our industries stood upon an equal footing and there were no complaints against unjust laws. The revenue was only sufficient for ordinary economic expenditures of the Government, and there was no incentive on the part of the Government to extravagance or profligate squandering of the people's money. But the great battle for equal rights and commercial freedom remains to be fought. This discussion will advise the people of the actual condition of affairs and unjust operation of the present tariff. The agitation of this great question now fairly begun will continue until every free American citizen shall be at liberty to enjoy the fruits of his own labor and dispose of the products of his own hands when and where he may choose, and in any market where he can realize the largest profit, and purchase in any market where he can buy the cheapest.

Army Appropriations.

SPEECH

OF

HON. JOHN P. LEEDOM,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 7, 1882,

On the bill (H. R. No. 5559) making appropriations for the support of the Army for the fiscal year ending June 30, 1883, and for other purposes.

Mr. LEEDOM said:

Mr. CHAIRMAN: The amendment which I had prepared to this bill, and which I had hoped to have adopted, but for the ruling of the Chair on the point of order made by my friend from Wisconsin, [Mr. BRAGG,] is as follows:

That the proper accounting officers of the Treasury Department be, and they are hereby, authorized and directed to receive, pass upon, and settle all claims for property taken and used by the Union forces engaged in opposing or pursuing the confederate forces under General John H. Morgan, while making his raid into the State of Ohio, in July, 1863; and said accounting officers are also directed to receive, settle, and pay for all horses or other property, taken from citizens of said State by said confederate forces, which were afterward captured, retained, and used by the Union Army. An appropriation is hereby made, out of any money in the Treasury not otherwise appropriated, to pay the same. That the said accounting officers of the Treasury shall take and accept as sufficient proof, in all claims so disposed of, the adjudications made by the commission appointed by said State, together with the accompanying proofs, which claims, adjudications, and proofs were filed in the office of the adjutant-general of said State: *Provided*, That all claims not so adjudicated upon may be established as other claims and demands against the United States are now established: *And provided further*, That upon the finding of said commission, or other sufficient proof of the taking of horses, mules, or other property by the said rebel forces, their capture, retention, and use by the Union Army shall be presumed and admitted by said accounting officers, and adjudication and settlement made for the same in the same manner as if said property had been originally taken by the Union forces. That the Quartermaster-General is hereby directed, upon the request of claimants or their attorneys, to turn over to the proper accounting officers of the Treasury all claims heretofore filed in his office for property taken from citizens of said State of Ohio during the said Morgan raid.

This amendment is a measure of such a meritorious nature that our national pride should be shocked at the reflection that it has been so long unattended to. In July, 1863, General John H. Morgan, with a force of rebel soldiers, made his way into the southern portion of Indiana and Ohio, and made that devastating raid upon the almost defenseless people of that section of the country which was productive of so much suffering and wrong.

The gallant men who would have defended their homes were in the armies of the Union, and the handful left there were unable to organize in time so as to cope with their assailants. From all sides men came to the rescue of the invaded people, and pursuing Morgan, attacked his forces, and capturing the leader, demoralized and made prisoners of a majority of his troops.

Along the roadway he had traversed there was desolation. The homes of the farmers were stripped of their possessions; the stock was taken by the followers of one army or another, and a prosperous people, who but the day before had lived with a consciousness that

security and protection would be afforded them by this Government, found themselves impoverished, outraged, and plundered.

The rebels swept on with the captured property, consisting largely of valuable horses, but were intercepted and overtaken, scattered and dispersed by the Union Army, which, in its pursuit of Morgan and his men, had been not far, if any, behind Morgan in appropriating the supplies and horses of the citizens; and the result of Morgan's defeat was the recapture by the Federal forces of most of the property gathered by the confederates. These horses, so taken by the Union soldiers and those falling into their hands by the dispersion of Morgan's men, were not returned to the people from whom they were taken, but retained by the Federal forces and carried with them to the "front" with indecent haste. There was very little, if any, effort made to restore such property to the rightful owners. This matter was capable of easy identification, and the Legislature of Ohio passed an act providing for the appointment of a "commission to examine claims growing out of the Morgan raid." The act of the Legislature required the observance of certain instructions, as follows, to wit:

SEC. 6. Said commissioners shall examine all such claims duly presented and find the amount of loss thereon and whether the claim be meritorious, as, upon the evidence before them, they may deem just and equitable; and they shall keep a full and correct record of the claims presented and of their action thereon; and shall, on or before December 15, 1864, report their proceedings, their finding, and facts upon which each claim is founded, to the governor, separating said claims into the following classes:

First. Claims for property taken, destroyed, or injured by the rebels.

Second. Claims for property taken, destroyed, or injured by the Union forces under command of United States officers.

Third. Claims for property taken, destroyed, or injured by the Union forces not under command of United States officers, with a statement showing specifically in each case under what circumstances and by what authority such property was

so taken, injured, or destroyed; it being the object of this act to have a careful examination of said claims, and report as to the nature and amount thereof, but to leave the question of the liability of the State open and undetermined for future action.

SEC. 7. Each claimant for personal property shall prove whether the same was listed in his name in 1863 for taxation in this State, and if so, whether he placed the valuation thereon; and no claimant for the loss or destruction of property so listed and valued by himself shall be allowed a greater sum than valuation.

The commissioners appointed by the governor under said act were Hon. Alfred McVeigh, Major George W. Baker, and Henry S. Babbitt, men of high character and ability. On the 15th day of December, 1864, that commission made its report. It commenced at the point where Morgan had first entered the State, and followed along his trail until they arrived at the scene of his surrender. Public investigation of every claim was made, a high and satisfactory class of testimony required, and this was recorded and preserved. The character of the evidence received appears from the following portion of their report: They say they "have observed scrupulously the directions given. The claimant's affidavit to his own statement in writing was taken in each case. Such witnesses as the claimant could produce were examined as to their personal knowledge of the truth of the statements made by him, and affidavits of persons not present who were familiar with the alleged facts were also received. The examinations were conducted publicly in the most convenient places to be procured by the commissioners, and the claimants found themselves surrounded by their neighbors and acquaintances, who could confirm or refute their statements, as truth and justice might demand."

The following is a "consolidated abstract of claims for property taken, destroyed, or injured during the Morgan raid" through Ohio in 1863, as certified to by Henry S. Babbitt, secretary of said commission:

Number of claims.	Name of county.	Amounts claimed.					Amount of property taken by the rebels and traced into possession of the United States forces.	Amounts allowed.			
		Damages by the rebels.	Damages by Union forces under command of United States officers.	Damages by Union forces not under command of United States officers.	Total amount claimed.	Damages by the rebels.		Damages by Union forces under command of United States officers.	Damages by Union forces not under command of United States officers.	Total amount allowed.	
394	Adams	\$64,918 71	\$9,932 15	\$100 00	\$74,950 86	\$1,960 00	\$55,312 00	\$8,569 00	\$100 00	\$63,981 00

These claims are now before the Quartermaster-General's Department, but although nearly nineteen years have passed since that report was made, there has yet been no sufficient appropriation made by Congress to pay them.

The authority under which this was made, its manner of proceeding, and its equitable conclusions have elevated these claims to a high and honorable position, so that Congress could at any time with perfect safety have appropriated the amount called for by the report of the commission. We are asking that there may be no more delay in making this just appropriation. The evidence is now on file in the Quartermaster-General's Department and can be transferred to the proper accounting officers of the Treasury, where a brief and simple examination will readily satisfy them of the justness of the claims. These people have waited eighteen long years for the settlement of an obligation as onerous as could be imposed on a government toward its citizens. I hold it to be one of the first duties of a government to extinguish its obligations to its citizens without any unnecessary delay. The Government owed these people protection for their property. It did not extend it, but beyond this when it came into its possession appropriated it to its own use and has

never recompensed the citizens who were its owners. The stalwart men of Ohio and Indiana were then gaining their glorious records on the field of battle. Many of them gave up their lives that their little homes and property might be protected from the invader. Was it right that their families and homes should be left unprotected? They have made no complaint beyond asking that the Government recompense them for the value of their property taken.

Since that period this Government has performed no prouder or more honorable work than discharging its obligations to its citizens and soldiers. To the soldier who lost health or limb the Government has displayed its gratitude for his heroic service by endeavoring to compensate his suffering, his losses, and his toil; to the widows and orphans of those who fell in battle it has extended its generosity as well as recognized its obligations to the dead. I insist then, Mr. Chairman, that we should act in this matter. We have already waited too long to do this justice to these people whose property we have consumed; there is no better way to right this wrong than I have suggested in my amendment, for the evidence which will be submitted is of that elevated character which will insure conviction.

Banks and Currency.

SPEECH

OF

HON. GEORGE W. LADD,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 3, 1882,

On the bill (H. R. No. 4167) to enable national banking associations to extend their corporate existence.

Mr. LADD said:

Mr. SPEAKER: At the bankers' convention, held at Niagara Falls in August, 1881, one of the able and leading orators of the occasion, George S. Coe, president of the American Exchange National Bank of New York City, spoke as follows:

It is very obvious that the continued reduction of the public debt is fast removing the foundation of the national banking currency, and that the system itself, thus losing its characteristic support, is approaching dissolution.

The advancing price of Government bonds, consequent upon their gradual diminution in volume, and strengthened by a growing demand for the investment of trust funds of every character, has already made the service of issuing currency profitless to banks, weighed down as they are with heavy burdens of special taxation.

With the certain progress of this reduction and absorption of bonds it is evident that the existence of the present system of banking cannot long be protracted, and that very soon some substantial change in the basis of our national currency will be inevitable.

Notwithstanding the social inconvenience which may result from this rapid payment of the national debt, and the consequent disturbance in the affairs of individuals and organizations throughout the country, yet the public sentiment undeniably favors its early and entire extinction. This sentiment, costing as it does the continuance of heavy taxation, nevertheless has too much of national good in it to be repressed. It is public virtue in most emphatic expression. However much the national currency may be regarded as superior to other systems, yet it manifestly will not be perpetuated, if to do it the national debt must also continue. Dependent upon the sentiment of the country upon that issue alone, it is evident that the currency must die. Its days are already numbered. Every fractional advance in the price of Government bonds is a blow at its life—and the march of events everywhere indicates its subversion from the present basis.

The practical question before the country, then, is this: "What currency shall take its place?"

This intelligent exposition of the national-bank currency question, coming from one of the able men, one who has comprehensive views not tintured with partisanship, is worthy of our profound attention. But for the partisan efforts of a few indiscreet friends of these institutions, we might regard the increasing opposition to funding, together with our great prosperity, had settled forever the question of the practicability of rechartering institutions to issue currency founded upon our bonds, now so rapidly being paid off from our surplus revenue. The national banks of issue were instituted and so generously endowed, mostly as a war measure, principally to create a market for our bonds at a time when necessity compelled the weak to yield to the avarice of the strong in the adjusting of the burdens growing out of the war. When these institutions came to entirely control legislation, which they did in 1869, not for the promotion of our industries, but rather to cut the tree down that bore the fruit, then it was that their days were numbered in the public estimation, and this system only awaited the development of the confidence of the people in the other and now proved superior currency, the United States Treasury note.

The contest has been going on for years. The banks knowing they cannot exist permanently without the withdrawal of the greenback on the one side, and the increasing determination of the people as expressed in Congress on the other that the greenback currency shall not be withdrawn, this contest has now culminated in the exclamation at a late bankers' convention, "What shall the future paper currency of this country be?"

The wisdom of Mr. Coe and the unwisdom of your Committee on Banking and Currency are evident to all—so plain that he who runs may read. Your committee ask for the recharter of the national banks; Mr. Coe says the system "will not be perpetuated if to do it the national debt must also be continued."

We have in our modern politics a word truly significant of those who support out-grown institutions—Bourbonism. Taking the intelligent opinion of the orator of the bankers' convention, Mr. Coe, our committee recommend to us Bourbonism, doubly loaded with death, asking us to adopt that which is dead, and more, to come forward with special legislation to pay its funeral expenses. We are now asked to rejuvenate the corpse of an institution on account of its glorious history, in a contest with the Government for the circulation of its notes—a history which can boast of a record in money-making unsurpassed in this or any other land, in this or any other age, whose track has been strewn with wrecks of business men and industries, only equalled by the destruction of humanity by the first Napoleon, and fortunately now about to share his fate. Comptroller Knox reports as follows:

DIVIDENDS AND EARNINGS.

From the semi-annual returns made by the banks to this office, tables have been prepared, showing the dividends and profits. The following table shows divi-

dends and total earnings of all the national banks for each half year, from March 1, 1869, to September 1, 1881:

Period of six months, ending—	No. of banks.	Capital.	Surplus.	Total dividends.	Total net earnings.
September 1, 1869.....	1,481	\$401,650,802	\$82,105,848	\$21,767,831	\$29,221,184
March 1, 1870.....	1,571	416,366,991	86,118,210	21,479,095	28,096,934
September 1, 1870.....	1,601	425,317,104	91,630,620	21,080,343	26,813,685
March 1, 1871.....	1,605	428,699,165	94,672,401	22,205,150	27,243,162
September 1, 1871.....	1,693	445,999,264	98,288,591	22,125,279	27,315,311
March 1, 1872.....	1,750	450,693,706	99,431,243	22,859,826	27,502,539
September 1, 1872.....	1,852	465,676,023	105,181,942	23,827,289	30,572,891
March 1, 1873.....	1,912	475,918,683	114,257,288	24,826,061	31,926,478
September 1, 1873.....	1,955	488,100,951	118,113,848	24,823,029	33,122,060
March 1, 1874.....	1,967	489,510,323	123,469,859	23,529,998	29,544,120
September 1, 1874.....	1,971	489,938,284	128,364,039	24,929,307	30,936,811
March 1, 1875.....	2,007	493,568,831	131,560,637	24,750,816	29,136,067
September 1, 1875.....	2,047	497,664,833	134,123,649	24,317,785	28,800,217
March 1, 1876.....	2,076	504,209,491	134,467,595	24,811,581	29,097,921
September 1, 1876.....	2,081	500,482,271	132,251,078	22,563,829	26,540,231
March 1, 1877.....	2,080	496,651,580	130,872,165	31,803,969	19,592,962
September 1, 1877.....	2,072	486,324,860	124,349,254	22,117,116	15,274,028
March 1, 1878.....	2,074	475,609,751	122,373,561	18,982,390	16,946,696
September 1, 1878.....	2,047	470,231,896	118,687,134	17,959,223	13,658,893
March 1, 1879.....	2,043	464,413,996	116,744,135	17,541,054	14,678,660
September 1, 1879.....	2,045	455,132,056	115,149,351	17,401,867	16,873,200
March 1, 1880.....	2,046	454,080,090	117,226,501	18,121,273	21,152,784
September 1, 1880.....	2,072	454,215,062	120,145,649	18,290,200	24,036,250
March 1, 1881.....	2,087	456,844,865	122,481,788	18,877,517	24,452,021
September 1, 1881.....	2,100	458,934,485	127,238,394	19,499,694	29,170,816

Total dividends from 1869 to 1881, \$550,491,522; total net earnings from 1869 to 1881, \$619,703,001; surplus now held by the banks, \$128,140,618. This the result of only twelve years of special legislation! It is well known to every intelligent man in this broad land that in the operation of the law but 10 per cent. of the capital employed is furnished by individuals and 90 per cent. by the Government; and if this vast sum was properly divided, the Government or people would have \$557,732,701 and the stockholders but \$61,970,300. Again, these twelve years have a history which can profitably be used for our guidance in the future. Mr. Speaker, I deny that there is any necessity for the recharter of the national banks.

Truly we live in a wonderful age. Steam upon water and land, the telegraph and telephone have quickened things mightily; rapid transit for business purposes and for political purposes! A dazzled and dependent class wondering with profound amazement at the feats of modernism, yielding and giving up their rights, as our youth do their good sense to the Hindoo juggler!

Neither are we much better, as we consent to the making of a committee on Banking and Currency of eleven, nine of whom recommend the recharter of the national banks under a system which one of its own friends held, only August last, was on its last legs, unless we legislate against the public virtue.

Comptroller Knox, who is so correct in figures but so wanting in candor, says, on page 11 of the bound edition of his report for 1881:

The discussion of the question as to the kind of circulating notes which will be substituted for the national-bank notes if the latter are retired is postponed for the present, as it is impossible to foresee the events which may occur to affect that question within the next few years.

Or, in other words, it is impossible to know at present the gullibility of the country. He evidently regards the system as one to be prolonged but a few years, notwithstanding, professionally, he is and has been a great supporter of these institutions.

Mr. Speaker, from what I have said one might suppose this contest was nearly over; but it is not so. Corporations have many lives. While the people labor in the field and shop capital meets, with one heart, one soul, and one monstrous body, to control our legislation. With a life more lengthy than that of Methuselah, with an existence where a thousand years are but a day, they lay their plans for the infant to be born a thousand years hence, in the establishment of vested rights in imitation of the old countries. Their plans are, that our national debt shall not be paid; that increased expenditures, enlarged appropriations, increased salaries, largesses to the wealthy, who are in the sunshine of favor, waste, and frivolities, shall absorb our surplus revenue henceforth.

The press, the great motor of progress, is largely subsidized, with its vast amount of intellect, to recommend salutary expenditures that will absorb our surplus. The press, which, like our country, had its honest and early struggle with poverty and want, frowned upon by prerogative until it conquered a victory for both—a glorious victory—must it now fall by the embrace of the enemy of its early existence, and die of the disease that wealth brings in its train? If so, let us anchor the country in the safe harbor which its honored pioneers left us, and use its last expiring hours of glory to mourn that its great power could be subsidized by the weak but wealthy idiot who by wealth is enabled to borrow the brains of an opponent to strike down the many to enrich the few, by fostering monopolies "for the thirty pieces of silver," that those who live by special legislation may be continued as a class to feed and fatten on our industries. The courtier is brought into requisition to play his arts upon the weak, so that he who is brought to doubt will soon be damned in the society of designing knaves who infest the capital of your country. Thus are monopolies continued by the people; a

people so dear when they are wanted for use, and so cheaply held by their masters when their wants are supplied.

Mr. Speaker, let us look at some of the arguments used by the friends of our national banking institutions. When it was proposed to enlarge the issue of greenbacks, we were told that trade controls prices and the entire pursuit of business operations depended upon the volume of currency, and that to increase it was a foolish or wicked "inflation." But when other questions came up, that of diminishing the coin part of money by one-half by demonetizing silver, the same persons who deprecate inflation made the discovery that the volume of money is of no consequence and that it may be reduced to any extent without injury. The Comptroller of the Currency in his last report proclaims the new doctrine in the following language: "Coin and currency are but the small change used in trade, checks and drafts as substitutes for money." And he therefore proceeds to adopt and indorse the following language of George H. Pownall to the Institute of Bankers of London, October 19 last:

Blue books full of weighty arguments, all curiously wrought out, to help in the settlement of the great note question. It is clear that the check and the clearing system are the main lines upon which banking is destined to run. Dead theories respecting notes and the right of issue belong to the generation to which they were living verities. To us the living fact is the substitution of a new instrument of credit. For the present generation the improvement of the check and the clearing system, the mechanical details of office organization, those details of book-keeping which save time, are, from the enormous number of documents passing through the hands of bankers, of more weight than the most learned treatise on notes and note-makers.

If this doctrine is true, no reason is visible for maintaining the costly machinery of the office of a Comptroller of the Currency, and none for rechartering national banks. The business of checks and drafts can be conducted just as well, and to any extent, through State banks and private banks, and the only special object of national banks is to secure a currency of notes having a general circulation. If coin and currency are but the small change used in trade, we have an abundance already, in gold and silver coin and existing greenbacks, when all the national banks shall have passed out of existence. Again he says:

The London Bankers' Magazine for November, which has just been received, contains an abstract of a paper recently read by Mr. Pownall before the London Bankers' Institute, from which the following table has been compiled. The percentages of the receipts in the city of New York on September 17 have also been added to the table:

Localities.	Coin.	Notes.	Checks.
	Per cent.	Per cent.	Per cent.
New York.....	.55	.06	98.80
London.....	.73	2.64	97.23
Edinburgh.....	.55	12.67	86.78
Dublin.....	1.57	8.53	89.90
Country banks, in 261 places.....	15.20	11.94	72.86

It will be seen that the proportion of checks and drafts used in London does not vary greatly from that of the same items shown in the receipts of the banks in New York City.

Now, that the vast fabric of modern business has grown beyond the old system of the handling of the metals in exchanges for the legal payment of debt, the one class who deal in large sums by the use of representative money, the bank check and draft, should not forget that the industrial classes, who produce that which renders them able to deal in large sums, have rights which they should respect. Among those rights, they claim to use a representative money, the greenback, as the best and safest yet devised. That in large money centers there is next to no coin or currency used is conceded; and that in such localities they have so little use for currency that it is an instrument only to be used as a standard of value.

In this we find the true inwardness of the desire of capital to strike down one of the metals as a standard of value. By demonetizing silver, one-half of our metal money, they correspondingly lessen that which measures the products of the country, and thereby give to the gold dollar the purchasing power of two dollars of bimetal currency. This cannot be denied if the theory could be carried out. Still more wonderful, those who advocate this do not longer propose to handle gold coin; they ask Government to issue gold certificates for their especial benefit, as more portable and handled with less trouble and danger. Thus it will be seen where their own interests are concerned they are anxious to trust the Government to issue paper obligations.

Now, let me bring the money theory to the practical wants of business life. The man of industry, he who produces five hundred bushels of wheat which takes him from six to seven months of time and labor, is in daily want of currency to pay for labor, materials, taxes, &c. When his grain is ready for market he has expended \$400 in currency; he then pays a freight on it, which maintains your railroads; this amounts to \$100 more. It is then perhaps changed by the miller into one hundred barrels of flour. When it reaches the merchant in New York the farmer has invested in all \$500 in currency, on an average of five months' time. The merchant goes upon change at twelve o'clock, sells the one hundred barrels of flour in thirty or sixty minutes, obtains his pay on delivery, takes a check for \$550, this check goes through the bank and clearing-house, pays the merchant's and banker's balances, and no money is required, only the grand confidence.

Mr. Speaker, the question for the country to decide is this: Shall

the merchant and the banker who do not use currency be allowed to dictate to the producer what the standard shall be, single or double; what the quality and character of the currency shall be, when it is conceded both are equally safe for circulation? The former, using in his business next to no currency, and the latter, from necessity, using all his land and labor produces.

Again, shall the producer have a voice in legislation for the adoption of an honest currency for the future? I insist that those who claim to use only representative money should not denounce others as being inflationists—those who ask the privilege of having continued a currency which is now conceded has no equal, and which is universally preferred to the metals for general use. Apply the legal principle in evidence, that which is wrong in part is wrong in all, to our existing laws, regulating banks of issue, how will the banks stand?

But a few years since the expansion of credits from the use of representative money, the check and draft, obliged the banks to suspend lawful payments in greenbacks. They bridged over this suspension by certifying one another's obligations, failing from a scarcity to meet their legal obligation in our legal-tender Treasury note.

It is claimed that the present system of banks is superior to all others. This I deny. Under what system of banking ever before devised could a cashier of a bank use up all the assets, stock, deposits, and credits, leaving nothing but stove and desks, as was done in Newark, New Jersey, to the amount of a million? Again, a president of a bank in Boston making away with all the bank had, and as much more, resulting in the loss of millions. In both cases the very intelligent board of directors and bank examiners, it was found, had been bossing "spiritual shadows" for months, while the cashier and president had been dealing in bubbles which happened to burst at noonday, and could not longer be hid.

Only in one particular can it be said that our national-bank currency is superior to any previous bank issue. And this in consequence of the Government's indorsement or its being bottomed on our bonds. It has its money functions from our Treasury note, and is redeemable in the same. We, as reformers, propose to take the original, divide it in sums needed for use, and retain the real and discard the expensive shadows—the national-bank currency.

"Substitutes," or representative money, as now presented to us by the Comptroller of the Currency, may be classified in the slang phrase of the day:

New York Exchanges, clearing-house..... 98 per cent. fiat.
The legal-tender silver dollar..... 12 per cent. fiat.
National-bank note and the legal-tender Treasury note..... 60 per cent. fiat.

It is conceded that 40 per cent. is all the metal needed by the Government to keep the greenback at all times equal to coin. Even this is denied by able authority, the Philadelphia American, an able Republican paper, which says:

But the credit of the Government is better than that of a bank, because of its constant command of gold; and this makes the retention of so large a sum as is now in the Treasury quite needless. Thirty per cent. would probably suffice to give all the stability and security needed, as it would take a good deal of time to drain the Treasury of so much gold, in case of an actual run for it, and in that time the gold needed would flow in from other sources.

The credit of the Government being so much better than that of banks, it can extend this money just in proportion as its credit can be extended, and no further. This is conceded. Another able writer uses the following language:

The gold would rarely be wanted for the paper, except to settle adverse foreign balances, as long as the bill-holder is sure he can have it if he wishes it. And the people of the country, if it is their will to have a specie-paying currency, never will fear that the notes of their Government will be dishonored.

Mr. Speaker, we are now brought to the main question. What constitutes the best paper currency; that which is attainable in sufficient quantities, and can always be relied upon, and which will promote the greatest amount of prosperity?

First. We are a silver-producing country, and if we had but confidence corresponding to our resources and energy, we could by the full and free coinage of silver (by placing its coinage on the same footing as gold) soon command the monetary affairs of the world, and provide, in the silver certificate to be issued, for every dollar deposited with the Treasury, a currency that would in part render us always safe from panics. I beg here to quote John Thompson, financial adviser and vice-president of the Chase National Bank:

It is in order here to prove that silver and paper currency, based on silver, is popular with the people. In two years standard dollars have been coined as follows:

TREASURY OF THE UNITED STATES,
Washington, November 10, 1881.

Sir: In reply to yours, without date, I beg to say that the coinage of standard silver dollars at the various mints of the United States up to the 1st instant was as follows:

Mint United States, Carson, Nevada.....	93,707,000
Mint United States, Philadelphia, Pennsylvania.....	45,081,705
Mint United States, New Orleans, Louisiana.....	17,041,000
Mint United States, San Francisco, California.....	38,864,000

Total..... 100,073,705

Very respectfully,

JAS. GILFILLAN,
Treasurer United States.

J. THOMPSON, Esq.,
Care Chase National Bank, New York, N. Y.

By the United States Treasury exhibit of assets and liabilities of November 1, (the same date as the dollar coinage exhibit,) it is shown that \$66,576,378 of the dollars are on deposit in the Treasury, but there are outstanding against such deposits \$66,327,670 of silver certificates, the Government owning \$248,708, and this is scattered in seventeen depositories. On the same day, observe, the following circular was issued:

Circular suspending exchange of silver certificates for gold coin or bullion.
[1881, Department No. 108, Secretary's Office.]

TREASURY DEPARTMENT, SECRETARY'S OFFICE,
Washington, D. C., November 1, 1881.

Until further notice the exchange of silver certificates for gold coin deposited at the office of the United States Assistant Treasurer at New York will be suspended, and Department Circular No. 75, of September 18, 1880, is hereby modified accordingly.

H. F. FRENCH,
Acting Secretary.

I need not adduce more facts to prove that silver certificates are preferred to gold coin, although the present issues are not of suitable denominations, nor are they properly executed for a circulating medium.

The act of authorizing the standard dollar coinage, passed February 28, 1878, by more than a two-thirds vote over the President's veto, orders the coinage of two millions per month, and it permits the coinage of four millions per month. The Treasury Department has coined only the minimum amount. Why is a question which the people will ask ere long.

First. Remove all restrictions on silver coinage; make standard dollars not only for the United States but for every silver-using people, and they are seven-eighths of the population of the earth.

Second. Issue silver certificates against bullion as well as against coin. The raw material, the product of the Rocky Mountains, is ample on which to base the "currency of the future." Panic will never strike nor undermine such a currency.

The better class of emigrants will always take into consideration the currency of the country to which they propose to go. Let us then have a paper currency based on a precious metal for domestic use, and an American coin currency for the outside world. Let England and Germany take our gold, as sure they will when they have the power to do so. The sooner silver and certificates constitute the major part of our money the farther off will be panic and revulsion.

To many of you this discussion may appear to be foreign to the business of this convention. I claim that our industries are interwoven with our money. The pay-roll is to the laborer an indispensable sequence. Besides, the silver interest of this country claims and deserves protection.

I beg to make another currency suggestion. There is a great want of elasticity in our money and currency arrangement. The remedy is simple—let the people have the privilege of taking greenbacks from the Treasury in change for interest-bearing bonds, the bonds to be given back on the return of greenbacks, the Treasury saving interest while the currency is out. This measure would surely ward off panic, and it would also effectually bar the stock and grain gamblers from locking up money.

For this purpose a 3 per cent. bond would bear a proper rate of interest, so that currency would flow out when much needed and return when not required for legitimate business.

To this I have only to add: the country that has a silver currency, which stimulates production, will, by this production, have a balance of trade in its favor, which will bring the gold. As admitted, the gold will go to pay foreign balances; so it will come back when the balance is in our favor. Our producing power returns it. This has been fully demonstrated during the last three years in our trade with foreign countries.

Second. The better the circulating medium is, taking the intelligent notions of the people who take and hold currency as a guide, the larger the quantity will be held in circulation, in the pockets of the industrial classes, for a rainy day. This is the circulation of the kind wanted. I claim that the silver certificate and the legal-tender Treasury note are this to perfection.

HISTORY OF THE TREASURY NOTE.

The first Treasury notes were issued during our war with England, between the years 1812 and 1815; amount, \$36,680,794; issued in 1837, \$10,000,000; in 1846, \$10,000,000; in 1847, \$26,122,100; in 1857, \$20,000,000; in 1860, \$10,000,000; in all before the war, \$112,802,894. These notes were generally issued on a short time and on interest, and were used as a currency, bearing interest at rates varying from one-tenth of 1 per cent. to 6 per cent. From February 8, 1861, to June 30, 1880, the whole amount issued by authority of law was 5,811,249,536, as follows:

Treasury loan certificates.....	\$969,992,250
Seven-thirty notes.....	716,099,247
Treasury notes and certificates of indebtedness.....	1,074,713,132
Old demand notes, legal tenders, coin certificates, and fractional currency.....	3,050,444,907
	<hr/> 5,811,249,536

(A part on interest and a part not.)

Whole amount of Treasury notes issued by law.....	\$6,924,052,430
Amount of all outstanding Treasury notes, including legal tenders, certificates of all kinds, and fractional currency.....	439,398,189

Amount of Government paper..... 6,484,654,241
Obligations issued as currency paid and destroyed.

With this showing, is it worth while for the capitalist to continue his "scare-crow" to defeat the adoption of the Treasury note as a permanent currency; a currency which, when untrammelled by law, has stood the test of seventy years without one cent of discount? Its money functions were limited to accommodate the banks in 1862 by act of Congress. The expense to the country by this and succeeding infamous acts I will not now allude to; let them be buried with the many wrongs that have come from our late civil war. The Treas-

ury note currency is no modern invention; its parentage is as distinguished as its success has been brilliant.

And so the nation may continue to issue its bills as far as its wants require and the limits of its circulation will permit. Those limits are understood to extend with us at present to \$200,000,000, a greater sum than would be necessary for any war. But this, the only resource which the Government could command with certainty, the States have unfortunately fooled away, nay, corruptly alienated to swindlers and shavers, under the cover of private banks. Say, too, as an additional evil, that the disposal funds of individuals to this great amount have thus been withdrawn from improvement and useful enterprise and employed in the useless, usurious, and demoralizing practices of bank directors and their accomplices. In the war of 1755 our State availed itself of this fund by issuing a paper money bottomed on a specific tax for its redemption, and to insure its credit, bearing an interest of 5 per cent. Within a very short time not a bill of this emission was to be found in circulation. It was locked up in the chests of executors, guardians, widows, farmers, &c. We then issued bills bottomed on a redeeming tax, but bearing no interest. These were readily received, and never depreciated a single farthing.—*Opinions of Thomas Jefferson in 1813; his Letter to John W. Epps, June 24, 1813; Jefferson's Works, volume 4, pages 40, 41.*

The question will be asked, and ought to be looked at, what is to be the recourse if loans cannot be obtained? There is but one—"Carthago delenda est." Bank paper must be suppressed, and the circulating medium must be restored to the nation to whom it belongs. It is the only fund on which they can rely for loans; it is the only recourse which can never fail them, and it is an abundant one for every necessary purpose. Treasury bills, bottomed on taxes, bearing or not bearing interest, as may be found necessary, thrown into circulation will take the place of so much gold and silver, which last, when crowded, will find an efflux into other countries, and thus keep the quantum of medium at its salutary level. Let banks continue if they please, but let them discount for cash alone or for Treasury notes.—*Letter September 11, 1813, volume 6, pages 199, 200, 201.*

Happily, the condition that Jefferson so anxiously sought is soon to occur, and now, without any disaster to business, the golden opportunity has arrived to adopt his time-honored recommendation, which was, charter no more banks of issue. We have only to add to existing law a few lines, made necessary by the surrender of the national-bank currency, gradually, as we pay the bonds which they hold, and authorize the Secretary of the Treasury to issue every month silver certificates or Treasury notes to the amount of all national-bank notes returned to the Treasury and destroyed. This will meet with the approval of an intelligent community, who have so manifestly approved it by giving the greenback the preference to the national-bank currency, and such frequent and loud calls for the prompt payment of the bonds which have given an occasion for past legislation for the benefit of banks.

The argument of the friends of the national banks that it is not safe to trust Congress to issue money and to regulate the volume thereof, I answer by asking, Is it safe to delegate a power which it is universally conceded exists in Congress, to issue money to those who act without responsibility—to the people—to those who in the exercise of this delegated power act from purely selfish motives? We oblige the banks to deposit in bonds 10 per cent. over the currency given them as a security of their good faith. Congress has done this, and you concede to Congress the power to issue interest-bearing obligations to the amount of outstanding indebtedness. If Congress can do this, why may it not with equal safety be trusted to issue non-interest-bearing obligations in small sums as wanted for business purposes? Again, why not trust Congress to do that directly which you so earnestly ask them to do indirectly? Why oblige them to procure selfish agents without restraint to do that which they can do better and cheaper themselves, and in the doing protect the country, acting as they always must under the restraints of a vigilant people who have so sadly learned that their money matters concern them, even to their existence, as an independent people?

Another argument used against the Treasury note is that it tends to centralization. The framers of our Constitution conceded to the Federal Government the coining of money and the power of making a legal tender for debt, in this language, (article 1:)

No State shall coin money, emit bills of credit, make anything but gold and silver coin a tender in payment of debt.

The making the Treasury note a legal tender is no more centralizing than the coining of metal money for a like purpose or the making of laws to regulate commerce between the States and foreign countries, and cannot be compared with that centralization which comes from 2,000 national banks, governed and controlled by the central power, organized for twenty years, with vested powers, whereas Congress has every two years the new voice of the people, and every four years a new Executive dependent on them and of them.

Mr. Speaker, panics in the money market do not come from the issuance of the Treasury notes; directly contrary is the experience of all business men; but they do come from overcredits brought about by the too free use of the substitutes for money, the checks and drafts spoken of by the Comptroller.

In all panics the full legal tender is hoarded as coin is, to protect property from the grasp of the remorseless tyrant who makes the corner in money as he does in other necessities of life.

Now, let us look at the monetary condition of Europe, and from it take warning. This is necessary, as we have moved a part of European ideas into our large money centers.

I quote from an able article in the Philadelphia American:

Suppose, however, that a nation or a continent go on for years increasing in population, with no substantial additions to the amount of money in circulation. Europe was in that condition during the period from the beginning of our era to the discovery of America. She was receiving no gold and very little silver from any part of the world. Through losses by fire, flood, and shipwreck, through the absorption of the supply in permanent use, the quantity in circulation was steadily decreasing. To this is due much of the wretchedness, dullness, and general inertia

of the Dark Ages. Money is the instrument of association as well as that of exchange. Its absence, isolated from industrial contact, drove the more enterprising into artificial associations of the monastic order in the absence of natural association, kept the lower classes on the level of a poverty which made them weak and manageable, and made the trade of the soldier the only prosperous business, as under the feudal system it required no money to carry it on. Any corner of Europe which could get more than its share of the scanty supply shot far ahead of the rest. Flanders, Lombardy, the Venetians, the Florentines were instances of the political energy which accompanied the possession of some spare cash.

But, after all, America is not the chief cause of the European difficulty. It is in the European treatment of silver. Far worse for the Old World than any drain the New can make upon her gold supply, is the unhappy policy which threatens to remove the most venerable of the precious metals out of the list of substances used for coinage. Germany and the Scandinavian countries have followed the example of the United Kingdom in discarding it. The rest of Europe has been forced thus to add to its discredit by ceasing its coinage, and thus refusing their people any addition to the amount of coin available for the purposes of association and exchange. For the same reason, America has been obliged to confine its coinage to a limited quantity on Government account, and to refuse it in the payment of international balances. All this mischief is traceable to the bad example of the English Government and the teachings of English economists. These latter never had any just view of the functions of money. They regard it only as the instrument of exchange. They speak of its export as an advantage in that it secures in return commodities "more useful" than itself. They speak of reductions in its amount as producing more than a limited and temporary grievance. The common-sense instincts of business men have been always against these loose theories. Yet the theorists have managed to control the course of legislation. It is to them, more than to any other cause, that Europe owes her present monetary distress. The new era of depression has them for its true authors. It will not end until experience triumphs over their deductions, and silver is restored to its old place as coined money of the civilized world.

The Bank of England is connected with her bonded system, which has been made perpetual, and which is so strenuously presented to us to imitate. At the last renewal of its charter in 1844 it had £11,015,100 (equal to \$55,000,000) of its stock in government bonds. The management of the entire public debt of Great Britain is placed in the hands of the bank, for which it received compensation in 1845 amounting to £93,111, equal to \$465,555. For exemption from stamp duty on its notes the bank pays the government for the privilege of banking, for doing the government business, issuing paper money, £180,000; equal to \$900,000.

This is the system we have, in part, been copying, without the profit which her government receives. The power of this bank is so firmly fixed that no party can exist which favors the extinguishment of her enormous debt or the reform of her monetary laws. The monetary commission that met at Paris last April was not represented on the part of England by the men of business and industry, but by the aristocratic fund-holder, who wants to lessen rather than increase the metal money of England. And thus it will continue to be, until a revolution occurs, and this her people have not the power to initiate at present. So this commission will fail to accomplish anything but the agitation of the question. This has been done at a recent meeting in England:

A meeting of bimetalists at the Mansion House evidently was one of no ordinary weight and significance. Five foreign ambassadors and the governor of the Bank of England united with a great mass of business men in supporting the proposals of the international Paris conference, and demanding the free coinage of silver throughout the world. That twelve hundred people gathered to a meeting which interested nobody except merchants in a large way of business, shows how deep is the feeling in favor of bimetalism among the business classes.

The number of emigrants to this country in 1881 was 720,045, seventy-one thousand more than we have of population in the State of Maine by the last census. Of this, a larger number came from the British dominions than from any other part of the world, about one hundred thousand entering this country from Canada. No cause can be assigned for this excepting our prosperity, consequent upon the partial remonetization of silver, and the continuance of the greenback circulation, with an increasing currency, resulting in a corresponding increase of production. Let me ask, What has transpired in this country for the last twenty years? Have our people, like Rip Van Winkle, been sleeping per chance in the mountains, so that when they awake they can exclaim with him, "How soon are we forgot?" Have they forgotten the great man who called the people around him when monopolies sought to rule, when his voice was heeded from the St. Croix to the father of waters, and the country was saved?

The first bank of the United States was chartered in 1791, with a capital of \$10,000,000. The second was chartered in 1816, with a capital of \$35,000,000. The bill to renew the charter of this bank was vetoed by the illustrious Jackson July 10, 1832, and the charter expired March 3, 1836. Jackson said in his veto message:

On two subjects only does the Constitution recognize in Congress the power to grant exclusive privileges or monopolies, namely, the power to promote the progress of science and useful arts, by securing for limited time to authors and inventors the exclusive right to their respective writings and discoveries.

But if they (Congress) have other power to regulate the currency, it was conferred to be exercised by themselves and not to be transferred to a corporation. Many of our rich men have not been contented with equal protection and equal benefits, but have besought us to make them richer by acts of Congress.

Again, in his message in 1834, he says:

The bold effort the present bank has made to control the Government, the distress it has wantonly produced, the violence of which it has been the occasion in one of our cities famed for its observance of law and order, are but premonitions of the fate which awaits the American people should they be deluded into a perpetuation of this institution or the establishment of another like it.

What Jackson so justly complained of in 1832 and 1834 of the influence of a bank of \$35,000,000 is now magnified nearly two hundred times in 2,155 national banks, having \$465,735,685 capital and a sur-

plus of \$128,000,000. Every word of Jackson's arguments and warnings is applicable to our condition to-day, and should be treasured by every patriot in the land who is in favor of equal rights and a free government.

Mr. Speaker, the friends of a bimetallic currency and of a continuance of our Treasury notes have before them an opponent worthy of their steel. There is no room for a divided army. Our opponents are one undivided host of corporations marshaled by warriors trained in the schools of European oppression for thousands of years. We must drop all minor differences on local issues, on collateral questions, and unite on the main question, the substitution of the Treasury note for the national-bank currency. From victory here will come that reform which will satisfy all who are honest and in earnest for the best interest of the people. Certainly this is a propitious time for the people to rise and assert their power.

The Washington Post, a liberal Democratic paper, says, in a leading editorial, February 23:

Neither party as such represents devotion to a protective tariff or to a tariff for revenue only. Neither is there practical union in favor of greenbacks or national-bank notes or gold or silver as the currency of the future.

Another prudent class ask for positive proof of the superiority of the Treasury note over the national-bank currency before they will accept our views. Happily we can furnish such in abundance. The national-bank currency did not help fight our battles.

In 1863 these banks had no national circulation, though they were authorized February 25 of that year to issue notes. Under the act of 1864 the circulation was continued as follows:

1864	\$31,235,270	1873	\$347,267,061
1865	146,137,860	1874	351,981,032
1866	281,470,968	1875	354,408,008
1867	290,625,379	1876	332,098,336
1868	299,762,855	1877	317,048,872
1869	299,929,624	1878	324,514,284
1870	299,766,984	1879	329,691,667
1871	318,261,211	1880	343,834,167
1872	337,664,795	1881	359,422,738

Warwick Martin, of Washington, an able writer on the currency, uses the following arguments:

Upon what are bonds of the United States based? Does the Government give any security for its bonds? By no means. They rest wholly upon the faith of the United States for the payment of both the principal and the interest. Foreigners, who have perhaps never seen the United States, purchase these bonds upon the faith of the nation only. If the faith of the nation fails the payment fails. The nation cannot be sued and the money collected as in the case of a debt against an individual.

Upon what do national-bank notes rest? Upon the faith of the nation that the interest and principal of the bonds upon which their circulation is based will be paid. Also upon the faith of the nation that the legal-tender notes shall be and remain in existence, and legal tender as they were when the banks were induced by the Government to adopt them as a basis of circulation. Were, then, that the faith of the nation is good and sufficient to secure the bonds of the United States, and to cause them to sell at the lowest rate of interest and to secure a national-bank circulation based upon bonds and legal-tender notes; but is not that same faith sufficient to make the legal-tender notes, which were received by the Government in payment of these bonds, and by which the national-bank notes are secured, and in which they were redeemable, reliable "money of the United States?" It is a well-known fact that the faith of the nation has always been kept toward the holders of bonds and with national banks; but it has been in many instances violated toward the legal tenders for the sake of the bondholders and banks.

But, we ask, what sustains gold and silver money, excepting the faith of the nation? One dollar of gold is required by law to have in it 23.22 grains pure and 25.8 grains standard gold. This gold must be nine-tenths fine. What assurance has any one that a gold dollar contains this amount of pure metal and this quantity of alloy but the faith of the nation?

J. C. Calhoun said:

I now undertake to affirm positively, and without the least fear that I can be answered, what heretofore I have but suggested, that a paper issued by government, with the simple promise to receive in all dues, leaving its creditors to take it or gold or silver, at their option, would, to the extent to which it would circulate, form a perfect paper circulation, which could not be abused by the Government, that would be as steady and uniform in value as the metals themselves. I shall not go into the discussion now, but on a suitable occasion I shall be able to make good every word I have uttered. I will be able to do more, to prove that it is within the constitutional power of Congress to use such a paper in the management of its finances according to the most rigid rule of construing the Constitution; and that those at least who think that Congress can authorize the notes of private corporations to be received in the public dues are estopped from denying its right to receive its own paper.

T. H. Benton said:

The Government ought not to delegate this power if it could. It was too great a power to be trusted to any banking company whatever, or to any authority but the highest and most responsible which was known to our form of government.

The Government itself ceases to be independent; it ceases to be safe when the national currency is at the will of a company. The Government can undertake no great enterprise, neither of war nor peace, without the consent and co-operation of that company; it cannot count its revenues for six months ahead without referring to the action of that company—its friendship or its enmity, its concurrence or its opposition—to see how far that company will permit money to be scarce or to be plentiful; how far it will let the money system go on regularly or throw it into disorder; how far it will suit the interests or policy of that company to create a tempest or suffer a calm in the moneyed ocean. The people are not safe when such a company has such a power. The temptation is too great, the opportunity too easy, to put up and put down prices, to make and break fortunes, to bring the whole community upon its knees.

Mr. Speaker, if we proposed any encroachments, or an entire new system of currency, time might be required to test its utility. This we do not. As one-half or more of our currency from 1831 has been the Treasury notes, and when received for customs dues have always been as good as coin, and now preferred to coin, it is now conceded

that if for every bank bill returned a greenback was substituted, no one not interested in banks would complain. Yea, more, the entire country would rejoice in a better currency and in the saving of \$12,000,000 annually.

The two systems are before us, to stand or fall upon their merits; the day for epithets and denunciations is over. We see there can be no party divisions on the tariff or on free trade or on debt paying; in fact, all questions not relating to our material welfare are soon to be lost sight of, excepting the question of the currency. On this subject parties can divide, for beyond the epithets of hard and soft money, which we have seen amount to nothing—as nothing is meant by such names as now applied—as all are in favor of the representative money—the question then is, Who shall issue money and regulate the quantity? In this there is great significance; on this question parties will divide as formerly, capital and monopolies on one side and the people and their industries on the other; corporate wealth from special legislation against the people and the customers of these corporations.

Corporations, like an inheritance, are armed with means and supported by outgrown institutions which are paraded in new garments to attract the weak and to purchase the wavering, whose real position is that with increasing population and decreasing volume of currency, and that under their control, they can rule in a republic by a system of frauds, intimidation, and violence, such as was resorted to in many States at our late Presidential election.

Those who antagonize this position of capital, men with hope and faith in the future, with expanded ideas corresponding with increasing population and production, propose to increase the volume of currency to meet the demands of business, to raise up and foster industries, to attain for labor those comforts attainable by an honest currency, expanding with our expansion, enlarging with our enlargement, that labor may prosper with our prosperity. This is soft money; soft, because it brings a soft pillow for him who works; soft, because it brings comforts for dear home and education for his children, and leads to that civilization on this continent that was purchased by so many deprivations, and which must and shall be maintained against all monopolies, all aristocracies, and all frauds. Can we maintain principles so manifestly correct without being subjected to losses by the false professions of designing men, who will profess anything for recruits that will maintain them in power? I answer we can, by education and toleration. Remembering that strength comes from association and weakness from exclusiveness, "no pent-up Utica shall contract our power." If we honestly wish for a currency reform we must meet in council with reformers. If we act from convictions, reform will come; if we act from temper, all is lost, for corporate wealth has the power to control the ebullition of passion.

If no charters are now granted there never will be any, and the existing banks will go out of existence just as fast as we pay our outstanding bonds. With this and the next Congress the question will be settled; but not without more or less trouble. Fortunately we have had some experience of what may be expected. The ridicule heaped upon our late Executive, President Hayes, for vetoing the 3 per cent. funding bill, because the banks used the Chinese mode of gongs and bluster to frighten him, will be a warning to the present administration too fresh to be disregarded. We have had enough of weakness and fright to satisfy one generation. Ohio has not been a success in finance if she has been in the holding of office.

Business life and political aspirations are subject to frequent disappointments in this busy world where the principal struggle of mankind is for happiness or for power. The man of industry, who was ignored entirely as a factor in politics centuries ago, who has so rarely nowadays entered the forum as a contestant for political honors, is in the future to take a part in our politics as an opponent of monopolies, with that cool judgment and intelligent patriotism which comes from honest toil; he is to be the independent actor and voter who will rule the State hereafter, while the professional politician is vacillating, like the swinging of the pendulum, from one opinion to another for personal aggrandizement and for wealth. The man of industry who silently but soberly sees the idiosyncrasies of parties will be the balance-wheel to regulate the Republic through his position as the independent voter, interested alone to perpetuate our institutions, which were so dearly purchased as the principal legacy at his command for his children, and of which he is as proud as were the barons of England who forced the Magna Charta from King John.

I have no time to allude to the other great questions, such as the reduction of taxation or the payment of the bonds, and the Post-Office savings-bank for the deposit of the earnings of industry; to the improvement and development of our industries by a low rate of interest and equal taxation; to the restoration of our commerce upon the ocean, which is sure to come, with interest and charges no higher than those in England; to the improvement that will come to us from the prompt payment of our bonded debt, which is a burden more weighty than can be enumerated in dollars, as it carries with it a fraud and a cheat and the exemption of the holder from taxation.

The two systems of money and their substitutes are before us. If conceded to be equally good for circulation, they are certainly not equally advantageous, as one borrows its substance from the other,

and, contrary to all previous ideas of economy, pays to him who borrows, rather than to him who lends. If we were legislating for ourselves, should we add to our burdens by such an absurdity? This country is too great, and its industrial institutions too grand, to be longer subjected to the clamor of designing knaves, or to the stupidity of retired decency. The people who took the risk to send us here expect of us legislation that is not obnoxious to the charge of being against the public virtue.

Richard Rumbold, the Scotchman, when on the scaffold in 1685, said: "I never could believe that Providence had sent a few men into the world ready booted and spurred to ride, and millions ready saddled and bridled to be ridden." He was mistaken then. How is it to-day? In 1685 there were excuses for all this want of education and independence; to-day there is none, if those who think alike would vote together, and prove that—

The freeman casts with unpurchased hand
The vote that shakes the turrets of the land.

HOW TO PREVENT A CONTRACTION OF THE CURRENCY.

The following joint resolution was introduced in the House March 20 by Mr. LADD:

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purpose of preventing a contraction of the volume of the currency, and for the purpose of supplying any deficiency thereof which may arise from a diminution of the net amount of the national bank notes, which net amount shall be ascertained by deducting from the amount of the same outstanding the lawful money which may be on deposit in the Treasury of the United States for their retirement, but not including in such deposit the 5 per cent. redemption fund, the Comptroller of the Currency shall, on the first day of each month, report to the Secretary of the Treasury the amount of national bank notes on that day, and if it is less than the net amount on the first day of January, A. D. 1882, the Secretary of the Treasury is hereby authorized and directed to make good the deficiency forthwith, in either one or the other of the following methods at his discretion: first, by the issue of United States Treasury notes in the form and with all the functions of the notes now in circulation; second, by a coinage of standard silver dollars, to be an addition to and not a part of the coinage of such dollars as directed by the act of February 28, 1878, with the right to issue certificates for all such silver dollars deposited with the Treasury in mode and manner as heretofore provided for by law. And the amount of money necessary to carry this resolution into effect is hereby appropriated out of any money in the Treasury not otherwise appropriated.

American Forestry.

SPEECH

OF

HON. MARK H. DUNNELL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 9, 1882,

On the subject of appropriations for the Department of Agriculture.

Mr. DUNNELL said:

Mr. CHAIRMAN: The subject of forestry, both as regards the present and the future, is scarcely equalled by that of any other subject coming before us for our consideration and action. I desire to note some of its principal points in order that we may act intelligently upon it.

At an early period, and while Florida still belonged to Spain, the reservation of lands for maintaining a supply of timber for the Navy was proposed, and some feeble attempts at the cultivation of the live-oak upon the Georgia coast were begun.

Later we find applications for grants of land to encourage private enterprise in tree-planting, but no legislation looking toward the supply of timber for future wants can be found till 1873, when the first timber-culture act was passed. This gave a quarter section of land to every person who would plant a certain portion of it with trees. This act, as since amended, is still in operation. There are doubtless many cases where the undertaking has been abandoned; there may be others in which its terms have been evaded and the privilege abused; but there are thousands of young plantations under cultivation and managed in good faith and to the best ability of their owners. Very many of these promise excellent success.

Early in February, 1874, a committee of the American Association for the Advancement of Science brought a memorial from that body to the President, who laid the same before Congress. This memorial urged upon Congress the duty of the Government concerning the cultivation and the preservation of forests. After setting forth the great importance of these supplies, the rapidly increasing use and great waste, and the action taken by other governments under the pressure of necessities that must soon be realized in our own country unless timely provision be made to avert it, the memorial concluded with the recommendation that a commission should be ordered to mature plans calculated to meet the requirements of the subject. This memorial was considered in the House Committee on Public Lands, and referred to a sub-committee to mature and present a bill intended to further the objects set forth in the memorial. I had the honor to

be chairman of the sub-committee, and was intrusted with the bill passed by the Committee on Public Lands for presentation to the House. The bill reported to the Forty-third Congress did not become a law. Early in the Forty-fourth Congress I introduced a bill containing the principal provisions embraced in the former one, and before the close of the first session its vital portion was inserted as an amendment to a bill then pending, in which \$2,000 were withdrawn from the moneys appropriated for the purchase of seeds to be distributed by the Department of Agriculture to make the first beginning in this investigation.

The amendment directed the Commissioner of Agriculture—

To appoint some man of approved attainments, and practically well acquainted with the methods of statistical inquiry, with a view of ascertaining the annual amount of consumption, importation, and exportation of timber and other forest products; the probable supply for future wants; the means best adapted to the preservation and renewal of forests; the influence of forests upon climate, and the measures that have been successfully applied in various countries, or that may be deemed applicable in this country for the preservation and restoration or planting of forests, and to report upon the same to the Commissioner of Agriculture, to be by him transmitted in a special report to Congress.

On the 30th of August, 1876, Hon. Frederick Watts, then Commissioner of Agriculture, appointed Dr. Franklin B. Hough, of Lowville, New York, to this duty, and he has since been wholly employed upon this service.

The appropriation of the first Congress was somewhat increased, and since then the sum of \$5,000 has been twice appropriated for the services and expenses incident to these duties.

Two reports have been made; the first for 1877, and the second for 1878-79. Of the first an extra edition of 25,000 copies was ordered. Of the second the Committee on Agriculture in the last Congress recommended the printing of 100,000 copies, together with the reprinting of 50,000 additional copies of the first report. It is proper to state that both these reports are now in stereotype plates. Unfortunately the resolution providing for the print of an extra edition of the second report, and the reprint of the first, as above stated, did not come before the House in season for its action.

The terms of the act under which these reports were made required that the statistics of exportation of timber and other forest products should be reported, and under this requirement a considerable part of the second report is devoted to the statistics which the law demanded. They cover the whole period of our existence as a Government, and in this particular they exhaust the whole subject. These reports have been elaborately reviewed and very highly commended in Europe; and in the international geographical congress, held in Venice in September last, they were awarded a diploma of honor.

In a lengthy review of the first of these reports, by an officer of the Württemberg forest service, since made a professor in one of the German universities, the writer, after noticing the steps that had been taken from the first introduction of this subject, in 1873, to the date of publication, in 1878, says:

It awakens our surprise that a man not a specialist should have so mastered the whole body of American and European forestry literature and legislation.

In the course of these inquiries Dr. Hough has made extensive journeys in various parts of the United States for the purpose of observing the wealth and the wants of the country in matters of forest supply, and during the last summer he has traveled under an appointment of the Commissioner of Agriculture for the purpose of gaining information concerning the forest systems of Europe. This journey extended through England, Scotland, Denmark, Norway, Sweden, Finland, Russia, Germany, Austria, Italy, Switzerland, France, and Spain, and amounted to nearly 11,000 miles, besides ocean distances.

In the course of this journey he visited about twenty special schools of forestry and the forest administration of every country that he entered. It is expected that his report upon the subjects mentioned in his instructions will be submitted by the Commissioner during the present Congress, but it is not embraced in his third special report already finished but not transmitted to Congress.

It may be safely predicted that the information acquired by Dr. Hough in this extended field of investigation upon these intensely interesting topics will be accepted by the country with eminent satisfaction.

Having thus briefly presented the steps that have thus far been taken in regard to forestry, I wish to present some facts that show the magnitude of the interests which this subject involves and the conditions that they present for our action in the near future. In doing this I shall make no statements that are not supported by official statistics, nor shall I conceal any facts that might tend to modify the conclusions to which these facts directly lead.

TIMBER RESOURCES OF MAINE.

Maine is called the "Pine-Tree State." It bears the white-pine tree upon its seal, and the supplies of that timber were once believed to be inexhaustible. Upon the faith of these expectations, extensive ship-building interests sprung up along its coast, and large amounts of capital were invested in this industry, which in 1855 amounted to nearly 216,000 tons. These native supplies have long since been used up within reach of these ship-yards, so that they have found it cheaper to bring materials from the southern coast

and from Canada. In 1879 the tonnage built was less than 43,000 for the whole State, or only about one-fifth part as much as it was about a quarter of a century ago.

The principal part of the timber of that State is now floated down the rivers and cut up into lumber in mills near the coast. One of the principal of these rivers, the Penobscot, drains an immense area of the timber region of the interior, and we have in the records kept by the State inspector at Bangor a continuous statement of the kinds and qualities of timber that has been taken out from that region for fifty years.

The totals are before me in detail, and when summarized in periods of five years, ending in the middle and last of each decade, give feet, board measure, the following average annual results:

Annual average quantities of lumber inspected at Bangor, Maine, by periods since 1832, (feet, board measure.)

Period.	Green pine.	Dry pine.	Hemlock.	Spruce.	Total.
1832 to 1835.....					44,926,299
1836 to 1840.....					69,664,741
1841 to 1845.....					117,298,000
1846 to 1850.....					181,689,076
1851 to 1855.....	100,017,571	15,371,149	11,447,655	64,283,237	191,110,613
1856 to 1860.....	72,976,757	13,180,829	13,997,306	70,331,840	170,486,731
1861 to 1865.....	43,716,243	11,614,139	12,212,669	97,675,907	165,219,048
1866 to 1870.....	37,266,219	9,954,360	18,273,902	145,901,625	211,456,166
1871 to 1875.....	26,859,263	6,667,538	19,148,000	144,244,747	196,919,548
1876 to 1880.....	11,328,578	6,046,970	15,361,561	86,481,394	120,228,513

Green pine, 1851 to 1880.....	Total feet.
Dry pine, 1851 to 1880.....	1,463,323,162
Hemlock, 1851 to 1880.....	314,224,971
Spruce, 1851 to 1880.....	454,705,768
Total, 1832 to 1880.....	2,953,321,038

Total, 1832 to 1880..... 7,300,153,671

In nearest millions of feet, board measure, the quantity of green-pine timber inspected at Bangor in 1851-'55 averaged 100,000,000 a year. In periods of five years the annual averages have since gone down to 73,000,000, 43,700,000, 37,200,000, 26,800,000, and 11,800,000. The dry pine has steadily declined during the same period from 15,400,000 to 6,000,000. The hemlock, on the contrary, went up for a time as it came to supply the place of pine; but this has again declined, the numbers by periods having been 11,400,000, 13,900,000, 12,200,000, 19,100,000, and 15,800,000.

The spruce, which, in 1851-'55, was about thirty-six millions below the pine, went up to a much greater figure and remained there for several years, but has within the last five years steadily and rapidly declined with every prospect of its continuing to descend as the supplies have become scarce. The quantities by millions of the spruce in these five-year periods were 64,300,000, 70,300,000, 97,600,000, 145,900,000, 144,200,000, and 86,400,000. Within the last four years immense quantities of spruce have died off, probably from the injuries of insects, upon the upper waters of the Saint John River, Maine, the loss being estimated at over a billion of feet, or more than \$10,000,000 at the market prices of this lumber.

Yet with these facts before us we will sometimes meet with gentlemen who, reasoning from what they may see upon their own horizon, tell us that timber grows as fast as it is cut; that there is as much now as ever there was, and that of the supply there will be no end.

We admit that there are now many old fields where the worn-out land has again become covered with a growth of trees that look in the distance like a forest, but when these thickets are entered we soon learn that the timber composing them is not fit for consumption. If let alone and suitably protected they will in time become valuable forests, but it is very unsafe to depend upon these young growths in estimating the existing timber resources of the country.

CENSUS REPORTS OF 1880.

The Census Office has published in a series of circulars the returns obtained by the inquiries of 1880 so far as they relate to the standing timber and the lumber productions of the more important seats of this industry in the United States. These circulars are accompanied by colored maps purporting to represent the areas from which the timber has been principally cut away, and those that remain. The accuracy of these returns has been questioned in some quarters. Indeed there is nothing more difficult than to obtain accurate statistics of a forest that has not been carefully surveyed and explored by experts, and the best that could be expected would be the most careful estimates by disinterested and intelligent persons who were familiar with the business and who had no motives for concealment or overstatement of the result.

THE GREAT TIMBER REGION OF THE NORTHWEST.

Accepting, therefore, these statements as the best that could be obtained, and in the main as correct, let us see what they show of what has been for years called the "great timber region of the Northwest." This region includes the Upper and Lower Peninsulas of Michigan, the northern part of Wisconsin, and the eastern part of Minnesota. It occupies all of the upper waters of the Mississippi and its tributaries and the shores of the upper lakes, and the waters

flowing into them, that furnish any timber for the market or that ever can, except as it may be supplied by future cultivation.

It comprises the region that has for many years supplied with building and fencing material the whole of the prairie region to the south and west of it; that has sent immense quantities of lumber and timber to the eastern markets and to foreign countries, and that is at the present time prosecuting these destructive industries with greater energy than ever before, new mills being erected by the dozen every year, and many of these with a capacity of cutting more logs into lumber every day than the old-time saw-mills could do in a year.

The total estimates for the whole of these three States give the following quantities still standing in the forests and the quantities cut the preceding year:

Timber supply of Michigan, Wisconsin, and Minnesota, as reported by the census of 1880.

States.	Quantity standing in the forests.	Remarks.
Michigan, Upper Peninsula:*		
White pine.....ft. b. m..	6,000,000,000	328,438,000 feet cut in year previous, including 106,482,000 shingles and 34,266,000 laths.
Hard wood.....cords..	124,500,000	} Cut, exclusive of fuel and ties, 1,145,100 feet in year previous.
Cedar.....cords..	62,500,000	
Lower Peninsula:†		
White pine, (ft. b. m.):		} 4,068,773,000 feet cut, b. m., including 2,988,000,000 shingles and 428,445,000 laths cut, exclusive of 36,000,000 staves and 3,330,000 sets of headings.
Saginaw, &c.....	7,000,000,000	
Lake Huron side.....	8,000,000,000	
Lake Michigan side.....	14,000,000,000	
Total Lower Peninsula.....	29,000,000,000	} 440,944,000 ft. cut year previous besides 163,821,000 staves and 18,567,000 sets of headings.
Hard wood.....cords..	575,500,000	
Cedar.....cords..	5,000,000	
Hemlock.....feet..	7,000,000,000	
Hemlock bark.....cords..	7,000,000	
Wisconsin:‡		
White pine, (ft. b. m.):		} 2,097,299,000 ft., b. m., cut the year before, including 1,007,039,000 shingles and 348,301,000 laths.
Saint Croix River.....	2,500,000,000	
Chippewa River.....	15,000,000,000	
Black River.....	900,000,000	
Wisconsin River.....	10,000,000,000	
Wolf River.....	600,000,000	
Oconto River.....	500,000,000	
Peshigo River.....	1,500,000,000	
Menomonee River.....	6,400,000,000	
Lake Superior shore.....	3,600,000,000	
Total standing pine.....	41,000,000,000	} Cut in year previous, 117,041,000 feet, exclusive of 86,545,000 staves and 7,498,000 sets of headings.
Hard wood, &c., in four counties §.....cords..	12,000,000	
Minnesota:¶		
Standing pine, (ft. b. m.):		} 540,997,000 ft., b. m., including 187,836,000 shingles and 88,088,000 laths.
Rainy Lake and Rainy River.....	300,000,000	
Shore of Lake Superior.....	800,000,000	
Saint Louis River and tributaries.....	1,500,000,000	
Mississippi River and tributaries.....	2,000,000,000	
Red Lake River and other tributaries of the Red River.....	600,000,000	
Total.....	6,100,000,000	
In the belt of country south of the pine region:		
Hard wood.....cords..	57,600,000	36,884,000 ft. cut the year previous, besides 7,825,000 staves and 547,000 sets of headings.
Total number of feet of pine in the three States of Michigan, Minnesota, and Wisconsin.¶¶	82,100,000,000	7,035,507,000

* Supply will last 18 + years at rate of year previous.

† Supply will last 7 + years at rate of year previous.

‡ Supply will last 20 — years at rate of year previous.

§ In four counties; no estimates of hard woods from other counties; 62,800,000 posts, telegraph poles, and ties of cedar, besides tamarack and spruce.

¶ Supply will last 11 + years at rate of year previous.

¶¶ Supply will last 11½ years at rate of year previous.

We have here 6,000,000,000 feet of white pine in the Upper Peninsula of Michigan, and about a third of a billion used the preceding year. At this rate of usage the supply will last about eighteen years.

In the Lower Peninsula we have 29,000,000,000 in the supply, and 4,000,000,000 used, or enough at present rates for seven years.

In Wisconsin we have 41,000,000,000, and a consumption of over 2,000,000,000, or a supply for less than twenty years; and in Minnesota 6,100,000,000, and over half a million used, or enough for eleven years.

If we consolidate the whole we find an estimate of 82,100,000,000

feet of standing pine, board measure, and a production of 7,035,500,000 feet of lumber in the last year. The one quantity is contained in the other something less than twelve times.

This guarantee of immunity for a dozen years depends upon the assumption that the production shall continue at present rates and that no forest fires or other casualties shall intervene. Let us see what past experience in recent years will lead us to expect.

TIMBER ON THE UPPER WATERS OF THE MISSISSIPPI.

In Minnesota the whole State is credited with 6,100,000,000 feet of standing pine. The Upper Mississippi is reported as having 2,900,000,000 feet.

The business statements of the Mississippi and Rum River Boom Company for ten years show the following amount of logs, in board measure, as scaled by them:

Year.	Feet.	Increase on previous years.	Decrease from previous years.
1872.....	146,572,250		
1873.....	164,743,150	18,170,900	
1874.....	192,482,520	27,739,370	
1875.....	149,350,820		43,131,700
1876.....	178,222,990	28,872,170	
1877.....	120,368,260		57,854,730
1878.....	102,479,520		17,888,740
1879.....	161,245,510	58,765,990	
1880.....	207,043,320	45,797,810	
1881.....	215,000,000	7,956,680	
Total.....	1,637,508,340		

The reporter remarks that in 1876 he ascertained that the logs averaged 218 feet. Two years after they averaged 161 feet, and in 1880, 187 feet, and adds, "One is struck by the large number of small logs in the booms, many of them being no thicker than a man's leg."

Stumpage had increased one-third in a year and a half. In the above table we have in six years a gain, and in three years a decrease from the preceding year. As we understand it, nearly the whole of the above quantities are pine. The other kinds must be relatively small and largely overbalanced by the pine production coming out by other means and used in local supply.

Now, if the census and these trade statistics are both correct, the yield of 1881 was nearly a thirteenth part of the amount standing the year before. The year is spoken of as one of "wonderful prosperity," and at the present time the pinneries are dotted all through with lumber camps, and new mills are going up at various points to anticipate the "success" which increased production and advancing prices appear to promise.

The following is a comparative statement of the entire cut of lumber upon the Upper Mississippi during the past ten years:

Year.	Feet.	Year.	Feet.
1872.....	179,722,250	1878.....	149,750,500
1873.....	197,743,150	1879.....	201,778,725
1874.....	217,468,520	1880.....	270,377,230
1875.....	172,775,000	1881.....	334,932,503
1876.....	216,919,900		
1877.....	150,330,460	Total.....	2,091,796,238

As to the accuracy of the data from which these statements are made—those of production of lumber are made up from reports and inquiries among the lumbermen at the end of each year, and published as information for their own benefit in the journals devoted to their interest. There is no reason to suppose that in any instance they overrun the truth, but there are many ways in which they may fall short. There are local mills that make no reports, and local demands of which no account is taken. We make no charges against the census with regard to its accuracy, but seriously hope that it may be found in error with regard to the supply. But even allowing these estimates to be too small by half, we would gain but a brief respite under the increasing rates of consumption from the calamity that is approaching.

THE LUMBER MARKET OF CHICAGO.

We know that Chicago is the greatest lumber market of the world; that it distributes the forest products coming to it by lake and railroad all over the prairie country to the south and southwest of it and along the lines of railway to great distances in the interior. The details of these receipts might readily be given, but without occupying time in reading them I may say that they amounted in 1881 to over two thousand millions of feet of pine, and that the total product of the Northwestern States, as reported in the trade, was fully up to the estimates of the census as already given. The single item of sawed lumber received at Chicago in 1881 would lay an inch flooring about fourteen feet wide around the earth at the equator; and the amount manufactured in the three States of Michigan, Wisconsin, and Minnesota during the last year would lay such a floor of more than fifty feet in width.

These are no ideal fancies; they are stubborn facts. They are made up from returns of business collected by those engaged in the lumber trade, and give the results of operations so far as they could be gathered, and if they are imperfect the error is in their falling short of the true amount.

PINE TIMBER OF THE SOUTHERN STATES.

The Census has published circulars and maps giving estimates of standing pine in 1880 and of the production of the year previous for the States of Alabama, Florida, Mississippi, and Texas, which show the following results:

Items.	Alabama.	Florida.	Mississippi.	Texas.	Total.
Feet (board measure) of merchantable standing pine, May 31, 1880.....	18,885,000,000	6,615,000,000	23,975,000,000	67,508,500,000	116,983,500,000
Feet of lumber cut the year previous.....	245,396,000	208,054,000	115,775,000	274,440,000	843,665,000
Years that the standing pine would last at rates of use the year previous.....	77—	32—	207+	24+	130+

These quantities appear large, and the day distant when they will be used up. But we must remember that the lumber business is still in its infancy, and that in many points but a recent beginning has been made in it in this region.

The exportation of hewn timber from Mobile to foreign countries in 1880 was much greater than in any previous year, and 114 per cent. above the quantity in 1879. The sawed timber was an increase of 240 per cent. upon the preceding year.

At the rates of present consumption in the Northwest the whole of the supply above reported would last less than seventeen years; and the years now estimated in hundreds would soon diminish to those expressed by unit figures, under the demand that would be thrown upon these resources for domestic wants and the foreign trade.

THE INFLUENCE OF RAILROADS UPON THE TIMBER SUPPLY.

The vast and rapidly increasing extent of our railroad system, which at the present moment can scarcely be less than one hundred thousand miles, has a most important bearing upon the question of our forest supplies. This effect is not limited to the vast consumption that they occasion in supplying ties and other timber materials for the new constructions and renewals that are constantly going on. These roads are everywhere penetrating the timber regions of the country, many of them being built for the express purpose of getting out the timber that was before inaccessible by the old methods of floating upon rivers or hauling in winter by teams. It is but a comparatively recent period since this feature in lumbering was introduced, and its direct and speedy effect is to hasten the exhaustion of these supplies that were going off too fast for the needs of the present and of the future. The obvious effect of this will be to keep up the supply at the mills so long as there are forests from whence it can be obtained. They will distribute the manufactured lumber over a wider area and to greater distances to meet the wants of regions that have already used up their own forest resources, and they will doubtless extend for a little while the time of apparent "abundance" and of "inexhaustible supply."

But while they are doing this they will be every day equalizing the ruin that must inevitably follow this vast and rapidly increasing destruction, that will happen to the country in the near future, unless seasonable and adequate measures are taken to meet these future wants by extensive and judicious planting and by effectual measures for economizing our remaining supplies. We shall be soon enough admonished of this necessity by the rapidly gaining prices of our timber; but it is not wise to wait for this extremity until it is directly upon us; we should anticipate these wants, for it takes many years for a seedling sprout to become a tree fit for timber and boards.

The duty before us is a most important one, and it presents two principal points for consideration, namely: first, as to how far and in what manner the General Government can withdraw its remaining timber lands from entry under existing laws and place them under regulations calculated to secure the greatest benefit to the present in the use of timber that is now fully mature, and that shall at the same time have due regard to the requirements of the future; secondly, as to how we may most thoroughly impress upon the owners of land the importance of planting, and as to how far and in what manner it is the duty of Congress to encourage this object.

The first of these is a complex question, and one that must be carefully considered in all its bearings before we can adopt a definite policy concerning it. Upon inquiry of the author of this report I learn that he has given the subject much attention, and that suggestions are made as to the measures that may be adopted. Until the report is before us no opinion can be expressed as to the feasibility of these plans, and they may require a further study before action can be had upon the subject. There can be no doubt but that property of this kind under the care of persons who have an interest in its protection, and the law for their support, would be better cared for than if exposed, as it now is, to the plunder of everybody.

The second point is of greater importance, because it affects the whole country and applies everywhere alike to the owners of the land.

We find in our country conditions of ownership that are in general very different from those that prevail in Europe. We have no lands belonging to the Government that are scattered here and there all over the country, to be reserved for timber growth, and cared for by skilled foresters. Our towns, cities, and villages own no lands for common usage; our public institutions have no landed estates that need the special care of Government; we have no great hereditary domains

belonging to titled owners, and we have no privileged classes. Almost the whole of our lands, excepting what remain under the care of the General Land Office, belong to farmers in actual possession, under absolute titles that assure perpetual ownership. We cannot require them to plant trees nor prevent them from cutting off their woodlands—at least not under the present state of public opinion; and nothing but sad necessity alone could ever hereafter so change this opinion as to justify and support restrictive legislation upon this subject. We cannot dictate in this matter. We certainly can never plant woodlands upon private property at the public expense, unless in the exceptional and local instances where this becomes a public necessity for the protection of some other interest.

It has been shown by long experience in Europe that timber can be grown with profit upon lands suitable for no other kind of use, and that by careful and intelligent management a permanent supply may be maintained.

It has long since been found that nothing will so effectually restore fertility to worn-out lands as a crop of trees, with the accumulation of organic materials that is constantly forming under them from the air and the soil. It is also proved by the experience of every careful observer that groves of woodland afford protection to the surrounding fields in the cooling and equalizing influence in mitigating the extremes of heat and cold, and by a perceptible and often decided effect in preventing injuries from drought. They afford resting places for insectivorous birds, and thus promote the destruction of insects to the profit of our grains and fruits. They screen us against the hot and dry winds of summer and the sweeping and piercing storms of winter, that are sometimes so severely felt, especially in the prairie regions of the West.

There can be no doubt but that timber can be grown within the United States sufficient for all the wants of its own inhabitants, but we must learn to regulate these wants and to guard against waste. We must diligently study the methods of cultivation that lead to most profitable results, and the kinds of trees that produce the most thrifty growth and the most valuable products.

In short, our first and greatest duty is to impress upon the owners of the land that it is in their interest to devote a portion of their land to the planting of groves of trees. We should establish experiment stations for the careful study of the requirements and capabilities of soils and of different kinds of trees, and we should publish the results of these observations in a form particularly calculated to impress the importance of these measures and to teach the plainest and simplest rules for securing their success.

If we rightly read the signs of the times public attention is already awakening upon this subject, and we should lead this question, and not wait to be driven by it, in whatever measures may appear necessary for the promotion of this object.

In recent journals we see accounts of gigantic monopolies springing up for "cornering" the great supplies of timber still in the hands of Government on the Pacific coast. Should we not "corner" these monopolies in the interest of the Government before we get "cornered" by them?

It would be a difficult matter to adopt any of the systems of forest management found in Europe, because our conditions are very different, and the persons skilled in this business cannot be had; but we might, without these, adopt systems of protection and regulation in the sale of products, to the great benefit of the public Treasury, and we might adopt, upon a limited scale, a system of conservation and cultivation, as they are doing in the English colonies of Australia, that should every year expand in magnitude, as the means of the service allowed, and as the results of the experience might lead.

In this connection we may further remark that success in timber culture depends upon a combination of favorable conditions in soil, climate, and the choice of kinds best adapted to them. In common agriculture if we make a mistake in one year we can correct it in the next, and in a few years of experience can generally ascertain what particular crops and what plan of cultivation are best calculated to secure uniform success.

But in forestry we may lose half a life-time before we learn that some particular kinds of timber would have yielded twice the profit of those that have been growing with indifferent success during this period, and that finally ends in failure. We cannot afford to make mistakes in this matter, and therefore need all the more as thorough a knowledge of the capacity of soils, the effect of climates, and the adaptation of trees to these conditions as science can teach us.

Our first needs are the fruits of experience in foreign countries and in our own, and a widespread and realizing appreciation of the importance of this subject that shall induce the owners of land to adopt effectual measures for economizing the existing timber resources of the country, and to invest for an ample future profit by liberal and judicious planting. We should look upon this great question in the light of political economy, and consider it as we judge of common business transactions when we would desire to learn whether they tend to profit or ruin. The growth of the woodland may be compared to the interest upon invested capital, and where in any country the rate of use is not greater than that of supply such a country may be compared to an individual who has his money safely invested, and is living upon his income. When he spends beyond his receipts his principal is wasted, and if the rate of expenditure is increased his ruin is hastened.

Now, this is exactly the condition of this country upon the timber question: we are using up the capital which nature had for centuries been providing for us in the growth of forests, and we are doing nothing to restore them. Under skillful management the supply might be so arranged that in twenty-five or thirty years for some kinds, and in fifty or sixty years for others, a new crop would be furnished by growth, and if only a twenty-fifth or thirtieth part of the former or fiftieth or sixtieth part of the latter were taken yearly the supply would be perpetual.

But instead of this we are taking a tenth or a twentieth part every year while the growth, under our neglect, is not a fourth part of what it should be where any growth is allowed, and this is exceptional rather than common, for generally the lands cleared are brought under cultivation.

We shall only too soon be reminded of the consequences of this improvidence in the growing prices of lumber, which in some kinds have already doubled within a very few years and which are advancing every day.

These advances may by some be ascribed to speculation, and doubtless to some extent they are, for the speculator never loses a chance to turn a penny in his own favor, it matters not who suffers; but when this advance is steadily going on from month to month and from year to year, at an accelerating rate, it means that the intrinsic value of the commodity that they represent is becoming greater under the combined effects of diminishing supply and increasing demand. It will inevitably lead to the realizing conviction that there is profit in growing timber, and the sooner this is understood and acted upon the better will it be for the country and for the future.

In order that this may be done to the best advantage we want all the light that can be thrown upon it from the experience of other countries, and from researches and experiments in our own, and it is for this very object that these inquiries in forestry are intended.

Tariff and Tax Commission.

SPEECH

OF

HON. PHILIP COOK,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 6, 1882,

On the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. COOK said:

Mr. CHAIRMAN: The Secretary of the Treasury, in his report made to Congress on the 5th day of December, 1881, uses the following language:

The rapid reduction of the public debt and the increase of the surplus in the Treasury presents the question to Congress whether there should not be a reduction in the taxation now put upon the people.

Again:

The result upon the public revenue is to embarrass this Department in disposing of the surplus in a lawful way and with regard to economy.

He says the plan which is the most just for giving relief is to reduce taxation and thereby diminish receipts and surplus. Again he says:

A revision of the tariff seems necessary to meet the conditions of many branches of trade. An equalization of the tariff and a simplification of some of its details are needed.

Such, sir, is a brief summary of the statement of the Secretary of the Treasury; that his Department is embarrassed by the surplus of lawful money in the Treasury; that the "tax upon the people is onerous;" that there should be a "reduction of the tax now upon the people;" that a "revision of the tariff is necessary;" that it should be "revised, equalized, and simplified."

What has Congress done to meet these suggestions of the Secretary of the Treasury, or to relieve the people of this onerous tax? Nothing, sir; absolutely nothing! The people have asked for bread, and

we are about to give them a stone. To meet the demands of the Secretary of the Treasury for a reduction of this onerous tax, and to relieve his Department of its embarrassment of a surplus of "lawful money," we have two bills before us, neither of which proposes any modification of the tariff or reduction of taxation. The bill of this House now under consideration simply provides for a commission of nine persons to investigate "the question of the tariff and internal-revenue laws," and to report the result of its investigation to Congress not later than the first Monday in December next.

The Senate bill now on our table is the same thing, except that it requires the report to be made by the first Monday in January next. So that neither of these measures is intended, as advised by the Secretary of the Treasury, to reduce the onerous tax or to revise the tariff. No question of free trade or protection is involved in either. It is simply a question of postponement and delay, not until next January or December, but for two years or more. No member of this House believes for one moment that any report made at the time required would enable any committee to frame such a bill as would be perfected during the short session of Congress. It would be an insult to any gentleman's intelligence to suppose that he believed such a thing possible, much less probable.

I will not violate the rules of this House by charging that the sole purpose of those who have reported these bills, or those who advocate them, is delay and delay only; but, sir, the people who are suffering under this "unequal and unjust tariff" and who are "embarrassing" the Treasury by the surplus accumulated under the "onerous" tax as collected by the Secretary of the Treasury, will charge it and believe it, and, in my opinion, will act upon it. Any system of taxation which extorts from the citizens of the country a surplus over and above its necessities is "onerous," illegal, and at war with the spirit of our people and the genius of our institutions. "Congress shall have power to lay and collect taxes, duties, imposts, and excises," says section 8 of the first article of the Constitution. But for what purpose? "To pay the debts, and provide for the common defense and general welfare of the United States." The Secretary of the Treasury says, above and beyond all these obligations and necessities of the Government, he is "embarrassed" by the surplus in the Treasury. Is the tax, then, not only unjust and onerous, but is it not unlawful to thus seize the property of the citizen and hoard it in the Treasury of the Government?

Sir, since I came into this House the expenses of this Government in every department have been greatly decreased. The public debt has been decreased many millions; the interest has been reduced from 5 and 6 per cent. to 3½ per cent., and but for the action of the Republican party would to-day be only 3 per cent. The Democratic party, coming into power in the Forty-fourth Congress, reduced the annual expenses of the Government some thirty or forty millions. Everything has been reduced except the "onerous" taxation upon the people, and this our opponents seem determined shall never be done if it can be prevented by any device or subterfuge.

By the rules of this House any bill changing the revenue laws goes to the Committee on Ways and Means, and there it perishes. That committee will not or cannot report any measure of relief or reduction of taxation upon the people. It would be a gross insult to the intelligence of the chairman of that committee or any member of it to charge that they do not understand this question of taxation; but the bill they have reported places them in an unenviable position before the country. There is no necessity for delay. Every interest, from the manufacturing of steamships, engines, steel rails, cotton and woolen goods, down to matches, has flooded the desks of members with every fact which their interest or ingenuity could suggest, and if the committee still desires their assistance, in ten days or less there is not a manufacturer in this broad land who would not have its representative here with every fact pertaining to its interest. The only proper, sensible, and just thing for this House to do is to adopt the resolution offered by the honorable member from New York, [Mr. HEWITT,] instructing the committee to report the modifications of the tariff suggested by him. If when such bills are reported any man can show that his business will be destroyed by their adoption, they will never pass. No one on this side of the House desires to impair any industry in our whole country, but, on the other hand, to lighten and equalize the burdens on all.

One word on the internal-revenue system. It is a difficult matter to convince the citizen that he has not a right to distill the fruits of his orchard which rot under the trees, or the grain of his fields which he has harvested. No harsher or more unjust laws of confiscation were ever enacted, or a more brutal or brigandish set of officers ever appointed to enforce them, than exist in the Internal Revenue Department. Property is seized and citizens arrested without warrant or process of law. More than one unarmed citizen of my State has been shot and killed, and when the murderers have been arrested by the State authority they have been taken from the officers of the State by the Federal judges, and the district attorneys required to defend them before United States commissioners. There seems to be no law in Georgia which the internal-revenue officers are bound to respect.

But again, sir, they are so many paid emissaries of the Republican party. Every removal and appointment which has been made in my State in the past three months has been solely with the view to the political influence it would have on parties in the State, and

not as to the fitness or qualifications of the parties for the office. I am myself in favor of wiping out this whole system of internal taxation and returning to the ancient policy of the Government of meeting all its demands by customs duties. There is no such thing as free trade in this country, and never will be while the Government owes a dollar or requires one for its maintenance. Let it return, then, to its ancient and almost uniform policy, and raise whatever is necessary for its support by customs duties, and in doing that let it be so adjusted that every interest and every section will feel alike its burdens and protection. Then and then only will the Government discharge its whole duty to all the people. Let us at once adopt the suggestion of the Secretary of the Treasury and reduce the revenues of the Government to its wants and revise the tariff laws without further delay.

Chinese Immigration.

SPEECH

OF

HON. CYRUS D. PRESCOTT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 17, 1882,

(on the bill (H. R. No. 5804) to execute certain treaty stipulations relating to Chinese.

Mr. PRESCOTT said:

Mr. SPEAKER: That we, as the Representatives of the American people, have not only the right of power but of self-preservation, to determine who of the nations of the earth shall be allowed within our borders, admits of no denial, and the claim of the orator or philanthropist that our land shall be thrown open as the common rendezvous of all the world is to forget the past, ignore the present, and lose sight of the future. That the Chinese come here only to glean and carry away is the teaching of the past; that they are the cause of unceasing turmoil, complaint, and discontent is the present condition of our western coast; that this may continue in an increasing degree and extend over other portions of our country is the prospect of the future. Our people, aside from the Pacific coast, are, and by experience must be, but slightly informed upon this great national question. One who has had the opportunity of observation, and whose observation has been specially directed to the solution of the question now before us, thus dispassionately states the situation, and from the best information I can obtain I adopt the same as the basis of my action upon this question. He says:

The fact is that the Chinese seem in all essential things to be about such human beings as we are, different from us only as men of the same race might differ who had been from birth subjected to the influence of widely different social environments. But this is a difference which is of as much practical moment as a difference in natural capacity—a difference so wide as clearly to distinguish Chinese immigration from any which has previously set upon our shores.

Between the various European peoples from whom our population has been drawn, there are differences of race, language, customs, and religion. Yet these differences are trivial as compared with the differences between the Chinaman and European. The European peoples belong to the same primary subdivision of the human family, their languages are derived from the same parent stock, their religions are but modifications of the same great creed, their civilization is essentially one, and their customs, methods, and habits of thought have even in their variations a family likeness.

Differences between Europeans are as nothing when compared with the wider differences which separate the Chinese from the European. The only immigration we have ever received which in point of difference can be compared with the Chinese is that which in the early days of American settlement was brought by the slave trade. But the negro, as landed from the hold of the slave ship, was merely a naked barbarian. He had everything to learn, but had little to unlearn. The difference between the negro as he came among us and the Chinaman as he now comes among us is like the difference between the child ready to imbibe whatever he is taught and the full-grown man whose habits are formed. The Chinaman is not a simple barbarian but a civilized man of a civilization to which ours is but a thing of yesterday.

The Chinese have a written language, a literature, codes of manners and of morals, national and religious traditions, arts, beliefs, customs, and habits of thought which have been perpetuated for centuries through immense masses of people. Of all the wrong impressions concerning the Chinese there is probably none more erroneous than that widely diffused in this country that they are conscious of their own inferiority and seek but to learn of us. That those who come among us recognize our superiority in the mechanical arts is doubtless true. But this is not the direction in which Chinese ideals lie, and their feeling toward us is probably akin to that with which the scholar, proud of his learning, might recognize the superior physical strength of a porter or coal-heaver, or the impoverished descendant of a noble family might regard the money-getting ability which had placed wealth in vulgar hands. It is doubtful, indeed, if the European mind, and especially the American mind, can fairly comprehend that veneration for antiquity which leads the Chinese to regard the "outside barbarian" for all his shipwrecks, and railroads, and telegraphs, as a barbarian still. Western civilization looks to the future for its ideal of perfection; that of Chinese civilization is in the past. Now, it is not merely that the greater the difference in language, customs, and habits of thought, the greater the difficulties of assimilation between different peoples brought into contact, but the greater the difference the less powerfully do assimilative forces act, for the greater are the tendencies, both attractive and repulsive, to the formation and maintenance of separate societies in which the peculiarities of each are perpetuated.

Chinese immigration differs from European immigration in being practically non-assimilable. That in course of time, should their immigration continue, the Chinese would bring women and permanently settle, just as they have permanently settled in parts of the East Indies, there can be little doubt; but from all appear-

ance and experience this would not be because they had become Americanized, but because a permanent Chinese community had been here founded.

The healthful life of every social or political organism depends upon the assimilation of its elements. Even differences in language, religion, customs, or traditions, which are as nothing when compared to the differences between the Chinese and our own people, are sources of discord and danger when they perpetuate themselves in the same community. But the immigration of the Chinese in any considerable numbers into a country like the United States means not only a population separated by the widest gulf instead of a homogeneous people; it means the attempt to blend two diverse civilizations in the same social and political organization. It means not merely the introduction of a non-assimilable element, with all the jealousies and hatreds and conflicts and dangers which experience shows hence arise, but the introduction of an element which even in its effect upon our own people tends most powerfully to intensify dangerous tendencies.

The social and political dangers with which the Republic is already menaced spring from the growing inequality in the distribution of wealth—the same cause which, as the long course of history shows, has everywhere brought destructive conflicts or slow decay, and turned the prosperity born of free institutions into anarchy and despotism.

The effect of Chinese immigration is to strongly increase the tendency to the unequal distribution of wealth, and at the same time to make remedial measures more difficult. The experience of California already shows that Chinese immigration means the introduction of an element into our political and social life which is as capable of arousing violent passions as negro slavery. Even were there no other objection to the Chinese than the fact that the opposition which their presence arouses among the laboring classes leads them to lose sight of all things else, and to blindly follow demagogues, it would be a sufficient one. The ethical considerations which are so often urged against any proposition to shut out Chinese immigration have no force when the real character and effect of that immigration are understood. A conscientious individual may fully recognize his duty toward his neighbor and yet see that to bring under the same roof with his own family a family of totally different habits would be to demoralize instead of elevate, and to produce quarrels and ill-will where there should be harmony.

And so may one fully imbued with that higher patriotism which regards the whole world as its country and all mankind as brethren see clearly that such an admixture of peoples as is involved in any considerable Chinese immigration to the United States would be to the degradation of the superior civilization without any commensurate improvement of the lower, and that, regarded from the highest standpoint, it would tend to check the general progress of the race, not to advance it. It is not merely the supreme law of self-preservation which justifies us in shutting out a non-assimilable element fraught for us with great social and political dangers, but a regard for the highest interests of our race. It is not that national vanity against which the philosopher should carefully guard, but the obvious fact, which it were blindness to ignore, that European civilization as developed on the freer field of the American continent represents the highest advance yet made by humanity, and that upon the great Anglo-Saxon Republic of the New World devolves in the era now opening the leadership of the nations. What civilizing influence she will exert upon other peoples depends on her own civilization, her maintenance of ground already gained, and her solution of problems which grow in gravity with the progress of development and the increase of wealth.

Whatever will introduce into the life of the Republic race prejudices and social bitterness, whatever will reduce wages and degrade labor and widen the gulf between rich and poor, it is our duty to guard against, not merely for the sake of the Republic, but for the best interests of mankind. It is easy to hold fast a door which, once fairly opened, it may be impossible to shut; it is easy to prevent a movement which, once it gathers way, may prove irresistible; and unless we are quite sure that the largest possible influx of Chinese could work no harm, it is the part of wisdom to take the side of caution. The enormous possibilities of an immigration which, with the advance in steam navigation, may be drawn from four hundred million people, among whom the struggle for existence is so intense that large numbers perish annually from sheer want, and the fact that these immigrants retain all their essential habits and characteristics, make the question, in its final aspect, nothing less than that of a Mongolization of America.

Believing this to be a fair and impartial statement of the situation of this question at this time, I favor the trial of restrictive legislation within such reasonable bounds as shall fully keep good faith with the treaties between our Government and China. But in our haste so to do we should not fail to provide that all the acquired and reserved rights of the Chinese now within our borders should be fully protected.

Those now in our land have the right of citizenship, but section 14 of this bill strikes down such right. If they had not such right, why this enactment? This section is evidence of its existence. The circuit court of the district of California, in the matter of Ah Yup, in 1878, held they were not entitled to become citizens of the United States by naturalization, because Mongolians were not "white persons," under the provision of the Revised Statutes of the United States, which reads, "The provisions of this title shall apply to aliens being free white persons," &c. If that decision is the law of the land then section 14 is wholly unnecessary. But it should be remembered that when the statutes were first revised, December 1, 1873, the word "white" was omitted, and February 18, 1875, in the second revision, the word "white" was first inserted. Prior to this date it may be that many of the Chinese now here, and reserved from the effect of this bill, filed their first papers preparatory to naturalization; before the time expired for application for the second papers the word "white" was inserted. Will it be held that thereby they lost their acquired right to naturalization? If they did not, then this act is intended to annul such right, and prevent obtaining and consummating the same, and that is its sole effect. If this acquired right could be so annulled by a specific act, and if this act is not unconstitutional, will it not invite the veto of the President as in conflict with the last treaty stipulations with China?

Under the Burlingame treaty of 1868 it is provided in article 6 that "Chinese subjects visiting or residing in the United States shall enjoy the same privileges, immunities, and exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation." It will be seen the grants of the Burlingame treaty are "privileges, immunities, and exemptions in respect to travel or residence." By the treaty concerning immigration concluded November 17, 1880, it is provided in article 2:

Chinese laborers who are now in the United States * * * shall be accorded all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation.

The word "rights" is now added, and the restriction to "travel and residence" is stricken out. To what nation of Europe do we not grant a right to naturalization? Does not this new treaty give all Chinese now within our borders the right of naturalization which this bill strikes down, and that in the face of the fact that within a few weeks we have provided for a Representative of California upon a fraction of 93,269, of which 75,132 are Chinese now to be disfranchised, and in fact making the additional member of Congress so given her the Representative of only 18,137, which by the ratio of the last Presidential election would be a Representative to California for 3,446 voters?

We gave these Chinese a Representative last month; let us not this month disfranchise them. If we have the physical power we cannot afford as a nation to wrong the humblest, although he be called a "heathen Chinese."

"I desire that an amendment be accepted that will provide for this very objectionable feature of this bill, although I believe their rights, so attempted to be affected, will be fully sustained by the tribunal which will still stand between them and the attempted injustice of this bill.

Utah Contested-Election Case.

SPEECH

OF

HON. AMBROSE A. RANNEY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 19, 1882,

On the Utah contested-election case.

Mr. RANNEY said:

Mr. SPEAKER: The committee were all, save one, agreed in this, that contestant was duly elected and returned and entitled to the certificate of election at the hands of the governor, instead of Mr. Campbell. It has been proved satisfactorily that he was a naturalized citizen, over twenty-one years of age, and for many years a resident of Utah. It is conceded that he therefore possessed all the qualifications prescribed by the acts of Congress and the statutes of Utah as the conditions of eligibility. By an examination of these acts and statutes it will be seen that the organic acts passed by Congress (Revised Statutes, section 1860,) provide that the qualifications of voters and of holding office shall be such as may be prescribed by the Legislative Assembly of each Territory, subject to certain restrictions as to citizenship and age; and that the statutes of Utah, approved by Congress, (Compiled Statutes of 1876, p. 87, 88,) have prescribed qualifications accordingly in conformity thereto; and that contestant in his person answered all these requirements of law.

Section 1862 provides in effect that "every such Delegate shall have a seat in the House of Representatives, with the right of debating but not of voting."

In this state of the facts and the then existing statutes it appeared to me that the right of contestant to a seat followed as a conclusion of law; and that the question of "final right" submitted to the committee was thus determined and their duty under the resolution of submission discharged.

It appeared, however, in the record that contestant was a polygamist, and it was claimed and held by a majority of the committee that this was a disqualification and should exclude him from the seat as an unworthy person; while others, including myself, held that this was a fact affecting the personal character of the contestant and furnishing only a ground for expulsion, in accordance with the practice of this House, and as was determined after full consideration and mature deliberation in the Forty-third Congress in the case of Maxwell vs. Cannon.

Since the report was made, however, an act of Congress has been passed and approved by the Executive which expressly provides that a polygamist shall not be eligible for election to, or entitled to hold, any public office of trust, &c. And if this act applies to the present contest and disposes of it, the questions of law which divided the committee become of no consequence save as abstract principles or in so far as they may affect the validity and operation of the eighth section of this act in the future. I may be permitted to say that so far as I am concerned I believe the new act does apply to this case, and that Mr. Cannon, being a self-confessed polygamist, must be denied his seat. As I felt bound by the statutes as they stood before, so I feel bound by the provisions of the new act, with this difference in feeling only: before, I obeyed the behests of duty alone; now, my pleasure and duty concur.

I do not propose to discuss the evils of polygamy. That discus-

sion has been had and exhausted; and we are all agreed upon that point. The sentiment of the country is against it, and should be. But I believe that the moral and religious people who feel so strongly about it would not have asked this House to violate the statutes themselves in order to rebuke others for doing that thing. They are a law-loving and a law-abiding people I believe, and they with me will rejoice at the change made in the law.

Can there be any serious question about the application and effect of the act referred to and approved March 23, 1882? It reads:

SEC. 8. That no polygamist, bigamist, or any person cohabiting with more than one woman, and no woman cohabiting with any of the persons described as aforesaid in this section, in any Territory or other place over which the United States have exclusive jurisdiction, shall be entitled to vote at any election held in any such Territory or other place, or be eligible for election or appointment to, or be entitled to hold, any office or place of public trust, honor, or emolument in, under, or for any such Territory or place, or under the United States.

It has taken effect now. It says in effect that a polygamist shall not be entitled to hold the office of Delegate. Contestant is not yet inducted into office, and stands as a petitioner before this House asking for a seat, with no certificate entitling him to one, *prima facie* even, and we have only to deny his request. The act does not require any conviction for a criminal offense in order to work the disqualification provided; but the proof needs only to show that contestant practices or maintains the lawfulness of polygamy in order to make him out a polygamist, according to the ordinary meaning of that word as defined by Webster. The same state of things, confessed in the written admission of record, must be presumed to continue to this time in the absence of any proof to the contrary, according to a well-settled rule of logic and of evidence, and the rule does no violence here because the polygamous relations admitted are of a permanent character. It reads as follows:

I, George Q. Cannon, contestant, protesting that the matter in this paper contained is not relevant to the issue, do admit that I am a member of the Church of Jesus Christ of Latter-day Saints, commonly called Mormons; that, in accordance with the tenets of said church, I have taken plural wives, who now live with me, and have so lived with me for a number of years, and borne me children. I also admit that in my public addresses as a teacher of my religion in Utah Territory I have defended said tenet of said church as being, in my belief, a revelation from God.

GEORGE Q. CANNON.

The admission was given as proof in the issue raised, to be used for the purposes of this contest until ended, and an amendment of the law meanwhile so that polygamy becomes a disqualification instead of a cause for expulsion, cannot be properly held to diminish its effect as proof. All prior irregularity in the introduction of this issue into the contest may be waived and the previous proceedings now adopted by the House. I do not see how it can be justly contended that any vested rights of property are destroyed. For I take it to be well settled, or if not as sound law, that a public office is not property but only a trust or privilege, and is subject to legislative control, unless some constitutional provision is in the way. Whether it would not have been more fair and wiser to allow a Delegate elected under the law as it stood then to serve out his term is not now an open question, as no such reservation or exception is incorporated in the act.

Contestant seems not to have been disposed to heed statutes of this class, for after the act of 1862, making polygamy a crime, he appears to have married his fourth wife in defiance of the same. So we can hardly be said to be harsh in not waiting to see whether he is disposed to yield to the law as amended. If he would not obey that statute he is not likely to heed the new one.

I grant that those who assent to the doctrine of the majority of the committee do not need this new statute, and may do as they please even now. So far as I am concerned, however, this disposes of the present contest, and I am ready to vote for the resolutions pending. But before doing so, I wish to say that I dissent still, and if possible with more firmness of conviction than ever, from the views of the majority so far as they hold that Congress cannot by a statute define or prescribe the qualifications for Delegates, and that this House has power when that is done to disregard the same and fix them themselves, admitting or rejecting the elected in their discretion and for any reason deemed sufficient in every individual case.

And I will add, with all respect for my honored associates, that I regard their doctrine as contravening all authority and precedent, unsound in principle and mischievous in practice.

Objection is made, or intimated, that the new act is *ex post facto*. But the objector must have forgotten that the inhibition against that class of legislation relates only to laws affecting crimes. It is said that statutes must be construed as prospective only in their operation, unless they are clearly designed to be retroactive. I admit the rule of law to be so. But the eighth section is prospective so far as it says that a polygamist, &c., "shall not be eligible for election," but when it says "or be entitled to hold," these four words bring the present case within its scope. If the Delegate was in his seat the words would have their prospective effect the same as if "hereafter" was in it. Under the act an occupant would be required to vacate his seat. Much more can we say that an applicant shall not be permitted to take a seat which he could not rightfully hold. Whether it be harsh to unseat a man who has been duly elected under a prior law the requirements of which he answered is not the question. That was an argument proper to be urged against the bill before it became a law.

* This section 14 was stricken out in the Senate.

It was urged in the Senate and a vain attempt made to amend it in that regard on the expressed construction that otherwise it would exclude a Delegate already elected.

The whole policy of the act was to strike a blow upon the institution of polygamy, and that presently, on the theory that the evil was present and pressing, and that it was a case demanding an effectual and severe remedy. The subsequent sections of the act indicate an intention that incumbents of office are to vacate at once. The intention is plain that the act should take effect now. It is not necessarily by way of punishment and a pain or penalty, giving it the nature of a bill of attainder, as is urged, but only adds another disqualification, like saying that a Delegate should be a man of good moral character, and if not he must vacate his seat. It may be partly by way of rebuke to a vicious institution, it is true, but may properly be regarded only as a safeguard for the good of the office and the Territories. Congress is supreme in a case like this, and may exercise an arbitrary power if it wills. The whole contention made by our friends upon the other side against the doctrine of the majority of the committee is that Congress has power to fix qualifications, and that statutes passed for that purpose are binding on this House. And so far I agree with them. But, strange to say, when another statute has been passed in the same line of legislation, fixing another qualification, they proceed to attack that, and say they will not heed it, resorting to arguments which seem to me less tenable than the grounds assigned by the majority of the committee as an argument to get rid of the effect of the prior statute.

Every statute passed by constitutional authority is binding on this House and the courts as much as on the humblest citizen, as is admitted in the views of the chairman, and if the statutes fixing the qualifications of Delegates have the force of law, this House has no right to disregard them nor any part of them. The power of Congress to erect Territorial governments and secure the right of representation by the creation of the office of Delegate, and providing that he shall have a seat in the House of Representatives, is not denied but conceded by the majority. And if this is conceded I do not see why it does not follow, as surely as night follows day, that the general power conferred to create the office and to regulate the election of a Delegate embraces within its scope as one of its natural and proper elements an authority to fix the conditions of eligibility, such as citizenship, age, and residence. They are a part of the needful rules and regulations of the office the same as they were when fixed in the Constitution for full members.

But if this concession is not accepted by the House, and any member is disposed, as strict constructionist or what not, to contend that Congress had no power under the Constitution to impose by statute the presence of a Delegate upon this House or any future House if they do not wish to receive him, whoever and whatever he might be, that is quite a different question, and if maintained it would lead to the result reached by a majority of my associates. This question, sir, is not new, and the committee could hardly find warrant for maintaining such a proposition. It was suggested and urged by Mr. Swift in the Third Congress, when James Madison was a member of the House, and voted down. It was involved in a contest for a seat by a Delegate in the Fourteenth Congress, when Daniel Webster was a member of the House, and the rights and position of a Delegate as a member or otherwise were discussed, and found no favor.

It appears that the celebrated ordinance of July 13, 1787, provided for a Delegate to Congress with the same rights as given now; that it was in force under the confederation when the Constitution was adopted; and one of the first things done in the First Congress was to adapt it to the Constitution, (1 Stat., 50, ch. 8,) with no demur or pretense that its provisions conflicted with it in any respect. In the act of March 3, 1817, the office was further regulated, without any such claim being made, and made applicable to all present and all future acquired Territories. The provisions of the said ordinance, the other ordinance relating to the Territory south of the Ohio River, the said statutes, and all others amendatory or supplementary, have been observed and kept to this day as securing rights and not as "persuatives" on this House.

In three cases of contested elections, which occurred in 1850 or thereabout, in matter of Doty *vs.* Jones, Messervy, and Babbitt, respectively, the whole subject was elaborately examined and considered in three several reports, written and presented by Mr. Strong, then a member of the Committee on Elections in this House, and since a distinguished and able judge for so many years upon the bench of the United States Supreme Court, and now in honorable retirement; which said reports, as adopted, show that the right of a Delegate to a seat rests upon the Constitution and laws of Congress, and not on any discretion of the House alone.—(1 Bartlett.)

It is true that a distinguished member from my own State, E. R. Hoar, in the Forty-third Congress, in the case of Maxwell *vs.* Cannon, expressed himself as troubled in mind on the question, and raised a query on the subject by a pointed suggestion. But after the same had been answered in the discussion by other legal gentlemen he did not attempt to maintain his suggested position, and we are left to infer by his silence and the subsequent action of the House that his doubts were removed, or certainly that they got no lodgment in the minds of the members of the House very generally.

If contemporaneous interpretation, acquiescence, and long-continued practice for nearly a century, with an unvarying line of numer-

ous and uniform precedents in election cases in this House, amount to anything as evidence upon the proper construction to be put upon the Constitution, we have them all here in a marked degree. They are very potent, and it will take a bold lawyer to gainsay the doctrine which they indicate.

But besides, and in addition to all these, we have decisions of the Supreme Court of the United States which lead to the same result in legal effect. It cannot now be denied that Congress has a supreme power over the Territories, both those which existed at the time when the Constitution was adopted and also those subsequently acquired. That power is conferred expressly by, or inheres in, the Constitution, and has no restriction save what wisdom and good faith impose and of which Congress itself is the sole judge. It is best stated in the opinion of Chief-Justice Waite in *National Bank vs. County of Yankton*, 101 United States Reports, 133. It must be apparent to all that unless the acts of Congress impose upon the House a reciprocal obligation to receive the Delegate and give him a seat, they can in nowise be said to secure to Territories the right of representation. The representative principle is embodied and inheres in the very theory of this Government, and to assert at this late day that it cannot be granted by Congress and secured to the people of the Territories in the limited and qualified form appearing in the original ordinance of July 13, 1787, and in all the organic acts since, is to predicate what will, or should, get little credence or favor.

When it is asserted that a Delegate exists *ex gratia* only, it is belittling the office, unless we add that it is by the grace of Congress and not of the House alone. It is hardly just or fair to call it grace when we consider what this country did and said about the right of representation when they were themselves colonies of Great Britain. The people embodied its principles in the very spirit and letter of the Constitution, and have acted them out ever since, and it is too late now to go back on them in reference to our Territories, which are part of the domain of this country. That this House has heretofore regarded the statutes fixing the qualifications of Delegates as binding upon them is apparent when we look at the various attempts which have been made at different times to change them so as to disqualify a polygamist, and all without success until the present session. Even now, if the doctrine of the majority is sound, the present act obtained after so long a struggle and hailed with so much joy throughout the country, and which does that thing, is nugatory as law and not binding as a rule of the House. It was wholly unnecessary for the purposes of this contest. It will come up to plague the friends of this act in the future and serve to hoist them, as by their own petard, in the possible event of a change occurring in the political complexion of the majority.

I beg leave to notice one other phase of the views of the majority; for they do not agree altogether among themselves. Some of them concede all that I have claimed in regard to the power of Congress and that this House, in judging of the election, returns, and qualifications of Delegates, is acting under the clause of the Constitution relating to members. In order to reach their result they have resorted to an apparent popular idea as to what "judging of the qualifications" means, to wit, that the House has a right in each case to say what they shall be and abridge or enlarge those prescribed by the Constitution or the statutes. While the main report does not assent to this doctrine so far as members are concerned, but admits that the House cannot add to or take from the qualifications fixed by the Constitution for them, yet it contends that the statutes fixing the qualifications for Delegates are not obligatory upon the House and a different rule of law prevails.

Now, sir, I am not ready, for one, to contravene and reverse the doctrine as laid down by Story, Kent, and other eminent jurists, and the long line of uniform precedents found in the history of Congress, and say, as is written on page 25 of the report, that they are chiefly valuable on account of their age and uniformity and that this House should reverse them and hold to the contrary. If anything can be said to be settled on principle and authority it is this.

When we come to the statutes prescribing the qualifications for Delegates we find that Congress attempted and intended to do as to them just what the Constitution had done in that regard for members, to-wit, adopt the Representative principle, fix the qualifications deemed to be primarily essential, and leave all else to the electors, and allow them to select their own Representative.

The Constitution and laws of the United States, except so far as locally inapplicable, are extended by statute over the Territory.

If these statutes are valid they must be interpreted according to their intention. If the purpose is manifest to enumerate the qualifications prescribed, and to exclude all others by implication, and to leave the rest to the electors or to the Legislative Assembly to determine, they must be so interpreted just as the Constitution was, because the rule of construction under which this was done applies to statutes as well as to the Constitution. (Sedgwick on Con. of Statutes, &c., page 31, note.)

Such was the intention of Congress most manifestly. It is apparent from the language of the same; it is according to the policy of the Constitution, and in consonance with the genius of the Government. The Constitution and laws of the United States are made by statute the constitution and fundamental law of the Territory.

It was never intended clearly to leave the admission of the Delegate subject to the discretion, caprice, or what not, of the House, but

to regulate this office by some rules of law. Otherwise, there would be nothing to guide the electors in their choice and the office would become in the House a "floating waif on the billows of excitement," and possibly occasionally lead to the exercise of "caprice under the specious appearance of merited resentment."

At the next Congress a polygamist may appear again as Delegate, and yet he can be admitted notwithstanding the recent act. Or his politics, religion, or what not, may not suit the majority and he may be rejected although made eligible by statutes and elected in good faith and in full reliance on the same by the electors.

It seems to me that the provisions of the Constitution in regard to judging of the election, returns, and qualification of members, and as to their expulsion, are the ones under which this House are to act in relation to Delegates; and that the same course of proceeding is to be adopted by analogy in each instance. Such has been the decision of this House heretofore, especially in the case of *Maxwell vs. Cannon*, and such its practice always.

The law regulating contested-election cases applies in terms to Members only, and yet it has been used in the case of Delegates. If it does not apply, the whole prior proceedings in this case have been irregular and were unauthorized by law.

While a Delegate is not a Member strictly, he has always been treated as a Member *sui generis*. While not a constitutional officer, in the sense in which a full Member is, he is still the creature of the Constitution through the medium of a statute authorized by that instrument; he has been given powers and rights which are so guarded as not to infringe upon the prerogatives of a Member, or endanger the rights of the States. Both have been elevated to equal dignity and honor save in the power to vote. The power of the House to regulate its own proceedings has not been impaired or abridged, and the House has always succeeded in adapting its rules to the law, and Member and Delegate have each hitherto enjoyed their rights and privileges in perfect harmony. It is too late now to attempt to antagonize them, and reduce one of them to the position of a suppliant at the doors of the House for the courtesy of a seat, and a dependent upon the sovereign grace of an omnipotent House for all he has. Rather let both be treated as legal creations of the Constitution, directly or mediately, and with rights, privileges, and powers, defined and secured by law.

I submit, therefore, that it is better not to resort to any doubtful rules of law even, and especially one which is so subversive of all prior authority and precedent and which will involve so much peril for the future, but to exclude Mr. Cannon distinctively on the grounds which the new act furnishes and which are stable and sure.

Interstate Commerce.

SPEECH OF

HON. JOHN H. REAGAN,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 17, 1882,

On the bill (H. R. No. 1653) to regulate interstate commerce.

MR. REAGAN said:

MR. SPEAKER: I desire the unanimous consent of the House to incorporate in the record of our debates, as in Committee of the Whole, the following remarks, made by me before the Committee on Commerce on the question of the regulation of commerce on railroads between the States. I submit my remarks in this form as they cover points I wish to make at this time on this subject, without going through the labor of recasting the argument.

You have listened patiently during your sessions of twelve days to arguments on the question of the regulation by act of Congress of the interstate commerce of this country. A part of one day was spent in hearing the representatives of the commercial and agricultural interests in favor of such legislation, and eleven days and part of another to the hearing of great railroad lawyers and great railroad officers and managers against such legislation. I am obliged to you for your consent to hear me make such reply as I can to the learned, ingenious, and in some respects able arguments submitted by the representatives of the railroad corporations.

In the view I take of this matter it will not be so much my purpose to reply to the particular arguments made by them as to show their want of relevancy to the principles and purposes of what is called the Reagan bill, and that it was the design of these arguments to mislead, begot, and deceive the committee into non-action on the subject.

If we except the formations of constitutions of government, such as the Constitution of the United States and of the several State governments, the question before us is the greatest with which the legis-

lators and statesmen of this country have ever had to grapple. I doubt, indeed, if any single question of greater importance ever came before a legislative body.

In the earlier governments of modern Europe the doctrines of feudalism and of privileged and subject classes in society were adopted and sustained as the accepted means of organizing and sustaining political government and social order. This was done because of the belief that the people were not capable of self-government, and that they must be governed by a power superior to themselves. Hence they had kings, nobles, and aristocracy of rank, title, privileges, and political power, constituting the governing class, and the body of the people, with few and limited political privileges, constituting the subject or governed class. Advancement in knowledge, and especially in the knowledge of the science of government, in modern times, has greatly mitigated and modified this form of government in most of the countries of Europe.

Our ancestors who settled this country, gave form to its institutions, and organized its governments, did not believe it necessary to make one part of its people hereditary rulers and masters of the other and larger part of them, who should be subjects, denied in a large measure political privileges and personal rights. In forming our political system they maintained "that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness;" that "no title of nobility shall be granted by the United States;" that "no State shall "grant any title of nobility." They formed governments of the people, by the people, for the people. They defined the duties and powers of public officers, and made them amenable to the laws as all other citizens are. They defined and guaranteed all the essential rights of the citizens, including his freedom of religion, of thought, of speech, and of the press. To insure political equality, and to guard against the re-establishment of privileged classes in this country, they abolished the law of primogeniture and the law of entails. In addition to our enjoyment of civil liberty and religious toleration, until, in recent years, the property of this country was more generally distributed among the people, and its use more universally enjoyed by them than in any other country of which we have knowledge, ancient or modern. And ours have been and are the freest, the most happy, and the most prosperous people on the earth.

In later years the progress in the arts and in one of the chief blessings of our country and times threatens, if not controlled by law, to establish a condition of things as much to be feared and dreaded as the feudalism and monarchical and aristocratic features of the governments of Europe in former generations. I mean the aggregations of capital, of power, of influence, and of privilege in the great railway corporations of this country.

It is but little more than fifty years since railroad cars were first propelled by steam-engines in this country. Now we have over one hundred thousand miles of railroads in operation, which represent in cost of construction and equipment about five billion dollars; an average of about fifty thousand dollars per mile. And I have seen the statement that this vast system of railroads is being operated by about two hundred and fifty thousand men, in the full vigor of manhood, not including the thousands of stockholders. They are operated under charters. And, while it is said these corporations have no bodies to be kicked and no souls to be damned, they live forever in the enjoyment of their vast and exclusive privileges, power, and influence and are managed and controlled by the most able and efficient class of our business men.

Their history shows that owing to the anxiety of the people to secure railroad facilities, they have often secured extraordinary and unconscionable advantages over the general public; that they have in many instances used the money unjustly extorted from the public to influence elections, legislatures, and courts, to aid them in imposing unjust burdens on the people who granted them the charters under which they exist. They claim that the railroads are private property held under contracts, and that they cannot be controlled and regulated by law, and some of the most prominent railroad magnates claim that they have the right to charge as freights whatever the commodity will bear; that is, that they may, if they choose, charge enough to cover all the profits on articles of manufacture, agricultural products, and commerce generally, and leave only enough to the producer or the merchant to keep him at work for their benefit.

This vast power, with all its real and pretended privileges and advantages, carrying the greater part of not less than thirty billion dollars' worth of commerce annually, besides their immense passenger business, for fifty million people, presents to the world to-day the spectacle of being able to charge whatever inclination, interest, and avarice may dictate for the transportation of all that part of it which is of the class of commerce among or between the States, with no statutory legislation to control or restrain them; and with such common-law remedies as exist in most instances utterly unavailable, because private litigants generally cannot successfully encounter these corporations in the courts, and because in most instances they are afraid to resort to the courts, and thus incur the displeasure of these corporations. And their lawyers and managers have the bold audacity to come here before a committee and Congress of the representatives of the people, and tell us, as they have done in a dozen

speeches in the last few weeks, that the best thing we can do is to do nothing, and leave the management of the railroad problem entirely to them. They even treat as dangerous intermeddling and impertinent interference any attempt by Congressional legislation to check and control their monstrous pretensions and their heartless rapacity.

If we appeal to our knowledge of history, and to the experience of all ages and of every country, we shall nowhere, at no time, in no civilized country, find so much power, covering such vast interest, uncontrolled by legislation. For several years now these corporations have had power and influence enough to defeat all the efforts made in the American Congress by the most conservative legislation, designed simply to abridge their monopoly powers and prevent them from doing wrong, when no effort has been or is being made to adopt or enforce any detailed regulation of their management. If they are to be allowed thus to go on unrestrained and uncontrolled, and Congress shall continue to disregard the rights and interests of the people, through either imbecility, corruption, or the fear of offending the managers of these corporations, how long will it be until they have the complete mastery of our agricultural, mineral, manufacturing, and commercial, indeed of all our material interests; of our governments, State and Federal, including legislative, executive, and judicial departments; until a few railroad magnates shall own the most of the property of the country, while the masses of the people must be reduced to a condition of serfdom, poverty, and vassalage? And if we allow this to occur, as it will if we do not act, shall we not have an aristocracy of wealth with monopolies and perpetuities which are forbidden and denounced by all our constitutions; and will we not then be subject to a vassalage more galling and more disgraceful than that of the feudal ages? Will we not be consenting to the breaking down of all the bulwarks of civil liberty, and to the destruction of all manhood; of that personal freedom and independence which is the pride of every American citizen; and of civil liberty itself? And when by our weakness and moral cowardice we have created a class of rulers and masters, shall we not become their subjects instead of being citizens of a great, free republic?

There is in this country, at this time, a mournful pathos in the lines:

Ill fares the land to threatening ills a prey,
Where wealth accumulates and men decay.

The real question before us is not whether we shall attempt to control and provide for the management of the complicated details of the railroad problem, as I shall show more fully as I go on, but whether we shall abridge the monopoly powers of these corporations for the benefit of the people. It is whether the people, through the machinery of their own government, are to be the masters of their rights and liberties, or the railroad corporations to be the masters of the people and subvert our free constitutional form of government.

I have thought proper to make these observations, because, in the examination of so great a question, we cannot safely omit inquiry as to the extent to which our action may affect the fundamental principles of our Government and the rights and liberties of our people.

This great problem has grown up with the comparatively recent growth of our country, and with the progress of improvements in the arts and sciences. The grave duty which is devolved on Congress of providing a solution of the questions growing out of it is not the less imperious because of its recent origin, because the use of steam power as employed on railroads and on steamboats and steamships was unknown to those who formed our Government and framed our Constitution.

The first question for us to determine is whether Congress has constitutional power to regulate commerce among (between) the States. Article 1, section 8, clause 3 of the Constitution is as follows:

Congress shall have power to regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

This is the general power.

Article 1, section 9, clause 6, is as follows:

No preference shall be given by any regulations of commerce or revenue to the ports of one State over the ports of another; nor shall vessels bound to or from one State be obliged to enter, clear, or pay duties in another.

This provides for regulations by Congress on a particular branch of this subject.

Article 1, section 8, clause 18, is as follows:

Congress shall have power to make all laws which shall be necessary and proper for carrying into effect the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or office thereof.

Here it is necessary for us to observe two important distinctions. The first is that the power is to regulate commerce, not railroads. The second is that the power is to regulate commerce among the States, not in the States.

On the first distinction it may be observed that those who deny this power of Congress assert that most of the railroads of the country derive their charters from the States, and that, being creatures of the States, Congress cannot regulate them. The answer to this is that it is true Congress cannot regulate the corporate rights and franchises of the railroads in the States, and that no one claims this power for Congress; but that it can, under the provisions of the Constitution just quoted, regulate the commerce between the States

which is carried on the railroads without reference to the fact as to whether they were or were not chartered by the States, or whether they lie wholly in one State or partly in two or more States. The jurisdiction of Congress to regulate commerce passing from one State to another, or from or to a foreign nation, attaches to the commerce, not to the means of conveying it, at the point of shipment, and goes with it to its point of destination, whether it passes over one or many railroads, and whether they be in one or many States, and whether this commerce is carried wholly on railroads or partly on railroads or other means of land transportation, or partly by transportation on land and partly on water. It is the commerce which Congress has power to regulate and protect; and it can make no regulations respecting the instruments or means by which it is carried beyond what is necessary to execute the foregoing provisions of the Constitution, to protect the people and their rights against the abuses and unjust exactions of the carriers of this commerce.

On the second distinction it is proper to observe that the power is to regulate commerce among (between) the States; not in the States.

The tenth amendment to the Constitution is as follows:

The powers not delegated to the United States by this Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.

There being no power given to Congress by the Constitution to regulate commerce wholly with a State, no such power can be exercised and no one proposes to exercise such a power. The States alone must regulate the commerce wholly within their respective jurisdictions. And they alone can regulate and control the corporate rights and franchises of railroads and other corporations within their several jurisdictions. The claim that Congress cannot regulate commerce among the States because it may be carried on railroads which derived their charters—their corporate rights—from the States rests, and can only rest, on the preposterous supposition that a State by its own act can overturn or nullify the Constitution and deprive Congress of the jurisdiction given it by the express terms of that instrument. In view of the case of *Gibbons vs. Ogden*, decided in 1824, and of all the decisions on this subject from that time to the present, this is simply absurd.

In the remarks I am making to-day it will not be in my power to take up in detail and examine and analyze the volumes of argument you have been hearing for the past few weeks in behalf of the interests of the railroad corporations, able and ingenious as many of them are, and worthy as they are of critical examination. Much that has been said by the railroad advocates has not yet been printed, and I have not had time or opportunity to read and analyze any considerable part of those which have been printed. I shall hope on a future occasion to have the opportunity before the House of Representatives to examine and to controvert many of the positions taken by those advocates in this discussion. On this occasion I shall confine myself to an effort to show that the bill which I have introduced is constitutional, just, and expedient in its provisions, and that it is based on the proper theory for our first legislation on this great question. I have never assumed, and do not now assume, that it will meet all the difficulties of the railroad problem, or that other legislation may not be found necessary in the future on this subject. Nor do I assume that this bill may not be improved by amendment. On the contrary, I respectfully invite your aid in determining whether it should be amended before being presented to the House, if you shall determine that it ought to be reported to the House for its action.

But I do believe the theory of this bill to be the proper one, if we mean to enact an efficient and wise law on this subject. Its theory is to avoid for the present any attempt at detailed regulation of railroad transportation; to avoid all such questions as involve the necessity of the technical knowledge of experts in the management of such transportation; to protect the people in their rights by law, and to give them direct remedies in the courts of the country for the wrongs done them. The object of the bill and its theory is to abridge the exercise of the monopoly powers of these corporations; to prevent them from doing things which all men know to be wrong, and not to cripple or hinder them in doing anything which is necessary and morally right in the management of this matter of transportation. I will again call attention to this matter further on.

Before recurring again to the question of the constitutionality of this measure it may not be out of place to call attention in a general way to some of the pretensions of the leading railroad officials and their lawyers.

1. They assume that the railroads are private property.
2. They deny that they are bound by the law of common carriers.
3. They deny that their roads are public highways.
4. They assume that their charters constitute a contract between them and the State which amounts to a prohibition against future interference with their management of these corporations by the legislative authority.
5. They deny, some of them wholly, and some in a qualified manner, the constitutional power of Congress and of State Legislatures to regulate and control the terms on which they shall carry merchandise.

I ask you if this is not the character of assumptions they have made before you. Are not these the assumptions made by Mr. Gould, by Mr. Stanford, and other leading railroad magnates throughout the country?

Now I ask you to follow me in a brief examination of these questions

in the light of the decision of the courts of the highest authority, in order that you may see how entirely they are wanting in truth, justice, reason, and law. It will be convenient to treat them in the aggregate. And I shall read what I said on this subject in my speech in the House on the 1st of June, 1880.

On the subject of the power of Congress to regulate interstate commerce Mr. Chief-Justice Marshall said, in the case of *Ogden vs. Gibbons*, page 189 of the report, that—

The subject to be regulated is commerce, and our Constitution being, as was aptly said at the bar, one of enumeration and not of definition, to ascertain the extent of the power it becomes necessary to settle the meaning of the word. The counsel for the appellee would limit it to traffic, to buying and selling or the interchange of commodities, and do not admit that it comprehends navigation. They would restrict a general term, applicable to many objects, to one of its significations. Commerce undoubtedly is traffic, but it is something more; it is intercourse. It describes the commercial intercourse between nations and parts of nations in all its branches, and is regulated by prescribing rules for carrying on that intercourse.

In what are known as the license cases, 5 Howard, 504-599, Mr. Justice Catron, in speaking of the powers of Congress in this respect, says:

The power given to Congress is unrestricted and broad as the subjects to which it relates; it extends to all lawful commerce with foreign nations, and in the same terms to all lawful commerce among the States, and "among" means between two only as well as among more than two. If it was otherwise, then an intermediate State might interdict and obstruct the transportation of imports over it to a third State, and thereby impair the general power.

In the case of *Gibbons vs. Ogden*, page 227 of the report, Mr. Justice Johnson, speaking both of the extent and exclusiveness of the power, says that "the power to regulate commerce here meant to be granted was that power to regulate commerce which previously existed in the States;" that is, before the adoption of the Constitution; and he says that the power "must be exclusive; and hence the grant of this power carries with it the whole subject, leaving nothing for the States to act upon." And Chief-Justice Marshall, in the same case, page 196, says:

We are now arrived at the inquiry, what is this power? It is the power to regulate; that is, to prescribe the rule by which commerce is to be governed. This power, like all others vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution.

In the case of *Brown vs. Maryland*, 12 Wheaton, 419-446, Chief-Justice Marshall says:

What, then, is the extent of a power to regulate commerce with foreign nations and among the several States?

This question was considered in the case of *Gibbons vs. Ogden*, 9 Wheat. Rep., in which it was declared to be complete in itself, and to acknowledge no limitations other than are prescribed by the Constitution. The power is coextensive with the subject on which it acts and cannot be stopped at the external boundary of a State, but must enter its interior.

In the case of *The City of New York vs. Miln*, 11 Peters, 102-157, Mr. Justice Story says:

It has been argued that the power of Congress to regulate commerce is not exclusive but concurrent with that of the States. If this were a new question in this court, wholly untouched by doctrine or decision, I should not hesitate to go into a full examination of all the grounds upon which concurrent authority is attempted to be maintained. But in point of fact the whole argument on this very question, as presented by the learned counsel on the present occasion, was presented by the learned counsel who argued the case of *Gibbons vs. Ogden*, 9 Wheaton's R., 1; and it was then deliberately examined and deemed inadmissible by the court. Mr. Chief-Justice Marshall, with his accustomed accuracy and fullness of illustration, reviewed at that time the whole grounds of the controversy; and from that time to the present the question has been considered, as far as I know, to be at rest. The power given to Congress to regulate commerce with foreign nations and among the States has been deemed exclusive from the nature and objects of the power and the necessary implications growing out of its exercise. Full power to regulate a particular subject implies the whole power and leaves no residuum; and a grant of the whole to one is incompatible with a grant to another of a part.

In the case of *Grover vs. Slaughter*, 15 Peters, 449-511, Mr. Justice Baldwin says:

That the power of Congress "to regulate commerce among the States" is exclusive of any interference by the States has been, in my opinion, conclusively settled by the solemn opinions of this court in *Gibbons vs. Ogden*, 9 Wheat., 186, 222, and in *Brown vs. Maryland*, 12 Wheat., 438, 446. If these decisions are not to be taken as the established construction of this clause of the Constitution, I know of none which are not yet open to doubt; nor can there be any adjudications of this court which must be considered as authoritative upon any question, if these are not to be so on this.

In the case of *Corfield vs. Coryell*, 4 Washington Cir. C. R., 344, 378, as early as 1823, Mr. Justice Washington says:

Commerce with foreign nations, and among the several States, can mean nothing more than intercourse with those nations, and among those States, for the purposes of trade, be the object of the trade what it may; and this intercourse must include all the means by which it can be carried on, whether by the free navigation of the waters of the several States, or by a passage overland through the States, where such passage becomes necessary to the commercial intercourse between the States. It is this intercourse which Congress is invested with the power of regulating, and with which no State has a right to interfere.

Again, in the great case of *Gibbons vs. Ogden*, 9 Wheaton, 1, 229, Chief-Justice Marshall, in 1824, says:

Commerce, in its amplest signification, means an exchange of goods; but in the advancement of society, labor, transportation, intelligence, care, and various mediums of exchange become commodities and enter into commerce; the subject, the vehicle, the agent, and their various operations become the objects of commercial regulations. Ship-building, the carrying trade, and propagation of seamen are such vital agents of commercial prosperity that the nation which could not legislate over these subjects would not possess power to regulate commerce. That such was the understanding of the framers of the Constitution is conspicuous from provisions contained in that instrument.

These cases and very many others which might be cited show conclusively that Congress has power, and the sole and exclusive power, to pass laws providing for equality in rates of freight to be paid by different owners of property to be carried by railroads or other common carriers in commerce between different States or with foreign nations; and to provide that such different owners shall have equal advantages and facilities as to the carriage of such property. And this is what it is proposed to do by this bill.

In the case of *Welton vs. the State of Missouri*, 1 Otto, 275-280, the question arose as to the right of the State of Missouri to impose a license tax upon persons selling property not the produce of that State when no such license was required from persons selling similar property the produce of the State. Mr. Justice Field, in pronouncing the opinion of the court, holding that to impose such a tax was in conflict with the power vested in Congress to regulate commerce, &c., says:

Commerce is a term of the largest import. It comprehends intercourse for the purpose of trade in any and all its forms, including the transportation, purchase, sale, and exchange of commodities between the citizens of one country and the citizens or subjects of other countries, and between citizens of different States. The power to regulate it embraces all the instruments by which such commerce may be conducted. So far as some of these instruments are concerned, and some subjects which are local in their operations, it has been held that the States may provide regulations until Congress acts with reference to them; but when the subject to which the power applies is national in its character, or of such a nature as to admit of regulation, the power is exclusive of all State authority.

It will not be denied that that portion of commerce with foreign countries and between the States which consists in transportation and exchange of commodities is of national importance, and admits and requires uniformity of regulation. The very object of investing this power in the General Government was to insure this uniformity against discriminating State legislation.

In the case of *The State Freight Tax*, 15 Wallace, 232, 275, the Supreme Court of the United States held as follows:

The transportation of freight or of the subjects of commerce is a constituent part of commerce itself. A tax upon freight transported from State to State is a regulation of commerce among the States.

Whenever subjects, in regard to which a power to regulate commerce is asserted, are in their nature national, or admit of one uniform system or plan of regulation, they are exclusively within the regulating control of Congress.

Transportation of passengers or merchandise through a State or from one State to another is of this nature.

Hence a statute of a State imposing a tax upon freight taken up within a State and carried out of it, or taken up without the State and brought within it, is repugnant to that provision of the Constitution of the United States which ordains that Congress shall have power to regulate commerce with foreign nations and among the several States and with the Indian tribes.

The question arose in respect to the power to thus tax railroad companies as well as other parties, and the decision is applicable, therefore, to the question of the means of transportation as well as to the question of general power. Mr. Justice Strong, in pronouncing the opinion of the court, says:

Beyond all question the transportation of freight or of the subjects of commerce for the purpose of exchange or sale is a constituent of commerce itself. This has never been doubted, and probably the transportation of articles of trade from one State to another was the prominent idea in the minds of the framers of the Constitution when to Congress was committed the power to regulate commerce among the several States. A power to prevent embarrassing restrictions by any State was the thing desired. The power was given by the same words and in the same clause by which was conferred power to regulate commerce with foreign nations. It would be absurd to suppose that the transmission of the subjects of trade from the State to the buyer or from the place of production to the market was not contemplated, for without that there could be no consummated trade, either with foreign nations or among States. In his work on the Constitution, Judge Story asserts that the sense in which the word "commerce" is used in that instrument includes not only traffic, but intercourse and navigation. And in the *Passenger Cases* it was said: "Commerce consists in selling the superfluity in purchasing articles of necessity, as well productions as manufactures, in buying from one nation and selling to another, or in transporting the merchandise from the seller to the buyer, to gain the freight." Nor does it make any difference whether this interchange of commodities is by land or water. In either case the bringing of the goods from the seller to the buyer is commerce. Among the States it must have been principally by land when the Constitution was adopted.

And see *Erie Railway Company vs. Pennsylvania*, 15 Wallace, 282, holding the same doctrine and reversing the cases of *The Commonwealth vs. The Erie Railway Company*, and other cases, 62 Pa., 280.

In the *Granger cases* (*Munn vs. Illinois*, 4 Otto, 113; *Chicago, Burlington and Quincy Railroad vs. Iowa*, 4 Otto, 155; *Peik vs. Chicago, &c., Railroad Company*, 4 Otto, 179; *Winona and Saint Peter Railway Company vs. Blake*, 4 Otto, 180) the nature and exclusiveness of the power of Congress to legislate as to the rates of freight in interstate commerce is especially recognized and virtually established. The fundamental doctrine of the cases proceeds upon the idea that when the means by which freight or charges are earned are public in their nature it is within the power of the Legislature having control over the subject to regulate and fix the rates of such freight and charges. Some of the subjects in those cases were under the legislative power of a single State. As it is above most clearly established, interstate commerce, its means, the property carried in it, and all things relating to it, are in all the aspects here considered under the supreme and exclusive power of Congress. If rates of freight and charges can be fixed by State Legislatures with respect to subjects under their power, *a fortiori* can they be regulated and made equal by the supreme and exclusive power of Congress as to subjects in this respect within its exclusive control. Indeed, this is directly recognized in the cases last referred to, and (as will be seen below) it is put beyond doubt that should Congress act in regulation of rates of freight, &c., in interstate commerce it would unquestionably have power to do so, and its power would be supreme and exclusive.

These cases settle these points, among others:

1. That "railroad companies are carriers for hire;" that "they are engaged in a public employment affecting the public interest," and that "they are subject to legislative control as to their rates of fare and freight."

2. That where warehouses or railroads are used in an employment affecting public interests, as to business "carried on exclusively within a State, she may, as a matter of domestic concern, prescribe regulations for them," notwithstanding such property is "used as an instrument by those engaged in interstate as well as State commerce; and until Congress acts in reference to their interstate relations, such regulations can be enforced, even though they may indirectly operate upon commerce beyond her immediate jurisdiction." But "the court does not hold that a case may not arise in which it may be found that a State has, under the form of regulating her own affairs, encroached upon the exclusive domain of Congress in respect to interstate commerce."

And, as has been said, the cases recognize the whole subject as one properly of legislative regulation, and, so far as relates to interstate commerce, as under the supreme and exclusive power of Congress whenever Congress shall choose to exercise its undoubted power.

And see *Sheerlock vs. Alling*, 3 Otto, 99.

Nor is there any doubt as to the power of Congress to exercise this power over railroads and their interstate commerce, of which they form a means, whether the property be wholly or partly carried by one railroad.

1. This must appear from the cases last cited and under the general principles above referred to. But it directly and more conclusively, if possible, appears from the authorities about to be cited.

2. The power extends to railroads and the property carried upon them in interstate commerce whether the property be carried in more than one State by one railroad or only in one State by one railroad if the part of the carriage be a part of one continuous interstate carriage. That the power extends to one, and any such means of carriage, part of a continuous line of carriage, is expressly recognized in the *Granger* cases above referred to.

See especially *Chicago, Burlington and Quincy Railroad vs. Iowa*, 4 Otto, 155.

This is expressly held (to cite it again) in the case of *The State Freight Tax*, 15 Wallace, 232, 273. This is an attempt, as the court held, to tax the freight—the interstate business, in substance—and the law provided for such taxation where the property was carried by different but continuous lines. The continuity of the carriage, the substance of the carriage as being in interstate commerce, and the act of the carrier as being wholly or part of such interstate carriage, were held by the court (see page 273 of the report) to be the substantial features which took the subject from without and placed it beyond State action, placed it under the supreme and exclusive power of Congress.

In the *Daniel Ball* (10 Wallace, 557) the question arose as to the character of the *Grand River* in Michigan, and whether a steamboat employed solely on that river was in certain aspects under the control of Congress. The case involved the precise question as to the character of a carriage performed within one State, and by one means, but part of a continuous carriage. The court held as follows:

The steamer in this case being employed in transporting goods on *Grand River*, within the State of Michigan, destined for other States, and goods brought from without the limits of Michigan and destined to places within that State, was engaged in commerce between the States, and, however limited that commerce, was so far as it went subject to the legislation of Congress. She was employed as an instrument of that commerce; for whenever a commodity has begun to move as an article of trade from one State to another, commerce in that commodity between the States has commenced. The fact that several different and independent agencies are employed in transporting the commodity, some acting entirely within one State and some acting through two or more States, does not affect the character of the transaction. To the extent to which each agency acts in that transportation it is subject to the regulation of Congress.

And see the *Montello*, 11 Wallace, 411; *The General Cass*, 1 Brown's Ad. R., 334.

That the power extends to railroads is beyond question under express decision. In *Railroad Company vs. Richmond*, 19 Wallace, 584, the question was as to the effect of two certain acts of Congress, one authorizing railroad companies to receive compensation for certain property carried from one State to another, to connect with other roads so as to form continuous lines, &c., and one to maintain a bridge over the Mississippi, and lay tracks over such bridge. The question was as to the effect of these laws upon a private contract between a railroad company and an individual. The acts were regarded as valid under the power of Congress to regulate commerce.

Mr. Justice Field, in delivering the opinion of the court, says:

These acts were passed under the power vested in Congress to regulate commerce among the several States, and were designed to remove trammels upon transportation between the different States which had previously existed, and to prevent the creation of such trammels in future, and to facilitate railway transportation by authorizing the construction of bridges over the navigable waters of the Mississippi. But they were intended to reach trammels interposed by State enactments or by existing laws of Congress. The power to regulate commerce among the several States was vested in Congress in order to secure equality and freedom in commercial intercourse against discriminating State legislation.

The more direct and stronger case, for it will be observed of course that the case last cited, as well as others before cited, relates to the power of Congress over railroads, is the case of *The Clinton Bridge*, 10 Wallace, 454. The case arose in the circuit court of the United

States for the district of Iowa, *Gray vs. The Clinton Bridge*, 1 Woolworth, 150, S. C., 16 Am. L. Reg., 149.

The questions were with respect to an act of Congress of February 17, 1867, as to a bridge erected by a railroad company across the Mississippi River at Clinton, in the State of Iowa. In commenting upon the act Mr. Justice Miller, of the Supreme Court of the United States, in deciding the case, says:

The second of these objections involves consideration of the commercial clause, as it is appropriately called, of the Constitution.

If the determination of the circumstances under which a bridge may be built over a navigable stream or the prescribing general rules on that subject is a regulation of commerce, either with foreign nations or among the States, then it falls within the powers conferred on Congress by that clause.

It would be sufficient in this court to say that we are concluded on this question by the decision of the Supreme Court in that branch of the *Wheeling Bridge* case, already referred to in *Howard*, which expressly holds that the power to declare such a bridge a lawful structure is included within the clause of the Constitution above cited. That case was, however, decided by a court equally divided, and its authority has been much questioned.

I think, however, that the proposition is well founded in principle. The power to regulate commerce is one of the most useful of all those confided to the Federal Government, and its exercise has done as much to create and to foster that community of interests which constitutes the strongest bond of nationality as the exercise of any power belonging to the General Government. The want of this power was one of the strongest necessities which led to the formation of the Constitution. The clause has always received at the hands of the courts and of Congress a construction tending liberally to promote its beneficent object.

The power to regulate commerce is a power to regulate the instruments of commerce. In the case of *Cooly vs. the Board of Wardens*, 12 Howard, 316, the court says that "the power to regulate navigation is the power to prescribe rules in conformity with which navigation must be carried on. It extends to the persons who conduct it as well as to the instruments used." Navigation is here spoken of as one of the subjects of legislation included within the power to regulate commerce. In this view of the subject Congress has passed statutes regulating steamboats, their construction, equipment, officers, and crew, prescribing qualifications of pilots and engineers, limiting the number of passengers they may carry, and laying down the signals they shall use in passing each other; and, in short, has prescribed a minute code for building and navigating those vessels. The right to do this depends wholly upon the power vested in Congress to regulate commerce, and has never been disputed.

Navigation, however, is only one of the elements of commerce. It is an element of commerce because it affords the means of transporting passengers and merchandise, the interchange of which is commerce itself. Any other mode of effecting this would be as much an element of commerce as navigation. When this transportation or interchange of commodities is carried on by land it is commerce as well as when carried on by water; and the power of Congress to regulate it is as ample in one case as in the other. The "commerce among States" spoken of in the Constitution must at the time that instrument was adopted have been mainly of this character, for the steamboat which has created our great internal commerce on the rivers was then unknown.

Another means of transportation equal in importance to the steamboat has also come into existence since the Constitution was adopted, a means by which merchandise is transported across States and kingdoms in the same vehicle in which it started. The railroad now shares with the steamboat the majority of the carrying trade. The one has with benefit been subjected to the control of salutary Congressional legislation, because it is an instrument of commerce. Is there any reason why the other should not? However this question may be answered in regard to that commerce which is conducted wholly within the limits of a State, and is, therefore, neither foreign commerce nor commerce among the States, it seems to me that when these roads become parts of great highways of our Union, transporting a commerce which embraces many States and destined, as some of these roads are, to become the channels through which the nations of Europe and Asia shall interchange their commodities, both with foreign nations and among the States; and that to refuse to do this is a refusal to discharge one of the most important duties of the Federal Government. As already intimated, the shackles with which the different States fettered commerce in their selfish efforts to benefit themselves at the expense of their confederates was one of the main causes which led to the formation of our present Constitution. The wonderful growth of that commerce since it has been placed exclusively under the control of the Federal Government has justified the wisdom of our fathers. But are we to remit the most valuable part of that commerce again to the control of the States and to all the consequent vexations and burdens which the States may impose through whose territories it must be carried on? And must all this be permitted because the carrying is done by a method not thought of when the Constitution was framed?

For myself, I must say that I have no doubt of the right of Congress to prescribe all needful and proper regulations for the conduct of this immense traffic over any railroad which has voluntarily become part of one of those lines of interstate communication, or to authorize the creation of such roads, when the purposes of interstate transportation of persons and property justify or require it.

Upon the appeal of this case to the Supreme Court of the United States the decision of the circuit court was affirmed, (*The Clinton Bridge*, 10 Wall., 454-462;) and Mr. Justice Nelson, in delivering the opinion of the Supreme Court, says:

The act of Congress in the case of the *Wheeling bridge*, whose language it is sought to distinguish from that used in the present one, was more explicit but not more comprehensive. In the *Wheeling bridge* case the court had rendered a decree directing the obstruction to be removed by elevating the bridge, or, if not, by abatement. No doubt the existence of this decree, which was in the process of execution, led to the very specific terms of the act. But with all its particularity, it is not more comprehensive or decisive in legalizing the bridges than the one before us.

The question whether or not it was not competent for Congress to interfere and legalize the bridge under the power to regulate commerce, and whether or not the act put an end to the pending suit, were questions examined and settled in the affirmative in the case already referred to. The reasons for the conclusions arrived at will be there found, and need not be repeated.

In the late case of the *Hannibal and Saint Joseph Railroad Company vs. Husen* (*Chicago Legal News*, February 2, 1878,) the subject has been again under consideration in the Supreme Court of the United States. The question was as to the power of a State to pass a law prohibiting the driving of cattle into the State of Missouri in certain months of the year, and it arose in the particular case with respect to the applicability to the statute of railroads. Mr. Justice Strong, in pronouncing the opinion of the court, says:

It is a plain regulation of interstate commerce; a regulation extending to prohibition. Whatever may be the power of a State over commerce that is completely internal, it can no more prohibit or regulate that which is interstate than

it can that which is with foreign nations. Power over one is given by the Constitution of the United States to Congress in the same words in which it is given over the other, and is necessarily exclusive. That the transportation of property from one State to another is a branch of interstate commerce is undeniable. The Missouri statute is a plain interference with such transportation. But even the right of steamboat owners and railroad companies to transport such property through the State is loaded by the law with onerous liabilities because of their agency in the transportation. Transportation is essential to commerce, or rather it is commerce itself, and every obstacle to it or burden laid upon it by legislative authority is regulation.

And the court holds that the statute is a "plain intrusion upon the exclusive domain of Congress," but, of course, recognizes as unquestionable the power of Congress, its exclusive and supreme power, to pass such laws—all laws which are "regulations" under the broad definition it gives the word—a definition broad enough to include the whole subject in its every detail—relating to railroads and all means of transportation used in interstate or foreign commerce.

And see *Hall vs. De Cuir* (Chicago Legal News, February 2, 1878) for another very late decision of the Supreme Court of the United States bearing on the whole subject. And see cases cited above.

It therefore must be regarded as decided beyond possibility of doubt that Congress has power to regulate interstate commerce when carried on wholly or partly by one railroad or more, or by one railroad with any other method of carriage, and to regulate it by providing for equality of freights and in other charges; that as to this subject its power is as supreme and exclusive as it is as to many other subjects over which its powers are supreme and exclusive, which it would serve no practical purpose and would require much space here fully to enumerate.

Congress has power to pass such penal laws and to provide for such judicial action or proceedings in the Federal courts as to compel obedience to the powers it constitutionally exercises and to afford remedy to those injured by the infraction of laws so passed. This is beyond question, nor would authority be cited to sustain it were it not that in *United States vs. Coombs*, 12 Peters, 72-78, Mr. Justice Story, in delivering the opinion of the court, employs language which not only determines the precise point in view, but covers the whole subject:

The power to regulate commerce includes the power to regulate navigation as connected with the commerce with foreign nations and among the States. It was so held and decided by this court, after the most deliberate consideration, in the case of *Gibbons vs. Ogden*, (9 Wheat., 189-198.) It does not stop at the mere boundary line of a State; nor is it confined to acts done on the water, or in the necessary course of the navigation thereof. It extends to such acts done on land which interfere with, obstruct, or prevent the due exercise of the power to regulate commerce and navigation with foreign nations and among the States. Any offense which thus interferes with, obstructs, or prevents such commerce and navigation, though done on land, may be punished by Congress under its general authority to make all laws necessary and proper to execute their delegated constitutional powers.

It remains but to say, as can be said with that strength which belongs to propositions based upon constitutional power, in reason, in principle, and under the reiterated decisions of the Supreme Court of the United States, (for it will be observed that almost every authority above cited is the direct decision of that court,) that it is established with such certainty that to attempt its question would be but the puerility of cavil, that Congress has supreme and exclusive power, a power broad as the subject, and therefore necessarily over all its details, to pass all laws which in its wisdom it may see fit to pass providing for equality of rates of freight upon property carried wholly or partly by railroad in interstate or foreign commerce, and to provide for equality in charges for services performed in or about such commerce; to provide such punishment, such remedies, for infraction of such laws as it may see fit to provide; and for such action and proceedings in the Federal courts as may secure obedience to its power and that justice may be done to the parties engaged in the commerce thus sought to be regulated.

And quoting my language on the former occasion I must say:

In conclusion I have to say that the interests to be affected by this bill are very important and all-pervading; that the power of Congress to pass it cannot be successfully questioned; that the public opinion of the country, that both public opinion and the best interests of the country appeal to Congress to perform the great public duty of passing such a law as will protect the interests of the people, as proposed by my bill, and at the same time impose no unnecessary burdens and place no embarrassing restrictions on the railroads and other transportation companies.

A law providing for the legal enforcement of this bill would save many millions of money annually to the people, while nothing could more demoralize or more debauch the merchants and shippers of the country than for them to feel that they are constantly subject to the arbitrary caprices and will and interests of the railroad and other transportation companies for the terms upon which they may carry on their business. And surely the time has at last come when such vast interests should be taken from the domain of arbitrary power and the exactions of monopolies and placed under the protection of just and wholesome legal regulations.

To what I then said I now add:

Mr. Chief-Justice Waite, in delivering the opinion of the court in *Thomas against The Railroad Company*, in the year 1879, (11 Otto, pages 83-84,) said:

That the franchises and powers of a railroad company are in a large measure designed to be exercised for the public good, and this exercise of them is the consideration for granting them.

In the case of the *Chicago, Burlington and Quincy Railroad Company against Iowa*, in 4 Otto, page 161, decided in 1876, Mr. Chief-Justice Waite, in delivering the opinion of the court, said:

Railroad companies are carriers for hire. They are incorporated as such, and given extraordinary powers, in order that they may the better serve the public in

that capacity. They are therefore engaged in an employment affecting the public interest, under the decision in *Munn vs. Illinois* subject to legislative control as to their rates of fare and freight, unless protected by their charters.

In the case of *Munn vs. Illinois*, in 4 Otto, page 130, decided in 1876, Mr. Chief-Justice Waite, in delivering the opinion of the court, said:

Common carriers exercise a sort of public office, and have duties to perform in which the public is interested. Their business is therefore "affected with a public interest," within the meaning of the doctrine which Lord Hall so forcibly stated.

This opinion of Lord Hall is stated on page 127 of that case.

I submit to you that the virtual denial of the authority of these cases, which has been so often made by the railroad men and their attorneys before you, and for the purpose of influencing your judgments as members of this committee and of Congress, shows one of two things: either that they are ignorant of the law and utterly reckless in their statements before you, or else that they have been offensively presumptuous in assuming that you are ignorant of the law on this subject.

Before I dismiss this branch of the case I must call your attention to an extract taken from the argument made before you on the 21st day of this month, on this subject, by Hon. Wayne MacVeagh. It is as follows:

So the clause giving Congress power to regulate commerce among the States and with foreign nations has heretofore been understood to mean that Congress possessed the exclusive authority to see that no State discriminated in favor of commerce originating within its own borders as against commerce originating outside of them; but now it is gravely argued that that clause, when literally read, authorizes you to regulate every possible relation which may hereafter arise between shippers and transporters, between a corporation chartered by one State as a common carrier, and a citizen in another State who desires to avail himself of its services. There has been no decision which has yet given judicial sanction to any such construction. The step you are now asked to take is a step a long way in advance of any yet taken; for you are asked to assume that this provision of the Constitution authorizes you to control the dealings between a corporation of Pennsylvania, organized as a common carrier under the laws of that State, and a citizen of Illinois who desires to secure its services within the limits of the State of Pennsylvania; that the language I have quoted endows you with full power and authority to prescribe upon what terms, as well as in what manner, to the minutest details, the citizen of my State shall perform the services which the citizen of another State demands from it.

And this is said by a lawyer of sufficiently national reputation to have been recently appointed Attorney-General of the United States. It is said by that learned lawyer, in the face of all the decided cases I have just read and referred to, and of many others, American and English, doubtless known to him and not referred to by me for want of time. It is said by him, after he had assured us in his opening remarks that, while he appeared before us on behalf of the Pennsylvania Railroad Company, nobody was responsible for the views he expressed but himself; that while he believed his views were in entire accord with those of the president and board of directors of that company, upon a question of this character the opinions he entertained were necessarily his own convictions and the result of his own consideration of the subject. This language must, I suppose, have been employed because he supposed we would have more confidence in the opinions of citizen and lawyer MacVeagh than we might have in those of the railroad attorney MacVeagh. I submit with great deference that there is no special reason for either of the MacVeaghs to be specially proud of the legal opinion which is above given, and which he may have expressed in the one or the other of these characters. And I submit to you further that in the cases I have referred to each of the five positions I have enumerated as having been taken by the railroad men and their lawyers, as well as the opinion of Mr. MacVeagh, are fully negatived. And I am obliged to say that Mr. MacVeagh's construction of the clause of the Constitution which provides that Congress shall have power to regulate commerce among the States is extraordinary. His construction would render it necessary to recast the language of the Constitution on this subject, and make it read that Congress shall have power to prevent or prohibit the States from engaging in legislation hostile to the commerce of each other. His construction would be a prohibition on the power of the States, instead of a grant of power to the United States.

After thus exposing such an opinion as that furnished you for your instruction and government, by one of such high character as Mr. MacVeagh, will it be thought necessary for me to go further and expose the weakness and the wickedness of the opinions on this subject of the many others who have appeared before you, representing the interests of the railroads, to instruct you as to your duties as representatives of the people, and to earn by so doing large fees or high salaries, to be paid them by these companies, out of money unjustly and mercilessly extorted from your constituents and from mine?

I now invite you to an examination of the provisions of what is called the Reagan bill. And here I wish to do an act of justice to two other men. If any credit is due for the provisions of this bill, and for the labor of preparing it, that credit is as much due to a lawyer of Buffalo, New York, whose name I do not now recall, and to the young and distinguished Representative from West Virginia, Hon. JOHN E. KENNA, as to myself.

DISCRIMINATIONS.

The first section of this bill defines interstate commerce—commerce among the States—to be such as is carried from one State or Territory to or through one or more other States or Territories of the United States, or to or from some foreign country.

It provides against all discriminations in freight rates and charges between persons, requiring like services to be rendered to all persons for like compensation. When it is remembered that these corporations have complete monopolies in the carriage of freights over their respective lines of road; that they are indebted to the State and to the general public for the right of eminent domain which enables them to secure their rights of way, to have a corporate existence, and to transact their business and make charges for their services; when it is remembered, as stated by the Chief-Justice in *Thomas vs. Railroad Company*, referred to further back, "that the functions and powers of a railroad company are in a large measure designed to be exercised for the public good, and this exercise of them is the consideration for granting them;" when it is remembered that, as stated by the Chief-Justice, in case of the *Chicago, Burlington and Quincy Railroad Company vs. Iowa*, "railroad companies are carriers for hire;" that "they are incorporated as such, and given extraordinary powers in order that they may the better serve the public in that capacity;" and that "they are therefore engaged in an employment affecting the public interest," and "subject to legislative control as to their rates of fare and freight;" and when it is remembered that, as said in the case of *Munn vs. Illinois*, "common carriers exercise a sort of public office, and have duties to perform in which the public is interested; their business is therefore 'affected' with a public interest;" is it not reasonable, just, and necessary that we should compel them to do that business on just and equal terms to all persons for whom they perform like and contemporaneous service? Is it not just, reasonable, and necessary that we should prevent them from pursuing a course by which they may benefit one person or set of persons at the expense and to the injury of another person or set of persons? Is it not just, reasonable, and necessary that we should compel them by law to execute the public trust connected with their business in a manner fair and equitable alike to all?

Now, the railroad lawyers and railroad managers who have so long occupied your attention, and who have been so earnest and zealous in advising you what your duties are to your constituents and to the public on this subject, commiserating the ignorance of members of Congress on the subject of the management of railroad transportation, and with a superabundance of verbiage, tell us that this feature of this bill is not right; and that it is right that they should have and exercise the power of making discriminations in the rates and charges prohibited by this bill; that it would embarrass their management to prohibit them from doing so; and that they benefit the public by making these discriminations judiciously. Does any one of you conscientiously believe there is one word of truth, reason, or justice in their statements and pretenses on this subject? Can any sane man be made to believe that wrong is right; that injustice is just; that there is no moral law; no such thing as reason and fairness? Can anything be plainer than that this provision of this bill is absolutely right, just, and necessary? And yet how many hours of your valuable time have these gentlemen representing the railroads spent in trying to prove to you that this feature of this bill is wrong; that our ignorance of the mysteries of railroad management is so great that we must not risk being just and honest and doing right? Why, my friends, shall we invoke the technical knowledge of a railroad expert to enable us to feel that we have consciences, and can afford to announce and sustain a principle which is incontrovertibly just, and which is made necessary by the vast interests involved? The qualifications requisite to deal with this question are an honest conscience and a purpose to do right.

REBATES.

Next, this bill prohibits the allowance of rebates and drawbacks in all cases. The allowance of rebates and drawbacks, or the making of what is sometimes called cut-rates, are but other modes of discriminating in rates and charges between shippers. The argument just made in favor of the provision which prohibits discriminations apply with equal force to this provision of the bill. The allowance of rebates is not only a mode of discriminating between shippers, but it is a secret mode of discriminating, and is practiced as a general thing to deceive and cheat persons not parties to it.

The gentlemen discussing this subject before you for the railroads say that there are two classes of drawbacks—the one legitimate and defensible; the other secret, dishonest, and indefensible. They also say that the legitimate drawbacks are in some cases promotive of competition, and they attempt to specify the cases in which it is so. I do not believe it can be fairly shown that rebates will in any case be more efficient as a means of competition than a uniform low schedule of freights, and certainly it is not as fair a way of dealing with individuals and with the public as well understood and uniform rates, made as low as the rates reduced by the rebates. This, I think, may be easily shown in any case which can be stated.

One of the difficulties with the railroad men in the consideration of this bill is, that they resort in all their reasoning and illustrations to their present methods of management, and not to the methods pointed out by the bill itself. They now have their dishonest, gambling methods of discriminations, rebates, cutting of rates, disregard of their schedule rates, having little or no regard for the length of haul or value of the services they render, charging what the particular commodity will bear, instead of what their services are worth; pooling of freights to destroy competition; the forming of sub-corporations and rings by railroad officials and their confidential friends

to secure the profits of particular branches of trade or business; and thus swindling their stockholders while they are robbing the public by means of these discriminations, rebates, pooling, &c. They try to test this bill by their methods. They find it impossible to continue them under it. They charge this as a fault in the bill, and they argue to convince you that because these bad methods cannot be reconciled with the bill, that it, and not their methods, is wrong. To be fair and logical, they should test the bill by its own methods. Then they should contrast their own methods, arbitrarily adopted and governed by no law, with the methods which must be observed under this bill, if it is permitted to become a law. This is the conspicuous vice in their argument on all the main points in this bill; that is, as to discriminations, as to rebates, as to pooling, as to charging more for short than for long distances, and as to schedules. I ask you to determine the merits of this bill by its own provisions, and by the methods its adoption will require. I am strengthened and sustained in these views by the general concurrence in these opinions of substantially the entire public, excepting railroad men themselves, and also by the fact that many, very many, of the States of the Union have, by their constitutions or laws, or both, condemned and prohibited the allowance of rebates, the making of discriminations between shippers, the pooling of freights, and the charging of more for a shorter than for a longer haul. I shall illustrate this much more fully further on by giving you an abstract of the provisions of various State constitutions on these and other points.

POOLING.

I believe all the attorneys and officers of the railroad corporations who have appeared before you during this or previous Congresses to discuss the measure we are now considering have objected to the feature of my bill which proposes to prohibit the pooling of freights by competing railroads. And they all insist that to make this provision law would cripple railroad management, deprive the people of the benefits of competition, and increase the cost of through freights between the East and the West. We will inquire further on whether this can be so.

My objections to the pooling of freights are that—

First. It destroys competition in freight rates and charges.

Second. That it makes one great monopoly out of several smaller ones.

Third. That it secures to the pooling roads the power to levy any exactions on the commerce they carry which their cupidity may demand.

Fourth. That it enables them to make their roads the means of oppression and wrong to the people to whom they are indebted for their franchises instead of a benefit and blessing.

Fifth. That such a power never has been and never can be safely surrendered by a free people to a few men who deny their responsibility to the public.

I ask you if these objections do not embody that number of axiomatic truths?

In the history of railroad construction and management it has always been a received and accepted fact that they were and are monopolies. The question has always been one of interest how the public was to be protected against their monopoly features. There have always been thought to be three remedies at least.

First. The competition of the water-ways and other means of competing transportation.

Second. An expected increase in the number of railroads and the competition which that increase would afford.

Third. The power of the political authority to regulate and control their rates of charges for the protection of the public.

Now if we do not prohibit them from pooling we certainly deny ourselves the second remedy against the evils of monopolies; and when we look at the extent and character of our country, and to the speed and value of the means of transportation, we shall find the second to be the most valuable and important check on their monopoly powers. Are you prepared to advise the people to surrender it, and to place themselves to that extent at the mercy of the pooling railroads?

Instead of the bill before us preventing competition, it beyond all doubt promotes and secures competition. How could this bill interfere with the just management of the railroads, and how would it increase the cost of the east and west bound freight? The same number of railroads will exist whether this bill shall or shall not become a law. The same water transportation will exist whether this bill shall or shall not become a law. The bill does not prescribe any rates of freight. The railroads may charge high or low rates after this bill shall become a law, as they do now. They may certainly, if they will, make the rates as low as they please after this bill shall become a law. And is it not manifest that as competing lines, when they can make rates high or low as they choose, they would carry the freight cheaper than they would if these lines were allowed to pool their freights, and, being freed from competition by railroads could charge any price they might please?

To this they reply that unless they are allowed to pool their freights the result will be a war among the roads, with the ultimate wreck of some, and the survival of the strongest. That must mean that their present management rests on a species of morality which makes it necessary for them to war on and destroy each other or to combine and rob the people. This being the case, if somebody must be ruined

or robbed, would it not be better that 50,000 railroad men should rob each other, in the ways most agreeable to themselves, than that the 50,000,000 people of this country should deliberately consent to be robbed by the railroad men.

The present methods of business and management by our railroad experts is a failure, and they know it. It is a failure because based on wrong principles and on worse practices. It is a failure because they disregard ordinary business principles and the rules of common fairness and common honesty. While most of them deny the constitutional power of Congress to legislate respecting transportation by the railroads so as to protect the people against their injustice and rapacity, they have the bold audacity to ask that Congress so legislate as to sanction their pooling arrangements. If Congress cannot do the one surely it cannot do the other.

The great trunk railroads employed Mr. Albert Fink to aid them to arrange the terms of a pool and rates between themselves so as to avoid their railroad wars. And in order to make this arrangement effective, and to guard against the contingency of a refusal of either to abide by his determinations, they employed Mr. Charles Francis Adams, jr., Mr. David A. Wells, and General Wright to act as a sort of board of appeal, doubtless on the supposition that it was possible for them to bind themselves to act fairly and in good faith with each other. But when the time came to test their fidelity to their voluntary engagements with each other by the measure of their avarice they threw their engagements and their expert commissioners alike and at once to the winds, and plunged the vast commerce which they carried into all the evils, injuries, and uncertainties of a railroad war, which lasted six or eight months, and was only brought to an end last month. Why should they ask the public to pass no law to control them, and then ask it to trust them with the unlimited control of such vast interests when they cannot and do not trust one another, and when the best methods of management they have been able to adopt lead only to contention and disaster?

But they claim the privilege of charging rates so low as to be unremunerative to and from distant points as an aid to their business. Upon what principle of justice can or ought this to be done? Taking business at less rates than will pay for its transportation is almost universally taking business which does not belong to the road so taking it. It is taken to prevent some other, perhaps more legitimate carrier from getting it. This disturbs and confuses legitimate business. It leads to underbidding and ends in wars of rates. And while it goes on, the way-shippers—that is, those at intermediate points on the road—have to pay more than equitable prices for the carrying of their freight, in order to make up the losses of the road from carrying through freights for less than compensating rates. This is unjust and unlawful. It leads of necessity to strife and to the injury of both the railroads and the public and ought not to be tolerated.

I will repeat here some arguments made by me on a former occasion on this subject.

COMPETITION.

There is one other subject to which I will refer, but do not now propose to argue as fully as I may do on some subsequent occasion. It is urged by two at least of the ablest representatives of the railroad interests, Mr. Adams and Mr. Fink, that the idea of competition must be eliminated from the railroad problem before it can be satisfactorily and properly adjusted. They advocate, as I understand them, a sort of universal pool, one of them calling it a "federation," and the other a "combination." But both think the more general it shall be made the better.

I look on this as the most dangerous theory which has been advanced in connection with the discussion of the railroad problem. I can see how such a plan might work to the convenience and advantage of the railroads; but there are at the same time the strongest reasons to believe it would be the very perfection of monopoly power and that the destruction of competition would operate altogether against the interests of the people in a commercial sense, while it would place in the hands of a very few men the control of so large properties and so many men and give them such power as to enable them to defy any effort of the political authority to control them in the interests of the people. Think of \$5,000,000,000 in railroad property and a quarter of a million of intelligent, active, energetic men in vigorous manhood, with the control of the shipment of our internal commerce, being in the hands of a few persons. They could regulate prices, control the markets of all our products, and enrich themselves to any extent, while they could by this process impoverish and degrade and break the spirit, dwarf the manhood, and destroy the independence and self-reliance of our people.

I doubt if this grand and dangerous scheme is practicable. It is to be hoped that if attempted it will fall of its own weight; but it should be watched, resisted, and defeated. On this point I quote the following from Mr. Adams's book on Railroads, their Origin and Problem, recently published:

Contrary to the general and popular conviction and increasing number of those who have given most thought to the subject, whether as railroad officers or simply from the general economical and political points of view, are disposed to conclude that, so far from being necessarily against public policy, a properly regulated combination of railroad companies, for the avowed purpose of controlling competition, might prove a most useful public agency. These persons contend that railroad competition if it has not already done its work will have done it at a time now by no means remote. An enormous developing force during the period of construc-

tion, its importance will be much less in the later periods of more stable adjustment. Under these circumstances, and recognizing the fact that the period of organization is now succeeding that of construction, these persons are disposed to see in regulated combination the surest if not, indeed, the only way of reaching a system in which the advantages of railroad competition may, so far as possible, be secured, and its abuses, such as waste, discrimination, instability, and bankruptcy, gotten rid of. In conducting this traffic, they argue, each road or combination of roads is now a law unto itself. It may work in concert with other roads or combinations, or it may refuse to do so. It may make rates to one place where it may think it for its interest that business should go, and may refuse to make them to another place where it is for its interest that business should not go. All this is essentially wrong. Yet the business community of America, from one end of the country to the other, has been from the beginning so thoroughly accustomed to the extreme instabilities of railroad competition that it has wholly lost sight of what its own interest requires. What it needs is certainly a stable economy in transportation, something that can be reckoned on in all business calculations, a fixed quantity in the problem. This, of all the results the most desirable, is now looked upon with apprehension.

The major proposition contained in this passage is, that what is needed in the proper adjustment of the railroad problem "is certainty, a stable economy in railroad transportation, something that can be reckoned on in all business calculations; a fixed quantity in the problem." I assent to the justice and necessity of this.

The minor proposition is as to the means of attaining this valuable end, which Mr. Adams thinks, or supposes others to think, is to be found "in regulated combination." From this I wholly dissent. "Combination" or "federation" among the railroads might have the effect he supposes in regulating and giving steadiness to freight rates and charges as between the railroads themselves; it might prevent railroad wars, and in this way and for this purpose it would do some good.

But there is another factor, and the most important one of all in this problem, which is wholly left out; that is, the people, the shippers, the owners of the many billions of dollars of commerce which is annually shipped over these roads, and who are interested in it to the extent of 99 per cent. of its value, while the railroads at most cannot justly be interested in it more than 1 per cent. The railroads, under a "combination" or "federation," left free from the restraints of legislation, and having legitimately no more than 1 per cent. interest in this immense commerce, may control absolutely the rates of freight, may bull or bear the markets at their pleasure, may as to individuals discriminate in freights and charges as they please, allow rebates to whom they please, ruin one city and place and enrich another at their pleasure, and may levy any tax on the commerce of the country which their sweet wills may dictate or their avarice call for. They might by an order any day increase their revenues to be derived from the commerce of the country by a sum greater than is now collected for the support of the Federal Government and the payment of the interest on the public debt. It will not do to say they will not do so. The power to do so is too great to be lodged in the discretion of any men.

I may be asked, since I agree that steadiness and uniformity in freight rates and charges is the great point to be gained in the adjustment of this problem, how I propose to obtain that result. I am prepared to answer this. I would do it by the passage of the bill I have presented to the House into a law. Its provisions would—

First. Prevent all discriminations in freight rates and charges between individuals.

Second. They would prevent rebates and drawbacks in all cases.

Third. They would prevent pooling of freights.

Fourth. They would limit the power of the railroads in making discriminations between places.

Fifth. They would require the posting up of schedules of rates and charges, and would provide for the punishment of those charging more or less than schedule rates.

There could then be none of the discriminations, cutting of rates, rebates, and other irregularities which now so disgrace railroad management and do so much injury to the people. By this means they would be forced into regular and just business practices, just as in the other important branches of business of the country. They would then be compelled to determine what rates of freight and charges on the business of their several roads would pay operating expenses and a fair interest or dividend on the capital invested. The roads could then calculate with reasonable certainty what their expenses, their revenues, and their profits would be. And every citizen could calculate with reasonable certainty how much of the fruits of his labor or the profits of capital invested would belong to him after he had paid the charges for transportation.

This would, under the operation of the bill I offer, I believe furnish the true and proper solution of this great problem.

One more quotation from Mr. Adams's book is given to show to what fearful dangers the theory of "combinations," "confederation" discussed by him, may lead. He says:

Beyond and behind this, however, the railroad corporations of the United States have from the beginning enjoyed a sort of lawless independence. Corporations, like communities, accustomed to this, necessarily remain for a long time restive under any sense of control. They need constantly to feel that a policeman's eye is upon them, and that there is a station-house in the next street. No one or two great corporations have yet been developed with power sufficient to assume a coercive protectorate over the others and to compel obedience. The combination of the trunk lines and their recent action toward their connections in the West is the first approach yet made toward this result. But without the cohesive influence of some such protectorate there is in all voluntary combinations a natural tendency to anarchy. In the absence, therefore, of any compelling force to secure order and subordination, the mill of competition has got to keep on grinding for some time yet. Its work is not done. Indeed, it will not be done until, through

the process of its grinding, the great principle of the survival of the fittest is finally ground out.

This process is unlikely to prove a rapid one, for order is not easily established in any community which has been long in a state of anarchy. In such cases the demoralization becomes general; the tone of the individual deteriorates. This is what is now the matter with the railroad system of America. Lawlessness and violence among themselves, the continual effort of each member to protect itself and to secure the advantage over others, have, as they usually do, bred a general spirit of distrust, bad faith, and cunning, until railroad officials have become hardly better than a race of horse-jockeys on a large scale. There are notable individual exceptions to this statement, but taken as a whole the tone among them is indisputably low. There are none of that steady confidence in each other, that easy good faith, that *esprit du corps*, upon which alone system and order can rest. On the contrary, the leading idea in the mind of the active railroad agent is that some one is always cheating him or that he is never getting his share of something. If he enters into an agreement, his life is passed in watching the other parties to it, lest by some cunning device they keep it in form and break it in spirit. Peace is with him always a condition of semi-warfare, while honor for its own sake and good faith apart from self-interest are in a business point of view, symptoms of youth and defective education. Under such circumstances, what is there but force upon which to build? It was the absence of the element of force which caused the failure of the Saratoga association, and probably will cause the failure of those which have succeeded it. Taken as a whole, the American railroad system is in much the same condition as Mexico and Spain are politically. In each case a Caesar or a Napoleon is necessary.

When, however, the time is ripe and the man comes, the course of affairs can even now be foreshadowed; for it is always pretty much the same. Instead of the wretched condition of chronic semi-warfare which now exists, there will be one decisive struggle in which from the beginning to the end the fighting will be forced. There will be no patched-up truces made only to be broken, for the object of that struggle will be the complete ruin of some one in the shortest possible time. Then will come the combination of a few who will be sufficiently powerful to restrain the many. The result, expressed in a few words, would be a railroad federation under a protectorate. The united action of the great through lines is necessary to bring this about; and how to secure that action is now the problem. If the elder Vanderbilt were alive and in the full possession of his powers, he would probably solve the difficulty in the way most natural to him. Meanwhile, although Commodore Vanderbilt is dead, there are very significant indications that his work is going on. His vast property, in the peculiar shape in which he left it and as it is now handled, seems to be little else than an accumulated fund devoted to bringing about a consolidation of railroad interests on the largest possible scale. The New York Central is the basis upon which this superstructure rests.

This is the fatal logic of the principle of "combination," "confederation" of the railroads of the country into one management. And if these extracts and this book, written by a sober, discreet, and scholarly man, in the interest of the railroads, does not startle the country and arouse the people and their representatives to action, then, indeed, I shall fear that the lethargy which precedes death is upon them. Comment may break its terrible force. But I will suggest that the court-houses of the country should be "the station-house in the next street," where the law could be administered and where justice could be done; and that good and wholesome laws would be better for us all than "a policeman's eye." I would suggest, too, that the character of the railroad men he describes as "hardly better than a race of horse-jockeys" are not the kind that should be trusted with the vast powers necessary to control and direct the "combined" railroads of the United States.

He sees no remedy for existing evils of railroad management but force. He describes with sufficient fullness the character of force he means. It is not the force of law; it is not the force of public opinion; but it is the force, the power of one man, of a Caesar or a Napoleon or a Vanderbilt; the force of personal will wielding corporate powers unrestrained by just laws; "the few who will be sufficiently powerful to restrain the many;" "a railroad federation under a protectorate," and the people and their property securely in the grasp of power, with no hope save such as might come from the charity of just or the mercy of avarice.

DISCRIMINATION BETWEEN PLACES.

Another of the provisions of the bill before us is that no more shall be charged for a car-load of freight of the same kind for a shorter than for a longer distance in one continuous carriage, and that the road of a corporation shall include all the road in use by such corporation whether owned or operated under contract or lease.

Much has been said by the advocates of the railroad interests against this section of the bill. It is urged, in relation to this section, as against the one which prohibits pooling, that it will destroy competition. When their arguments on this point are sifted down to their real meaning it amounts to this: that unless the railroads are permitted to carry through freights at rates so low as not to pay for the service, and then to make up the losses by overcharging the other freights along their lines, they cannot command the through business. Is it right, as they require, that we shall permit them, for purposes of their own, to make one portion of their patrons pay for the service rendered to another portion of them? If so, on what principle? If it is not, then the bill in this respect is right and their demand is wrong and a violation of the rights of a part of the people.

In framing this section we had in view the wrongs which have grown out of unjust discriminations in favor of some places or branches of business and against other places and branches of business. This was strikingly illustrated by the extraordinary privileges and advantages extended by some railroad companies to the Standard Oil Company. By obtaining rates lower than were allowed to others, in the form of rebates, which amounted to about ten million dollars in one term of about sixteen months, and by being charged less for longer distances than others were for shorter distances, the Standard Oil Company succeeded in breaking up many other companies competing with them in the oil business, and in securing to

themselves nearly an entire monopoly of this vast business, amounting to ten or fifteen million barrels of oil a year. And this conduct has met the general reprobation of good men everywhere. This is but one of many cases of the abuse of this power by the railroad companies. There is nothing to prevent the officers and managers of the railroad companies and their favorites from producing the same result in any other branch of business by the same means, and it is monstrous to think of tolerating such wrongs.

In framing this section we recognized the fact that freights could not be transported and handled for short distances as cheaply per ton per mile as for longer distances. We also recognized the fact that the hitching on and letting off of cars at way stations made it reasonable that they should charge more per mile for way than for through freights. And we adopted the rule provided in this section in the belief that it would prevent the wrongs to be guarded against, and that at the same time it would secure to them a just and reasonable compensation for this extra service.

Under the provisions of this section they may, if they choose, charge as much for a car-load for a part of the length of their roads as for the whole distance. But it is intended that they shall not charge more. You will see we have no reference to so much per mile. We allow the whole margin of the difference in distance between the long and the short hauls in favor of the long hauls. What more in justice can be asked by either the railroad men or the favored shippers?

Attempts have been made by several of the railroad advocates to confuse your mind by illustrations and the giving of instances which cannot arise under this section, such as reasoning on the hypothesis that one carriage, one haul, as contemplated by the bill, might extend from Chicago to Savannah or to Charleston, or from New Orleans to New York. They know, of course, that no such meaning is to be found in this fourth section; and why invoke such illustrations except to deceive? The bill limits one carriage, one haul, to the road owned by the particular company and those operated by it under contract or lease. And it means, and only means, that that company shall not charge more for a car-load over a part of its road than it does over the whole length of it. And this section applies to each and every company in the same way. This can produce no difficulty in the management of railroads. It can do no wrong, while it will prevent much wrong and render much injustice now being done impossible if this provision shall become law.

I now submit to you an abstract of some of the provisions of twelve of the most recently formed State constitutions, which relate to railroads and railroad corporations. My first reason for doing this is because it is the expression of the opinions of the people in their highest sovereign capacity on this subject. A second reason for doing so is to show you that these opinions of the people, as expressed in their State constitutions, are in strict accord on every point treated of with the opinions of the courts and law-writers referred to in a previous part of this argument. A third reason for presenting this abstract to you is that it is in strict accordance with and fully sustains the provisions of what is called the Reagan bill, so far as the two relate to the same subjects. And still a fourth reason for presenting it is that you may see at a glance the uniform current of action of the States which have made or revised their constitutions in recent years, and since it has become apparent to the public that the practices and pretensions of these corporations must be curbed and controlled by law in the interest of the people who grant them, and to prevent the worst possible effects of the employment and use of monopoly power.

For greater clearness, before giving you this abstract, and in order that your attention may be the more directly drawn to them, I will mention some of the points in which these State constitutions, and the opinions of the courts and law-writers, and the provisions of my bill agree.

They agree—

1. That the railroads are public highways.

2. That they are common carriers.

3. That they shall not discriminate in freight rates and charges.

4. That they shall not allow rebates or drawbacks.

5. That there shall be no pooling of freights between parallel or competing railroads, and no combination of the management, stock, property, or franchises of such railroads to defeat competition.

6. That more shall not be charged for hauling like kinds of freight on the same railroad for a shorter than for a longer distance.

Of course I do not wish to be understood as saying that these constitutions agree on all of these points. But, as you will see, taking them as a whole, they sustain, in a striking manner, these points of agreement; and none of them disagree with the law quoted or referred to, or with the provisions of my bill.

And I further call you to note, as I shall present them, that they clearly and distinctly disagree with the opinions given you on these points by the railroad attorneys and officers who have spoken before you and who have written on these questions.

With these prefatory remarks I will now present the abstracts from these several constitutions, with the date of adoption of each constitution. I shall not pretend to make literal extracts, but only to give you in substance the meaning of the provisions referred to, which can be easily verified.

It is proper for me to observe at this point that, if any question

should arise in your minds as to whether the action of the several States on the points referred to should or should not be regarded as precedents for the action of Congress on like questions, the Constitution gives to Congress the exclusive power to regulate commerce among the States; and that, while Congress may not charter railroad corporations in the States, or legislate upon or regulate their corporate rights and franchises, it may do anything in regulating commerce between the States which a State can do in regulating commerce wholly within the State, for Congress has all the power in this respect in the sphere of its action which the State has in the sphere of its action. This view is fully sustained by the authorities I have already cited, and I need not quote them again.

The constitution of Alabama of 1875 declares railroads in that State to be—

1. Common carriers.
2. Public highways.
3. Requires the Legislature to provide against unjust discriminations and extortion in passenger and freight rates.
4. Forbids railroad companies to grant free passes, or to sell tickets or passes at a discount to members of the Legislature or other State officers.

The constitution of Arkansas of 1874 declares railroads in that State to be—

1. Common carriers.
2. Public highways.
3. Declares the equal right of all to have persons and property transported over railroads.
4. Declares against undue and unreasonable discriminations in charges and facilities for freight or passengers.
5. Shall not charge more for freight or passengers for a shorter than for a longer distance.
6. Declares that railroads, canals, or other corporations shall not consolidate with any competing railway or canal, and that the same persons shall not be officers of two such competing corporations.
7. Declares that "no discrimination in charges or facilities for transportation shall be made between transportation companies and individuals, or in favor of either by abatement, drawback, or otherwise."

8. Provides that the General Assembly shall prevent by law the granting of free passes by any railroad or transportation company to any officer of that State, legislative, executive, or judicial.

9. That the exercise of the right of eminent domain shall apply to the property and franchises of corporations as well as to individuals.

10. The General Assembly required to pass laws to correct abuses and prevent unjust discrimination and excessive charges by railroads for transporting freight and passengers, and to provide for enforcing such laws by adequate penalties and forfeitures.

The constitution of California of 1879 declares that—

1. All railroads are common carriers and subject to legislative control.
2. No railroad or transportation company shall grant free passes, or passes or tickets at a discount, to any person holding any office of honor, trust, or profit in that State.
3. No discrimination in charges or facilities to be made by them between places or persons.
4. Shall not charge more for a short than for a longer distance.
5. The railroad commissioners shall have power, and it shall be their duty, to establish rates of charges for the transportation of passengers and freight by railroads.

The constitution of Colorado of 1876 declares that—

1. All railroads shall be public highways.
2. All railroad companies shall be common carriers.
3. Railroads shall not be connected or consolidated with other and competing railroads.
4. All have equal rights to have persons or property transported over railroads.
5. No undue or unreasonable discrimination shall be made in charges or facilities for transportation of freight and passengers.

6. The exercise of the right of eminent domain to apply to the property and franchises of corporations the same as to individuals.

7. Corporations not to be permitted to conduct their business in such manner as to infringe the equal rights of individuals or the general well-being of the State.

The constitution of the State of Georgia of 1877 declares that—

1. The Legislature shall have power to regulate railroad freight and passenger tariffs.
2. To prevent unjust discriminations.
3. To prohibit the charging of other than just and reasonable rates.
4. The exercise of the right of eminent domain shall apply to the condemnation of the property and franchises of corporations as well as to the property of individuals.
5. Corporations shall not so conduct their business as to infringe the equal rights of individuals or the general well-being of the State.
6. The General Assembly to have no power to authorize corporations, by contract, agreement, or otherwise, to defeat or lessen competition in their respective businesses, or to encourage monopoly.
7. No railroad company shall give or pay any rebate or bonus in the nature thereof, directly or indirectly, or do any act to mislead or deceive the public as to the real rates charged or received for freights or passage.

The constitution of Illinois of 1870 declares that—

1. No railroad corporation shall consolidate its stock, property, or franchises with any other railroad corporation owning a parallel or competing line.

2. That the railways of the State are public highways.

3. That the General Assembly shall pass laws establishing reasonable maximum rates of charges for the transportation of passengers and freight.

4. That the exercise of the power of the right of eminent domain shall never be so construed or abridged as to prevent the taking, by the General Assembly, of the property and franchises of incorporated companies.

5. The General Assembly shall pass laws to correct abuses and to prevent unjust discrimination and extortion in the rates of freight and passenger tariffs.

The constitution of Louisiana of 1879 declares that—

1. Railways are declared public highways.

2. Railroad companies are declared common carriers.

The constitution of Michigan of 1850 declares that—

1. The Legislature shall pass laws establishing reasonable maximum rates of charges for the transportation of passengers and freight on railroads.

2. Shall prohibit running contracts between such railroad companies whereby discrimination is made in favor of either of such companies owning connecting or intersecting lines of railroad.

3. No railroad corporation shall consolidate its stock, property, or franchises with any other railroad corporation owning a parallel or competing railroad.

The constitution of Missouri of 1875 declares that—

1. It shall not be lawful in this State for any railway company to charge, for freight or passengers, a greater amount for the transportation of the same for a less distance than the amount charged for any greater distance.

2. Railways in this State are declared public highways.

3. Railroad companies are declared common carriers.

4. The General Assembly shall pass laws to correct abuses and to prevent unjust discrimination and extortion in rates of freight and passenger tariffs.

5. And shall pass laws establishing reasonable maximum rates of charges for the transportation of passengers and freight.

6. No railroad or other corporation shall consolidate the stock, property, or franchises of such corporation with any railroad corporation owning, or having under its control, a parallel or competing line.

7. No officer of a railroad corporation shall act as an officer of any other railroad corporation owning, or having the control of, a parallel or competing line.

8. No discrimination in charges, or facilities in transportation, shall be made between transportation companies and individuals, or in favor of either, by abatement, drawback, or otherwise.

9. No railroad, or other transportation company, shall grant free passes or tickets, or passes or tickets at a discount, to members of the General Assembly, or members of the board of equalization, or any State, or county, or municipal officers.

The constitution of Nebraska of 1875 declares that—

1. No railroad corporation shall consolidate its stock, property, franchises, or earnings, in whole or in part, with any railroad corporation owning a parallel or competing line.

2. Railways declared public highways.

3. Compelled to transport persons and property under such regulations as may be prescribed by law.

4. The Legislature shall pass laws establishing reasonable maximum rates of charges for the transportation of passengers and freight.

5. The liability of railroad corporations as common carriers shall never be limited.

6. The exercise of the power of eminent domain shall never be so construed as to abridge or prevent taking the property or franchises of corporations the same as of individuals.

7. The Legislature shall pass laws to prevent abuses, and prevent unjust discrimination and extortion in charges of railroad companies.

The constitution of Pennsylvania of 1875 declares that—

1. Railroads are public highways.

2. Railroad companies are common carriers.

3. They shall receive and transport each other's passengers, tonnage, and cars, loaded or empty, without delay or discrimination.

4. All individuals, associations, and corporations shall have equal right to have persons and property transported over railroads, and no undue or unreasonable discrimination shall be made in charges for, or in facilities for, transportation of freight or passengers.

5. Persons and property transported over any railroad shall be delivered at any station at charges not exceeding the charges for transportation of persons and property of the same class, in the same direction, to any more distant station.

6. No railroad corporation, or the lessees, purchasers, or managers of any railroad, shall consolidate the stock, property, or franchises of such corporation with, or lease or purchase the works of franchises of, or in any way control any other railroad corporation owning or having under its control a parallel or competing line.

7. No incorporated company doing business as a common carrier shall, directly or indirectly, prosecute or engage in mining or manufacturing articles of transportation over its works.

8. No such company shall, directly or indirectly, engage in any other business than as common carriers, or hold or acquire lands, freehold or leasehold, directly or indirectly, except such as shall be necessary for carrying on its business.

9. No discrimination in charges or facilities for transportation shall be made between transportation companies and individuals, or in favor of either by abatement, drawback, or otherwise, and no railroad company or lessee, manager, or employé thereof shall make any preferences in furnishing cars or motive power.

10. No railroad company shall grant free passes, or passes at a discount, to any person except officers or employes of the company.

The constitution of Texas of 1876 declares that—

1. Railroad companies shall receive and transport each other's passengers, tonnage, and cars, loaded or empty, without delay or discrimination.

2. That railroads are public highways.

3. That railroads are common carriers.

4. The Legislature shall pass laws to correct abuses and prevent unjust discrimination and extortion in rates of freight and passenger tariffs on railroads.

5. And shall pass laws establishing reasonable maximum rates of charges for the transportation of passengers and freight on railroads.

6. No railroad corporation, or the lessees, purchasers, or managers of any railroad corporation shall consolidate the stock, property, or franchises of such corporation with, or lease or purchase the works or franchises of, or in any way control any railroad corporation owning or having under its control a parallel or competing line.

7. No officer of a railroad corporation shall act as an officer of any other railroad corporation owning or having the control of a parallel or competing line.

SCHEDULES.

The railroad advocates have attempted to alarm the fears of the committee by wonderful stories of the evil effects which would be produced by the enforcement of the provision of this bill, which requires the railroad companies to post up schedules of rates and charges at their several depots. Let us see what there is in this. They now profess that they do substantially what this section of this bill requires them to do; that is, that they fix and post up schedules of their rates. If they do this now, what wrong can there be in the making of this requirement? If they do not do this, but, on the contrary, keep their rates secret from the public, so as the better to enable them to levy unequal or unjust exactions on that commerce, then, on every principle of reason and right, they ought to be compelled to do it. Another consideration which makes this requirement necessary is that this schedule furnishing their rates furnishes at the same time an important part of the evidence upon which they may be convicted of violating the law by disregarding their rates and discriminating between shippers as to rates. And a knowledge of this fact is no doubt the real cause of their opposition to this section, instead of the inconvenience of its requirements as they now suggest.

WATER-WAYS.

The railroad men complain that, while this bill proposes to regulate the interstate commerce on the railroads it makes no provision for the regulation of commerce on the water-ways. What is the necessity for regulating the rates of transportation of commerce on the open water-ways of the country—the navigable rivers, the lakes, and the bays? They are now free public highways of commerce, which all may navigate who will. No person and no company has or can have exclusive control of them as these corporations do have the exclusive control of the railroads. And, so far, the people have been able safely to rely on the competition between the different vessel-owners who navigate the public waters for that competition which has secured to them reasonable freight rates and freedom from unjust discrimination. So far no act of Congress has been necessary to secure these ends. But Congress has the same power over the water as over the land transportation of interstate commerce. And if the time shall ever come when the navigation of these waters shall become a monopoly, either because some person or company has obtained the exclusive ownership of the vessels used for such navigation, or for any other cause, Congress will no doubt legislate to abridge such monopoly powers, as I now ask for the abridgment of the monopoly powers of the railroads.

We are constantly told that the great lakes and the Mississippi River force rates down to the lowest point by the competition of water transportation which they afford; and that if this bill shall be passed the railroads will be ruined by this competition. In reply to this I have to say that the great lakes and the Mississippi River were put where they are by the God of nature, not by my bill, and their value to our people as commercial highways is too great for computation by figures. That they are the means of the reduction of the cost of transportation is true, and this is a great blessing. They furnish competing lines of transportation now. They will do no more if this bill shall become a law. And the railroads will be as free to make low through rates if this bill shall become a law as they are now. But it does not satisfy these railroad companies that they will be left to compete freely with the water-ways at fair and reasonable rates, with all the advantages of quicker dispatch and the choice of markets, if this bill shall become a law. That is not what they want. They wish and intend, in the future as in the past, if they can, to

have a monopoly of the vast through freights during the seasons when the water-ways are frozen up, in winter and spring; and then during the summer and fall months, when the water-ways are open to navigation, they propose to carry this volume of through freights as low at least as the water routes, and at less than paying rates, and in this way to control this transportation at all seasons. And to enable them to do this they mean to increase the cost of transportation at points east of Chicago and Saint Louis, in Illinois, and in Indiana, Ohio, Pennsylvania, and New York to an amount above what it should pay, in order to make up the deficiency in their revenues caused by the undercharges on through rates.

Among the just and wise provisions of the Federal Constitution is the one in the fifth amendment to that instrument, which provides:

Nor shall private property be taken for public use without just compensation.

So, even for a public use one part of the people could not be required to pay for the carriage of the freights of another part of the people. But the railroads would require them to do so for a mere private use. There is no power in this country, not even in the Federal or State governments, which can do this by lawful authority. It can only be done by force or fraud. These railroads propose to do this as a mere matter of policy on their part, in violation of all law and of all morality. Will you, my brethren of the committee, aid them in doing this? That is undoubtedly what is meant by their clamor on this subject, and by their misrepresentations of the provisions of this bill.

The railroad advocates have so often complained before you of the competition of the water-ways as to assure us they would be glad to see anything done which would embarrass and make more costly our water navigation.

COMPETITION OF THE CANADA RAILROADS.

It would seem there is but one thing which comes as near as the Reagan bill to giving railroad men and advocates the nightmare, and that is the fear of the competition of the Canada railroads. They have rung the changes on this subject in every imaginable form. They have even frightened General Alexander with the fear that the competition of the Canada railroads will seriously reduce the profits of his railroads in Kentucky, Tennessee, and Georgia. Such fears, based on such brilliant conceptions, and supported by such splendid rhetoric as these gentlemen have employed, ought to excite our sympathy—the fears, I mean, not the facts.

The Grand Trunk Railroad of Canada, from Detroit, Michigan, by way of Montreal, Canada, to Portland, Maine, is eight hundred and fifty-six miles long. Its connection by way of Montreal with Boston, Massachusetts, is a little longer. Its extension from Port Huron, Michigan, to Chicago is three hundred and thirty miles. This, added to the eight hundred and fifty-six miles, makes the distance from Chicago to Portland eleven hundred and eighty-six miles. In the greater portion of its length it runs through a country sparsely populated, and with a limited commerce. Its equipments and the amount of its rolling stock are nothing like so great as are either those of the New York Central, the Erie, or the Pennsylvania Railroad. From these causes, as well as because of its greater length, and the greater amount of interruption from frosts and snows, and because it crosses the Saint Lawrence River twice, once on ferry-boats, a long ferriage, it cannot carry as large amounts of freight or carry that freight as cheaply at paying rates as either of the above-named three trunk roads on the south side of the lakes and of the Saint Lawrence.

By the New York Central and by the Erie and the Pennsylvania Railroads the distance between New York and Chicago is about nine hundred miles. The equipments of these roads are of the best; their rolling stock is abundant; they pass through densely populated States, of great wealth, and with very large local business; they avoid the crossing and recrossing of the Saint Lawrence River. These lines of road are nearly three hundred miles shorter from Chicago to New York than the Grand Trunk from Chicago to Portland. These three trunk roads south of the lakes, as well as the Baltimore and Ohio Road, have in many respects the decided advantage of the Grand Trunk Road in fair competition. Either of them is prepared to carry more freight, to carry it cheaper and more expeditiously, and to better markets than the Grand Trunk by way of Montreal. Yet, all at once, the railroad men who manage the trunk lines south of the lakes have become wonderfully alarmed at the dangers of the competition of the Canada railroads.

But it may be said the branch of the Grand Trunk Road coming from the Northwest to Buffalo furnishes a route but little longer between Chicago and New York than the trunk lines south of the lakes. But it is longer, and for more than two hundred miles it passes through a country with much less population, wealth, and commerce than that through which the competing lines south of the lakes pass. And this line, too, has its long ferriage at Port Huron, and has again to cross the Niagara at Buffalo, and it would be dependent on the New York Central and the Erie for its connections at Buffalo, and hence could not compete with them for the Chicago freights against their consent.

The Canada Southern Railroad is another of those Canadian roads whose competition is so much feared, as these gentlemen tell us, by the trunk lines south of the lakes. It is three hundred and ninety-two miles long; extending along the southern border of Canada, from the Detroit River to Buffalo, New York. Its president is Will-

iam H. Vanderbilt, of New York. Its vice-president and treasurer is Cornelius Vanderbilt, of New York. And yet we are left to understand from the speeches of Messrs. Fink, Blanchard, Depew, and the balance, that these Vanderbilts are dreadfully afraid of the competition of these Canada roads if the Reagan bill shall become a law. Why this insincere dealing with the committee?

Mr. Poor's Railroad Manual of 1880, always in the interest of the railroads, right or wrong, tells us that the Chicago and Canada Southern Railroad came under the control of the Lake Shore and Michigan Southern Railway Company November 1, 1879. The Lake Shore and Michigan Southern extends from Buffalo to Chicago along the southern shore of Lake Erie from Buffalo to Toledo, and from thence to Chicago, and is five hundred and forty miles long. Its president is William H. Vanderbilt, who is also the president of the Canada Southern. Its vice-presidents and all its officers are citizens of the United States. The Canada Southern is under their control. This same William H. Vanderbilt is the president of the New York Central and Hudson River Railroad, which connects with both the above-named railroads at Buffalo, New York. Yet Mr. Depew, who appeared before you as its attorney and told us he was a director in the last-named road, and Mr. Albert Fink, the great railroad expert, and an employé of that railroad, and Mr. Blanchard, of the Erie Railroad, told you of the terror with which they looked on the dangers of the competition of the Canada Southern Road, of which Mr. Vanderbilt is president, with the Lake Shore and Michigan Southern, of which he is also president. So we dispose of the bugaboo of the dangers of competition of the Canada railroads.

On these facts I submit to the members of the committee two questions, which each member can answer to himself at his leisure: First, do these gentlemen wish to be understood, as some of their arguments would seem to imply, and especially that of Mr. Depew, that these American officers and controllers of the Canada Southern Railroad, having also the control of its western connections with Chicago, and of its eastern connections with the eastern cities, and of the competing lines south of the lakes, are managing and controlling it in the interest of Canadian commerce and British capital; or are they managing and controlling it in the interest of their own roads and of American commerce and American capital? The second is, do these gentlemen, in the discussion of this point, mean that you shall know the real facts, or do they mean, presuming on your ignorance of them, to deceive you?

THE NEW YORK CENTRAL RAILROAD.

Much stress has been laid on the question of the exceptional condition of the New York Central Railroad by many of the gentlemen representing the railroad interests, because, as alleged, it is entirely within the State of New York, and can carry the through freight from the West, coming to it at Buffalo by the water transportation of the great lakes, free from the influence of this bill, while the other trunk roads, carrying western through freight, will be subject to the provisions of the bill, and will therefore be discriminated against by the bill in favor of the New York Central. The first inquiry which should legitimately arise in your minds on this statement of facts is, if this be so, why should Mr. Depew, Mr. Fink, and the others, representing the interests of that road, which it is assumed is to have these advantages over the other trunk roads, so vehemently denounce and oppose this bill? Is it common for men, and of all men for railroad men, to oppose and denounce, as the representatives of the Central road have this bill, a measure calculated to give them special and great advantages over their competitors? The asking of these questions, to all fair men and logical minds, is their answer in the negative.

The next answer to this position is, that the gentlemen taking it misunderstand and mistake the provisions, meaning, and effect of the bill. They assume that the object of the bill is to regulate railroads. I have repeatedly stated on former occasions, and during this discussion, that it is not the purpose of the bill to provide for the regulation of railroads; that Congress has no power to regulate the corporate rights and franchises of railroads in the States, to regulate railroads because they are railroads; that the power conferred on Congress by the Constitution is to regulate the commerce among the States. And this is the power which it is the purpose of this bill, as shown by its own provisions, to execute. That when commerce is consigned from a point in one State to a point in another State, or to a foreign country, it becomes *ipso facto*, by force of the Constitution, commerce among the States, between the States, interstate commerce, and the State power of regulation is lost, and the exclusive power of Congress to regulate begins, when a shipment is so made, as shown by the State freight tax case in 15 Wallace, in the case of the Erie Railway Company *vs.* Pennsylvania, 15 Wallace, and in that of the Hannibal and Saint Joseph Railroad Company *vs.* Husen, referred to in an earlier part of this argument. And these cases and others show that such commerce remains interstate commerce, and subject to Congressional regulation alone, from the point of shipment to its point of destination, whether it passes over one or many railroads, whether these roads be situated in one State only or pass through two or more States, or whether the commerce on its passage is conveyed wholly on railroad or partly by railroads and partly by water transportation. It being the commerce primarily which Congress regulates and has power to regulate, and not the means or vehicle in which it is conveyed, it does not matter by what means

it is conveyed, the power of Congress to regulate it exists, and this is the power which it is intended by this bill to execute.

This being so, any commerce shipped from Duluth, from Chicago, from Detroit, from Toledo, or other point on the lakes, or in States outside of the boundaries of the State of New York by way of Buffalo, the northern terminus, to the city of New York, the southern terminus of the New York Central Railroad, is interstate commerce, and would come under the provisions of this bill, from its point of shipment to its point of destination, as fully and completely while passing over the New York Central from Buffalo to New York, as if sent wholly over railroads from one of these points to the other. The fact of its being carried by water from one of the points named to Buffalo does not oust the jurisdiction of Congress when it reaches the Central Railroad because that road is wholly within the State of New York.

This is a sufficient answer to the criticisms on this feature of the bill. But there are others. The Erie Railroad Company has its main connection with the water transportation of the lakes at Dunkirk, on Lake Erie, as shown by Poor's Manual, near to where the New York Central has its connection with the lake transportation at Buffalo, and gets its full share of this lake commerce. Indeed, it runs sixteen steamers and two sloops on the lakes in connection with its railroad. The Pennsylvania Railroad has its connection with the lake commerce at Erie, doing its full share of the carrying of lake commerce. And its line between Philadelphia, its eastern and tide-water terminus, and Erie on Lake Erie, is entirely within the State of Pennsylvania, and occupies exactly the position which the New York Central does on this question. All three of these roads have like advantages in carrying the lake commerce, the through business by way of the lakes. They exercise and enjoy equally these similar advantages. They are all subject to the same competition and laws of competition in connection with this great through business, whether it goes wholly by rail or partly by rail and partly by lake. Each of them has its connections, both by rail and by the great lakes, with Chicago and other competing points in the West. And this bill would subject them all alike to the regulating power of Congress. They compete with each other and with the Canada roads, and with the Baltimore and Ohio Road now. And if this bill shall become a law they will then compete with each other on equal terms, just as they do now, no more, no less. But they all make common cause against the passage of this bill, not because in fact it would give any one of them an advantage over any other, but because, for reasons of their own, hostile to the interests of the general public, they wish to retain and exercise their monopoly powers for their own aggrandizement, free from the regulating power of Congress, to be exercised for the benefit and protection of the people.

There is one subject that I think I left in a shape requiring explanation. The point was made, and correctly made, by Governor BROWN, that the cases which I had referred to as sustaining the principles of this bill did not decide that particular question. I have said that he made a correct statement on that point, because there was no law of this express kind for the court to pass upon; and when I say that those decisions sustain the principles of this bill I mean that if the reasoning which I have read, in the opinions from which I have quoted, is not sound law, then it was impossible for the court to have decided the precise cases in point as it did decide them, and it is because that reasoning made it necessary to make those decisions as they were made, that I insist that the decisions have developed fully the power of Congress in the matter.

I shall commence this morning by inviting the attention of the committee to what I have to say on the remedial provisions of the bill before us.

REMEDIAL PROVISIONS.

The remedies provided in this bill for the punishment of those who may violate its provisions have been denounced with great bitterness by the railroad advocates as unjust, excessive, and inquisitorial. And several of them have said it proposes to treat the railroads, their officers and agents, as common felons. They seem to forget that no law ever made a felon. It is the violation of law which subjects persons to prosecution for offenses, and a conviction which fixes the stain of guilt. And in their heat and zeal they seem to have overlooked the fact that the bill affixes no higher grade of offense to the violation of its provisions than a misdemeanor, and does not even provide for imprisonment for violation of its provisions; it only provides for the imposition of fines on conviction, and these by no means excessive, when we consider the power and wealth of these corporations, and their facilities of inflicting the gravest injuries on society and its members.

The bill makes the doing of anything prohibited, or the refusal to do anything commanded by it, unlawful. As said in my speech of June 1, 1880, it gives three separate remedies against those violating its provisions. First, a civil suit by the injured party, who upon recovery is entitled to triple damages, and in any case of recovery the judgment is to be for at least \$500. This is so provided to discourage the large and powerful corporations in their efforts to defeat justice by wearing out poor litigants in court. Second, it provides for a *qui tam* action against offenders against its provisions, and in case of recovery the judgment is to be for not less than \$1,000; one-half of this penalty, when collected, to go to the informer. But these provisions, rigorous as they appear, would not protect the pub-

lic and its interests if these companies could keep their books and the mouths of their officers and agents closed. To overcome this difficulty we provide in the bill that the courts trying civil cases arising under it shall have both legal and equitable powers; that they may compel parties in interest to testify, with the provision that such testimony shall not be used against them in criminal prosecutions; and that they shall have all the powers now provided by law to compel discovery and the production of books and papers. Without these provisions no such law can be successfully enforced against these corporations. Third, in addition to these remedies this bill also provides for criminal prosecutions against those offending its provisions; and in cases of conviction the penalty is to be not less than \$1,000.

It will thus be seen that this bill provides plain, specific remedies for the evils under which the people and the commerce of the country suffer at the hands of these corporations, and that it provides clear and efficient means for the enforcement of its provisions in the courts of the country. All this is to be accomplished simply by an abridgment of their monopoly powers, and without any interference with their legitimate management, or embarrassment to them in doing anything which in conscience and right they ought to do. It does not require them to fix high or low rates for freight and charges, but only prevents unjust discriminations, and requires and compels them to be impartial and honest. It prohibits them from doing wrong and does not embarrass them in doing right. It touches no subject which requires the knowledge and skill of an expert, and only invokes common sense and common honesty for its full, fair enforcement, and for the protection of the people against the enormous wrongs now inflicted on them by these corporations.

The denunciations we have listened to of these provisions cannot but revive in our memories the old saying that

No thief e'er felt the halter draw
With good opinion of the law.

I would not in ordinary cases advocate the giving of moieties of penalties to informers, but in this case it seems to be necessary and proper. It was made to appear in the proceedings of the committee appointed by the Legislature of New York, known as the Hepburn Committee, that merchants and citizens were afraid to appear voluntarily and testify as to discrimination and other wrong-doings by the railroad companies, because, if they did so, they would incur the displeasure of the railroad officials and be made to suffer by it. And this is known to be a common belief throughout the country. It is also true that men dependent on the railroads for their transportation and success in business are afraid to bring suits against or to litigate with the railroad companies. To meet and to overcome this difficulty, and to compel the railroads to respect the law, this bill provides that the United States district attorneys shall institute proceedings, in the nature of civil suits, for the recovery of penalties for a violation of the provisions of this bill. As these officers cannot be expected to be generally personally cognizant of the infraction of its provisions, they must often act on the information of others; under the provisions of this bill they may prosecute such suits on their information, or when advised of the violation of the law by the affidavit of any reputable citizen. So it is apparent that improper and unnecessary prosecutions cannot be set on foot by loose statements or by irresponsible persons. And it cannot be presumed that United States district attorneys would allow themselves to be used for mere purposes of wantonness, malice, or to promote speculative suits. If the railroad companies avoid violating the law, they can be in no danger of prosecutions.

THE PLAN OF A COMMISSION.

Several of the railroad advocates have urged on us the plan of providing by law for a commission, to be charged with the duty of inquiring into railroad management, and of reporting to Congress information which will enable it to legislate on this subject, as they say, more intelligently than can now be done. Other citizens have advocated a commission for the purposes named above, in addition to advocating the passage of the bill before us, and to aid in the enforcement of its provisions, in addition to the collection of information for the use of Congress. And some of the members of Congress are in favor of each of these plans. My own view is that the bill before us, simply for the abridgment of the monopoly powers of these corporations; declaring what acts shall be unlawful, and providing for their punishment in the courts of the country; which opens our courts to hear the complaints and redress the wrongs of every citizen, is the wise, just, efficient, and true policy. But I might defer to the judgment of others and agree to a commission as an experiment, in addition to what is provided for in this bill, but not as a substitute for it. My fear as to a commission is that it would be more likely to represent the interests of the railroad companies than those of the general public. The railroad companies can always combine their influence, either directly, or, if thought more prudent, indirectly, to influence the making of the appointment of such commissioners, by whomsoever to be appointed. The body of the people can never act in concert on such a subject.

The railroad attorneys and advocates claim great credit for the action of the trunk lines in their recent selection of three distinguished citizens—Hon. Allen G. Thurman, Hon. E. B. Washburne, and Judge Cooley—to adjust differences between them, and perhaps

between the eastern cities. If we could have a commission composed of these three men, distinguished as they are for their ability, their integrity, and their patriotism, and clothed with proper powers, or of such men as these, to aid in the enforcement of proper legislation, and to collect and furnish to Congress information as a basis for future legislation, I do not doubt that good would come from their appointment. But who believes the railroad companies would consent to the appointment of these men, or such as these, clothed with proper powers to represent and take care of the interests of the people as well as of the railroad companies?

These trunk railroad companies employed three or four other distinguished citizens and railroad experts—Mr. Adams, Mr. Wells, General Wright, and Mr. Fink—to settle and control questions of difference among themselves, and to keep them from warring on each other; but their difficulties and wars have gone on all the same as if they had not been selected and paid for this service. And it is safe to assume that whenever the supposed interest of any one or all of these companies shall come in conflict with the judgment and advice of this new commission they have appointed, their suggestions or authority will be no more regarded by them than were those of their predecessors. But, if these men were supported by a proper law of Congress, they might do real good both for the interests of the railroads and the people.

This, I may add, seems to be peculiarly an era of Congressional commissions. We had a commission to settle a controversy about a Presidential election, and the people were cheated. We had what is known as a silver commission, composed of good and able men, who went to Europe to learn whether an American Congress should authorize the coinage of silver. We have provided for a commission on the rights of women, and must await to see whether it can propose an improvement on the laws of God and the experience of the world, for six thousand years, and convert women into men. We have a commission on the traffic in alcoholic liquors, and must await to see to what extent it can promote temperance, and to what extent we can safely violate the Constitution of the United States. And we have before us a proposition for a commission to revise the tariff, and must await to see how long it can delay that revision, and whether it can make our tariff legislation more monstrous and unendurable than it is at present. And this is still followed by the proposition to create another commission to make inquiries and reports in relation to railroad transportation. Whether the object of proposing this last commission is to defeat needed legislation on the railroad problem, or to do something of real utility, must be determined in the future. Whatever may be thought of the value and importance of these several commissions and proposed commissions, it seems to me the people might, with much advantage to themselves, constitute themselves into a commission to retire a sufficient number of members of the two Houses of Congress, and send others here who can and will legislate on subjects instead of putting them into commission to obtain information.

CONCLUSION.

I have but little more to say. I am sure I need not apologize for the time I have occupied your attention when it is remembered that I am trying to answer weeks of argument before you, made by a number of the ablest lawyers and by a number of the ablest railroad experts in this country in behalf of the railroad companies.

The bill before us passed the House of Representatives by a majority of 35 during the Forty-fifth Congress. I do not doubt that this bill would have passed through the House of the Forty-sixth Congress by a much larger majority but for delay in reporting on the subject by a committee unfriendly to the measure. It has already been four months before the committee which now has it in charge—I hope soon to know whether to receive their favorable or unfavorable consideration. Undoubtedly the railroad influences are doing all they can to keep it from before the House, where the Representatives of all the people could consider and pass upon its merits. I beg you to make a report on this subject at as early a day as you can mature your judgments on it either one way or the other.

It should not be forgotten that the Legislatures of several of the States, including the great States of New York and Pennsylvania, have asked the action of Congress on this subject; that the National Board of Trade, and boards of trade and chambers of commerce in many parts of the country, the Grain Receivers' Association of Chicago, the Millers' Association of Cincinnati, and a day or two ago the Produce Exchange of New York, have asked the action of Congress on this subject. And that the same has been done by the National Grange, by a number of State and many local granges; and by petitions and memorials in unusually great numbers, from manufacturers, merchants, and citizens generally, from all parts of the Union. Indeed I think it safe to say that a greater number of petitions by far have come to Congress asking for action on this subject than on any other ever before it for action, and perhaps the larger part of them asking for the passage of the particular bill now before you.

In contrast with the extravagant and unreasonable declarations of the railroad attorneys and railroad experts that there is no danger in leaving these corporations free to do as they please with all questions of railroad transportation, and that it would endanger the interests of both the railroads and the people for us to legislate to control and restrain them, I give the following extracts, showing the

opinions of leading public men and newspapers, the representatives of the real opinions and of the real interests of the great body of the American people.

In a letter written by Hon. DAVID DAVIS, late a justice of the Supreme Court of the United States, and now a Senator from Illinois and President of the Senate, he says:

Great corporations and consolidated monopolies are fast seizing the avenues of power that lead to the control of the Government. It is an open secret that they rule States through procured legislatures and corrupted courts; that they are strong in Congress, and that they are unscrupulous in the use of means to conquer prejudice and acquire influence. This condition of things is truly alarming, for unless it be changed quickly and thoroughly free institutions are doomed to be subverted by an oligarchy resting upon a basis of money and of corporate power.

In a letter written by Hon. WILLIAM WINDOM, then and now a Senator in Congress, and recently Secretary of the Treasury of the United States, to the Anti-Monopoly League of New York, a little over a year ago, he said:

The channels of thought and the channels of commerce thus owned and controlled by one man or by a body of men, what is to restrain corporate power or to fix a limit to its exactions upon the people? What is then to hinder these men from depressing or inflating the value of all kinds of property to suit their caprice or avarice, and thereby gathering into their own coffers the wealth of the nation? What shall be said of the spirit of a free people who will submit without protest to be thus bound hand and foot?

Hon. Jeremiah S. Black, formerly a judge of the supreme court of Pennsylvania and Attorney-General of the United States, in a speech delivered before the Anti-Monopoly League of New York, a little over a year ago, said:

All public men must take their side on this question. There can be no neutrals. He that is not for us is against us. We must have legal protection against these abuses. This agitation once begun and the magnitude of the grievance being understood, it will force our rulers to give us a remedy against it. The monopolies will resist with all their arts and influences, but fifty million of people, in process of time, will learn the important fact that they are fifty million strong.

Governor Porter, of Indiana, in a message to the Legislature of that State, last January was a year, said:

In my judgment the Republic cannot live long in the atmosphere which now surrounds the ballot-box. Moneyed corporations, to secure favorable legislation for themselves, are taking an active part in elections by furnishing large sums of money to corrupt the voter and purchase special privileges from the Government. If money can control the decision at the ballot-box it will not be long until it can control its existence.

Daniel Webster, whose fame could not be increased by affixing a title to his name, said, long ago:

The freest Government cannot long endure where the tendency of the law is to create a rapid accumulation of property in the hands of the few, and to render the masses of the people poor and dependent.

The New York Times newspaper, discussing the question of the encroachments of corporate power, last May, said:

It is not only absorbing to itself the fruits of labor and the gains of trade and piling up wealth in the hands of a few, but it is controlling legislation and endeavoring to sway the decisions of courts in its own interest. We are now at a stage in the contest where the people may vindicate the authority and place these corporations under the regulation of the law.

The Brooklyn Eagle, in a recent editorial, said:

There is pretty general feeling that the continent of America was not discovered by Columbus, and civil liberty established by the fathers of the Republic, to the end that 50,000,000 of people might be made tributary to a band of railroad magnates, or that farmers, artisans, and merchants might by hard work and keen competition raise up a dozen Vanderbilts, with several hundred millions of dollars. Those who entertain this feeling have become persuaded that the time has arrived for the industrious masses of this country to protect themselves, if they ever intend to do so. It certainly will not be easier after the adversary has grown stronger. In this contest every delay is to the disadvantage of the people. Let the issue be deferred for a few years, and nothing but a revolution as violent as that of France will overthrow the oppression. Of all misleading delusions, there is none more mischievous than the notion that popular suffrage and popular power are synonymous. Given the means of bribing multitudes, of intimidating others, of wrecking opponents, coupled with actual possession of the Government, and adverse sentiment must be paralyzed. If the suffrage is to be our salvation it must be applied sharply while there are still odds on the side of unbought and unterrorized manhood.

The late President James A. Garfield, who voted for this bill in the Forty-fifth Congress, and whose death we have so recently been called to lament, in discussing the railroad problem and its effect on our Government and people, a few years ago, said:

The modern barons, more powerful than their military prototypes, own our greatest highways and levy tribute at will upon all our vast industries. And, as the old feudalism was finally controlled and subordinated only by the combined efforts of the kings and the people of the free cities and towns, so our modern feudalism can be subordinated to the public good only by the great body of the people, acting through their Government by wise and just laws.

I might multiply such evidences of opinion of impartial, disinterested, and patriotic men of all parts of the country; and I invite you to contrast them with the interested, selfish opinions of railroad lawyers and railroad managers and experts, paid for by the railroads out of money wrung from the hard earnings of people engaged in other vocations. Do you think such a question can be whistled down the wind by the vast throng of mercenaries who infest the halls and corridors and committee-rooms of Congress, for the purpose of influencing the action of members whenever this question comes up for consideration?

The wishes of the people on this subject may be baffled and delayed for a time on pretexts reasonable or unreasonable. But when we consider the magnitude of the interest involved; that the transportation of not less than three thousand million dollars' worth of commerce annually, in which 50,000,000 people are interested; that the

larger part of this is interstate commerce; that in all the world's history so much of interest has not been left without the protection of law, and to the mercy of a class of persons interested in levying the largest exactions on it; and when we consider the principles involved and the probable, nay, the almost inevitable consequences to the property interests, the prosperity, the happiness, and ultimately the dangers to our liberties and form of government, I say to you, in all seriousness, action by Congress on this subject cannot much longer be delayed. So many interests are so constantly affected that all men must see a solution of this problem must come; and I do not think it can ever come through a more just or more conservative measure than the one now before you.

This measure was not conceived in hostility to the railroads. Their great value as a means of progress and prosperity are fully understood by all. No good citizen could wish to cripple or to harm them. No one would hail with more pleasure than myself their prosperity. My judgment is that the passage of the bill before us would benefit them, while it would benefit and protect the people.

Interstate Commerce.

SPEECH

OF

HON. FRANK E. BELTZHOVER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 17, 1882,

On the bill to regulate interstate commerce.

Mr. BELTZHOVER said:

Mr. SPEAKER: I have introduced a bill which is now pending before the Committee on Commerce, along with other bills on the same subject, intended to provide proper regulations by law for commerce by railroad among the several States. There is no subject in which the people of the nation are more vitally interested and on which I firmly believe they desire that Congress should take judicious but prompt and decisive action.

This proposed legislation is based upon the third clause of section 8 of article 1 of the Federal Constitution, which declares that—

Congress shall have power to regulate commerce with foreign nations and among the several States and with the Indian tribes.

In the discussion of the subject I will consider—

First. The character, extent, and object of the power granted to Congress under the Constitution as ascertained by the decisions of the courts and the history of the subject.

Second. The nature of the vested rights claimed by railroads chartered by the several States and built by private capital, and to what extent those rights can be affected by the State Legislatures and by Congress.

Third. The manner in which the power of Congress should be exercised and how far the bills under consideration tend to establish expedient and justifiable regulations of interstate commerce.

Under the first proposition I maintain that—

1. The power of Congress extends to every species of commercial intercourse among the several States, but does not extend to commerce which is completely internal.

The leading case which construes this portion of the Constitution is that of *Gibbons vs. Ogden*, (9 Wheaton, 1,) wherein Chief-Justice Marshall, in delivering the opinion of the court, says:

The subject to be regulated is commerce; and our Constitution being, as was aptly said at the bar, one of enumeration and not of definition, to ascertain the extent of the power it becomes necessary to settle the meaning of the word.

The counsel of the appellee would limit it to traffic, to buying and selling, or the interchange of commodities, and do not admit that it comprehends navigation. This would restrict a general term, applicable to many objects, to one of its significations. Commerce undoubtedly is traffic; but it is something more—it is intercourse. It describes the commercial intercourse between nations and parts of nations in all its branches, and is regulated by prescribing rules for carrying on that intercourse.

To what commerce does this power extend? The Constitution informs us, to commerce "with foreign nations and among the several States, and with the Indian tribes." It has, we believe, been universally admitted that these words comprehend every species of commercial intercourse between the United States and foreign nations. No sort of trade can be carried on between this country and any other to which this power does not extend. It has been truly said that commerce, as the word is used in the Constitution, is a unit, every part of which is indicated by the term. If this be the admitted meaning of the word in its application to foreign nations, it must carry the same meaning throughout the sentence, and remain a unit, unless there be some plain, intelligible cause which alters it. The object to which the power is next applied is to commerce "among the several States." The word "among" means intermingled with. A thing which is among others is intermingled with them. Commerce among the States cannot stop at the external boundary line of each State, but may be introduced into the interior.

It is not intended to say that these words comprehend that commerce which is completely internal, which is carried on between man and man in a State, or between different parts of the same State, and which does not extend to or affect other States. Such a power would be inconvenient, and certainly is not necessary. Comprehensive as the word "among" is, it may very properly be restricted to

that commerce which concerns more States than one. The phrase is not one which would probably have been selected to indicate the completely interior traffic of a State, because it is not an apt phrase for that purpose; and the enumeration of the particular classes of commerce to which the power was to be extended would not have been made had the intention been to extend the power to every description. The enumeration presupposes something not enumerated, and that something, if we regard the language or the subject of the sentence, must be the exclusively internal commerce of a State.

The genius and character of the whole Government seem to be that its action is to be applied to all the external concerns of the nation and to those internal concerns which affect the States generally, but not to those which are completely within a particular State which do not affect other States, and with which it is not necessary to interfere for the purpose of executing some of the general powers of the Government. The completely internal commerce of a State, then, may be considered as reserved for the State itself.

This principle is, if possible, still more clear when applied to commerce "among the several States." They either join each other, in which case they are separated by a mathematical line, or they are remote from each other, in which case other States lie between them. What is "commerce" among them, and how is it to be conducted? Can a trading expedition between two adjoining States commence and terminate outside of each? And if the trading intercourse between two States remote from each other, must it not commence in one, terminate in the other, and probably pass through a third? Commerce among the States must of necessity be commerce with the States.

Judge Redfield, in his able and exhaustive work on the law of railways, (pages 720-722,) says:

The natural import and construction of the terms of the Constitution would not seem to admit of much doubt, judging from the language merely. The meaning of the word "commerce" at the time the Constitution was adopted must have been definitely settled and well enough understood. The word, as well understood, is derived from the Latin *commercium*, and which is found almost in its original form in most of the languages of modern Europe. It means, in its most literal sense, intercourse and exchange both of persons and commodities. It is more nearly synonymous with traffic than with any other word in the language, probably. Its great natural divisions for ages have been foreign and inland. The regulation of all the former and that portion of the latter which extended beyond the limits of a single State was, as we have seen, by the organic law of our National Government secured to the nation, and the remainder was naturally left to the particular State where it exclusively existed.

It is obvious that the purpose of the provision was not to be confined to future commerce carried on in the same mode it then was, i. e., by ship and boat navigation propelled exclusively by wind. If that had been so, the provision could not have been applied to that large portion of commerce now carried on by steam-power, which has already become very considerable, and is constantly increasing in a rapidly-advancing ratio.

The fact that the entire subject of regulating all commerce among the different States, including all the means and appliances by which it was carried on, was committed to Congress, and that thereafter the States were to have no concurrent action in the regulation of the same, would seem to reduce the question of Congress having the power of regulating interstate railway traffic to the single inquiry whether it forms any portion of the commerce of the country which requires to be regulated at all. Those who assume to argue that Congress has no power to regulate the traffic upon these extended lines of railway, reaching from one end of the Union to the other, must, if they would meet the question fairly, either say the traffic on these extended lines of railway, amounting to many millions annually, probably ten times as much as the entire commerce of the country at the time of the adoption of the Constitution, is not commerce at all, or, if it be, is not subject to any regulation or control whatever. For it is certain the States have neither the power nor capacity to regulate to any purpose, or with any efficiency, this interstate railway traffic. It must, then, come under the control of Congress or be left to its own devices and impulses—an experiment never yet tried in any other country.

In the Passenger cases, in 1843, Judge McClean held that—

All commercial action within the limits of a State which does not extend to any other State or foreign country is exclusively under State regulation.

2. The power is exclusively vested in Congress, and no part of it remains to the States; and laws made in pursuance of this power are supreme, and State laws must yield to this supremacy.

Judge Cooley, in his work on Constitutional Limitations, (page 586,) after referring to *Gibbons vs. Ogden*, and other cases upon the subject, says:

It is not doubted that Congress has the power to go beyond the general regulations of commerce which it is accustomed to establish, and to descend to the most minute directions if it shall be deemed advisable; and that to whatever extent ground shall be covered by those directions, the exercise of State power is excluded. Congress may establish police regulations as well as the State, confining their operation to subjects over which it is given control by the Constitution.

Judge Story, in his work on the Constitution, section 1067, says:

The power to regulate commerce is general and unlimited in its terms.

The full power to regulate a particular subject implies the whole power, and leaves no residuum. A grant of the whole is incompatible with the existence of a right in another to any part of it. A grant of a power to regulate necessarily excludes the action of all others who would perform the same operation on the same thing.

3. The power is coextensive with the subject on which it acts, and cannot be stopped at the external boundaries of a State, but must enter its interior.

In what is known as the license cases, (5 Howard, 504-599,) Mr. Justice Catron, in speaking of the powers of Congress in this respect, says:

The power given to Congress is unrestricted and broad as the subjects to which it relates; it extends to all lawful commerce with foreign nations, and in the same terms to all lawful commerce among the States, and "among" means between two only, as well as among more than two. If it was otherwise, then an intermediate State might interdict and obstruct the transportation of imports over it to a third State, and thereby impair the general power.

In the case of *Brown vs. Maryland*, (12 Wheaton, 419-446,) Chief Justice Marshall says:

What, then, is the extent of a power to regulate commerce with foreign nations and among the several States?

This question was considered in the case of *Gibbons vs. Ogden*. (9 Wheat. Rep.) in which it was declared to be complete in itself, and to acknowledge no limitations other than are prescribed by the Constitution. The power is coextensive with the subject on which it acts, and cannot be stopped at the external boundary of a State, but must enter its interior.

4. The object of investing this power in the General Government was to insure uniformity against discriminating State legislation, and to prevent embarrassing restrictions by any State. The idea of securing equality and freedom in the transportation of articles of trade from one State to another was the prominent and controlling one in the minds of the framers of the Constitution when they committed the regulation of interstate commerce to Congress.

In the case of the *Reading Railroad vs. Pennsylvania*, (15 Wallace, 232,) Judge Strong says:

Beyond all question the transportation of freight, or of the subjects of commerce for the purpose of exchange or sale, is a constituent of commerce itself. This has never been doubted, and probably the transportation of articles of trade from one State to another was the prominent idea in the minds of the framers of the Constitution when Congress was committed the power to regulate commerce among the several States. A power to prevent embarrassing restrictions by any State was the thing desired.

In *Railroad Company vs. Richmond*, (19 Wallace, 589,) Judge Field says:

The power to regulate commerce among the several States was vested in Congress in order to secure equality and freedom in commercial intercourse against discriminating State legislation; it was never intended that the power should be exercised so as to interfere with private contracts not designed at the time they were made to create impediments to such intercourse.

In *Welton vs. Missouri*, (1 Otto, 275,) Judge Field says:

It will not be denied that that portion of commerce with foreign countries and between the States which consists in transportation and exchange of commodities is of national importance, and admits and requires uniformity of regulation. The very object of investing this power in the General Government was to insure this uniformity against discriminating State legislation.

The question is also discussed and decided by Mr. Justice Miller in the case of *Gray vs. The Clinton Bridge Company*. From that case we quote as follows:

The railroad now shares with the steamboat the monopoly of the carrying trade. The one has, with great benefit, been subject to the control of salutary Congressional legislation, because it is an instrument of commerce. Is there any reason why the other should not? However this question may be answered in regard to that commerce which is conducted wholly within the limits of a State, and is, therefore, neither foreign commerce nor commerce among the States, it seems to me that where these roads become parts of great highways of our Union, transporting a commerce which embraces many States, and destined, as some of these roads are, to become the channels through which the nations of Europe and Asia shall interchange their commodities, there can be no reason to doubt that to regulate them is to regulate commerce, both with foreign nations and among the States, and that to refuse to do this is a refusal to discharge one of the most important duties of the Federal Government. As already intimated, the shackles with which the different States fettered commerce in their selfish efforts to benefit themselves at the expense of their confederates was one of the main causes which led to the formation of our present Constitution. The wonderful growth of that commerce since it has been placed exclusively under the control of the Federal Government has justified the wisdom of our fathers.

It is also a part of the history of this portion of the Constitution that the weakness of the confederation arose from the embarrassing legislation passed by the several States against the commerce of each other, and to remedy this the convention which framed the Federal Constitution was called perhaps for more than any other reason. In the convention, when the clause in reference to commerce between the States was under consideration, it was moved to insert the words "sole and exclusive" before the word "power;" but the motion was defeated by a vote of six to five.

In 1866 Congress, in conformity to these views of the power delegated to it, passed a law compelling all railroads running through States to connect with all other railroads, so as to form continuous lines in the transportation of passengers, troops, Government supplies, mails, freight, and property on their way through one State to another.

WHAT LIMITATIONS ARE ON THE POWER?

II. The character and extent of the power having been determined, how far is it limited or restricted by the vested rights of railways chartered by the several States and built by private capital? The States themselves are prevented by the Federal Constitution from passing any "law impairing the obligation of contracts" and by the same Constitution Congress is prevented from depriving any person of his property "without due process of law," and from taking "private property for public use without just compensation." The States and the General Government are also subject to that great fundamental charter which Hallam calls "the keystone of English liberty," wherein it is declared that—

No freeman shall be taken or imprisoned, or be disseized of his freehold or liberties or free customs, or be outlawed or exiled or any other wise damaged, nor will we pass upon him nor send upon him but by lawful judgment of his peers or by the law of the land.

Judge Redfield, in his work on Railways, (volume 2, page 406,) says:

The British Parliament is omnipotent, but never exercises its power in violation of vested rights. In the United States the several State Legislatures are expressly prohibited from passing any law "impairing the obligation of contracts," which has been construed to contain a prohibition against taking away or impairing the exercise of any of the essential franchises of a corporation. This rule obtains practically in Great Britain. In this country the question in regard to what is to be considered an essential franchise of a corporation is one admitting of almost indefinite range of construction or discretion.

The same learned author, in the most exhaustive and elaborate opinion, delivered by him in *Thorpe vs. R. & B. R. W.*, (27 Vermont, 140,) says:

It is admitted that the essential franchise of a corporation is recognized by the best authorities as private property and cannot be taken without compensation, even for private use. All the cases agree that the indispensable franchises of a corporation cannot be destroyed or essentially modified. This is the very point upon which the leading case of *Dartmouth College vs. Woodward* (4 Wheaton, 518) was decided, and which every well-considered case in this country maintains.

The highest courts of a large number of States hold that—

The charter of a private corporation is a contract between the government and the corporators, and the Legislature cannot repeal or impair or alter the rights and privileges conferred by the charter against the consent of the corporators and without its default. (6 Georgia, 130; 25 Illinois, 353; 15 B. Mon., 426; 14 Mississippi, 599; 27 *Idem*, 517; 11 New Hampshire, 19; 18 New Jersey, Equity, 178; 9 Wend., 351; 13 Fredell, L., 75; 6 Pennsylvania, 86; 13 Pennsylvania, 133; 11 Vermont, 632; 21 Illinois, 53; 26 Missouri, 441; 27 Vermont, 140. See also 1 Ohio St., 591-622; 24 Texas, 89.)

In *Sheets vs. Ohio* (5 Otto, 319) Judge Swayne says:

When an act of incorporation is repealed few questions of difficulty can arise. Equity takes charge of all the property and effects which survive the dissolution, and administers them as a trust fund primarily for the creditors. If anything is left it goes to the stockholders. (*Curran vs. State*, 15 Howard, 304.)

Mr. Justice Swayne, delivering the opinion of the court in *Shields vs. Ohio*, (5 Otto, 325,) said:

Beyond the sphere of the reserved powers, the vested rights of property of corporations in such cases are surrounded by the same sanctions and are as inviolable as in other cases.

And he cites decisions of eminent State courts in support of this principle.

In 1876, Mr. Chief-Justice Waite said, referring to the Granger cases:

We decided that the State may limit the amount of charges by railroad companies for fares and freights unless restrained by some contract in their charter.

In the Iowa case, relating to the Chicago, Burlington and Quincy Railroad, (4 Otto, 155,) Mr. Chief-Justice Waite expressly declared that railroads were subject to legislative control as to their rates of fare and freight, unless protected by their charter. But the practice of our States and the whole current of our judicial decisions establish the principle that it is for the Legislature to determine what is a public use, and that the consideration which the State receives for granting authority to take the land is to be found, and found only, in the public benefit which will flow from the use which the corporation proposes to make of it.

In a very recent case (*Olcott vs. The Supervisors*, 16 Wallace, 678) the Supreme Court of the United States say:

That railroads, though constructed by private corporations, and owned by them, are public highways, has been the doctrine of nearly all the courts ever since such conveniences for passage and transportation have had any existence. Very early the question arose whether a State's right of eminent domain could be exercised by a private corporation created for the purpose of constructing a railroad. Clearly, it could not, unless taking land for such a purpose, by such an agency, is taking land for public use. The right of eminent domain nowhere justifies taking property for a private use. Yet it is a doctrine universally accepted that a State Legislature may authorize a private corporation to take land for the construction of such a road, making compensation to the owner. What else does this doctrine mean, if not that building a railroad, though it be built by a private corporation, is an act done for a public use? And the reason why the use has always been held a public one is that such road is a highway, whether made by the Government itself or by the agency of corporate bodies, or even by individuals when they obtain their power to construct it from legislative grant. It would be useless to cite the numerous decisions to this effect which have been made in the State courts. We may, however, refer to two or three, which exhibit fully not only the doctrine itself, but the reasons upon which it rests. Whether the use of a railroad is a public or a private one depends in no measure upon the question who constructed it or who owns it. It has never been considered a matter of any importance that the road was built by the agency of a private corporation. No matter who is the agent, the function performed is that of the State. Though the ownership is private, the use is public. So turnpikes, bridges, ferries, and canals, although made by individuals under public grants, or by companies, are regarded as *publici juris*. The right to exact tolls or charge freights is granted for a service to the public. The owners may be private companies, but they are compellable to permit the public to use their works in the manner in which such works can be used. That all persons may not put their own cars upon the road, and use their own motive power, has no bearing upon the question whether the road is a public highway. It bears only upon the mode of use, of which the Legislature is the exclusive judge. The railroad can therefore be controlled by the State. Its use can be defined; its tolls and rates for transportation may be limited.

In many of the States the same unlimited power of the Legislature has been maintained as to the railroads holding charters from the States. Among these cases are *Railroad Company vs. Chappel*, 1 Rice, (S. C.,) 398; *Railroad vs. Davis*, 2 Devereaux and Battle, (N. C.,) 469, wherein the court say:

As to the corporation, it is a franchise like a ferry or any other; as to the public, it is a highway, and in the strictest sense *publici juris*.

See also *Vedders vs. Fellows*, 20 N. Y., 131; *Sanford vs. Railroad Company*, 34 Penna., 380; *Railroad Company vs. Casey*, 26 Penna., 307, wherein Judge Black says:

Railroads made by the authority of the Commonwealth upon lands taken under her right of eminent domain, and established by her laws as thoroughfares for the commerce that passes through her borders, are her highways. No corporation has any property in them, though corporations may have franchises annexed to and exercisable within them.

As against these may be cited the language of Judge Strong in the case of *Reading Railroad vs. Pennsylvania*, *supra*, which asserts:

That tolls and freights are a compensation for services rendered or facilities furnished to a passenger or transporter. A toll is a demand of proprietorship. The right to make terms for the use of the railway is in the grantee of the franchises and not in the grantor.

By common law a carrier is bound to carry for all persons who apply to him without unjust discrimination and for a reasonable compensation. It prohibits unreasonable charges and unjust discrimination. In *Harris vs. Rockwood*, 3 Taunton, it is ruled:

A carrier is bound by law to carry everything which is brought to him, for a reasonable sum.

Judge Redfield, in *Am. Law Reg.*, 1864, says:

It is the duty of carriers to carry for all who apply, for reasonable compensation, and to make no unreasonable or unjust discrimination among those who desire to employ them.

I believe the following propositions are maintained by the preponderance of authority in the foregoing decisions:

1. That a charter is a contract within the meaning of the prohibitory clause of the Constitution of the United States, and the several States have no power to pass any law which destroys or impairs the essential franchise of a corporation, unless that power is reserved in the constitution of the State granting the charter or in the charter itself.

2. That where there is no limitation on the powers of the Legislature in the constitution of the State granting a charter against granting exclusive privileges, nor any power to alter or annul reserved in the charter itself, the essential franchises of such corporations, which are those necessary to their continued existence and complete operation, are private property which cannot be taken even for public use without just compensation, and of which the stockholders cannot be deprived without due process of law. The powers of the Legislature over such corporations are:

(a.) The power under the general police authority of all governments to regulate them in the mode of their transacting their general business, so far as it tends unreasonably to infringe the rights of others or interfere with the public good.

(b.) The power under the common law to compel them to conform to the purposes of their creation in subserving the public use and observing the public rights.

(c.) The power to take possession of their franchises and property under the right of eminent domain.

3. That where the constitution of a State prevents the granting of exclusive privileges, or the charter of a corporation contains a reservation to the Legislature of the right to alter or amend it upon any contingency or condition, the Legislature is the exclusive judge of the happening of that contingency or condition, and its action is final.

To these propositions may be added another, which has not been settled by the courts, but which is based on the relation between the State and Federal governments, namely: that the States at the time they came into the Union surrendered absolutely to Congress the right to regulate interstate commerce, and all State constitutions and laws and charters adopted since the formation of the Federal Government are subject to that power. There are no railroads in the United States which received exclusive or unlimited charters from the States prior to the adoption of the Federal Constitution, but all such charters have been granted since, and they therefore took their charters with full notice of this power of Congress and subject to whatever regulations conflicting with their chartered privileges which Congress might see proper to enact.

There is no ground, therefore, for the plausible argument of Judge Curtis—

That foreign capital has freely flowed into this country and been invested in our railroads to enormous amounts, because it was known and continues to be known everywhere that our States cannot, and that the United States will not, pass any law impairing the obligation of a contract, and that a charter of incorporation is a contract. Every American lawyer who has had occasion to advise foreign capitalists in respect to such investments knows that his first inquiry has always been directed to the charter, to see if the Legislature which granted it had reserved an authority to legislate on the terms on which the company shall do business with its customers; and he knows that unless he has found such a reservation he has uniformly declared that the power cannot be exercised by a subsequent law.

Foreign capitalists and domestic investors and all people dealing with railroads and all other common carriers of interstate commerce have had notice from the foundation of the Federal Government that all such common carriers, without any regard to their vested and chartered rights under the State, are subject to the plenary and exclusive control of Congress when they carry commerce among the several States. This is a power written in the fundamental law of the Government before any of the railroad charters were given, and fortified with the further declaration in that great charter of national existence that Congress shall have power "to make all laws which shall be necessary and proper for carrying into execution" this power to regulate commerce among the States.

HOW SHALL THIS POWER BE EXERCISED?

III. I will next consider the manner in which the power of Congress should be exercised and how far the bills under discussion tend to establish judicious and proper regulations of interstate commerce.

The whole history of railroads is embraced within less than half a century. Within the easy recollection of all the older people of this generation these great highways and carriers of the world's commerce have not only been born, but have grown with such rapidity and to such magnitude as to surpass all other works of human hands and human ingenuity. In so suddenly reaching this stupendous stature from such recent and comparatively insignificant beginnings lies the difficulties of the railroad problem and the complications and dangers which threaten the commercial interests of the nation while we are trying to solve it. The stripping which everybody was eager to encourage and foster by liberal and unlimited grants of public favor and funds and franchises has grown to be a formidable and powerful giant. The theories of those who granted the early railroad charters were crude,

and have proved to be utterly fallacious and unfounded. They believed that railroads were only highways in the old-fashioned sense of the word, and that every individual could run his own carriages on them as on the ordinary turnpike. They based all their legislation on this belief. They encouraged the multiplication of railroads, and granted charters for them without limit. All sections of the country vied with each other in courting the construction of lines over their territory. Instead of being looked upon with suspicion and jealousy and apprehension, they were believed to be the pioneers of civilization and wealth.

When the character of these new carriers began to be better understood and the indications of their power began to appear, the Legislatures undertook to imitate the policy which was adopted and continued in France and Germany of putting railroads under the ownership and control of the government. With this view provisions were inserted in many charters for railroads reserving the right of the State to take charge of the roads after a certain number of years, usually limited to fifteen years, and after the road had reached a certain annual dividend on its stock, usually 10 per cent. When this term of years expired and this dividend was realized it was intended by the Legislature that the State should take the road under its power of eminent domain, and guarantee to the stockholders a dividend of 10 per cent. Limitations were also put upon the rates for passenger traffic in all early charters, in the belief that the carriage of passengers would be the chief business of these roads. No limitations were reserved on the charges for freight.

These are some of the numerous provisions contained in the first charters of railroads which were utterly without effect and void. We have, therefore, a question for determination on our hands in which all the efforts that have hitherto been made in this country to reach a just decision have been misdirected. The precedents are all without any value as to what ought to be done. They stand only as beacons along a great public question to warn us what policy we must not pursue. There are also some considerations of fact which lie on the threshold of the subject which we should observe as we enter upon it. In less than fifty years we have built 85,000 miles of railroad at a cost of \$5,000,000,000. These great arms of commerce reach out with their thousand hands to grasp the carrying trade of 50,000,000 of the greatest and thriftiest commercial and agricultural people on the globe. These five billions of money which form the capital stock of these railroads has thoroughly permeated the business of the nation, and is scattered in the hands of tens of thousands of people who had nothing to do with their original construction and equipment. Banks and trustees and widows and minors and aged people, who are reposing on the careful accumulations of years of early toil, are all dependent upon the security and stability of railroad interests. The whole commerce and industry of the country are dependent upon the wisdom and honesty of railway management and legislation.

No other interest is so large and so ramified in the avenues of its influence. The very magnitude of these railroad enterprises and the prodigious strides they are making toward power and wealth have excited the envy and jealousy of the masses and awakened the apprehension of the thinking people. They are rich and prosperous, and growing rapidly more formidable, but in their mighty march of progress they have carried the nation along in their wake; and its teeming millions of population, and its unparalleled prosperity and advancement among the people of the earth, are to a great extent the fruits of the marvelous power of railroads. This is an age of progress; and while it is the duty of legislators to control public highways and commercial carriers for the general good, it is a narrow and superannuated policy to measure the rights and obligations of these mighty public institutions which are born of the nineteenth century by the procrustean bed of a turnpike and towpath. It is natural that there should be errors of administration in such vast affairs, but there are very many indiscriminate and some unfounded complaints against railroads.

For instance, the hue and cry which is alleged to come up to Congress from the people demanding legislation in favor of interstate commerce, is almost wholly from those whose ground of complaint, if any exist, is against the improper or defective regulations of internal or local and State commerce. If every allegation is true in these petitions and letters and circulars addressed to members of Congress in the crusade made against railroads, they only go to show that there has been a discrimination against State and in favor of interstate commerce. Therefore that which has palpably favored interstate commerce and trade is made the basis for legislation to restrict and control that particular trade. Without regard, however, to the validity or consistency of all the complaints, there should be an honest and energetic effort on the part of the railroads and of legislators, State and national, to afford as prompt and complete relief as possible by legislation for whatever grievances may exist. But under no circumstances should the zeal to relieve State commerce be sufficient to justify an invasion of the jurisdiction to which the regulations of that trade is remitted by the Constitution, by appealing to the power which is given to control commerce among the States. It should never be forgotten too that in dealing with such a great and important question no radical action should be taken without mature and careful deliberation.

The true way of looking at this question is to consider the railroad

as a producer as well as the farmer, or the manufacturer, or the miner, or any other class of freight-producing industry, and to remember that the managers of railways are governed by business principles in forming their tariffs, just as producers, and distributors, and merchants are in the management of their business. The railway is as much a machine in producing values as the plow, the gin, or any other mechanical contrivance that is employed. The rule which necessarily should govern the railroad companies in forming their tariffs is the price that will encourage to the greatest extent the production of the country, thereby offering the largest tonnage and the largest profit. The rates should be strictly affected by the capital cost of the railways, and not by the ability of the traffic to bear certain rates. The experience of managers of railroads in the last few years has taught them that low rates of freight operate beneficially in the increase of tonnage and in the decreased cost of transportation.

The English people have given the subject of railway management and control the largest and most persistent and thorough discussion and examination. In 1844 the tremendous development of railway power and influence attracted special attention in that country, and a commission was appointed, with Mr. Gladstone at its head, which took a very large amount of testimony and gathered statistics and facts on the subject from all sources, and during their investigations made three elaborate reports, giving their conclusions and suggestions. The last of these reports, which is the fullest and embraces the substance of the other two, declares:

1. That parliamentary concessions should be more carefully guarded.
2. That passenger rates and freight tolls are excessive.
3. That unlimited competition does more harm to the railroads than good to the people.
4. That monopolies, while they directly damage the public, indirectly damage the railroads.
5. That the government must be more stringent in exacting its rights.
6. That for new lines government should limit their income to a certain per cent. and guarantee that per cent.
7. That when the income reaches the prescribed limit the government should have the option to take the road.
8. That the limit of time at which the government option should begin be fifteen years, and the per cent. of income to be guaranteed be 10.

This report was followed by carefully-drawn acts regulating railroads, in 1846 and 1847, and by the Cardwell act in 1854. In 1872 another commission was appointed, which took thousands of pages of testimony, and reported, after great deliberation, that the only safety for the public against the exactions and impositions of railroads was in a board of railway commissioners. In consequence of this report the comprehensive act of 1873, called the "regulation of railways act," was passed, and a board of commissioners was appointed for five years. This board has been reappointed for five years more, and is working well, and seems to be the best and most efficient remedy for railway complaints.

The "regulation of railways act" of 1873 creates a court known as the "railway commissioners." This act empowers the commissioners to take cognizance of all infractions of the "railway and canal traffic act" of 1854; of the "regulation of railways act" of 1868, or of any acts amendatory thereof, or of any private bill under which the railway company operates its line. It gives the commissioners power to allow the railway company an opportunity to explain the conduct complained of, before actually entertaining the bill of complaint, if they see fit to do so. It gives them the power, when any differences arise between railway companies or railway and canal companies, or a canal and a railway company, to arbitrate such differences; and it transfers the general powers of the board of trade, under the third part of the "railway clauses act" of 1863, as to working arrangements between railway companies and amalgamations, to this commission. It amends and explains the enactments in relation to discriminations, and the forwarding and interchange of traffic between companies, and clothes the commissioners with special powers, under such explanatory legislation, to enforce the provisions of previous laws in that behalf. It gives the commissioners power to decide that any proposed through rate is due and reasonable, notwithstanding that a less amount may be allowed to any forwarding company on such through rate than the maximum rate such company is entitled to charge, and to allow a portion of such rate accordingly. It gives them jurisdiction to entertain complaints by municipal boards or public corporations, local and harbor boards, without any evidence of special damage to the complainants; but requires that there shall be a certificate of the board of trade attached to such a complaint that it is proper matter for the adjudication of the commissioners. This statute of 1873 requires that every railway and canal company shall keep at each station and wharf where it receives goods a book or books showing the rate, and also containing all special contracts made, and giving the rules governing rates for certain distances; and that such rates shall be open for public inspection, without the payment of any fee.

This statute also gives the commissioners power from time to time, on the application of any person interested, to make orders with respect to any kind of traffic, requiring the railway company or the canal company to distinguish in such book how much of the rate is for carriage, which includes locomotive power, and how much for expenses of the haul—in other words, to divide the haul from the term-

inals. It gives the commissioners power to hear and determine every question which may arise with respect of the terminal charges of any railway company, and where the charges have not been fixed by an act of Parliament to determine how much is a reasonable sum to be paid to any company for loading and unloading, covering, collection and delivery, and other services of a like nature. It forbids all railway companies and canal companies from making traffic arrangements of any kind with each other without the consent of this commission, and provides that all such traffic arrangements to and with each other shall be void unless the commission's consent has been obtained. It then provides that the machinery by which the consent shall be obtained is by a deposit of plan and intended agreement, &c., and their publication, and finally contains elaborate provisions as to the carrying of mail-matter.

The remainder of the act gives and clothes this commission with the necessary judicial powers to carry out the jurisdiction previously conferred. No appeal is allowed from the decision of this commission, unless the commissioners themselves certify that it is a proper case for the consideration of the supreme court of judicature.

The New York Chamber of Commerce in 1879, after a thorough and exhaustive examination of the subject, recommend—

1. The compelling of correct reports from the railroads.
2. The appointment of railway commissioners.
3. The passage of anti-discrimination bills by the Legislatures and Congress.
4. The regulation of the election of railroad directors.
5. The prevention of consolidations.
6. The most stringent laws regulating the increase of stock by railroads.

In support of the last recommendation the report states that \$49,000,000 of the stock and \$15,000,000 of the bonds of the Erie Railway, and \$44,000,000 of the stock and \$11,000,000 of the bonds of the New York Central Railway, do not represent any actual value in the construction and equipment of said railroads. If this be so these two roads are draining the commerce of the country to pay fictitious investments.

The same body, in a special report made in January, 1881, report:

That the public welfare urgently demands that commerce by railroad should be controlled and regulated; that such regulation should take the form of, first positive laws defining public rights; and second, a supervision by an executive power to see that these laws are carried into effect.

That with interstate commerce these laws and supervision should be provided by Congress, and for those railroads exclusively within the jurisdiction of a State similar action should be taken by the Legislature of that State.

The New York Board of Trade and Transportation, in their report of 1881, say:

That the investigation by the committee appointed by the Legislature of New York resulted in the verdict that the principal charges were "fully proven;" that the committee recommended a series of seven bills, designed to remedy evils found to exist. These were as follows:

1. Amending the general railroad act of 1850 with reference to increase of stock.
2. Amending section 2, chapter 917, relating to the consolidation of railroad companies in this State.
3. To regulate voting by stock and bondholders of railroad corporations, known as "the proxy bill."
4. To regulate the transportation of freight by railroad corporations, known as "the anti-discrimination bill."
5. To create a board of railroad commissioners, and to define their powers and duties.
6. To prescribe the form of annual report made by railroad companies.
7. To prevent the particular method of stock-watering by which the stock of the elevated roads in New York City was so largely inflated.

It was found that a majority of the Senate had been elected in the railroad interest, and no bill could pass without Mr. Vanderbilt's consent. As a concession to a strong public opinion, however, Nos. 1, 2, 3, and 6 were permitted to become laws. No. 3, however, was so emasculated as to greatly impair its usefulness. No. 4 passed the assembly, but was entirely transformed in the railroad interests by the senate, then passed and sent back to the assembly for concurrence, which was refused, because instead of prohibiting discrimination it tolerated and legalized it. Nos. 5 and 7 failed to pass either house.

It will be observed that all these reports on the subject recommend, and all the English legislation provides for, the appointment of railway commissioners. They have proved eminently useful in England, and in fourteen States in this country have been tried with substantial success. A recent report says:

The railroad commissioners of Georgia have triumphed over the corporations in the matter of a reduction of passenger rates. The commissioners insisted that a rate of three cents per mile was sufficient to yield fair profit, and under the law of the State creating the board directed the railroads not to charge more than that. The railway companies were very much averse to recognizing any outside power, but they have been compelled to succumb, and three cents per mile is now the legal and established tariff for passengers.

These reports and investigations also recommend stringent legislation on a number of points which are not covered by the bills pending before Congress and do not refer to the subject of drawbacks and other matters contained in those bills.

In applying the suggestions of the English committees and the legislation of England in reference to railroads to the railroads of this nation, the vast differences between the countries should always be kept in mind. In England all charters come from one supreme and unrestricted legislature. In this country charters are granted by the General Government and by forty subordinate State governments. The area of England is 121,000 square miles. That of the United States is 3,000,000 square miles. There are only 17,500 miles of railroad in England, while there are 86,000 miles in this country. England is an island with no foreign borders, but shut in all around by the sea. The United States covers the center of a great continent, with foreign powers to its north and south. These are only a few of the great facts which go to complicate and confuse a problem which, without these

difficulties, has taxed to the utmost the wonderful versatility of the genius and statesmanship of the first commercial country in the world. While, therefore, it is very desirable in this matter to subserve the public interests in the very highest degree, it should always be done in view of the results of the experience of men and with justice to those who have helped to create these great throbbing arteries of commerce. "Justice itself is the great standing policy of civil society." The Government, it is conceded, can take absolute possession and control of the railroads, under its power of eminent domain, by paying for them. But when it wants to regulate and restrict, without compensation, the vast private property of thousands of its best citizens, contributed, it may be admitted, partly for public use, it should act without passion or prejudice, but governed and controlled by those general principles of justice which are crystallized in the popular mind and recognized among honest men as "the law of the land."

THE PROPOSED LEGISLATION.

The effort to regulate commerce among the States by railroad was first made by an elaborate and statesmanlike bill introduced into the Forty-third Congress by Judge McCrary, and ably advocated by him in a report and speech. This bill was reported from the Committee on Railways and Canals, and is the same bill which I introduced into the Forty-sixth Congress and have reintroduced into the present Congress and is now pending before the Committee on Commerce. The subject was next brought forward by a brief but intelligent and practical bill introduced into the Forty-fourth Congress by Mr. Hopkins, of Pennsylvania. This bill of Mr. Hopkins's was reintroduced into the Forty-fifth Congress, at its first session, with very slight and immaterial alterations, by Mr. REAGAN, of Texas. In the second session of the same Congress Mr. WATSON, of Pennsylvania, introduced a lengthy and very technical bill on the same subject. This same bill was abbreviated, but every material portion of it was retained and was introduced by Mr. REAGAN into the Forty-fifth Congress and reintroduced by him into the Forty-sixth and present Congresses, and is now known as the Reagan bill.

This bill of Mr. REAGAN, which is the most prominent measure which has been agitated and discussed, has some serious objections when considered in view of the most reliable information and practical examination and experience on the subject. The chief of these objectionable features are:

1. It encourages unlimited competition.
2. It prevents drawbacks.
3. It prevents pools.
4. It prevents competitive rates, and thereby fixes rates.

In no respect has the history of railroads so completely defied all the former theories of business action as in the matter of competition. This has been called the life of trade in every other occupation. The belief that competition would advantageously apply to railroads was the chief incentive in the early legislation on the subject for giving charters without limit in number and privileges. It was supposed that the more there were of these great public highways, and the more competition there was, the better it would be for the public. There is no doubt, however, as shown by all the facts in reference to railroad management, that this unlimited competition has injured the railroads largely, and damaged the stockholders and the people who patronize railroads.

The result of such wars as have devastated railroad property in the past has been to put many of these roads which could not stand the competition into the hands of receivers and impose upon the directors of others the necessity of absolutely suspending the payment of dividends. After this condition has been reached, the millions of money which innocent and enterprising people have invested in the building and equipment of these roads becomes utterly unremunerative, and the roads are run as if they had cost nothing. Even worse than this, in some instances the rolling-stock and track of the road are worn out without the return of enough to restore and renew them. It is a notorious fact that thousands of tons of freight are carried annually over certain great trunk lines at vastly less than the actual honest cost of transportation. When a railroad is thus cast out on the boundless sea of unremunerative competition and insolvency it becomes a freebooter among the solvent roads. In this way the principle of competition, which it was supposed would be the bulwark of the public against railroad imposition and extortion, becomes the destroyer of legitimate railroad enterprise and injures the people who use railroads. The interests of the people as well as of the railroads demand that they shall have a fair price for their work.

This is the first bill that has ever made an imperative inhibition against drawbacks, except the Watson bill, from which it is copied. This inhibition is not recommended by any bill or report or commission that has ever dealt with the subject. It is admitted to be wrong to discriminate against individuals in any instance and against places where the laws of competition do not compel it. But a drawback which is open to every shipper is not wrong. It is based upon the soundest business principles. Where two roads compete to one point there is no way by which they can maintain competitive rates, which are always on the very verge of cost and sometimes below it, without permitting drawbacks to those who ship to this competitive point. Drawbacks apply to places, and not to persons; to localities, and not to shippers. Two roads run between two points, the one is one hundred miles longer than the other; if it desires to compete with the other it must make its rates on the very extreme of the

actual cost of transportation to all those who ship to the competitive point. It cannot do this with the shippers along its line who do not have the advantage of another competing road. The shippers along its line have no right to anything but to have their goods carried at a fair and reasonable rate, which is enough to cover cost and afford an honest profit to the company. If the company choose to carry for others situated at points where there is competition at cost, or even less than cost, it is the business of the road and its stockholders only. Places that have no competing railroads have no right to complain of those which have. A city or a town that by reason of its natural situation or advantages, or by reason of its energy and thrift, succeeds in being a railroad center and has competing railroads, has a right to whatever advantages this gives them.

On the other hand, a city or town has no right to demand that a railroad which they have, and which has no competition, shall be put under contribution to equalize their misfortune or lack of enterprise with their more fortunate rivals who have competing roads. It would be just as honest and proper for a little inland town to complain of the cities by the sea, and demand that the great body of commerce which goes in and out from the great seaports should contribute to remedy their disadvantages. The railroads are entitled to a reasonable rate in all instances and from all parties, but they are not bound to exact this where their interests do not justify it, any more than merchants or business men in any other vocation of life. They can carry at any price below a reasonable one so long as they do not make any person else contribute to the loss. The history of commerce is full of instances where railroads have carried large quantities of goods at very diminished rates, and yet at a profit, to prevent them going by other routes of transportation.

A very striking instance of this is given by one of the gentlemen who argued the subject before the Committee on Commerce in the last Congress, wherein he showed that wool brought from Africa by ship was carried by a French railroad from the seaport to a northern town in that country at a very small rate, to prevent it going by water. The local shippers along the line of that French railroad complained of the discrimination, and yet the board of railroad commissioners justified it fully, on the ground that the railroad made thereby a small profit, which it would not otherwise have made, and the road and the people and local shippers reaped the benefit of it. It was also shown in the argument before the committee that the English railroads carry American meat from Liverpool to London at half rates, to prevent it from going by water. It was also shown before the committee that certain roads, by competing for large quantities of freight at rates which barely pay the cost, give employment to their hands and road, so as to afford more prompt and efficient freight facilities for the local shippers, and at less cost to them than these roads could furnish without this low-priced competitive freight. This point is susceptible of very elaborate illustration, but it is too plain to need further argument.

There is perhaps more doubt about the propriety of pools or combinations than about any other provision in this bill. Combination is the opposite of competition. Where combination is possible it is said competition is impossible. In this part of the subject lies the most difficult aspect of the railroad problem. In the solution of it, however, no plainer and more practical way can be suggested or devised than the appointment of a fixed commission of eminent and impartial men who shall have absolute power to say what are reasonable rates, what are uniform drawbacks, and upon what terms and when and how two railroads can pool or combine their capitals and business. The gigantic consolidation of the three great telegraph lines of the country did more to injure the honestly struggling transportation and other great commercial and business corporations in the public mind than all the other doubtful acts of these jealously-watched powers for many years. A fourth and formidable competing line which has recently sprung into life is about to go down into the maw of what is a palpable and monstrous and dangerous monopoly. If, however, unlimited and unrestricted competition is wrong, then there must be some means to prevent it. There are no means in the power of the companies themselves except by a pooling agreement among themselves. Mr. Fisk, who is certainly one of the most intelligent railroad men, says "pools are the only means to prevent discrimination and the evils which result from railroad wars and competitions. No one act has done more to relieve the whole railroad management and cheapen freights and legitimate the whole business than the great west-bound freight pool made April 5, 1877." The following is a copy of the agreement:

Memorandum of agreement this 5th day of April, A. D. 1877, between the New York Central and Hudson River Railroad Company, the Erie Railway Company, by H. J. Jewett, receiver, the Pennsylvania Railroad Company, and the Baltimore and Ohio Railroad Company, witnesseth:

To avoid all future misunderstanding in respect to the geographical advantages or disadvantages of the cities of Baltimore, Philadelphia, and New York, as affected by rail and ocean transportation, and with the view of effecting an equalization of the aggregate cost of rail and ocean transportation between all competitive points in the West, Northwest, and Southwest, and all domestic or foreign ports, reached through the above cities, it is agreed:

First. That in lieu of the percentage difference heretofore agreed upon, there shall be fixed differences upon the rates on all east-bound traffic from all competitive points beyond the western terminus of the trunk lines, whether on freight shipped for local consumption or shipped locally and afterward exported or shipped for direct export. These differences shall be as follows:

Three cents less per hundred to Baltimore and two less per hundred to Philadelphia than the agreed rates established from time to time to New York, and all

such traffic shall be billed at the rate thus fixed and no export or other drawback shall be paid thereon; it being further agreed that the cost to the shipper of delivering grain at each port, from the terminus of each of the roads to the vessel in which it is exported, as well as the number of days' free storage allowed thereon, shall be the same.

Second. That the rates to Boston shall at no time be less than those to New York on domestic or foreign freights.

Third. Should rail and ocean steam through bills of lading be issued, neither of the parties hereto will accept as its proportion less than its current local rates to its seaboard termini; but no joint rail and ocean bill of lading shall be given or recognized by the parties hereto.

Fourth. That on all west-bound traffic passing over the roads of the parties hereto from competitive points at or east of their respective eastern termini to all competitive points west, northwest, or southwest of their western terminal, the differences in rates from Baltimore and Philadelphia below New York shall on third class, fourth class, and special be the same as the differences fixed on east-bound business, and on first and second classes eight cents less per hundred from Baltimore and six cents less per hundred from Philadelphia than the agreed rates from New York, and that after existing contracts governing foreign business can be terminated neither of the parties hereto will accept as its proportion of the through ocean steam and rail rates less than the established local rates.

Fifth. All agreements inconsistent herewith are hereby annulled. In witness whereof the parties hereto have affixed their signatures the day and year aforesaid, to this agreement, which is intended to be permanent, but if either party desires modification, three months' notice must be given of such desire, said modification to be made by mutual agreement.

NEW YORK CENTRAL AND HUDSON RIVER COMPANY.

By W. H. VANDERBILT, Vice-President.

THE ERIE RAILWAY COMPANY.

By H. J. JEWETT, Receiver.

THE PENNSYLVANIA RAILROAD COMPANY.

By THOMAS A. SCOTT, President.

THE BALTIMORE AND OHIO RAILROAD COMPANY.

By JOHN W. GARRETT, President.

There is nothing in this agreement if legitimately carried out which does not go to simplify and perfect the business of the great trunk lines which join in it. It was brought about by a series of destructive railroad wars between these four great companies, in which they suffered almost incalculable loss. They were certainly entitled to exercise the first law of nature, which is said to be self-preservation, by agreeing upon a cessation of hostilities and a fair and honorable treaty of peace. But notwithstanding this solemn and formal compact between the four great competing lines of the country, the last summer's experience gave us a railroad war more gigantic and bitter and destructive than any which had preceded it. This was the direct and immediate result of excessive and ruinous competition, which is more harmful to the railroads, as the English experience declares, than beneficial to the people. There can be no regularity of freights and no stability in the freighting business as long as railroad wars continue. At one time freights will be disastrously low and at another immoderately high. This cannot be consistent with the true interest of regular and legitimate traffic. No business dependent upon transportation can make any calculation as a basis of action for any time in the future with such a condition of things. Besides, it is not fair and honest to encourage a system of indiscriminate competition which compels railroads to carry for less than a fair price and forbid their resorting to the only remedy which can protect them. There must necessarily arise an abnormal condition of business from such a policy. Either competition should be prohibited or railroads should be permitted under proper restrictions of law to agree upon a just basis of rates.

It will be conceded, further, that railroads and all other public carriers should have fixed schedules of rates which are certain and uniform and open to all. It may also be further conceded, that all other things being settled, railroads should agree to make no change in their schedules of rates except upon certain fixed and determinate notice. But we must examine this provision in reference to the change of schedules in the light of the other provisions of the proposed legislation. If unlimited competition is to be encouraged and drawbacks and rebates and pools prohibited, then the hands of no railroad company should be tied for five days nor for one day while the hands of all the competing and antagonistic companies are loose. When a competing company changes its rates, all its competitors must change immediately or lose the competitive trade in the interval in which they so fail to change. In addition to this, railroads are called upon frequently to answer at once what is the lowest rate at which they will agree to carry a certain stipulated amount of freight for a certain fixed length of time. This request is made of railroad companies by large manufacturing establishments who, at certain periods of the year, enter into contracts for the delivery of their goods during certain periods and at certain points. There should be no inflexible barrier in the way of any company giving an answer in reference to freight at any time which shall be safe to itself and satisfactory to the transporter.

The provisions which Mr. REAGAN's bill omits and which it or any bill which may be enacted ought to contain are the following:

1. It should provide for the appointment of a board of railroad and common-carrier commissioners, whose salaries and tenures of office should command the best talent and integrity of the nation, and to whom should be given the same or greater powers than are committed to the English railroad commissioners.

2. It should prevent absolutely, and under heavy penalties, all consolidations of railroad and other carrying companies, except under certain limitations and with the consent of the railroad commissioners.

3. It should prevent, by rigid and careful penal sections, all contracts of every kind by stockholders, directors, or employees of railroads, and other transportation companies, with the company of which

they are members, either directly as individuals or indirectly as members of another company. The greatest curse and marplot of honest railroad business to-day is the bleeding and exhausting of the companies by unrighteous contracts made with and between companies comprising parts of the same stockholders, directors, or employés. These contracts of parties with themselves, these "wheels within wheels," are the meanest and wickedest civilized methods of highway robbery practiced in this century.

4. It should compel correct reports to be made by all railroad and other carrying companies.

5. It should restrict by the most exacting provisions the increase or "watering" of the stock of railroad and other companies.

6. It should embrace clearly and broadly within its provisions all kinds of common carriers of interstate commerce.

A measure based on these suggestions and containing these provisions would meet the demands of the people and be just to the railroads and their stockholders. It would utilize the results of the very large experience and extensive investigation of the English people on the subject who have arrived at a system which gives general satisfaction there as nearly as that can be attained in public business affairs. It would conform to the most intelligent propositions which have been presented as the result of very earnest and exhaustive investigations into the railroad problem in this country.

Tariff and Tax Commission.

SPEECH

OF

HON. CHARLES N. BRUMM,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 13, 1882.

The House, in Committee of the Whole House on the state of the Union, having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

Mr. BRUMM said:

Mr. CHAIRMAN: As to the necessity of the passage of this bill in its present shape, or rather the necessity of creating this commission, I shall say perhaps but one word. The appointment of a commission to revise our tariff laws seems to me to be necessary more because it brings the commission in direct contact and communication with those interested in the several industries of our country, and enables them by personal observation right on the spot in the various sections of the land to probe to the bottom all disputed questions, and thus by thorough investigation be enabled to give us such facts and statistics as will greatly assist us in coming to a proper solution of this vexed question; besides that, you have a small committee traveling from point to point, instead of having representatives of all our vast industries coming here to furnish imperfect information, based on *ex parte* statements exclusively. Therefore the appointment of this commission seems more like the natural thing of the dog wagging the tail, rather than the tail wagging the dog. [Laughter.]

It will be more economical, will expedite the revision of the tariff law, make it more just and equitable to all industries and all sections of our country, and we can act more intelligently after the work of this commission is done than we could with the imperfect data obtainable in the old way.

But why do we require a tariff for protection against foreign competition? I contend that we require it in this country because we are laboring principally under two great disadvantages, the most important of which, I believe, is dear money or high interest, with the fluctuations caused by the absorption and control of the medium of exchange by private corporations, by, and through which jobbers and speculators are permitted to gamble on the sweat and blood of our people. The second cause is high wages as compared with other countries. These matters I will take up in their proper order.

You say we must levy tariff for revenue only. Well, so far as I know, there is no surplus revenue being collected, and since this tax must be paid, why deprive your friends and neighbors of the benefits derived therefrom and give them to strangers who are abroad; especially as there is no prohibitory tariff? For I contend that so long as the tariff is below the high-water mark of prohibition it is the greatest leveler and slasher of prices known to political economy. Competition is always the life of trade, and therefore prices will be reduced just in proportion as home competition will be able to wrestle with foreign competition and thus force the prices down to the lowest possible notch. Destroy home competition and you remove the only check on foreign monopoly, and thus the farmer and all others will be left to the tender mercies of European avarice, not only for what he buys, but also for that which he has to sell. For, mark you, if we are not furnished employment in our factories we

must seek employment on the soil. Either we will be manufacturers and commercial men, carriers, &c., or we will be farmers. That is, we turn our attention to raising cotton, if you please, cereals, meat, &c., instead of consuming them. Then how long would it be before these farm products would become a drug in the market? Close your workshops and other avenues of industry and you open up the field. You not only destroy the farmer's best customer, but you make a producer of your own commodities of him, and force him to become your rival in the sale of your products, and thus like a two-edged sword it cuts the farmer both ways.

Mr. Chairman, I speak from experience. I know what the result was in my own county in the coal region during the crisis of 1873. There was scarcely a hillside, rocky, rugged, barren, and desolate, that was in reach of our poor that was not tilled by the idle miners and laborers who were thrown out of employment. There was not a bog, scarcely a wood, that they did not attempt to clear, and turn their attention to raising those products necessary to keep body and soul together. So it is in every branch of industry. Just as you drive out one class or one branch of industry, you compel those engaged in that particular branch to turn their attention to another, and that in this country will necessarily, as a rule, be to tilling the soil, of which God in His goodness has given us so bountiful a supply.

The gentleman from Georgia, I believe, yesterday wanted to know where the cotton raiser was to be compensated. The cotton raiser is being compensated to-day, directly and indirectly, by every man, woman, and child that is working in the factories, farms, &c., and wearing and consuming cotton goods.

The cotton raiser of the South stands to-day as no other industrial class in the world stands. You have the cotton of the South, a fiber and product that cannot be competed with anywhere else in the world. No matter what your wages are, no matter what the price of money is, the "sea island cotton" of America has no competitor on earth, and yet you are always in want. Let the cotton raiser force the manufacturer to close his factory and you make the manufacturer a producer, and the laborer employed in his factory must seek some other branch of industry, and among others will go down South and become a cotton raiser himself, in spite of your proscription. You have room for all of us there. Your country is hardly touched yet. You have no development, comparatively speaking, with your resources, and as your cotton industries pay well you will find men going down there to enter into that business with you and divide your profits. And yet with factories protected, good wages, and proper treatment they would soon come among you, teach you cotton farmers how to take care of yourselves and be compensated and become the richest and happiest people in the world.

But gentlemen say that protection discriminates unjustly in favor of privileged classes; that it makes the masses pay tribute through the Government to monopolies; in short that it is class legislation. Now, sir, I deny the whole proposition. We do not discriminate in favor of anybody or any section of our country. We protect no one in the monopoly of any business, privilege, or locality. Sir, we protect the industry only, and not those engaged in it specially. For example: we foster by protective tariff the wool-growing industry; that does not mean that those who are now engaged in wool raising shall have the exclusive benefit of it, nor that it shall be confined to any locality; but it means that any one in any part of the country who wishes to raise sheep shall be encouraged in his laudable purpose by protection (to a certain extent) against foreign competition. It is true if we were to put a tariff on wool and then limit the raising of wool to certain persons or localities it would be unjust, as this would be creating monopolies, and would be taxing the many in the interest of the few; but if we offer general protection to the wool-raising industry and then open the door to all who wish to raise sheep in any part of the land we are doing good to the whole country and all its people, and turning the ordinary burden of taxation into a real blessing.

But, Mr. Chairman, I might say that 90 per cent. of the trade of all countries is domestic, and yet the free-trader would have such a system that would enable him to sell his products at high prices and buy the other products at low prices. Sir, you are attempting to introduce the fallacies and heresies of England in this country. Let me read here a short extract taken from an editorial in the Chicago Inter Ocean of a recent date on the English fallacies. It says:

The theory of free trade is that although thirty-nine parts in forty of the trade of every country consists of the internal trade of its people with each other, yet that each person so trading with his neighbor, whether he be selling or buying land, labor, produce, services, or goods, is entitled, as a clear matter of economic right, to demand that his own country shall be the dearest country in the world in which to sell, and at the same time the cheapest country in the world in which to buy, notwithstanding the fact that the sales and the purchases are one and the same fact, which is exactly equivalent to demanding that our yard-sticks shall measure more cloth to the purchaser and less to the seller than those of any other country, and that our pound weight shall indicate four ounces more to the purchaser and four ounces less to the seller than that of France or Germany. This free-trade hallucination that the whole population of a country can by any hocus-pocus be awarded both a dearer market in which to sell their services, land, labor, skill, and goods than is to be found elsewhere, and at the same time a cheaper market in which to buy the services, land, labor, skill, and goods which they need to purchase, is worthy of the venerable old lady who wondered why the Bible Society could not furnish a small pocket-Bible printed in as coarse print as her quarto Bible. One would think that if a solitary English economist had ever strayed into the "old clothes" quarter of London and heard the vendors of second-hand garments recommend a pair of pantaloons as "large enough for the tallest man and short enough for the smallest boy," he would have seen in it such an exact parallel to the pro-

posal to supply the whole people of a country with "the dearest market to sell in and the cheapest to buy in" that he would have mistaken himself for the keeper of an "old clo' shop" and gone out of a business in which sophistries were obscurely stated into one in which they could be used for selling goods.

Why, sir, you build a factory within your own limits, and you employ a hundred men in it, and it will furnish employment and subsistence for a thousand people at least. Thus you can build up your waste places, and save the cost of transportation and handling the raw material and manufactured article, and you will save more in many cases than the first cost of the article.

The gentleman from Kentucky [Mr. CARLISLE] made what at the time I thought about the ablest free-trade speech I ever listened to, and perhaps I have never read a more able one. But a closer examination of it will show that although plausible at first blush, yet upon investigation we find it full of sophistry, error, and nonsense, and so it always is when men rely upon statistics alone, and especially when these statistics are unfairly or not properly handled. When you rely upon statistics you must not only take two or more factors because they happen to be consistent but you must take every factor that comes within the proposition, and every one of them must be consistent before you can establish any result upon statistics alone. In other words, not only must the factors named be consistent with the results claimed but no other factors relating in any way to the proposition must be inconsistent therewith, or else your statistics are absolutely worthless.

I must give the gentleman credit for one acknowledgment at least, for in that he was more frank and candid than most free-traders. He acknowledged that protection does protect; and to prove that he is correct in that, in this connection I desire to read a short letter sent to me by one of my constituents. It is as follows:

THE GREENWOOD ROLLING MILL COMPANY,
Tamaqua, Pa., February 17, 1882.

DEAR SIR: We desire to call your attention to the bill now pending before Congress, known as the McKinley bill, in reference to the revision of the tariff laws, and ask you to give it your support. We were engaged in the manufacture of cotton-ties, and, under the decision of the Secretary of the Treasury in substituting ad valorem rates for specific rates, were compelled to close the mill, and remained idle fourteen months. When we resumed again, were obliged to drop cotton-ties and take up the manufacturing of merchant bar iron.

We believe the bill in question has been reported favorably to the House of Representatives by the Committee on Ways and Means.

Respectfully, yours,

JOHN RALSTON,
Superintendent.

HON. CHARLES N. BRUMM, M. C.,
Washington, D. C.

There you have the positive testimony of a reliable firm that was compelled by reason of a decision of our Secretary, on the mere construction of our revenue laws, to close this mill and throw out of employment a large number of workmen, and finally to compel it to abandon the manufacture of ties altogether, and by destroying one of the competitors in the manufacture of cotton-ties enable the foreign monopolists to keep up the price. And yet other gentlemen will tell us that protection will not protect nor compensate the cotton grower.

The gentleman also said that consumption of domestic farm products was not increased by a protective tariff, and for that purpose cited the statistics and showed that our relative consumption of these farm products had not increased according to—what? Why, according to the general production of these articles! forgetting the other factor in the statistics, namely, what was the relative increase of population; thus showing the fallacy of your statistics when you take but one portion of them and leave the other portion out. It is like the boy's reasoning: "A dog is an animal; so is a horse. A dog has a tail; so has a horse; ergo, a dog is a horse;" forgetting the inconsistent factor, namely, the distinction between the canine and the equine species. And this is the manner of free-trade reasoning.

But the gentleman from Kentucky [Mr. CARLISLE] stands with us in another matter. He has practically contradicted the theory that we must buy where we sell. I agree with him; we must not buy where we sell. Take a Cincinnati lady to a silk-store. Will she inquire before making her purchase whether the foreign silk manufacturer buys his lard and hams in Ohio? Or will it be contended that the American silk-dealer in making his purchases makes any inquiry except as to the quality, kind, cost, and manner of payment? Neither does the hungry Englishman ask his baker or butcher whether the American farmer drinks English ale. No, sir; the whole matter is, simply, will it pay? It is not a matter of charity or social or commercial intercourse. It is wholly a matter of business, rigid, cold-blooded business at that, having no other object in view than the almighty dollar.

The gentleman from Kentucky seemed to think that because the farmers of this country can compete with the worst paid labor of Europe and other countries without protection, therefore the manufacturer also could compete. Does the gentleman forget the fact that the farms of Europe are but specks; that they are cut up into small patches inhabited by large families; that these families do the work themselves and consume the greater portion of what they raise, and that they have but little to throw as a surplus on the market, and therefore cannot afford to pay high wages? Does he forget that on small farms you cannot introduce machinery and yet that by the aid of machinery on our farms one man can raise as large a product to-day as he could with maybe a hundred men a few years ago? Does he forget that we have the advantages here of unlimited soil

and territory; that our machinery starts at one end of a farm, miles in length, and does the work there that the European pauper labor or the Asiatic or African slave labor does by hand, some even with the old-fashioned sickle?

The farmer understands this proposition well enough. He can compete with the pauper labor of Europe, he is content and he is not clamoring now, nor is he thanking the Democracy for presuming upon his ignorance by attempting to gull him with any of this free-trade nonsense.

But the gentleman from Kentucky says again, and he has statistics for this, "Wages were less in 1870 than in 1860." Well I will only say, in the first place, that God grant we may have some more of those lower wages in my section of the country at least. Then we were in prosperity. There was no poverty, no squalor, no hunger in 1870. Yet the gentleman says statistics show the average wages were lower. But those statistics were based upon gold values. Why, sir, will the gentleman contend that the fluctuations and the prices of gold are a fair criterion to measure the wages at any one specific time? Will he contend that on Black Friday, when gold fell almost in the twinkling of an eye some 30 and odd per cent., wages fell with gold just at that time; or that when gold shot up like a rocket that wages also shot up as gold did at that time? If the gentleman is fair, why does he not take the statistics from the beginning of one decade to the end of that decade, and not at a specific point or a specific time?

Again, by war, terrible war, that drained the North and drained the South of their laboring men, women, and children, aided by sewing-machines and other inventions, were driven into the labor market as a matter of necessity; and in making up the wages of 1870, as compared with 1850 and 1860, you had the wages of the women and children that your damnable rebellion forced into the workshops to work instead of the men who were fighting the battles.

Mr. CARLISLE. Will the gentleman allow me to ask him a question?

Mr. BRUMM. Certainly.

Mr. CARLISLE. Does the gentleman from Pennsylvania not think that the effect of the war by withdrawing laborers from the industries of the country increased wages in this country?

Mr. BRUMM. Not by withdrawing labor alone, but by creating such a demand for the industrial products. Labor, of course, being scarce by that withdrawal, wages necessarily advanced; and that is our position to-day. We say that wages advanced for men, and this answers the proposition that that scarcity of labor forced women and children into the field, into the workshops, and everywhere else that labor was wanted, and women and children are never paid as good wages as men are paid; and therefore it affected the general average.

But, again, another element came into competition. Four millions of slaves had been made freemen; Chinamen had begun to immigrate—no; not immigrate, that is a wrong term—Chinamen had begun to be imported, servile Chinese labor; and this free labor that is to-day held in practical slavery in the South, helped by the servile Chinese labor to force the mechanic and miner into other occupations. Therefore, these elements should enter into your calculations when you seek to produce general results by statistics alone.

But the prime fact after all is that supply and demand regulate the matter. If there is a demand for two days' work, with a supply of but one laborer to fill it, then capital must bid against itself for that one man's labor. But if there is a demand for one day's work only, with a supply of two men to fill it, then the labor of both those men must go begging of capital.

In the first case labor is sold to the highest bidder; in the other case capital is struck down to the laborer who is the lowest bidder. In the one case capital must do justice to labor; in the other, labor lies prostrate and helpless, forced to divide between two what would otherwise be the proportion of one.

Labor—the cheap labor of Europe, the servile labor of Asia, the barbarous labor of Africa—is to-day competing with the free labor of America. England is a country fully developed; we are but starting out in the race of life. England robs the labor of Ireland, robs the labor and material of India, and justifies it on the hell-born doctrine of Malthus, Ricardo, Mills, Price, and other English political economists.

Let me illustrate some of the disadvantages that honest business men and laborers are under, by an old anecdote: there was a wholesale brush dealer came to a retail dealer and offered his brushes for sale. The retail dealer wanted to know the price. He replied that they were worth \$12 a dozen. "Why," says the retail dealer, "they are the cheapest brushes I ever saw; I will take all you have got." Just then another brush dealer came in and said: "Hold on; I have brushes I can sell you for \$10 a dozen, just as good as these are." The first dealer looked up in astonishment, and wondered how the second dealer could sell his brushes so cheap. Of course the second dealer made the sale. After the sale was made, the two brush dealers went out together, and the first one said to the other, "How is it, neighbor, that you can sell your brushes cheaper than I can, for the fact is I steal the hair and have men rob the wood out of which I make them?" "Oh," said the second dealer, "I steal the brushes ready made, and that is the way I can beat you." So, you see, the greater the thief the greater the advantage he has over honest producers.

And so it is with cheap labor. Whenever you steal the hair and rob the wood of which you make your brushes you beat the honest brush-maker, or whenever you steal the proper wages from labor in England, Ireland, India, or any other country, you have undue advantage over any people that endeavor to pay fair wages. Therefore we demand protection for our people against such robber nations.

I said that the free-trade theory was based upon the English hell-born doctrine of Malthus. What is that? It is that the fittest only can survive; that war, pestilence, famine, or some scourge must come periodically in order to wipe out the surplus laboring population. That is the theory upon which Democratic free trade in this country is based. That is the foundation upon which England bases her free trade theory.

Remember, Mr. Chairman, America has no Ireland to pauperize. This Government has not a hundred million servile inhabitants, as England has in India, from which to draw the sweat and blood of its laboring people. This Republic has no colonial possessions to rob, no subjects to enslave; we have sovereign citizens only. Whenever you degrade American labor, you degrade American citizenship. Whenever you pauperize the labor of this country, you pauperize the state itself. Whenever you pull down that high standard on which we would base American labor you destroy the very foundations of our free institutions, disgrace American labor, and we contaminate the source of all our greatness. We impoverish and debase ourselves. Therein England has the commercial advantage over us, and yet the free-trader says: "Oh, we must do just as England does, and not expect that our workmen can be so much better off than their fellow-workmen in other lands."

Again, capital by means of machinery and inventions is becoming a more important and potential factor in our productive industries day by day, as in most cases one man can do the work of more than a hundred required a few years ago. This is done by the aid of steam and electricity, which have been substituted for muscle. Therefore the ratio of capital invested to the amount of production is constantly growing greater. I want you free-traders to bear this in mind. I will repeat it. The ratio of capital invested to the amount of production is constantly growing greater, while that of labor grows relatively less. Hence the price or value of capital—that is, interest—is daily becoming a greater corresponding element of our commercial weakness. Our capitalists are so handicapped by dear money or high interest that it requires special protection against the lower rate of interest in Europe.

Here, again, the gentleman from Kentucky thinks he has answered that whole proposition when in his speech he says that the difference in the rates of interest, as he has it from Hatch & Co., amounts to only about 2 per cent. and a little over. I do not mean to say that the gentleman is unfair, for I do not believe him capable of anything unfair. But he certainly handles these statistics rather carelessly.

Now, mark you, he says that in getting the value of money in England and the foreign countries he takes "the commercial rates of interest at the banks and in the open market." Now, if by open market he means permanent loans, then his proposition might be correct so far as it goes. But I take it he does not mean that, especially from the fact that he gets his figures from Hatch & Co. But when he speaks of the rate of interest in America, what does he do? He says that he finds the average rate on call loans to be so and so; and he includes call loans in the regular banking rates and the rates of commercial paper in the open market. He then puts the two together and says that that is our rate, when in fact it is far below our rates for permanent loans.

But that is not all; he does not stop at that. He says that the difference is only 2 per cent. and a little over, but that he will be generous and call it 3 per cent.

Mr. Chairman, the average difference of rates of interest to the capitalist who wants a permanent loan between this country and the foreign civilized world is no less than 4 per cent. Rates here are no lower on permanent loans anywhere than 6 per cent., and in many places the rate is as high as 12 per cent.; while abroad a permanent loan on good security is granted at a much less rate than on ordinary commercial paper.

The gentleman from Kentucky says: let us impose an ad valorem rate sufficient to cover the difference in the rate of interest, *i. e.*, 3 per cent., and that will cure it all. Oh, no, my friend; that is only a drop in the bucket! The question is not simply the rate of interest on the price of the article itself, but it is the interest on the entire investment in the manufacture. It is this absorbing rate which goes on compounding year by year.

But let me illustrate how damaging this difference of interest is in other respects. In my county the principal rolling-mill is owned by Mr. Charles M. Atkins. Mr. Gowen, the president of the principal railroad running through that part of the country, wants, we will suppose, some rails. He goes to Mr. Atkins, and says: "I want a thousand tons of rails; what will you furnish them at?" Mr. Atkins replies, "I can sell you rails at Philadelphia for \$40 a ton." But Mr. Gowen before he agrees to buy finds out from Mr. Brown, in England, at what price he will deliver rails in Philadelphia. The English manufacturer says, "I can deliver rails also at \$40 a ton." The prices are even. Mr. Gowen knows that the American rail is better than the English rail; experience has taught that it will wear longer; it is a better rail. Hence, Mr. Gowen would naturally buy of the

home manufacturer, Mr. Atkins; but before doing so he says: "Mr. Atkins, how do you want to be paid for your rails?" "Well, Mr. Gowen, I must be paid cash, or, I might give you the rails at thirty, sixty, or ninety days on good security." Then Mr. Gowen asks the English manufacturer, "Mr. Brown, how do you want to be paid for your rails?" He replies, "Mr. Gowen, I do not want to be paid at all." "Do not want to be paid at all, eh! And you will deliver me a thousand tons of rails without pay?" "Yes; I simply want you to give me a first mortgage on your railroad; or, if your stock is par and pays a dividend of, say 7 or 8 per cent., I will take stock instead of money for these rails." Mr. Gowen then says, "Of course, Mr. Brown, I will buy my rails from you." Mr. Atkins loses the sale.

Now, mark you, Brown goes into the English money market and borrows his capital at 2 or 3 per cent.; he hypothecates the American securities with his own indorsement, draws no less than 7 per cent. interest every year on that mortgage or that stock. He pays to the Englishman from whom he borrows money only 3 per cent. Thus the English iron manufacturer puts 4 per cent. in his pocket every year. Yet the American debtor owes as much at the end of the year as at the beginning. This is the way, Mr. Chairman, that the accursed blight of interest helps to damage the American manufacturer.

Let me give you, by way of illustration, another incident. It has been stated that the late A. T. Stewart could go to France and buy silks more cheaply on credit than he could for cash. Do you ask me why? Because the French dealer knew that if Mr. Stewart would not pay the cash, he would pay the rates of interest prevailing in this country, which would be nowhere less than 6 per cent. In France money is worth only 2 or 3 per cent., therefore he would sell his silks to A. T. Stewart for less money than he would ask any other silk dealer, even less than cost, because he could make up the difference, especially if A. T. Stewart would give a long-time bond on which he could draw his regular interest. Yet the gentleman from Kentucky tells us that an ad valorem duty of 2 per cent. is about all that we want.

My own county is the greatest producer of anthracite coal in the world, notwithstanding the statement of the gentleman from New York. While on this point, let me settle a little dispute with the gentleman. I quote from pages 93 and 94 of "Statistics of Coal" by R. C. Taylor. The controversy with the gentleman was whether there was such a thing as pure anthracite coal anywhere else than in our anthracite coal fields. The gentleman from New York stated that there was in Wales. It is true that in Wales there is what they call pure Welsh anthracite coal; that is a trade name which has been given to it; but when you come to the analysis of that coal, what do you find? First, that it varies in its essential elements, and especially in the bitumen from which bituminous or anti-anthracite coal gets its name; and, secondly, in its specific gravity. This volume says:

As regards the table of American anthracites (and it may be correct also to include that of the bituminous coals) it will be seen, with the assistance of a map that their specific gravity increases as we advance from west to east, confirming also the fact noted elsewhere that the weight of the combustible decreases in proportion to the amount of bitumen with which it may be charged.

Now, what does it show? The weight of American anthracite is 26.01, and of European 22.81, a difference I believe of something like 20 per cent. in specific gravity.

Mr. HEWITT, of New York. What? Twenty per cent. in specific gravity?

Mr. BRUMM. Yes, sir.

Mr. HEWITT, of New York. Why, the specific gravity of coal is only about 7.

Mr. BRUMM. I am giving you my authorities and the country can judge who is correct.

Mr. HEWITT, of New York. I am trying to get the gentleman on the right track. The specific gravity of coal is not 20, but somewhere about 7.

Mr. BRUMM. I am giving you the weight between the American and European anthracite, and I say the difference in the percentage of weight or specific gravity would be something like 20 per cent., the one being 26.01 and the other 22.81.

Mr. HEWITT, of New York. Does the gentleman now say there is no anthracite coal in Wales?

Mr. BRUMM. I said there was no pure anthracite coal. It is semi-bituminous or semi-anthracite.

Mr. HEWITT, of New York. Will the gentleman allow me to have read a letter on this subject from David Thomas, who was the introducer of the manufacture of anthracite pig iron into this country?

Mr. BRUMM. No; I cannot yield for that purpose.

Mr. HEWITT, of New York. The gentleman interrupted me without any objection on my part. I only wish to get at the truth. Here is the letter from David Thomas, the first manufacturer of iron with anthracite coal in Wales and in the United States.

Mr. BRUMM. Does Mr. Thomas contradict it?

Mr. HEWITT, of New York. He does.

Mr. BRUMM. Well, let it go for that much, and you can print it afterward and have the benefit of it.

Mr. HEWITT, of New York. The gentleman is not fair. When he interrupted me I listened to every question, and I answered him courteously. I now offer to give very briefly the authority of David

Thomas on the subject of anthracite coal in Wales. No man will question that he is the best living authority on the subject.

Mr. BRUMM. If the gentleman will only stop, I will let him read it, as it will take less time than to continue this interruption.

Mr. HEWITT, of New York. Very well, then I will read it myself:

CATASAUQUA, Pa., April 3, 1882.

My DEAR SIR: Your favor of the 31st ultimo came to hand on the 1st, and copy the RECORD to-day noon. Concerning the matter contained therein I would say that I have no recollection of ever having any conversation with Judge KELLEY about any coal. I am very positive that I never told him or any other person that there is no anthracite coal in Wales, having used thousands of tons of it. The quality of it there varies as it does here in this country. I have seen there some fully equal to any in Pennsylvania. I do not think the quality varies any more there than it does in this country, but certainly it is pure anthracite coal. As to quantity there is one general basin of some eighty to ninety miles long, running from the upper end of the vale of Neath in County of Glamorgan to the coast in Pembrokeshire, near Milford Haven, and when I was in Wales last (in 1869) I found fifteen blast-furnaces making iron all along this basin with pure anthracite coal as fuel, and if any one attempts to say that I have stated there is no anthracite coal in Wales, you put it down as not true. Both my wife and myself are enjoying as good health as we can expect at our time of life. She joins me in kind respects unto you.

Very sincerely, your old friend,

DAVID THOMAS.

To Hon. A. S. HEWITT,

Member of Congress, Washington, D. C.

Mr. BRUMM. Well, that is Mr. Thomas's statement, and let it go for what it is worth.

Mr. HEWITT, of New York. I should think it is worth a good deal.

Mr. BRUMM. I will give much better authority. Here is the analysis.

Mr. HEWITT, of New York. I will say to the gentleman from Pennsylvania that if he will take the tables of analysis which are given in Appleton's Encyclopedia he will find the coal of Wales contains 92 per cent. carbon.

Mr. BRUMM. That is true.

Mr. HEWITT, of New York. As against 90 per cent. of carbon in Pennsylvania coal; that the coal is purer and thicker. Will that satisfy the gentleman?

Mr. BRUMM. There is your free-trade theory of statistics again. They both agree in the fact that both have tails, [laughter,] namely, they both have carbon, but disagree in the main fact between bituminous and anthracite, namely, the Welsh coal containing about 20 per cent. more bitumen than that of Schuylkill, and weighing about 20 per cent. less.

Mr. HEWITT, of New York. But there is Mr. Thomas's letter; answer that.

Mr. BRUMM. I have already answered that. In connection with this subject Mr. Gowen, the president of the Philadelphia and Reading Coal and Iron Company, has been making strenuous efforts to introduce American anthracite coal into Europe for domestic consumption, and for that purpose has, I believe, been trying to bring about the introduction of our anthracite stoves into Europe. Mr. Gowen would not attempt this if they had the same coal there.

Now, the transportation of coal from my county to Philadelphia, which is less than one hundred miles, costs almost as much as mining and preparing. No industry in the world requires such risk both to capital and life as the anthracite coal industry of Pennsylvania.

Going from the light of day, miles down into the bowels of the earth, facing falling rock, all of the natural elements of death, fire, water, explosive gases, dampness, and suffocation, men take their lives in their hands, go down into these coal beds, dig out the coal, send it miles to the surface, put it in the rollers, crush it, screen it, load it on the cars, and, on the car, that coal will not fetch any more than the price of transporting it a little more than ninety miles.

Free-trader, what does this mean? What is the cause of it? It means that the Reading Railroad Company, and other companies in that region, have a debt which is required to be paid, and on every dollar of its gross receipts it must pay almost 40 per cent. interest alone—not a cent for dividends. It is only the interest on the funded and floating debt, and the condition of these companies is no worse than the condition of the carrying companies of my part of the State at least. Interest robs the miner of his share of the product. Interest robs the consumer, and robs the manufacturer of his proper share of the product. Give us lower interest; give us a system of finance which shall create a rate of interest that will reduce that exhaustive rate which those companies are now paying and bring it down to a comparison with that of England, then you free-traders may have some reason for urging tariff for revenue only.

Mr. Chairman, the South is specially cursed by cheap labor and dear money. If there is a spot on this earth that ought to know what the damning blight of cheap labor is, the South of all others when compared with the rest of this country, ought by this time to know what it means. Cheap labor withers the body and poisons the mind of employed and employer. Cheap labor and slavery are synonymous. Cheap labor breeds ignorance and vice on the one hand, insolence, prejudice, and inhumanity on the other, and wretchedness, death, and damnation to both. With all your advantages in the South, your advantages of climate, your advantages of mineral wealth and all natural resources, why is it that of all this immense immigration to this country you get none of it? Sir, these immigrants have no bitter feeling as to the late war. They are not poisoned with sectional hatred. They come from a foreign country seek-

ing to better their condition, and if you would give them the opportunities, the South would receive these immigrants instead of the West.

The trouble with you men of the South is, that ever since the invention of the cotton-gin you have stuck to the old rotten hulk of Democracy. You have stood by that party through all its career; and ever since that invention that party has been the special advocate of cheap labor, of slave labor. You stand by them to-day. You are to-day urging the necessity of cheap labor not only for yourselves but you attempt to force it upon the North. You have to-day that system which you inaugurated years ago; a system which would classify society; a system which would have the laborer, on the one hand, degraded, wretched, ignorant, and damned, while on the other hand, you yourselves alone would be the "lords of creation," and then wonder why it is that the balmy South is not as successful and prosperous as the cold and barren States of New England.

Why not start in the right direction. That which degrades your labor makes yourselves unfit for any freemen to live among. I speak this in kindness. I have no hard feelings toward you. I am of those who wish Godspeed to the South. I am of those who desire to extend all the assistance, all the charity or protection which may be required. I would lift it up, elevate it, wipe out sectional lines, eradicate all class prejudice, gather all under the broad wing of the National Government without reference to race or class, poverty or riches, section or locality. But you must be told the truth, and until you carry it out you must submit to the curse that has been and still is upon you. Do not stand in the light of your own progress.

What good will your schools do you down South? You are coming here and asking for certain taxes or the proceeds of the sale of certain public lands in order that you may get an educational fund for the benefit of your uneducated people. I shall favor anything that helps to educate the South; but, sir, until you liberate your labor, your schools will do you no good. Your laborers will be too poor to go to school, and too poor to allow their children to go. Under your system of degrading labor, instead of dignifying it you fetter the mind as well as the body, you might as well throw your school-books to the winds, for they can be of no service to you until you have altered the system.

First, start out in the right direction, help to elevate your own labor; then you may not only secure foreign immigration but have your public schools as well, and secure the aid of Northern labor and Northern capital to build up your country and develop your resources.

You must guarantee the free exercise of the elective franchise to the laboring element, white or black; elevate the laborer of the South; get rid of the prejudice that prevents northern men and immigrants from going among you. When you are ready to do justice, grant equal rights to all men, and let the negro and the white man, whatever may be their occupation, have the full benefits and the full fruits of their liberty, then you will receive the blessing along with them, and the South will bloom like a rose.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HOOKER. I hope the gentleman's time will be extended.

Mr. HAMMOND, of Georgia. I make the request that the time of the gentleman from Pennsylvania be extended indefinitely.

Mr. BRUMM. I only desire a few minutes.

The CHAIRMAN. Is there objection to the time of the gentleman being extended?

Mr. SPRINGER. I object. There are a great number of gentlemen whose names are on the chairman's list. If gentlemen who now have the floor are allowed two hours, those at the bottom of the list can never be reached. There should be some fairness in this thing. This debate cannot last all summer.

Mr. HOOKER. Why not?

The CHAIRMAN. The gentleman from Pennsylvania desires only five minutes more.

Mr. GODSHALK. I hope that will not be objected to.

Mr. SPRINGER. I do not object to an extension of time for five minutes.

Mr. BRUMM. Let me say here that the creation of wealth without a proper distribution is nursing the viper that will sting you to the heart. To create wealth you must with it create the viaducts, the means of distribution among the people, through a proper medium of exchange. To create wealth and have it in the hands of the few to lord it over the many, will be a curse rather than a blessing. Therefore, its distribution by means of high wages and cheap transportation as well as low interest is necessary to secure commercial prosperity, political stability, social progress, and moral improvement.

Take the history of every empire, of every republic that has existed. It rose as the masses rose with it. Its fall became imminent as wealth centered in the hands of the few, and the masses were impoverished. Just as you divide and classify the people, so you endanger your institutions, weaken the state, and drift headlong into barbarism.

The doctrine of Malthus, that the fittest only can survive, is the doctrine of the South, and it is the doctrine that has made such hypocrites as Henry Ward Beecher a possibility in this country. It is the doctrine that makes men doubt the existence of a God. It is the doctrine that says you must murder off your surplus. God has created them and placed them here without fault of theirs, but Malthus and

England and the South and the Democratic party say, under that doctrine you must have war, pestilence, and famine to destroy the images of God. Christ teaches fraternity; Malthus teaches envy. Christ teaches charity; Malthus avarice. Christ teaches love and salvation; Malthus hatred and damnation. One or the other only is correct. Therefore when men become imbued and poisoned with the doctrines of free trade and Malthusian theories, they cannot reconcile them with the doctrines of the Bible. Hence they reject their God, become scoffers of religion, or, worse still, hypocrites, who rob the livery of Heaven to serve the devil, and, in the robes of the Church of God, utter such blasphemy as that "bread and water is good enough for workingmen," and "that we must have a lower class to do the drudgery of the better class."

Sir, not only the solution of the commercial and political problem but also the social and religious problem is involved in the adequate remuneration of labor, cheap money, cheap transportation, and the stability of prices regulated by adequate currency controlled exclusively by the wants and necessities of business and subject to no fluctuations except those incident to supply and demand and the free and honest operation of the laws of trade. Therefore, our policy should always be that which would produce high wages to relieve and elevate labor, and low interest or cheap money and cheap transportation to sustain and secure capital; and just as you thus lift the poor and downtrodden up to a higher plane of civilization and elevate them to a common level with their fellow-man, that all may together enjoy the blessings of this life, you teach all through the harmony of nature to see the glory of nature's God and to realize the great truth of the "fatherhood of God and the brotherhood of man."

Tariff and Tax Commission.

SPEECH

OF

HON. CHARLES M. SHELLEY,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 11, 1882,

On the bill (H. R. No. 2615) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws.

Mr. SHELLEY said:

Mr. CHAIRMAN: I take advantage of the consideration of this bill to present my views upon the question of tariff. I do not propose to discuss the constitutional power of Congress to adopt a protective policy. From the earliest history of legislation on this subject in this country the existence of this power has been disputed by some of our ablest statesmen, but seems to have been settled by the practice of the Government. I address myself, therefore, to the

WISDOM OF THE POLICY,

without reference to its constitutionality. If the civilized world was organized into one government, with a homogeneity of interests, subject to the same laws of business, and controlled by the same commercial and industrial regulations, then, perhaps, the theories of political economists who deal with the abstract science of trade in its general application could be maintained, and free trade would be practicable and wise; but with the existing conditions, divided, as we are, into separate governments and communities, having adverse and antagonistic interests, it becomes the duty of one government, as against other governments, to protect the industries of its own people. That we may adequately and intelligently perform this duty we must first ascertain whether or not, in order to reach the highest degree of prosperity and wealth, it is necessary to diversify our industries. It is admitted by all that

THE PURSUIT OF AGRICULTURE

is necessary to subsistence, to say nothing of the accumulation of wealth. It is believed by many that a people can become great and prosperous who are engaged exclusively in agricultural pursuits. If this opinion could be maintained the whole theory of protection would fall to the ground and its advocates would be driven from the field. Can it be maintained? That is the question first claiming our attention. If the farmer could plant his seed and cultivate his crops without the aid of the manufacturer; if the soil could produce the raw material and then by the same processes transform it into fabrics and other products which render it useful; in other words, if the productions of the soil in the state or form they are gathered from the field were adapted and adequate to all the wants of man, and if tools and implements were not needed to cultivate the soil, we would be forced to admit that manufacturing and diversified labor are not necessary to our prosperity. The conditions, however, named, and which are essential to this admission, do not, and in the very nature of things could not, exist. The production of cotton would not be very profitable without the aid of the gin and spindle

and loom. Cotton in its raw state could not well be utilized for the comfort and convenience of man.

The simple growth of these various productions could not bring the largest measure of prosperity if we had to send them to foreign countries to find a market in which to sell or exchange them for such manufactured articles as we are compelled to have. I think it is safe to say that if raw material of any kind has a value, that value to the owner is increased by being molded, shaped, or woven into articles of use. The value of cotton is greatly increased by being woven into cloth, but it requires machinery and at the same time additional labor of a very different kind from that employed in raising it to give it this increased value. It requires a certain kind of labor and certain kinds of tools and machinery to raise iron ore out of the ground, but this labor with the same tools and machinery could not reduce this ore to pig metal; nor could the same labor and processes employed in reducing it to pig metal roll and shape it into the various forms in which iron is used. So with all other material and products in their raw state; they must be molded, shaped, woven, or ground to prepare them for use. Therefore, as we have to live by labor, that

LABOR MUST BE DIVERSIFIED

to promote prosperity, and the greater diversity we can have the larger the measure of our prosperity. This is a principle of political economy which applies to nations, communities, and families with equal force.

The free-trader insists that this diversified labor in a given community is not necessary to its prosperity. He says that the people of one government can engage exclusively in agriculture, and by shipping their products to the people of other countries can exchange them for such manufactured articles as they need. By this division of labor between countries each would acquire the highest skill in its peculiar industry, which would enable them to furnish their products at the lowest possible cost to the consumer. He claims that the only obstacle to the success of this policy is the protective tariff. If that was removed, although we might not be able to manufacture our raw material in competition with other and older countries, yet we would grow strong and wealthy upon the saving of the difference in the cost of goods bought in foreign markets. This is contrary to and an absolute reversal of all the laws of business.

SELF-SUSTENANCE THE KEY TO PROSPERITY.

There is not a progressive government on the earth whose leading policy has not been to encourage its citizens to become self-sustaining. There is not a community in this or any other land which does not accept the fact that the nearer they can become self-supplying the more prosperous they will be. There is not a successful family anywhere engaged in industrial pursuits that has not observed and practiced, as far as possible, the theory of producing all they consume. The people of the United States are under no obligation to foster and build up the industries and commerce of other countries. Their domestic and foreign policy should be shaped with reference solely to the promotion of their own national power by increasing their collective and individual wealth.

The free-trader next insists that if it is desirable for our people to engage in the various branches of manufacturing, the favorable conditions which exist here are sufficient to establish these enterprises in competition with the world without the aid of a protective tariff; and if they were not the Government should not interpose to give encouragement to manufacturing by levying a tax for the benefit of one class of industries at the expense of other and more important interests. Let us inquire whether these manufacturing industries, which are claimed to be so necessary to our prosperity, can be maintained without the aid of a protective tariff. I believe that they cannot, and that

PROTECTION IS A NECESSITY.

I do not believe that the conditions for cheap manufacturing are as favorable in this as in other and older countries. First, the difference in the price of labor (which is cheaper in all foreign manufacturing countries than this) is of itself sufficient to prevent successful competition. This difference is to some extent due to the style and manner of living that prevails among the American laborers and artisans, which on account of their habits and more highly cultivated tastes are much more expensive than those of the laborers and artisans of other countries. Under our American institutions and ideas the laborer and mechanic are encouraged to aspire to a higher degree of domestic comfort and enjoyment than those classes in other countries. The

WORKINGMEN OF THE UNITED STATES

form an important element in the forces which have driven us forward as a nation to the position of greatness and power which we now hold, and they will continue to be our chief reliance for that progress in material development which is so much to be desired. Among that class we have to depend mostly upon those who are skilled manufacturers and masters of the mechanic arts. The merchant is a mere transfer agent, not producing anything—a tax upon the products of labor. Those who are engaged in the various professions add nothing to the material wealth of the country. They, as well as the merchants, are a necessary burden upon the producing class, which burden is greatly mitigated, however, by the fact that they are all consumers and furnish a market for the producer.

So that when we come to analyze and classify the different elements of progress and advancement we must accord to the skilled and educated artisan, who molds and fashions and shapes the raw material into articles of value, the first place in degree of importance among the influences which impel us forward in the march of civilization.

With this conscious power, and with all the avenues to prominence and greatness open to him, the workingman's ambition is stimulated, his aspirations enlarged, his tastes and desires elevated, and his wants multiplied. These aspirations are not unreasonable in the presence of the fact that from his class have sprung many of the nation's most trusted servants. The workingmen of this country have shed luster upon every page of its civil history, while their valor has been conspicuous in all our wars. These circumstances and conditions necessarily enlarge their desires and increase their expenses, forcing them to demand higher wages; not because the cost of mere subsistence is more, but because their wants are greater. Although the foreign laborer may not pay less for the particular articles upon which he subsists, his wants are not so great and his tastes much simpler, and the cost of living necessarily much less; hence he can afford to work for less wages than the workingman in this country. There are other conditions, however, which add to the

DIFFICULTIES IN THE WAY OF THE AMERICAN MANUFACTURER.

The capital employed in these industries in this country is more expensive than elsewhere. The rate of interest is higher, which of course adds to the cost of the manufactured article. It may be that we possess some advantages in having larger resources in the way of raw material, but this slight difference is more than overcome by the difficulties I have mentioned. I think, therefore, in order to reach the highest development of manufacturing capacity we need such a protective tariff as will foster and encourage these interests. These obstacles to cheap manufacturing are of such a nature that they cannot easily be removed. Their removal would involve the depreciation of skilled labor, the abridgment of the privileges and comforts of the working class, and the complete destruction of their aspirations, because the small wages paid them would not supply the means of advancement and elevation. The intelligence and skill of the workingmen of this country demand constantly increasing remuneration, which is only restricted by the constantly increasing competition. The cheap foreign operatives who come to this country soon become Americanized, and their multiplied wants force them to demand higher wages than they received in the old country. For these reasons I have no difficulty in coming to the conclusion that nearly, if not all, of the manufacturing interests of the United States are dependent upon a protective tariff for their highest development and success.

THE EFFECT OF PROTECTION ON THE AGRICULTURIST.

The next question to be considered is, What effect does a tariff which gives sufficient protection to the manufacturing interests have upon the agricultural and other classes not engaged in manufacturing? The free-trader insists that it imposes unjust and onerous burdens upon him; while the protectionist contends that the benefits conferred upon the protected class are distributed among all classes in such natural and equalized form as to promote the good of all. If this latter proposition can be established, then all will agree that it is wise business policy to protect. In my efforts to establish this I shall first call the attention of the House to its result upon the commerce and business of the country at large. The United States, above all other countries perhaps, possesses the greatest variety of material resources. We have every variety of soil and climate, and can produce everything that can be grown by any other country. We have every variety of those minerals which enter so largely into the business and commerce of the world. The raw material for almost every article of manufacture can be found within the limits of the United States. It is only necessary therefore that we should acquire the means of working up all this raw material to enable us to supply the world in its manifold wants.

A NATION IS WEAK AND DEPENDENT

in proportion to the extent it has to rely upon other countries for its supplies. In times of peace it is drained of its substance to purchase articles of consumption. Every dollar that is sent out of the country, whether it goes to purchase the ordinary supplies or to purchase productive property, is taken from the aggregate wealth of the country, and to that extent weakens the national power. In times of war these evils are greatly augmented. Being dependent upon foreign and perhaps unfriendly countries for the goods we consume, with no merchant marine to transport them to us and no navy to protect the transportation even if we had the shipping, the United States would be poorly prepared for successful defense against the hostile operations of the leading powers of the world.

It may be said that the dangers of war should not enter into the consideration of this subject; that the exceptional geographical advantages of the United States and our peaceful attitude toward all nations does not justify us in shaping our policy with reference to such dangers. I agree that the prospect for continued peaceful relations with the rest of the world is good, and trust that it may so continue; but the nations who manufacture our goods and carry our commerce are not as free from these dangers as we are. If they

should become involved in wars, with formidable navies to prey upon each other's commerce, our supplies carried in foreign bottoms would not have that protection and security which every wise government should strive to give to its commerce. So that in either event we are at the mercy of foreign countries in proportion to our commercial and industrial dependence upon them. It is one of the first duties of government, as was memorably announced to the American people a century ago, "in times of peace to prepare for war." It is impossible to know at what time we are to become involved in difficulties with other nations. Even our progress in the arts of peace and civilization may excite the envy and jealousy of other countries and lead to controversies which cannot be adjusted except upon the battle-field. The imprudent or thoughtless act of a Government official might precipitate us into a war which would tax our resources to their utmost capacity, and often the very strength of a people is their surest protection against the envy and jealousy of others. It is believed that the highest development of our material power is the most effective means of preserving peaceful and friendly relations with foreign powers.

THAT GOVERNMENT IS STRONGEST

and most powerful which produces all its supplies and has a surplus to dispose of. The encouragement of these various industries adds to the material wealth of our people in their collective life, whether they be located in one State or scattered throughout all the States; and in times of war, this productive power, this self-reliance, this industrial energy, makes us strong and invincible, placing us above and beyond the reach of possible disaster. In times of peace these advantages are great, and attract to our country the enterprise and intelligence and wealth of other lands. In this view of the question it becomes important to foster and encourage every industry that will tend to make us self-supplying and independent. One century of national life has given us wealth and power which command the respect of all nations; and to-day, on account of the vast possibilities of this free country, we occupy a place in the great family of nations second to none. Our greatness has just begun. We have just emerged from the by-paths into the highway of prosperity and power, with the resources of a world at our command, with a virtuous, patriotic, and progressive people; we have only started on that career of progress which will take us onward and upward until we reach the highest eminence that can be attained by civilization and science.

The American of Anglo-Saxon descent is distinguished for his pride and ambitious patriotism. There is no height to which he will not aspire and no sacrifice that he will not make for his country's glory. Actuated by an enlightened self-interest, he seeks to exalt his country and promote the welfare of his people. While he would not obstruct the progress of others, he wisely prefers his own. This wise and patriotic selfishness leads him to foster and encourage their commercial, industrial, and social development. The influences of national wealth are not only felt by other countries but they stimulate pride of country, promote civilization, and elevate the moral tone of the people. All these are the legitimate national

RESULTS OF DIVERSIFIED INDUSTRY.

To the community these advantages are more direct and appreciable. A community which is blessed with these industrial enterprises acquires wealth rapidly, and the temporary failure of one branch of industry does not bring that distress and suffering that comes from failure when you depend entirely upon a single industry, such as agriculture. The agriculturist who has a manufacturer for a neighbor is encouraged to grow every variety of crop that the soil is capable of producing. A market is found at his door for his products, and as these neighbors are multiplied the demand for his products is increased. This increased demand stimulates the price, which reacts upon the farmer, who improves and stimulates his land to increased production, and so on, each acting upon the other, until the highest productive capacity is reached in both agriculture and manufacturing. The farmer may have to pay higher prices for his goods, but he is able to do so because he sells his own products for higher prices and has more to sell. A large proportion of the products of the farm will not bear transportation to a distant market. These products, which in many instances could be grown without any additional cost to the farmer, would not be grown if they could not be sold at their doors.

To show the full force of this point, I call attention to the condition of the farming class in Pennsylvania and contrast it with the farming class in Alabama. In Pennsylvania, where the manufacturing interests have reached a high degree of development, the farmers are thrifty and well to do. Every year they make a support and something over, which surplus is invested in the stocks of these manufacturing enterprises, from which they draw regular dividends, and thus become to a large extent the beneficiaries of this very system of protection which the free-trader (assuming to speak for the farmer) denounces in such strong language. The profits of the factory added to the profits of the farm grow from year to year, until the poor farmer, whose pitiable condition is so pathetically portrayed by the anti-tariff politician, rejoices in the accumulation of a substantial fortune, and his little farm of twenty, forty, or one hundred acres becomes the source of a princely income. The lands upon

which these fortunes are made are valued by their owners at an average price of about fifty dollars per acre. These are the results upon communities who were prepared to avail themselves of the advantages of a protective tariff. Now turn to an agricultural country such as the southern and central portion of Alabama, and see the condition of things there. The farmers there devote most of their energies to the growth of cotton, because it bears the cost of transportation better than anything else they can raise, and if the season should happen to be unpropitious and the cotton crop fail, the whole people are reduced to a state of distress and poverty. A partial failure of the crop in Alabama last year has been most disastrous. Many farmers are not able to buy seed to plant their lands. The price of lands in Alabama average about four dollars per acre. This condition of things would not exist if Alabama, like Pennsylvania, had a factory of some kind in every community. Why do States by legislative enactment propose, (as many of them have done,) to exempt manufacturing enterprises from taxation?

Why do municipal corporations offer various exemptions and privileges to these industries to induce their location and development in their midst? It is because the benefits to the general public are of more value than the exemptions and privileges they bestow. This is nothing more nor less than protection in another form, and the recognition of the principle upon which the policy of protection is based, that the welfare of the State is promoted by such establishments, and they should receive the fostering favor of the Government for their creation and success. A distinguished statesman from the State of Texas, in the other end of the Capitol, whose speech is perhaps the ablest that has been delivered in favor of free trade, admits "that in the immediate vicinity of the factories in the manufacturing States the agricultural interest is compensated for its burdens in the home market furnished for agricultural products by the manufacturers." This being admitted, a logical deduction follows, that the nearer you can bring them together the more nearly would the agriculturalist be compensated, and the factories in New England, being nearer than those of old England, would necessarily be of more benefit to the agricultural interest than the latter. He says in another place:

If we had free trade now, or what is the same thing, a tariff for revenue only, manufacturing capital, in order to surround itself with the most favorable conditions for free competition with the world and realize the largest profit, would, for reasons I have given, flow at once into the South for investment as its most profitable field for operation.

If this could be so under a free-trade tariff, there can be no good reason why it should not occur under a protective tariff. The superior advantages of the South exist, whether we have free trade or protection, and if capitalists desired to avail themselves of these advantages, the existence of a protective tariff would not restrain them, as the profits would be the same, so far as these superior facilities are concerned, with or without the tariff.

If the result of free trade would be to compel the capital now employed in manufacturing in the New England States to leave that locality and seek investment in the South, where it could be surrounded with more favorable conditions for cheap manufacturing, I submit that such a necessity would work greater hardships and entail greater losses upon the people of the New England States than could be compensated for by the advantages sought. The money invested in buildings and other fixed property which would be destroyed by this transfer of capital or its withdrawal from active use in these various industries is enormous in amount. Certainly the free-trader could not desire such a wholesale destruction of the wealth of an entire section of the country as his policy, if adopted, would lead to.

BENEFITS OF PROTECTION TO THE SOUTH.

There are other reasons why I should favor a continuance of the protective policy, for awhile at least, even if I were a free-trader. They are, however, more of a local nature, and I mention them merely to show southern members who want this system of duties removed, or at least greatly reduced, what will be the effects of their policy if adopted. They are these: heretofore the manufacturing industries have been confined chiefly to the Northern or Eastern States. As a result of their development and growth these States have become densely populated and wealthy. Under this protection the manufacturers there have been enabled to acquire facilities for cheap manufacturing, and a very large proportion of the capital of these States is employed in these industries. In the past the southern people have devoted their energies chiefly to agriculture. Before the war, while they owned slaves, they had an ample field for the employment of all their capital in this direction. While slavery existed it would perhaps have been to their interest to have free trade; but the emancipation of the slaves and the destruction of property resulting from the war has made it necessary for them to change their policy. They are just beginning to diversify their industries. If the tariff is continued at a rate that will give protection, these new enterprises in the South will only have to meet the competition of their own people in other sections. If protection is removed, they will not only have this home competition in the older manufacturing States but they are brought in competition with all foreign countries. The North has always had the benefit of this protective system, and under it this section has grown wealthy and strong. Now, just as the South

is beginning to avail herself of them, many of her own people are demanding free trade.

TARIFF REVISION PROPER BASED UPON PROTECTION.

I will admit that the tariff is in some respects too high and not properly adjusted or equalized, and I favor a revision, but I want it done upon the basis of protection, with reference to the material interests of the country and people, and not by politicians for partisan purposes. I therefore favor a commission with power to consider the whole matter and gather information from all sources. I am not competent, and I believe there are very few members of this Congress who are competent, to take up this matter and gather the necessary information to enable them to construct a system of import duties that would be satisfactory and successful. I regret, Mr. Chairman, that my convictions on this important question are not in accord with the views of what seems to be a majority of the Democratic party. I am consoled, however, by the assurance that my views are not undemocratic, and I warn gentlemen, who assume to declare what is Democratic and what is not, that their wild theories and vague abstractions, if adhered to, will in the future, as they have done in the past, lead them to defeat. I do not think the tariff question should be made a party question. It is so directly connected with the material interests of all classes and parties that it should be dealt with purely as a business question, to be settled without reference to party interests. It does not involve any fundamental doctrine of government. It is simply a question of policy, and as such could be abolished altogether or asserted more vigorously without affecting the vital doctrines of our Government. I am therefore opposed to any plan of dealing with the subject that will expose it to partisan influences.

All controversy on this question might be avoided by removing all internal taxes and raising the entire revenue for the expenses of the Government by a duty on imports, which is the fairest practicable mode of raising revenue. Under our present laws the people are unequally taxed to maintain two distinct systems of gathering taxes, either of which costs as much as the collection of the entire revenue would cost under one system. I think our internal-revenue system works greater hardships upon particular classes than the tariff, and the taxes paid under it are more unequally laid and harder to pay than the entire amount would be if laid upon imports. Let us get rid of these internal taxes and there will be no necessity for interfering with the tariff, except to equalize it.

Utah Contested-Election Case.

SPEECH

OF

HON. JULIUS C. BURROWS,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 20, 1882,

On the Utah contested-election case.

Mr. BURROWS, of Michigan, said:

Mr. SPEAKER: The issue between the House of Representatives and the polygamists of Utah is at last made up. At the beginning of the present Congress George Q. Cannon and Allen G. Campbell presented themselves at the bar of this House as rival claimants for a seat in the Forty-seventh Congress as Delegate from the Territory of Utah. Mr. Campbell claimed the right of admission by virtue of a certificate of election.

Mr. Cannon contested his *prima facie* case and affirmed that he (Cannon) was in fact duly elected. In reply Campbell asserted that if for any reason his *prima facie* title should be held defective, Mr. Cannon could not be seated for the reasons—

First. That he did not receive a majority of the votes legally cast; Secondly. That he was an unnaturalized alien; and Thirdly. That he was a polygamist living in open violation of the laws of the United States.

Pending the discussion of the *prima facie* case of Mr. Campbell, and before its determination, the whole matter was, by order of the House, referred to the Committee on Elections for their examination and report thereon.

After investigation that committee conclude and report to the House upon the first proposition, as follows:

We therefore find that the evidence establishes that Mr. Cannon received 18,568 votes; that Mr. Campbell received 1,357 votes; and that there were scattered 8 votes. Mr. Cannon, therefore, received a majority of all the votes cast at the November election of 1880, and is duly elected a Delegate from the Territory of Utah, unless he is disqualified from holding a seat for one or more of the reasons alleged in the answer of the contestee.

Upon the second proposition the committee report:

We therefore hold that Mr. Cannon is a naturalized citizen of the United States, and that he is not disqualified, on the ground of alienage, from holding his seat as Delegate.

Thirdly, that he is a polygamist. This fact appears from the following admission:

I, George Q. Cannon, contestant, protesting that the matter in this paper contained is not relevant to the issue, do admit that I am a member of the Church of Jesus Christ of Latter Day Saints, commonly called Mormons; that, in accordance with the tenets of said church, I have taken plural wives, who now live with me, and have so lived with me for a number of years, and borne me children. I also admit that in my public addresses as a teacher of my religion in Utah Territory I have defended said tenets of said church as being, in my belief, a revelation from God.

GEORGE Q. CANNON.

It is conceded on all hands that George Q. Cannon possesses all the constitutional qualifications required for a Representative in Congress. A Delegate certainly does not require other or higher qualifications.

The simple and single issue in the case is whether this House has the constitutional power to refuse admission to Mr. Cannon upon the ground that he is a polygamist. While I am in full accord with the views of those who hold that a Delegate is not a Member within the meaning of that word as used in the Constitution, and that our powers touching the exclusion of a Delegate are greater than those over a Member, yet in my view of the case I do not think the establishment of this principle necessary to the determination of the matter. I affirm that if a Representative from any of the States should demand admission to this House under the same circumstances as those surrounding Mr. Cannon, it would be within our constitutional power to deny him admission. If that position be correct, the importance of the distinction between a Representative and a Delegate disappears. In standing upon this ground I am aware of that provision of the Constitution which prescribes the qualifications of Representatives and that other provision which confers upon each House the right to judge of the elections and qualifications of its own members. Nor do I overlook the long and unbroken line of decisions that it is not within the constitutional power of Congress nor of the States to add to or in any way modify these constitutional requirements.

But it will be observed that the Constitution does not undertake to specify those things which disqualify a person for membership. The doctrine is well settled that to entitle a person to a seat in this House he must not only possess those affirmative qualifications mentioned in the Constitution, to wit, age, residence, and citizenship, but he must be free from those things which by common parliamentary law disqualify. In other words, a Representative, though duly elected, a citizen, and of proper age, would not be entitled to membership unless free from personal disqualifications. An idiot or a madman would not be entitled to membership, though duly elected and possessing all the constitutional qualifications. We would deny admission to a person infected with a contagious disease, and would be justified in so doing. Should a member-elect, after he was chosen, be arrested and convicted of some infamous offense and punished by imprisonment in the State prison, would it be contended that if he should present himself at the bar of this House at the expiration of his term of imprisonment and demand to be received into membership, that it would not be within the constitutional power of this body to refuse him admission? Instances of personal disqualification might be multiplied indefinitely. This is sufficient, however, to illustrate my point.

I hold that George Q. Cannon, by confessing himself in this tribunal and in this contest guilty of polygamy, an offense punishable by imprisonment in the State prison, has that personal disqualification which renders him ineligible and a fit subject for the exercise of our constitutional power of exclusion. I could fortify this position by a long citation of authorities, but will detain the House with only a single case.

In 1870 B. F. Whittemore, a member of Congress from the State of South Carolina, was charged with selling a cadetship in violation of law. He admitted the charge, but pleaded in extenuation of the offense that he used the money for charitable purposes in his district. He was about to be expelled from the Forty-first Congress when (and the day before he expected the vote to be taken) he resigned and ousted the House of Representatives of jurisdiction to expel.

A new election was ordered, and Whittemore was returned a member to the Congress in which he committed the offense. The House refused to receive him by a vote of 130 to 24. Now, he had not been convicted of any crime, but the House to which he was re-elected was in possession of his own confession that he had done that which was an offense against the law of the land, and for which he might be imprisoned, and it exercised what I conceive to be its common parliamentary right to decline to receive him into membership. Other and numerous cases might be cited sustaining the same principle. So in this case, Cannon comes into this presence and solemnly admits his great crime; even in his speech just closed does not avoid, but rather justifies and seeks to shield himself under that broad mantle of religious toleration beneath which all religions in this country have ever found the amplest shelter. I regret, sir, that he should have sought to justify his crime by appealing to Holy Writ, and claiming that the inspired Word of God sanc-

tioned this monstrous crime. The words of the poet come to my lips:

Just Father, what must be Thy look
When such a wretch before Thee stands
Unblushing, with Thy sacred book,
Turning the leaves with blood-stained hands,
And wresting from its page sublime
His creed of lust and hate and crime!

I repeat, the issue is made up. Brigham Young once declared in his own peculiar and uncouth phrase, "I will send a polygamist to their Congress and cram polygamy down the throat of the American nation." It was in execution of this audacious menace that he commanded the election of George Q. Cannon to the Forty-third Congress, since which time the representative of polygamy has sat unchallenged in this Hall. Hitherto Mr. Cannon has effected his entrance into this Chamber through the instrumentality of a certificate of election, that potent instrument against which it is difficult to interpose a successful barrier. He presents himself, however, at the door of the Forty-seventh Congress disarmed of this weapon, confessing himself guilty of an offense made by law a felony, but challenges the constitutional power of Congress to deny him admission for that cause. And so the issue is squarely made up, and we are now to see whether the constitutional power of a living Congress is sufficient to cope with and overcome the infamous edict of a dead priest. I trust that the report of the majority of the committee will receive the unanimous support of this House, that the Forty-seventh Congress may place its seal of condemnation upon this relic of barbarism. The American people have long enough endured the shame of having seated in their high council a man who offends public decency, disturbs social order, defies national authority, and outrages the moral sense of all Christendom. Let the humiliation end now and forever.

Chinese Immigration.

SPEECH

OF

HON. WILLIAM S. ROSECRANS,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 17, 1882,

On the bill (H. R. No. 5804) to execute certain treaty stipulations relating to Chinese.

Mr. ROSECRANS said:

Mr. SPEAKER: On the bill now under consideration for adoption it seems fitting that I should state to this House the views of my constituents of the first Congressional district of California, and which I may say are shared by all the inhabitants of the Pacific coast.

Our position on the Chinese question is this: we think it not arrogance to say that in education, intelligence, generosity, humanity, attachment to our country, respect for its interests and for its honor, our people are the peers of their fellow-citizens on this side of the Rocky Mountains. We believe this will be readily admitted by every gentleman on this floor, and that all our fellow-citizens will give us the benefit of this assumption.

We have had thirty years' experience of the effects of Chinese industrial immigration to our coast. We have watched it from its feeble beginning on our shores and seen the stream swell, year after year, until within the last four months it has poured a flood of 20,000 adult male Chinese immigrants upon us at the port of San Francisco alone, to submerge our white labor.

As our experience increased year after year public opinion was forced by incontestable facts more and more decisively to the conclusion that their presence among us was unwholesome to the State. Despite its immediate convenience and pecuniary profit to employers, years ago the vast majority of our people demanded that Chinese immigration should be stopped.

Public meetings were held and petitions were presented to the Legislature and to Congress on the subject.

State legislation was invoked, and restrictive laws obtained to abate the nuisance. The Federal courts pronounced these laws in contravention of those of the nation. Recourse was then had to Congress, by petition and resolutions of our State Legislature, asking the Government to stop this immigration by negotiation with China. We waited for this with what patience we could, but in vain. We waited for the fruits of commerce from the Burlingame treaty which, for bare permission to trade in eight ports of China, opened all of ours on both coasts and the vast interior to Chinese trade, and colonization by the pauper classes of China. At last our united and persistent complaints arrested the attention of our generous statesmen. Congress passed the "fifteen passenger bill," which, while it did not meet the necessities of the case, promised to limit the evil, and allay our apprehension that our coast would be overrun. The President vetoed this bill in the interests of commerce, in the

face of the fact that England's commerce with China continued on the basis of mutual interest, despite England's war on that country for the introduction of opium, and even the burning of the Chinese capital.

But the claims of white labor for protection led the party in power to promise negotiations with China to give it relief from the ruinous competition of Chinese labor importations to our shores, but such was their tardiness in fulfillment that Congress was obliged to intervene. Meanwhile it was pretended by Chinese, and even by some unworthy Americans, that this claim for relief arose from the clamor of an "Irish mob," competing for labor.

To put this falsehood to death, in 1878 the California Legislature provided that when the adoption of the new constitution should be submitted to vote by a secret ballot, a vote should be taken "for" and "against" Chinese immigration. The result was 883 votes for and 154,638 against it, or, 994 out of every 1,000 against to 6 in favor.

This astonishing unanimity was sufficient to prove to every reflecting mind that all pretense of our opposition, being the offspring of a prejudice against "color" or of political truckling to the passions of an "Irish" or any "mob," is utterly unwarranted and unfounded in fact.

Congress accordingly provided for sending commissioners to China to arrange for the preservation of the real and supposed interests of commerce under our treaties and for the satisfaction of the demands of our own citizens on the Pacific coast for the suppression of Chinese industrial immigration. It was sent as a party exigency on the eve of the late Presidential election to inspire American labor with confidence in the party.

The Republican party, always lavish in its professions of philanthropy, but wonderfully apt to confine its practice to races and cases subservient to its interests, under the energetic action of some of its members from the Pacific coast, put a pledge of relief to our people in its Chicago platform. Its leader gave that public and official interpretation, and of the nine hundred and ninety-four out of each thousand voters opposed to Chinese immigration, those who voted the Republican ticket did so believing that interpretation and that the party was bound to carry it out.

The commissioners to China met those of that country. They stated our demands and the wishes of our Government for a permanent stoppage of Chinese labor immigration. The latter, desirous of making the best bargain possible, treating the complaint as a temporary excitement, suggested "restricting," or "suspending for a short time." Our commissioners, very anxious to complete their work in time to influence the Presidential campaign in favor of the Republicans, whose fidelity to the cause was put in doubt before the people, were nevertheless true to the object of securing treaties by which, while protecting our commerce, the United States should be able to protect its own labor.

The general result was announced by telegraph before the election. The treaties were not made public for some time after. Although bearing traces of the crudeness and weakness due to the exigencies and haste of their negotiation, they were approved by the Senate as containing ample provision for the redress of our complaints against Chinese labor invasion.

The bill which has just been vetoed was drawn not to give us that full relief which we claim as reasonable and necessary, but to conform to the letter and spirit of these treaties. It was the judgment of overwhelming majorities in both Houses as declared by "ay" and "no" voting that the bill was thus in accord with the treaty.

In the exercise of his constitutional right the President has vetoed the bill and plunged our brave, loyal, and law-abiding people almost into despair. Of the reasons given for this veto, of the trifling pretenses alleged by the Chinese ambassador, worthy only of the "Six Companies" he essentially represents, and gravely paraded before an intelligent public; of the contrast between such statesmanship and that of the British Government I will not here speak. They will receive the judgment of the nation, to which they are submitted, and that of history.

Nor will I now arraign those Republicans who enjoy the party benefits of votes obtained from the Pacific coast upon the faith of promises they have helped to render nugatory. But I will say it ill becomes the gravity of the business we have before us to squabble for petty party advantages. Let members of both parties act upon their convictions and leave the people—as they surely will—to decide their responsibilities and those of the parties to which they belong. Still less does it become my honored friend from Iowa [Mr. KASSON] to turn to the members on this side of the House and with tragic energy declare that while he swallows the bitter draft of this bill he must protest against "hounding down people on account of color or race." The assumption that he alone, or conspicuously above, much less contrasting with others, detests such injustice savors of an egotism and pharisaism which so fine a gentleman would not wish to display. Actions speak louder than words, and whenever that test is applied for real beneficence to people of all races, white as well as colored, with less pretense of humanitarianism, members on this side will make quite as favorable a showing as those in whose favor, by word and gesture, the honorable gentleman implied a contrast which I should be sorry to think he made for party clap-trap, as I should also regret that he could bring his mind to believe just.

Under ordinary circumstances the people of our coast would accept the President's veto and appeal to the people of the United States for a more ample and complete redress than was offered by the vetoed bill. They would ask the great American people to decide whether Mongolian or our own civilization shall dominate our fair Pacific coast; to decide whether the interests of great Chinese and American monopolies shall first be conserved or whether American labor shall first be cared for and kept from the depressing influences of Mongolian labor.

But our distress is great; our business paralyzed, our people depressed. Chinese industrial immigration pours into San Francisco about a thousand adult male laborers per week. With the pistol of a Presidential veto at our breasts silencing our demands for justice, as the robbed traveler accepts any portion of the money which the robber pleases to hand him back, we accept whatever relief we can get, and in that sense we accept this bill.

Utah Contested-Election Case.

SPEECH

OF

HON. WILLIAM C. OATES,

OF ALABAMA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 19, 1882,

On the Utah contested-election case.

Mr. OATES said:

Mr. SPEAKER: The system of governments in the United States is, or ought to be, pre-eminently one of law. Every citizen's rights, however humble or exalted he may be, should in all cases be determined by the law honestly and fairly applied. The question before the House is not one of morals, but of legal right. Approval or disapproval of polygamy is not involved. This House has given a very potential expression of its opinion upon that question in the law passed at this session for the suppression of polygamy.

There is no dispute about the facts. There appears from the reports of the committee to be no issue of fact. All admit that Cannon was elected. The first question, then, to be settled is, Was he eligible to the office when elected? No one, I believe, questions, and certainly the evidence does not controvert that fact. Has anything transpired since his election to render him ineligible or to deprive him of the right to his seat? It is contended by those who oppose seating him that the recently enacted law of Congress, declaring, among other things, any person who is guilty of polygamous practices ineligible to a seat in this House, disqualifies him and presents a legal impediment to Cannon's taking his seat here as a Delegate from the Territory of Utah. It is a sound rule of interpretation of statutes that they shall operate only in future. It is competent, however, for the law-making power to enact retrospective laws or those which relate to or operate upon the past, provided they do not divest vested rights or make that criminal which was innocent when performed prior to the enactment, and punishes the same. It was held by the Supreme Court of the United States in the case of *Calder vs. Bull*, in 3 Dallas, that any law whereby a conviction can be had upon less evidence even than the rules of evidence in existence at the time the alleged illegal act was performed required was *ex post facto* and void.

All writers on statutory and constitutional law lay down the rule broadly that no statute shall be construed to have a retrospective or retroactive operation unless the statute itself so declares. The recently-enacted statute against polygamy, upon which the other side relies, does not declare that it shall so operate. It must therefore be construed as though the word "hereafter" was interpolated into each section thereof. It therefore follows as a logical sequence that Cannon is legally entitled to a seat on this floor as a Delegate from Utah. After he is seated, should charges be then brought against him of violating the recent enactment while sitting here as a Delegate, and his guilt be established by proof, he might be legally expelled from this House, and I for one would vote for his expulsion in that event.

But, Mr. Speaker, he will not be seated. It is a foregone conclusion that the temper exhibited upon the part of the majority of this House unmistakably indicates such a decision. I regret it, for the reason that in my judgment the citizens, the legal voters of Utah will be thereby denied a great legal right. It is no answer to say that the Mormons are violators of the law of the land. Await their trial and conviction; or would you condemn American citizens without a hearing? We are in this case a judicial tribunal. My duty to my country is to advocate the fair and unprejudiced enforcement of the law, and I shall therefore vote to seat Mr. Cannon.

Condemned Cannon.

SPEECH

OF

HON. HENRY L. MOREY,

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 21, 1882,

On the bill (H. R. No. 4745) to authorize the Secretary of War to furnish condemned cannon for the soldiers' cemetery at Hamilton, Ohio.

Mr. MOREY said:

Mr. CHAIRMAN: The soldiers of this Republic are citizen soldiers. We are a nation almost without a standing army. It consists of not more than twenty-five thousand troops. This would be scarcely a nucleus for a regular army in any other first-class nation on the face of the earth. The smallness of our Army is a marvel and a wonder to other nations who keep hundreds of thousands of men in arms even in times of peace. That we are able to preserve good order and command the respect of the world without a larger standing army is the glory of our nation and a proud inheritance of our people. We have just entered upon the second century of our national existence, and have grown from thirteen sparsely populated colonies, in the wilderness of the New World, to the dignity and proportions of a first-class power among the nations of the earth.

We have achieved triumphs in art and science, and in government, that have impressed themselves on the civilization of the age with more marked effect than have the efforts and achievements of any other people. We have grown to be a great nation of fifty millions of souls. We have mastered every art, and excel in all the sciences. Our skilled workmen cannot be surpassed in their cunning by the workmen of any country. In my own city of Hamilton and throughout the great Miami Valley, where it is situate, the hum of industry is heard on every hand. Our farmers are prosperous, independent, and happy. But, sir, our triumphs have not all been the triumphs of peace. Our very existence as an independent nation was ushered in by one of the most remarkable and protracted wars in modern times.

Our one hundred years of national life have witnessed warfare in all its phases. In all it has been shown that free citizens of a free country make the most valiant and courageous soldiers. They have shed luster on the American name and honored the institutions under which we live. As her soldiers have protected and honored her, so will this Government protect her soldiers who have survived the perils of battle, and honor the memory of the heroic dead. I am proud, sir, that this is so. It is an honor to this great Government; it is a credit to every community which is doing what the people of Hamilton and vicinity are doing.

To the soldiers who risked life and health and limb to win her independence, to defend her honor, and to preserve her existence and integrity, is extended the gratitude and munificence of a great nation. We have not needed, nor do we now need a great standing army. Our great country is free from the draft it would make on our Treasury and upon the young men who would be drawn from peaceful pursuits. Every citizen of the American Republic prizes his citizenship as a most priceless inheritance.

It is a part of the system of our Government that each citizen is a component part of the political body. He is prepared to defend his citizenship, as he is to defend his home. When his Government is assailed he is assailed in his personal political rights. He is prepared to defend them with his strong arm; to expose himself to bodily harm, to endanger his health, and, if need be, to lay down his life to preserve to his children that which is dearer to him than life itself. Sir, our citizen soldiers of the colonies dared to challenge the British nation to a conflict of arms to determine the question of American independence.

That great conflict with the foremost military and maritime power on the face of the earth was carried on by the struggling colonists, with matchless courage and endurance, through seven long years, to a glorious victory, establishing the principle of free government on the American continent and forever redeeming it from the supremacy of the old world. Six of the brave men who went forth to battle in that war sweetly sleep in Greenwood Cemetery at Hamilton today. A hundred times has recurring spring brought verdure and flowers to cover the face of the earth, the sweet resting-place of the dead, since they so grandly achieved their country's triumph, welcoming them to peaceful and silent rest.

In the war of 1812 the soldiers of the Republic again engaged in deadly conflict with the mother country to maintain the honor of their country's flag, and in the conflict that followed taught Great Britain and the world that the Stars and Stripes should be respected and honored on all the seas and oceans. In this conflict our citizen-soldiers had not only to meet the red-coats of the British army, but the wily and revengeful savage, who was incited to deeds of courage and cruelty by his more civilized ally. In this conflict of arms,

upon land and upon sea, my native State of Ohio rendered conspicuous and valuable service.

The victory of Perry on Lake Erie will be celebrated as long as the annals of naval warfare continue to be read and as long as deeds of valor and daring excite the admiration of men. Thirty-seven of the heroes of this war who have run life's fitful race have found rest and sweet repose in the beautiful city of the dead that adjoins the city on the banks of the Great Miami, among whose people it is my privilege to have my home.

The soldiers of the Republic, recruited from the farm and the workshop, from the factory and the store, from the school and the college, from offices of the professions, and even the pulpit itself, marching through the savannas and pampas of Mexico, carried the flag of our country to Mexico's capital and planted it on the Halls of the Montezumas. And there they dictated terms of peace consistent with our country's honor, and added empires of territory to our vast domain; but, sir, the severest test of the valor of our citizen soldiery was to be experienced. In the wars named and in the many other minor conflicts that make the history of our country our armies fought an alien foe or the native Indian. The last great struggle was to come, the clash of arms was again to be heard resounding through our own land, not with a foreign foe, not with an enemy from without, but from within.

American was to meet American, and on their native soil, and there to draw the sword and invoke the god of battle to decide between the two civilizations that contended for the mastery on the American continent. The issue involved at the threshold the very question of the national existence and life. The assertion of one civilization essentially and necessarily denied the inviolable integrity and unity of the General Government; the other asserted it and denied the sovereignty of the States.

Sir, upon this issue there sprang into existence as it were in a day armies whose numbers and equipment have not been equaled in modern times, and whose mighty tread shook a continent from sea to sea. During the continuance of that great struggle, the President of the United States called for 2,763,670 to go forth in defense of the nation's life and honor. Two million seven hundred and seventy-two thousand four hundred and eight loyal citizens of the Republic responded to the call, and risked life and limb and health to achieve its victory. I have here a statement which displays the magnitude of the Army of the Union and the patriotic fervor that inspired our people:

Statement of number of men called by the President of the United States, and of the number furnished under said calls.

States and Territories.	Aggregate.	
	Quota.	Men furnished.
Maine.....	73,587	70,107

Texas.....		1,995
Indian Nation.....		3,530
Colored troops*.....		93,441
Total.....	2,763,670	2,772,408

* Colored troops organized at various stations in the States in rebellion, embracing all not specifically credited to States, and which cannot be so assigned.

Notwithstanding the magnitude of these calls, the enlistments exceeded them by nearly 9,000 men. It needs no word-painting, it

requires no play of the imagination, to picture the scenes that followed in the four years of terrible war that preceded the final triumph of the national cause. The sacrifices of the brave men who achieved it are hallowed by the love of a grateful people, and their deeds of daring illumine the pages of our history. I need not recount them here. They are fresh in the recollection of every member of this House. Two hundred and five of the gallant men who went forth in 1861 to battle for their country and its flag, with flush of youth upon their cheeks, with the fire of patriotism lighting their eyes, and with love of liberty in their hearts, sweetly sleep in Greenwood Cemetery now. Then they were quick with life, buoyant with hope, and animated with ambition. To-day they peacefully sleep in that silent city of the dead.

I hold in my hand a list of the names of the comrades who have answered the bugle-call and have gone before; but whose bodies find sepulture in that sacred spot. It was prepared by a comrade who is still waiting for the command to cross over to the other shore.

And, sir, I only wish that I could transfer to the RECORD the beautiful and artistic letters and colors with which his work is done and the list made. That I cannot do. But, sir, the following is a list of United States soldiers who are buried in Greenwood Cemetery at Hamilton, Ohio:

1. Isaac Hammond.
2. John Reily.
3. Pearson Sayer.

REVOLUTIONARY WAR.

4. John Wingate.
 5. Joseph McMakin.
 6. Isaac Hull.
- #### WAR OF 1812.
1. John G. Rosebom.
 2. John P. Reynolds.
 3. John Pierce.
 4. Thomas Stone.
 5. Isaac Falconer.
 6. John Caldwell.
 7. Thomas Sinnard.
 8. Brigadier-General Dr. Dan Millikin.
 9. Dr. Jacob Lewis, surgeon First Regiment, U. S. A., under General Wayne.
 10. William H. Wilcox.
 11. N. S. Smith.
 12. Vincent Cohee.
 13. F. Perry.
 14. William Clements.
 15. Robert Clements.
 16. John Woods.
 17. John Freeman.
 18. John Byers.

MEXICAN WAR.

1. Daniel McCleary.
2. William H. Sinnard.
3. Major William P. Young.
4. William H. Wilson.
5. Joseph Garrison.
6. John Holloway.

WAR OF 1861-'65.

1. Major John McCleary.
2. S. R. John.
3. Captain John S. Earheart.
4. William Anderson.
5. John Giffen.
6. Jacob Marsh.
7. Mathias Grissle.
8. Hamilton Miller.
9. Adam Richard.
10. Captain John Van Derveer.
11. George D. Dilg.
12. Porter Durell.
13. Henry Smith.
14. J. Gargus.
15. Stephen G. Lefler.
16. B. C. Wilcox.
17. Edward Fairclough.
18. Garret Parker.
19. Robert H. Miller.
20. Captain Robert Clements.
21. Colonel C. K. Smith.
22. Captain J. W. C. Smith.
23. Charles Morris.
24. James McClellan.
25. William Kennedy.
26. J. H. Atherton.
27. C. Chapman.
28. J. W. Miller.
29. E. H. Scudder.
30. Henry C. Renther.
31. Rev. Adolph Gerwig.
32. John Myers.
33. William H. Myers.
34. Thomas S. Myers.
35. Isaac Hagerman.
36. P. C. Schmidtman.
37. Alexander Schmidtman.
38. Wilson Furry.
39. Captain Thomas Stone.
40. Nathaniel Rogers.
41. James Jackson.
42. S. Miller.
43. Samuel Crawford.
44. Colonel Minor Millikin.
45. Dr. F. B. Morris.

RECAPITULATION.

Revolutionary war	6
War of 1812	37
Mexican war	12
War of 1861-1865	206
Total	261

These names shall stand in the record of Congress illumined by the luster of the heroic deeds that shall make them ever honorable and revered among men. Sir, there are many other of the nation's dead at other cemeteries and burial-places in my county, whose names, I regret, have not been furnished me, but in whose name and memory I also ask for the passage of this bill.

The authorities of my city, at the request of Wetzel-Compton Post of the Grand Army of the Republic, to which I have the honor to belong, have dedicated to the exclusive use of a soldiers and sailors' burial-place the most elevated, conspicuous, and beautiful lot in Greenwood Cemetery.

The Grand Army propose to embellish and beautify it appropriately and lovingly, befitting the sacred memories that must ever cluster round it. I am in receipt of the following letter, which sets forth the action of the city council, the desires and objects of the Post of the Grand Army, and incloses the names of deceased soldiers which I have heretofore given:

HAMILTON, OHIO, March 3, 1882.

DEAR SIR: We, the undersigned committee, appointed by Wetzel-Compton Post, Grand Army of the Republic, have secured the grounds desired for a soldiers and sailors' burial lot in Greenwood Cemetery. The city council has passed the ordinance dedicating said grounds to such exclusive purpose, and we are prepared to improve and beautify the same.

In pursuance of the above object we hereby petition you to use all possible efforts to secure the passage of our resolution, lately introduced by you in Congress, for the appropriation of ordinance to our use. We would also request that if said ordinance are donated they be placed on stationary limbers.

We inclose herewith a list of several hundred soldiers now buried here. They embrace men who served in the American Revolution, and in every war in which the United States of America has ever been engaged.

Yours, very respectfully,

JAMES E. CAMPBELL,
F. B. LANDIS,
GEO. H. PHILLIPS,
Committee.

To Hon. H. L. MOREY, Washington, D. C.

Sir, the soldiers of the Republic have done much for this nation. They have achieved its independence, they have defended its honor, and have preserved its existence and unity. Through all time their example will teach the generations that are to come to love liberty and to esteem no sacrifice too great to be made to preserve free government and its inestimable blessings. The cannon that we ask for

* Among these dead are comrades Jacob Wetzel and John A. Compton, both color sergeants of the gallant Sixty-ninth Ohio Regiment. Each fell with the national colors in his hands. In their honor our Grand Army Post has taken its name.

have done their part, they have fulfilled their destiny in the field of battle and upon the seas in our vessels of war. They are the mute instruments of our soldiers and sailors' prowess, the silent witnesses of the mighty events of which they were a part. Had they but tongues, and could they but talk, what deeds of valor they would relate, what accounts of wounded and dying men they would give, what pictures of waning hope and despair in the dark days of the war they would reveal, what shouts of victory they would echo upon the final triumph of our arms!

Give us these guns. We will plant them on the banks of the Great Miami within range of old Fort Hamilton, but a few years since a frontier post in the Indian wars. We will place them in the beautiful Greenwood Cemetery, on the highest, the loveliest spot within its limits, where the green grass and the blue violets first come in the spring-time, to remind us ever that they are not dead but gone before. Then these guns shall have tongues, and they shall be loosed, and they shall tell to our children and the children of the two hundred and sixty dead who lie buried there the story of their heroic lives.

It matters not to them whether their graves are marked by stately shafts of marble, by magnificent piles of granite, or whether nature, enfolding in her bosom all vestiges of their last resting place, forever withdraws them from the vision of man. But, sir, it does matter to the living. It is of interest to all generations that follow that the lessons of their sacrifice and death be not forgotten and lost. When we look upon the monuments that are raised to those who have rendered service to the State and to their fellow-man, association of ideas directs our minds to the contemplation of their great deeds and excites us to emulate their patriotic and philanthropic examples.

At Arlington Heights, near this city of Washington, in the beautiful city of the dead that our Government has there established, there stands a magnificent block of New England granite on which is engraved a legend in enduring letters that tells the visitor to that beautiful spot that beneath its massive form lie buried the bones of 2,200 unknown dead, who fell in Bull Run and other battles in Virginia. Their names are lost forever, but the glorious lesson of their sacrifice will never die. Countless thousands in the years to come, as they read that sacred inscription and remember the patriotic sacrifices of the unknown who lie buried there, will go away animated with a better love of country and a higher and nobler ambition to serve their country and benefit mankind.

These monuments are all over our broad land. Their influence is impressed upon our youth. Patriotism and love of country are inspired by them. Every noble and patriotic impulse is quickened by the lessons they teach. Such a monument will my people make of these guns which they ask at your hands. Annually, when the flowers come, when the face of the earth is covered with verdure, and all nature smiles, they will go forth with garlands and wreaths of choicest flowers to deck the last resting-places of their dead heroes with these tokens of their love; and there, in the presence of the sacred memories that will be then invoked, they will dedicate themselves anew to the cause of liberty and free government in the New World, for which these heroes poured out their blood to establish and defend.

Soldier, rest, thy warfare o'er,
Dream of fighting fields no more;
Sleep the sleep that knows no waking,
Morn of toil, nor night of waking.

Army Appropriations.

SPEECH

OF

HON. PHILIP B. THOMPSON.

OF KENTUCKY.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 5, 1882.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. No. 5559) making appropriations for the support of the Army for the fiscal year ending June 30, 1883, and for other purposes—

Mr. THOMPSON said:

Mr. CHAIRMAN: On account of the great interest to my constituents I will trespass upon the patience of the House long enough to call attention to the importance of the amendment which I offered transferring from the Quartermaster and Commissary General's Departments those claims now pending there under the act of July 4, 1864, (which embraces all claims in loyal States for quartermaster's supplies, which includes horses and commissary stores taken or used by the United States Armies during the late war,) to the Court of Claims. The amendment offered by the gentleman from New York [Mr. HISCOCK] provides that no part of the money appropriated in this bill (the Army appropriation bill) shall be applied to the payment of the agents used by the Quartermaster and Commissary

Departments to visit the neighborhoods and take proof in regard to claims.

This is eminently proper. Heretofore large sums of money have been used without any specific legislative action appropriating it for that purpose by this Department, amounting yearly to at least \$50,000, paying secret-service agents to nominally investigate claims in a few States like Kentucky and Tennessee, but in fact to assist in electioneering for the Republican party. No money should be used in these investigations except upon a specific appropriation by Congress for that purpose, designating the amount. These officers or agents were for long years but spies sent out to defeat the just claims of good citizens upon reports of disloyalty, unless the claimant changed his politics, if a Democrat, and voted Republican, for no amount of services in the Army, even suppressing the rebellion, made a man loyal unless he voted the Republican ticket and co-operated with the Republican party. Their reports were not subject to inspection, but were hid away in the Department, and inspection or knowledge of their contents refused to the claimant and his attorney. They took affidavits without notice, and they, too, were kept secret, under the false pretense that it was unsafe for a man in Kentucky to testify against the loyalty of a claimant, if a Democrat. Men's rights were thus tried and adjudicated in the dark, without notice, without trial, and without law.

No witnesses were called; no cross-examination to elicit the truth tolerated or allowed; no interested person present either at the taking of testimony or its investigation; no record of the evidence ever seen, but by a system of secret court trial, in comparison with which the infamies of the Star Chamber and Inquisition sink into insignificance, and the court of Judge Lynch becomes the type of civilization; law and order, the dearest rights of free American citizens were passed upon in open violation of the Constitution and in utter contempt of every principle upon which republican government rests. The Constitution provides that no person shall "be deprived of life, liberty, or property, without due process of law, nor shall private property be taken for public use without just compensation." These principles antedate the Constitution, which is merely declaratory of the law as it already existed. They are part of the Magna Charta, the birthright of every Englishman, yet they have been ignored by the Republican administrations, and the property of our people taken for public purposes without law and without compensation, and when they asked were refused all relief unless reported favorably by a secret agent, whose report was frequently, no doubt, based upon what he received and not upon the truth of the case. Thus the law stood in regard to this secret assassination of honest claims until 1880, when I aided in putting upon the Quartermaster's bill, reported by the Committee on War Claims, the following proviso:

SEC. 2. That the agents appointed by the Quartermaster-General or his subordinates to investigate claims under the act of July 4, 1864, shall give notice to claimants whose claims it is proposed to investigate of the time and place of taking testimony, who shall have the right to cross-examine every witness who may testify in behalf of the Government; and said agents shall also take, at the same time, testimony of any and all witnesses who may be presented by the claimant. And all, both in behalf of claimants and the Government, shall be taken under the law and rules which usually govern the taking of testimony. And the reports of said agents shall be open to the inspection of the claimant or his attorney at all times, on application, subject to such regulations as the Quartermaster-General or Commissary-General may prescribe.

Approved June 15, 1880.

This broke down secret reports but could not root out of the officer who passed upon the claims his intense hatred of our people. Thousands of claims had already been filed away, on their secret reports; they are yet filed away, probably eighteen thousand. They are subject to revision, review, and new trial; for the Quartermaster-General cannot reject a claim. He "can only examine it, and when satisfied that it is right and just recommend it for payment."

Mr. Chairman, in filing these claims away, he shall, and should, act only upon legal evidence, taken upon due notice, after thorough cross-examination, with an open trial, so that public justice may be done. And as the amendment of the gentleman from New York [Mr. HISCOCK] leaves no money to pay investigating agents, and the whole machinery will stop for want of money and the people be deprived of all remedy, I favor their transfer to the Court of Claims. I know he pledges himself to make ample provision for this upon the judicial or sundry civil bill, but even if fully provided other reasons of a cogent nature demand a change.

My colleague from Kentucky [Mr. BLACKBURN] opposes my amendment, which reads as follows:

And holders of such of said claims as are now pending and undetermined in the Quartermaster-General's Department or in the Commissary-General's Department, and which the Quartermaster-General or Commissary-General has, under the express terms and within the limitations of said act of July 4, 1864, and the acts and resolutions amendatory thereof and supplementary thereto, the jurisdiction and authority to have examined and adjudicated, and to report to the Third Auditor with recommendation for settlement, may have the same transferred to the Court of Claims to be tried and adjudicated there as other claims now are.

He would in the light of information he has in his desk compel a transfer. He has exhibited to us corruption among officials, clerks, and employes in and around the Quartermaster's Department and Third Auditor's Office which are appalling. How claimants have been compelled to pay a per cent. upon their claims to those who are to pass upon them to get them allowed. He claims much evidence of this kind has just been furnished him which he will lay before us. This at least should induce a transfer away from the secret and

unconstitutional methods of the present management to an open investigation through the forms of law in an honorable court. The Government had better pay a few unjust claims for want of investigation than languishingly live in the corruption now made public. Why not transfer? The Court of Claims is not a new institution. In 1855 it was first established, with broad jurisdiction and ample powers. Even at that early day it was felt and known that Congress was no place for the investigation of private claims. That justice was not the rule in their settlement, but political prejudice, party passion, and the whim of the moment, not justice, dictated their allowance or rejection.

The most meritorious frequently received no consideration, while the most corrupt were forced upon the Calendar and passed hastily and without investigation. So patent has this become that the Calendar upon which they are placed, even after a favorable report, and frequently repeated from Congress to Congress, that the House turns with disgust from its consideration, or, having entered upon it, meets one around which hang dark clouds of suspicion, and all behind are then postponed because the House must pass over the reeking mass of corruption that blocks the way before they can be reached. If public policy and public justice demanded a transfer of private claims in 1855 to a court of claims, what must be the necessity now when they have increased a hundredfold? Our Constitution never intended that Congress should exercise judicial power, which it does in passing upon the claims of its citizens. The judicial power was committed to another branch of the Government, co-ordinate with the legislative. But as Congress holds the purse, and payment cannot be made except pursuant to an appropriation made by it, they assume to pass upon the justice of the claim. This is a great stretch if not a violation of the Constitution. We are told by enlightened publicists that every nation claiming to be even semi-civilized save ours has by law provided a court wherein the humblest citizen can sue and establish his claim against his government. China has had this law in days of antiquity so ancient that history fails to find its source. Yet here in free America, where sovereignty rests with the people, there is no remedy for the citizen "whose private property has been taken for public purposes without just compensation," save to bribe its way through the Departments or Congress, if it falls into the hands of one subject to such influences. Failing in this, he lingers around the corridors of the Capitol like a sinner in the courts of hell, waiting for that favorable hearing and escape, which never comes.

Political passion now prevents this transfer. The question of the "loyalty" of the claimants is the "ghost" that will not down. The gentlemen upon the opposite side of this House are afraid, it seems, to trust a court of their own selection with the adjudication of these claims. As far as I am concerned, I am now ready to put the payment of the claims of citizens residing in loyal States like my own upon the broad ground of the Constitution and the law. A different rule must hold in the States in rebellion. As the Supreme Court held in the prize cases, they went into rebellion as States, and every citizen residing there became, upon the recognition of the *de facto* government as sufficiently established to entitle its citizens to belligerent rights, alien enemies, to be held and treated as such according to the rules of war and law of nations. Every one recognizes that upon the theater of war the peaceful methods of the Constitution cannot be applied, else the rebel in arms could claim the right to shoot those who attack him, and demand before his gun be seized just compensation, and the process of the law to fix its value. Such folly and impossibility cannot be inferred. When belligerent rights were granted rebellion ceased to be treason and the peaceful methods of the Constitution were suspended, while insurrection was suppressed by the laws of war, under the laws of nations. When the war was over and peace established, the Constitution was again supreme. On this theory only can the right of coercion be sustained. If secession be admitted, they had no constitutional rights against the Federal Government after voluntary withdrawal from under its protection.

Be this as it may, in Kentucky, as was declared by the Supreme Court in the Mulligan case, the Constitution was in force at all times and in all places, and having so remained, its citizens are entitled to full and "just compensation" for all "private property taken for public purposes." And every man in Kentucky under the Constitution and law is a loyal man, unless he be convicted of treason; not proven guilty, but convicted, for the heavy penalty of a forfeiture of property (which can only be even after conviction during the life of the person attainted, and not longer) can be only enforced in a legal way against those convicted upon a trial. Any other rule nullifies the Constitution. The Republicans hate Kentucky and treat her as an outcast in the Union of States. Millions of dollars have been paid to Ohio and Indiana upon claims not so meritorious as ours; yet we are denied a hearing, and turned away empty-handed. They refuse this transfer because they claim the rule applied on the subject of loyalty is not as stringent as in the Quartermaster-General's Office. Such may and no doubt is the case, for being an enlightened court they apply the Constitution as they understand it, and do not ignore it, as the Departments do. The rule, then, is sufficiently stringent, and, in my opinion, in violation of the Constitution and the spirit of free institutions; but we want an open investigation and fair trial, free from the secret-service system of fraud and cor-

ruption; and will stand for the present to obtain any rule which Republican malignity imposes upon us.

The amendment which I have offered will, I think, effect the object which the committee attempted to accomplish by this bill, and it cannot possibly work any wrong or injury to anybody. The question of the loyalty of the claimants ought not to be forced into the consideration of this matter at all, because the act of July 4, 1864, under which these claims are adjudicated, applies only to claims from loyal States, and cannot apply to rebel claims as such. It does not apply to the States which were in insurrection. The Government long ago furnished to claimants from such States a remedy. Every loyal man from the insurrectionary States having a claim of this kind was allowed to prefer it before the southern claims commission, as it was called, and have it adjudicated. This act therefore applies only to loyal claimants from loyal States.

When the gentleman from Illinois [Mr. CANNON] argued that this might throw open the door to a great many disloyal claims, he made a mistake, because section 1074 of the Revised Statutes, under which the Court of Claims adjudicates such claims, provides expressly that unless a man can directly prove his loyalty his claim shall not be allowed. Where the claimant lived within territory occupied by the rebel army, he must bring positive proof showing that he adhered to the Government, and gave it aid and comfort, before he is treated as a loyal man or allowed any standing in court, the presumption being by the section referred to against him, presuming his guilt contrary to every principle of law and justice.

Now, so much for that. So far as the suggestion of the gentleman from Maine [Mr. REED] is concerned, I agree with him in part of what he has said; that is, that something must be done. The gentleman from New York [Mr. COX] attacks all these claims on account of their age. He says they have been pending for seventeen years. Why have they been pending so long? Where any have been pending that length of time it is because the Government has not afforded proper remedy to the parties.

A MEMBER. Twelve thousand were only recently filed.

Mr. THOMPSON, of Kentucky. Yes; twelve thousand were filed only recently from Indiana. They were filed under what is known as the Morgan raid, and within six months of the expiration of the time when they could be filed. They were filed when Congress authorized them to be filed. Now, is the gentleman going to repudiate the claims of Indiana growing out of that raid?

Mr. BUTTERWORTH. I think the gentleman is in error. Only three-thirtieths have been filed from Indiana and Ohio both.

Mr. THOMPSON, of Kentucky. I could turn to the report and show the exact number referred to by the gentleman from Michigan [Mr. BURROWS] the other day. They were filed in the last six months preceding January, 1880.

Mr. BUTTERWORTH. Not one-twelfth of the number, as the gentleman will find by turning to that statement.

Mr. THOMPSON, of Kentucky. I only take the statement of the gentleman from Michigan, and I know he is sustained by the reports. I have them before me, and I will insert them to keep the record clear.

Furthermore, of the fifty-three thousand claims before the Quartermaster-General there has been, as stated by the gentleman from Maine, [Mr. REED,] allowed of that whole number only \$4,000,000. That small percentage of the whole amount is all that has been paid. So the gentlemen who undertake to frighten this House from giving a remedy to these claimants by declaring \$100,000,000 are to be taken out of the public Treasury are not justified by anything in the record, and especially when we remember the fact that all that is left, if every one was allowed dollar for dollar, would not involve more than \$12,000,000.

These people are entitled to a remedy, as the proofs and facts before the House show; and as they do not receive adequate adjudication of their claims before the Quartermaster-General's Office, where the claim is of sufficient size to justify it, it should be taken before the Court of Claims, where it can be passed upon, where they are fully prepared to take charge of it, and where a speedy remedy will be afforded to these litigants, who have been so long kept out of their just rights. But where the cases are awaiting the decision of the Quartermaster-General they should not be forced out of his hands unless the claimant should ask that to be done; and the reason why they should not be required to take their small claims before the Court of Claims is that in the Court of Claims the records of the cases are required to be printed, and the printing of those records would cost more to the claimants than the whole amount of their claims. All the machinery for the investigation is provided for by the Government. The Court of Claims has all the machinery necessary for the purpose of properly investigating these claims just as much so as the Quartermaster-General's Department.

I agree with what the gentleman from New York [Mr. HISCOCK] has said, that these Quartermaster-General's agents should be dispensed with, because they cost \$30 for every claim, and from the beginning of this whole matter the expense to the Government in that one item has amounted to something like \$3,000,000. They are now operating, or rather now using their time, not in the investigation of fair claims, but for the purpose of "whooping the boys up" in certain sections of the country to the polls on the day of election in favor of the men who are demanding that they shall be kept still longer in the service.

American Citizens in British Prisons.

SPEECH

OF

HON. HENRY W. LORD,

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 25, 1882,

On the resolution of Mr. ROBINSON, of New York, concerning American citizens in British prisons.

Mr. LORD said:

Mr. SPEAKER: I shall of course decline to vote for the discharge of the Committee on Foreign Affairs from the further consideration of the resolution relating to American citizens held in foreign prisons without trial, and especially since the gentleman from New York [Mr. ROBINSON] has been kind enough to say that if he had been possessed of fuller information in regard to the work and progress of this committee in relation to the matter he would not have made the proposition under discussion.

It now appears from his own lips that the Committee on Foreign Affairs has not only escaped his censure but has actually won his praise, at least by implication, which when his anxious solicitude and very commendable zeal for his countrymen is considered, is a compliment worthy the appreciation of that committee.

The honorable gentleman's heart warms to the green, as did that of the Duke of Argyle—Maccallam More—to the tartan, when a case of imprisonment under other circumstances was brought to his attention.

There has been much said on this floor by the gentleman to whom I refer, and by others, sharing his views wholly or in part, in which I fully concur; and though I shall not join in anything like a clamor for the recall of Minister Lowell, yet I desire to say that if there is any duty to which a minister should proceed with alacrity and all possible promptitude, it should be to assert the rights of American citizenship. There is nothing of a national character that is of equal value; nothing upon which national existence so much depends as the sacred observance of all the rights that citizenship implies and a readiness to fulfill all the obligations for mutual support and defense that enter into the idea. Such rights as an American citizen has when abroad are just as emphatically his as such rights as he has at home are his.

His government at home is bound to see that he is protected in all his rights at home, and to afford immediate relief when necessary. When he is abroad his dependence on his government for protection and defense within the measure of his rights abroad is just as absolute. If he should require relief it should be directly given, and the extent of it should be equal to the necessity. If citizenship does not involve this obligation for mutual defense as well as mutual aid, then citizenship does not exist, and there can be no communities nor States nor nations.

The idea of mutual defense on the part of those associated to form a community does not depend on any very exalted sense of mutual obligation, that through long processes of evolution has at last found development in an element of patriotism by which nations become formidable in proportion to the degree of fraternal affection among the people. It is on the contrary so obvious, so natural in fact, that some companies of brute beasts, instinctively associated in the forests, act upon it with a high degree of energy, and a devotion to each other in the exercise of which there is not one among them who will not lay down his life for the community, or the whole community will risk its existence for the individual member.

The obligations resting on fellow-citizens to protect and defend each other form the very basis of society—society is organized for that purpose, and in fulfillment calls very specially for instant action if danger or disaster overtakes one of the community when far from home. Then his government, whose shield is always over him, is called upon for the exercise of its highest duty in affording instant succor and relief.

The citizen may have some rights at home which he does not have in a foreign country; but there is no foreign country in which he has not rights, and for his protection in those rights his government through its minister is directly alongside of him; the flag of his country is directly over him; and more important than ceremonies at court, or amiable discussions of old conundrums that can wait, is the minister's duty to demand the full measure of lawful privilege for any one of his countrymen who may seek his aid.

Here it may be well to dwell a moment upon the fact that so far as the rights and privileges under consideration are concerned there is but one kind of citizenship, but one class of citizens associated to form this nation. No question of birthplace has any relevancy whatever. The words naturalized or native have no qualifying significance. If the condition of citizenship exists, then the equality is complete, and whatever protecting power the flag indicates, to the extent of whatever force the nation has, is due to the humblest party

to the national compact, in whatever quarter of the earth he may become dependent upon the nation's care.

Citizenship means no less than this, and if it does not mean as much, then it is insufficient to hold any people together in the form of what is called a government.

The question of citizenship may be at issue; it may be claimed and denied by parties to the question, either at home or abroad, as it often is, but when inquired into and established, that measures the right of the individual and defines the precise duty of the nation. That there is no difference in this respect between the rights of naturalized and native citizens may appear from this. Let it be supposed that the German Emperor shall determine that Germans naturalized as citizens of the United States and afterward returning to the German states shall, if they remain two years, be deemed citizens of that empire and subject to obligations as such. Let us suppose, further, a native-born citizen of the United States and a naturalized German citizen of the United States shall travel together within the German Empire, remain for more than two years, and the German Emperor shall claim them both, and enforce upon them the obligations, military or otherwise, of German citizens. It may well be assumed that the United States would without much delay go to the rescue of them both. It would not be easy to say, why to the rescue of the one any sooner than the other, or, if to one before the other, then for what reason? If the German Emperor had a reason to give in the one case and none in the other, that would be wholly immaterial to the Government of the United States.

A few words now upon another point. I do not yield a cheerful nor a ready assent to the proposition that a foreign nation, England for instance, may justify a course of conduct toward citizens of the United States on the ground that she treats some of her own subjects in the same way.

If she shall enact, for instance, that from the 30th of September, 1880, until the 30th of September, 1882, the Lord Lieutenant of Ireland may prescribe certain districts and change or alter them from time to time, which shall be as districts politically infected, and within which imprisonments may be according to his own direction, "without bail or mainprize," and if within the net that shall be from time to time drawn over these districts so designated there shall be here and there an American citizen involved in the meshes and thrown into prison, and if neither information as to his fault nor trial as to the truth of the charges shall be afforded to him even after many months' confinement, I am disposed for one to protest that there is no justification in the fact that the foreign government is treating numbers of her own subjects in the same way to which this country should listen with any degree of satisfaction.

There are governments which have passed beyond that stage of national development in which their rights have to be held under humble submission to long and wearying negotiations with superior powers. The United States have survived that epoch. When a question arises so vital to her honor and to her existence as that which now challenges her attention, she has sufficient standing in the earth to demand, as Rome did, the recognition of her citizens as representatives of her power.

Extension of Bank Charters.

SPEECH

OF

HON. AYLETT H. BUCKNER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 17, 1882,

On the resolution of the Committee on Banking and Currency, to fix a day for the consideration of the bill (H. R. No. 4167) to enable national banking associations to extend their corporate existence.

Mr. BUCKNER said:

Mr. SPEAKER: It is not my purpose to enter into the discussion of the details of the bill now before the House. It is not to the form or to the means or mode by which the charters of the banks are to be continued that I make opposition; but to their recharter, however made or with whatever restrictions surrounded. I object to their recharter because there is no apparent popular or even bank demand for such legislation. There is no evidence before this House that the stockholders of the national banks, or their officers, desire the passage of this bill. There are no petitions from the people, no memorials from national-bank owners, no demand from the press that the extension of the charters of these banking associations is either a financial or a banking necessity.

I have not observed a bank president, cashier, officer, or stockholder besieging the room of the Banking and Currency Committee or thronging the aisles and corridors of the Capitol in behalf of continuation of the charters of the banks. Three bills for that purpose

have been introduced into this House and the Senate, each one a *fac-simile* of the other, and all bearing indubitable marks of a common paternity. It seems to be generally understood that the Comptroller of the Currency is entitled to the credit of preparing the original bill for which the majority of the Committee on Banking and Currency have substituted the measure now before the House. And unless he has permitted himself to become the agent and attorney of the banks, in securing the legislation proposed by this bill, I am warranted in the statement that it is not asked for by the banks or demanded by the stockholders, owners, or officers of the banks. Why should they desire an extension of their charters for twenty years, when the law as it now stands invests every five "natural persons" having a sufficient amount of United States bonds with the privilege of incorporating themselves into a national bank? The seventy or eighty banks that have been organized, with a capital exceeding \$7,000,000 invested in $3\frac{1}{2}$ percents since the 1st of last July, have under the law a corporate existence running into the next century, and there are new banks now being organized and so they will continue to the end of time, provided the people consent to be taxed for the special purpose of keeping them alive.

The system was designed to be self-perpetuating, while every individual bank is limited in the duration of its corporate life. It was never contemplated that any of these banks should have an existence longer than twenty years, and there is no reason why they should not at the end of that period go into final liquidation, close up their business, and divide their assets. The owners and stockholders can organize a new bank with the same assets, as has already been done by banks in Michigan and Iowa, and those of the stockholders who prefer to realize upon their share of the bank assets will find no obstacle in their way. That is their legal right under their contract of organization, and Congress has no power to divest any one stockholder of that right. It is not sufficient to say that the continued bank will indemnify a dissenting stockholder against loss, or provide a mode by which he may realize the value of his interest in the expiring bank. He has a right to stand upon his contract, and to require that the affairs of the bank shall be wound up and its assets distributed.

The fact stated in the report of the majority of the committee that the charters of two hundred and ninety-seven banks will expire February 25, 1883, involving a return of \$54,000,000 of lawful money to the Treasury in order to effect the withdrawal of the bonds securing the circulation of these banks, instead of being an argument in favor of continuing the powers and franchises of these institutions, is a striking illustration of the vast power of contingent mischief which has been vested in these institutions. It is not claimed that the banks expiring at that time, even after the passage of this enabling act, will be under any obligation to continue their charter existence. A large or a small proportion of them may prefer to go into liquidation notwithstanding the passage of this act, and to the extent of their outstanding circulation they will still have the power to disturb the operations of trade, and no remedy can be provided to prevent it by this bill or any other, because it is a vice inherent in the system. This power of contraction or expansion must be a continual menace to the stability and regularity of all the operations of business in any event.

All that can be said in favor of the provisions of the committee's bill is that it affords facilities for reorganization to those banks that desire to continue their corporate existence, and to those that determine to go into liquidation it offers no inducement to continue their business. It is not at all probable that the banks who desire to extend their lease of life would, as the committee suppose, wait until the last day of their existence before they took the necessary steps for reorganization, but that months before that day they would have made the necessary deposit of lawful money and withdrawn their bonds, made a new deposit and obtained new circulation. So that whether we have a contraction of the circulation to the extent of one million or fifty millions in the early part of next year depends wholly upon what each one of these banks considers to be its interest, and the passage or failure of this bill will have no perceptible influence on that decision. For myself, I greatly prefer that they give a practical demonstration, as early as possible, of their vast powers of financial mischief and monetary disaster. By all means, if the people need more proof than they had in March, 1881, of their capabilities in this direction, let us have it next year—the sooner the better. We may be better prepared for it next year than at any other time in the near future, and I would therefore offer no additional facilities to the continuation of a system which sooner or later will convince the most skeptical of the fatuity of those who uphold it.

Mr. Speaker, this bill is a vain and useless effort to galvanize into a short-lived and spasmodic existence a system that contains within its own organism the seeds of decay and death. The breath of its life is debt, and without debt it ceases to live. National banks and national debt are the Siamese twins of our financial system. The one cannot exist without the other. The right to continue their existence for another period of twenty years, as proposed by the committee's bill, cannot add a day to their duration or prolong the period of their final dissolution. That depends entirely upon the rapidity with which the people are willing to discharge the bonds which guarantee their circulation. The president of the American Bank-

ers' Association and president of one of the leading banks of New York City said, in an address before the Niagara convention of bankers of last August:

It is very obvious that the continued reduction of the public debt is fast removing the foundation of the national banking currency, and that the system itself, thus losing its characteristic basis, is approaching dissolution, and it is evident that the existence of the present system of banking cannot be long protracted, and that very soon some substantial change in the basis of our national currency will be inevitable.

This sagacious and intelligent banker advocated the substitution of some other basis than United States bonds for the bank-note circulation, and neither he nor any other member of that convention even hinted at the necessity or desirability of the law now before the House. Whether expiring banks go into liquidation by operation of law or by the vote of their shareholders, or some or all of the shareholders organize a new bank under the same or a different name, or whether their charters are extended by the provisions of this bill, the foundations of the system will in either contingency continue to be undermined and destroyed as long as debt redemption is continued; and no such patent nostrum as prescribed by this bill will exempt the national banks from their inevitable doom. I say inevitable, because there is no more universal sentiment in this country than the fixed and determined purpose to discharge the last dollar of the public debt-bearing interest as rapidly as the resources of the country will permit. What the banks need, therefore, is not deceptive and unnecessary legislation, such as we have in this bill, but something to restore the constituent element of the system, and to secure a firmer and stronger foundation for their mischievous and vicious note circulation.

The Comptroller of the Currency, notwithstanding his inordinate admiration of a system which he has so long petted and caressed, in his last annual report seems to have a dim but unwilling conception that the object of his veneration and affection is going the way of all earthly things, and that the circulation of the banks will, under existing laws, diminish in volume "as the public debt shall be reduced," but inasmuch as the 2,248 banks now in existence could operate upon a bond guarantee of about eighty-two millions, and that from one hundred to one hundred and fifty millions of bonds would be sufficient to supply the minimum amount necessary to be deposited in the Treasury by all the banks which may be established during the next twenty years, he thinks it would be premature to recommend any substitute at present. These conclusions as to the amount of bonds necessary to maintain the bank-note circulation as a part of our credit circulation I do not purpose to controvert. But when analyzed, and their real significance understood, instead of affording a sufficient reason for the Comptroller's failure to recommend some substitute for the circulation which must diminish in volume as the debt is reduced, as he affirms, they manifest a singular indifference and unconcern as to the effects of such reduction on the business interests of the country. The banking system may have a name to live when it is dead in fact and its feeble and lingering existence becomes a source of desolation and disaster to all the diversified interests it was designed to promote and foster. Such it will be if we follow the counsels of the Comptroller, and fail to make early provision for its approaching dissolution.

Mr. Speaker, it will be my purpose to show that we cannot, without dereliction of duty to those who have confided their interests to our hands, look with such philosophic indifference to the necessary and inevitable effects of the continued reduction of the public debt on the paper circulation issued by the banks. It is a question wholly outside of the expiration or continuance of their charters, and is forced upon our consideration by the constant and rapid diminution of the public debt. Heretofore and even now the bank circulation has been continually on the increase, except during the period when the country was preparing for resumption by the tortures of contraction. Henceforth we may reasonably look for a regular and constant contraction of the national-bank circulation growing out of the payment of the bonds held for their security. Let us suppose that the minimum sum of bonds (namely, \$82,000,000) required by the 2,248 banks in operation last November to sustain their circulation could be reached by redemption by the 1st of next January, what would be the necessary effect upon the circulation? It would reduce it under existing laws by about the sum of two hundred and ninety-seven millions of dollars in the withdrawal from circulation of that amount of lawful money deposited in the Treasury for the redemption of the circulating notes of the banks. And notwithstanding this heavy curtailment of the paper circulation, as stated by the Comptroller of the Currency, the banking system could still live and breathe, but its breath would be freighted with universal ruin.

If we look at the probable events of the near future, with reference to the character of the bonds and the probability of their redemption, there is reasonable ground for the opinion that, as we redeem the $3\frac{1}{2}$ percents, the paper circulation will suffer such a reduction as will necessarily inflict serious injury to all the vast industrial and commercial interests of the country. It may be safely assumed that there will be no material reduction of the revenues of the Government during this Congress, and that one hundred millions of the public debt will be discharged during this and several succeeding years. The Treasury is now discharging all its current obligations and paying off this debt at the rate of one hundred and

fifty millions per annum; and any probable reduction of revenues will be more than counterbalanced by the difference in our interest account now and that of the preceding fiscal year, and by increased consumption from increasing population.

The amount of $3\frac{1}{2}$ percents on the 1st of April subject to call was \$511,400,000, and of this amount \$245,601,000 was held on November 1, 1881, by the Treasury as security for the circulation of the banks, and one hundred and twenty-four millions of $4\frac{1}{2}$ and 4 percents and Pacific Railroad sixes aggregating \$369,600,000 as the total amount of United States bonds held by the banks to secure their circulation of \$330,000,000 November 1, 1881. In other words $3\frac{1}{2}$, or about 68 per cent. of the bonds securing bank circulation, consists of $3\frac{1}{2}$ per cent. bonds, and they also constitute $3\frac{1}{2}$, or about 48 per cent. of the outstanding $3\frac{1}{2}$ percents, all of which are payable at the pleasure of the Government. If one hundred and fifty millions of these bonds are called for redemption during the current year, the banks must respond by the surrender and cancellation of their bonds in the proportion of 245 to 511, and the deposit of lawful money by the banks to redeem their circulation will be required in nearly the same proportion as the amount of bonds deposited, the amount of circulation being three hundred and sixty millions, secured by three hundred and sixty-nine millions of bonds. Each bank owning called bonds will thus be brought to the alternative of purchasing $3\frac{1}{2}$ percents, which may be included in the next succeeding call of the Secretary, or $4\frac{1}{2}$ or 4 percents, the former at a premium of 12 to 14 per cent. and the latter at a premium of 18 to 20.

Which will they do, or will they prefer to go into voluntary liquidation, give up their circulation, sell their bonds, and continue in the legitimate business of banks of discount and deposit? Their course of action will be determined by the interest of the stockholders of the several banks. The interest of the public will not be consulted or regarded, but each bank will decide its action with reference solely to its own interest. For myself I do not believe that any fair proportion of the banks whose circulation is based on $3\frac{1}{2}$ percents, will continue their existence by reinvesting in 4 or $4\frac{1}{2}$ per cent. bonds at the rates of premium at which they are now sold. The banks chartered since the 1st of July are based almost exclusively on the $3\frac{1}{2}$ percents, thereby showing that they are unwilling to pay the premium at which the fours and four-and-a-halves are held, and it is not at all likely that the premium will be less in the face of the increased demand that will arise for them, as all other national bonds are redeemed or in course of rapid redemption. To the extent that the $3\frac{1}{2}$ per cent. bonds are withdrawn and not replaced by other bonds, the monetary circulation must be curtailed, and if the opinion of the late Secretary of the Treasury is to be relied upon, the whole of these bonds will be redeemed within the ensuing five and a half years at the rate of at least one hundred millions per annum.

Can we afford to take the risk of having the volume of circulation curtailed at the rate of from ten to fifty millions of dollars per annum for the next five years? Is our present prosperity so assured, or is the business of this country on so solid and firm a foundation that we can intrust the vast monetary interests of this country to the doubtful and capricious action of banks and bankers. Shall we take no warning from the diminution of our exports, from the short crops of last season, from the expenditure of millions of dollars in unproductive enterprises, from the wild and reckless speculation that is pervading all classes of men in every part of the country, and commit the question whether we shall have two hundred millions of circulation, more or less, to the decision of two thousand national banks? If I do not grossly misconceive the present situation we shall richly merit the execration of the people of this country if we leave them subject to such unnecessary hazards. It is but little over a year ago since the banks gave us a striking illustration of their power to produce a monetary panic. It was a legitimate result of free banking, and of what is known as the "elasticity of the circulation," the power to contract or expand the circulation of the banks at will. Whether the bill of the committee is or is not enacted into law, that dangerous and vicious power still remains to the banks, and if I am not greatly mistaken they will find it to their interest to exercise it in such a way that will not only startle the country but produce such a revulsion in financial and commercial circles as will forever consign banks of issue to the opprobrium they so well merit.

But, Mr. Speaker, let it be conceded that my apprehensions as to the immediate future are groundless; that I am taking counsel either of my wishes or my fears, and that such is the value of the sovereign right of issue to the banks that they will maintain the present volume of paper circulation by the purchase of $3\frac{1}{2}$ percents to replace those that may be redeemed. Is there any one who believes that they will pay the present premium for the 4 and $4\frac{1}{2}$ percents, when all the $3\frac{1}{2}$ percents are redeemed, which will take place, in all human probability, within the next five or six years? Or are they prepared, with the Comptroller of the Currency, never to abandon the national banking system as long as the bonded debt amounts to one hundred or one hundred and fifty millions, and without making an effort, either to strengthen its foundations, or substitute anything in its place, permit the bank-note circulation gradually to dwindle down from its present volume of three hundred and sixty millions to one-fourth of that sum? Instead of extending the charters of the outgoing banks, it becomes this Congress to prepare for the probable

contingencies of the future, and either authorize them to issue circulating notes on some other security, substitute some other kind of circulation in their place, or resolve that the taxpayers of this country shall in all time pay an annual interest of twelve millions of dollars, in the shape of interest on an interminable bond, in order to maintain a bank-note circulation.

To this complexion it must come sooner or later, if not in this exact form, by such changes in the revenue laws and by lavish expenditures of the revenues as will practically make a portion of the public debt a perpetuity. Nothing will be done on a question of this character during the next Congress, because no radical change in existing revenue or financial legislation is ever made during the term in which a Presidential election occurs, and in the mean time we are by our non-action exposing the business interests of the country to the doubtful and capricious action of more than two thousand distinct and independent banks, controlled by no other consideration than the pecuniary interests of their owners.

I come now to consider the provisions and principles of the proposed substitute for the bill of the committee, both of which will be found in the appendix to these remarks. And at the outset I beg the House to believe that the proposition involved in the substitute of the direct issues of the Government for its indirect bank issues is primarily a question of monetary circulation, and not a question of interest reduction or debt paying. It involves the question of a stable and steady volume of circulation of far greater importance to the commerce, trade, agriculture, and manufactures of the country than the annual saving of ten or twelve millions of dollars. It is a part of the history of this country that we have had several monetary convulsions, most of which are traceable remotely or proximately to the vicious system of bank issues and the union of banking in its proper sense, with authority in the banker to make money out of his credit by the issue of his promissory notes. In each of these monetary crises—of 1814, 1817, 1837, 1857—when the banks suspended cash payments, the losses and bankruptcies of the country were a hundred-fold greater than the saving to the Government of the difference between a non-interest-bearing and an interest-bearing debt of four hundred millions, which will be the effect of the substitute now before the House. Hence I shall treat the question before the House simply as one of currency, that of interest saving being altogether subordinate and incidental.

The substitute I have proposed asserts the exclusive right and duty of the Government to issue all the credit circulation directly, and not through the intervention of corporations, and without shock or disturbance to the business of the country to substitute the promissory notes of the United States for the promissory notes of the banks. It neither increases nor decreases the present volume of national note circulation, and endows the note of the United States with functions conferred by law on the bank note, with the exception of making the former receivable for customs dues, and making the Treasury note redeemable in coin, which the bank note is not. It goes further, and separates the business of banking, and the issue of notes; and except in taking away from the national banks their note issue it does not interfere with their business as banks of discount and deposit. And as an inducement to the note circulating banks to surrender their circulation and to become banks of discount and deposit simply, the substitute offers to repeal all taxes of non-circulating banks on capital and deposits. Such, sir, is the remedy that is proposed to ward off the dangers of a great reduction of the circulation by the payment of the debt on which it is based, and at a time when an unfavorable condition of our international exchanges may be greatly aggravated by this unrestricted action of the banks.

When it is considered that one-half of our paper circulation is now issued by the Government, and that there has never been a successful effort openly made to withdraw this circulation during the score of years it has been in use by the people, it cannot but excite surprise that any defense of a proposition that the other half of the circulation should in like manner be issued by the Government should be necessary. As in the war of 1812, so in the late civil war, when the credit of the banks had failed and they were powerless to meet the exigencies of the occasion, the credit of the Government was resorted to as the only resource to pay its soldiers and carry on its vast military operations. It would seem that a credit and the use of such credit which could be made available to the wants of the people and the Government in time of war might be profitably and advantageously used in peace. Such in fact has been the experience of the people of the United States as to the notes of the Government known as greenbacks, and notwithstanding the various insidious and clandestine efforts to supplant them with the notes of the banks, I hazard nothing in saying that they have a hold upon the judgment and esteem of the people that will make them the last debt of the Government that will be paid, if they are ever paid.

In popular estimation their value as a circulating medium is not enhanced by the fact that they are made a lawful tender in the discharge of debt, or that they are redeemable in coin at the treasury in New York. They are valued because of the faith of the people in the Government which utters them—because of their uniform value in all parts of the Union—and of their receivability for all taxes, national, State, county, and municipal, and necessarily in all the multifarious transactions of daily life. And when the plain, blunt common sense of the man of ordinary understanding and average

intelligence demands to know why all the paper money, as he terms it, cannot be issued directly by the Government instead of half of it being issued by corporations created by that Government, no answer that you can give, however fortified by authority or experience, or replete with the theories of monetary science, will satisfy him that in permitting this condition of things we are not countenancing a great folly, if not a great wrong. If I were to answer this question I should say that we employed banking corporations to issue a portion of our circulation because of the proclivity of all governments to legislate for the benefit of privileged classes and special interests, because of the natural distrust of large numbers of men of the capacity of the people for self-government, and of a still larger number who have a morbid and superstitious dread of every innovation upon the existing order of things.

If, Mr. Speaker, Congress, instead of authorizing the creation of two thousand banking corporations, had invested a single individual and his assigns with the right to issue his promissory notes to the extent of three hundred and sixty millions of dollars for twenty years, and had made them receivable for public dues and payable on account of debts by the Government, as provided by the national-bank act as to national notes, and with like power to expand and contract the paper circulation as these institutions now have, I am perfectly safe in the assertion that there is not a member in this House who could be found willing to extend such powers and privileges for a day. Such abuse of our legislative authority would shock the minds and consciences of all men—not because a single individual might not secure to the people as safe a currency and one as uniform in value in all parts of the country as that furnished by two thousand corporations, but because of the special and peculiar privileges bestowed upon this fortunate individual, and of the inconsistency of such legislation with that equality of right which is the corner-stone of republican government.

There is nothing in the Constitution which makes any distinction in favor of a thousand corporations over one, or of any number of individuals over a single individual. If Congress has constitutional power and jurisdiction over any subject or matter there is no restriction upon the means it may adopt to carry into effect the grant of powers. It has the same power to incorporate Jay Gould or W. H. Vanderbilt as it has to incorporate ten thousand bank shareholders or two thousand banks. We should be giving to the favored individual the right to exchange his promissory notes without interest to the extent of three hundred and sixty millions for the promissory notes of others, bearing interest, with the pledge of the Government that it would receive them for hundreds of millions of annual taxation, and pay them out to all employes, officers, and creditors of the Government, except where it had stipulated for some other mode of payment, and at the same time forbid by stringent legislation any interference by other individuals or State corporations with the valuable privileges thus conferred.

Such is the extent of the extraordinary franchise which would inure to the exclusive benefit of the beneficiary of our legislation. Need I say that such a franchise conferred upon a street beggar would in a few years transform him into a millionaire? I speak not of the indirect result of the elastic principle of the bank-note circulation, so much lauded by its advocates, which enables bank-owners to expand or contract their note obligations at will, and thus, by advancing or depressing the prices of commodities, afford them the opportunity of enriching themselves at the expense of the great mass of the people, and at the same time bankrupting merchants and traders and embarrassing all kinds of business. And now, sir, what pretext of justification can be offered for such unjust, partial, and anti-republican legislation? Can we delude ourselves into the belief that what cannot be justified when for the benefit of a single individual will find its justification when the number of beneficiaries is increased a hundred or a thousand fold. Is there such magic in an act of incorporation as to make a franchise conferred upon a corporation justifiable, and without justification or excuse when conferred upon a single individual and his assigns? Can we sugar-coat injustice in the form of class legislation by increasing the beneficiaries of our injustice and multiplying the number who participate in the robbery of the general public?

No, sir. Banks of issue are inimical to republican institutions, and cannot be justified, except by an abandonment of the principle of equality of all men before the law. "Power is ever stealing from the many to the few," and note-issue by banks is one of the chief instruments of power by which the few are aggrandized at the expense of the many. It has been the fruitful source of vast accumulations of wealth in the hands of a moneyed oligarchy in this country, which is the sure forerunner of public corruption and the bane of republican institutions. The present distinguished premier of the English cabinet (Mr. Gladstone) said in a speech in the House of Commons, in March, 1875, in reference to issue banks, that they were subsidized by the state to the extent of their note-issue. "It would be exactly the same thing," he said, "so far as the money is concerned, to grant a legislative privilege to a person to pay over to him a considerable sum from the consolidated fund."

And, strange to say, we are discussing in republican America the question whether we will continue to the national banks the payment from the pockets of the people of a subsidy of millions by allowing them to issue their notes and endowing them with most of

the functions of money. Will it be said that they repay the Government for the franchise of note issue by making a market for the bonds of the Government? When first established and the credit of the Government was depressed they served the purpose of sustaining its credit, but it is not pretended that the Government stands in need of any such adventitious aid to sustain its credit now. Its bonds are sought for in every market of the world and stand first on the list of the world's securities. For the last ten years the banks, instead of being a help to the Government, have been an obstruction to every effort to appreciate their value and obtain a lower rate of interest. Even now they are engaged in stealthy, underhand, and indirect schemes to perpetuate the public debt, in order that they may have a plausible pretext to retain their subsidy of note-issue, by a reduction or repeal of all internal taxation.

Shall I be told that the banks pay the Government a bonus of 1 per cent. on their circulation in consideration of the grant to them of the privilege of making money out of their indebtedness. This is an admission that the right of note-issue belongs to the Government as a part of its sovereign power, and has been bartered away for a mere song. If it were any adequate compensation for this valuable franchise, how is it, when the interest on the securities for the circulation has been reduced from 6 to 3½ per cent., that there were as many or more banks organized within the last half year than ever before in the same period of time, and how does it happen that the rate of bank dividends for the last twelve months is greater than the ordinary rate of interest through the country, notwithstanding the continued complaint of ruinous and excessive bank taxation? If there is any profit in bank circulation to justify the payment of a large or small bonus it belongs to the whole people, and not to an inconsiderably small fraction, and should no more be bargained away or farmed out than the transportation of the mails or the coinage of metallic money.

Mr. Speaker, no argument can be urged against the proposition contained in the substitute for the bill of the committee that is not equally potent in favor of the redemption and destruction of the three hundred and forty-six millions of greenbacks. But what party or segment of a party will champion a measure that looks to that result since the policy and design of the resumption act in that respect was defeated and reversed? I do not speak of depriving the greenback of its legal-tender character, but of its redemption and cancellation, and thus permit the bank oligarchy to "filch from us," to use the expressive language of Mr. Jefferson, the exclusive right to issue all the credit circulation for our fifty millions of people. If there were not an urgent necessity growing out of the rapid reduction of the public debt that some substitute should be provided for the national notes, the fact that we have two kinds of currency performing the same office, one issued by the people and for the people, and the other issued by the banks and for the banks, will give the question, "who shall emit the future currency?" a prominence that will demand a final solution in the very near future. It cannot continue to be half greenback and half national-bank note. It must all be issued directly by the Government or by the banks. There is the same irrepressible conflict between the two that once existed in this Union between slavery and freedom, and one or the other must and will be exterminated.

I pass to the consideration of the monetary objections, as I understand them, to the issue by the Government of the entire credit circulation. I grant that it involves a "fixed issue" of the whole credit circulation just as the maximum amount of the greenback circulation is now fixed by law. It is because it is so fixed and possesses no "elasticity," as it is termed, and that it is so fixed in amount by Congress, that it encounters apparently the strongest objection. I maintain that what I have denominated the credit circulation, that is, circulation based on credit and not on coin, however secured or redeemed, should have no elastic power; that is, should not be contracted or expanded at the will of those who make a profit for themselves by loaning it or discounting notes in exchange for it. Elasticity in the sense I have used it, and as it is generally understood, necessarily involves the power to contract as well as expand the circulation. That such a power should not be lodged in the hands of those interested in abusing it seems to be too evident to admit of argument. Banks follow the law of their being when they maintain their circulation at the highest amount. To give them the unrestricted power to increase their circulation as they may consider needful for the demands of trade and commerce, is to give them the power to make or unmake the fortunes of individuals and to advance or depress the prices of all property and commodities.

It is universally agreed that paper circulation has precisely the same influence on prices as so much metallic money, and as it increases in amount the whole volume of circulation, both coin and paper, all other conditions being equal, is relatively depreciated, and the depreciation of the whole volume manifests itself in the advance of the prices of commodities. High prices here diminish our exports and tend to increase our imports, and the result of this state of things is, that we become indebted to foreign countries and the foreign exchanges become adverse to this country. A drain of coin takes place in order to liquidate the foreign balances against us, and if not arrested by increased exports and diminished imports it will result in panic, and not infrequently in a monetary revulsion and general bankruptcy. If there were no increase of paper money—

when a metallic drain sets in—the decrease in the stock of coin produced by the outflow to foreign countries would soon bring prices down to an exporting point; but it is just at this stage that the banks continue their paper issues and thus aid to keep up high prices and stimulate speculation. Especially is this true of the national banks, whose notes are not redeemable in coin and never have been, and therefore would not be affected directly by the unfavorable condition of foreign exchanges.

From a combination of causes there is now an outflow of bullion abroad which will likely continue during the greater part of this year. I doubt not that the increase of bank issues from three hundred and twenty to three hundred and sixty-two millions in three years has tended to this result, and may aggravate it very seriously; and instead of reducing the circulation, and thus aid in bringing prices down to an exporting point, the banks are now adding to an already redundant paper circulation, notwithstanding the vast increase in the gold and silver circulation. That they will continue to do this, not to satisfy any real monetary or trade necessity, but to put money in the pockets of the shareholders, as long as they can obtain United States bonds at a paying rate, is proved by all experience. In truth, the demand for increased circulation is as insatiable as death. It grows by what it feeds on. The more that is issued the more will be wanted. Walker, on the Science of Wealth, (book 3, chapter 6,) says with truth:

The supply does not satisfy the demand—it excites it. Like an unnatural stimulus taken into the human system it creates an increasing desire for more; and the more it is gratified the more insatiable are its cravings.

He gives the reason for this statement, which has been verified in the experience of every one who has witnessed a period of an increasing volume of paper circulation. He says:

There are two reasons for this: one that as the currency is expanded prices are raised correspondingly, and more currency is required to effect the same exchanges; that the speculation inevitably following the rise of prices leads to an enormous extension and repetition of indebtedness, which requires for its discharge a greatly increased amount of the circulating medium. Thus, by the action and interaction of these causes, the demand for the issue of this kind of currency is certain to be greatest when it is already redundant.

The idea of having a credit circulation that will expand or contract, according to the demands and the state of trade and commerce, is folly and fallacy combined. Issue banks are organized because they hope to realize profits by loaning their own credit and the deposits of their customers, and not to give facilities to the growth of trade and business, except as an incident to the profits to be derived from making loans on their credit and on their deposits, and the more of their notes they can keep out the larger is their income. An elastic credit currency is as great an absurdity as an elastic yard stick. What is most needed for the permanent prosperity of all kinds of business and all classes of the community is a volume of circulation which will give steadiness to prices and regularity to the movements of trade and commerce. Security to the noteholder is of inferior moment compared with the injury which constant fluctuation in the amount of the paper issues inflicts upon the business of the country by creating corresponding fluctuations in the prices of commodities, and by deranging the equilibrium of exchange with foreign countries, and producing panic and financial disaster. Insolvency and failure to redeem its obligations by a bank of issue will entail loss and inconvenience to individuals and localities, but every industrial interest, and the entire business of the country is affected by the exercise of this power to curtail or expand the credit circulation at the will or caprice of bank owners. Trade and commerce are but other names for gambling and all kinds of mercantile operations are but lotteries in which the prizes are few and far between and the blanks without number. If the notes of the bank were redeemable in coin at the bank counter, or elsewhere, it might offer some slight check to their capacity to inflate the paper circulation, but there is no pretense of coin redemption of the bank note anywhere. The only check which the people have against excessive issues is the condition of the public debt and the premium upon Government securities which tends to reduce their profits on circulation.

If I have failed to show by the application of admitted monetary principles that the elasticity of a paper circulation is necessarily productive of disaster to the industrial and commercial interests of the country sooner or later, it is undeniable that it is condemned by all the most important and advanced nations of the world, and if not abandoned in this country it is because the people are misled by the sophistries and fallacies of those who are interested in the profits of note-issues, or the apprehensions of those who are controlled by a false and fatal conservatism. We have copied our opinions and practice as to bank issues from England; but England has long since discovered the mischiefs which necessarily cling to the exercise of the unrestrained issue of a mere credit circulation. The bank act of 1844 was passed after an exhaustive investigation of all the questions pertaining to coin and currency, and the examination of the most distinguished practical and scientific experts in the United Kingdom. Under this law the credit circulation was fixed in amount, and has been gradually but very slowly decreasing for the last thirty-eight years. Prior to this period Great Britain had a somewhat similar system of currency and banking as that of the United States, during the existence of the last Bank of the United States—the stock banks of England answering to our State banks, and the Bank of England occu-

pying a somewhat similar position as the Bank of the United States. The right of issue, except as to the outstanding emission, was taken from the local banks by the Peel bank act, and the Bank of England fell heir to two-thirds of any circulation thereafter surrendered by the local banks.

So far from there being any elasticity in the present credit circulation, the fixed issue of the whole kingdom is actually less than it was forty years ago, notwithstanding the vast increase in wealth, population, and commerce, and "elasticity" is provided for solely by coin, or the actual representative of coin. An almost exactly similar currency system has been adopted in Germany. The prohibition of any increase of the fixed credit issue is not absolute, as in Great Britain, but any excess of paper issues, except that bottomed on coin, can be made only on the payment of a tax of 5 per cent. on such excess. In France nearly the entire circulation of its great bank is based on coin, and the evident tendency of that institution is to make its note circulation a representative rather than a mere credit circulation. In fact the United States alone, of all the great commercial nations of the world, countenances this vicious elastic credit circulation, which is said to be the chief merit of our national banking system.

Mr. Speaker, I flatter myself that I have shown from admitted laws of monetary and currency science, as well as from the example of two of the most enlightened commercial nations of the world, that what is termed the elasticity of the bank-note circulation is a dangerous fallacy, and that there is no foundation for the objection to my proposed substitute that it fixes and restricts the credit circulation to a given amount. In this respect I am but following the example of those who have unlearned the lessons which we were taught by the nation from which we have inherited so much of our jurisprudence and so many of the principles that regulate our rights of person and property. And in this connection I beg to call the attention of the House to two other important innovations made by the English Government upon the accepted dogmas of Wall-street financiers and the advocates of bank-note issues, and which will be found to be in perfect consonance with the underlying principles of the proposed substitute, and will give abundant evidence that my views are supported by the judgment of the British Parliament not only in 1844 but from that time to the present.

The object of the currency reform of 1844 was, first, to give a greater degree of stability and steadiness to the circulation; second, to secure the absolute convertibility of the note circulation; and, third, to cause the mixed circulation of coin and circulating notes to expand and contract as it would have expanded and contracted under similar circumstances had it consisted exclusively of coin.

To effect these objects the Bank of England was divided into two separate and distinct departments, the one confined exclusively to the issue, circulation, and payment of bank notes, and the other to the ordinary business of a bank of deposit and discount; that the amount of notes payable on demand uttered by the issue department should be limited to \$70,000,000, the amount of such notes issued by the stock banks of England and Wales should be limited to \$40,000,000, and that the excess of the bank-note circulation over and above these fixed amounts should be issued against coin and bullion held on deposit by the issue department.—*Torrens act, 1844, page 57.*

The amount of seventy millions of dollars as the maximum of the fixed issue of notes was adopted, because it was ascertained by an investigation running through several previous years that sum was under all circumstances and at all times outstanding. It would be out of place, even if my time permitted, to go into a discussion of the monetary principles upon which the advocates of this reform based their action. It will suffice for me to say that there has been no material change or modification of the act of 1844, notwithstanding at every period of ten years since, the principles of the act have been discussed in Parliament and by financial writers; and on a careful examination of the provisions of the act, as well as of the opinions of those who were instrumental in its passage, it will be seen that while the note-issue of the bank is the issue of the corporation of the Bank of England, it is to all intents and purposes as to such issue a department of the Government of England, and has no connection but is absolutely independent of the banking department, and the banking department independent and disconnected with the issue department. The evils and mischiefs of having the same body of men or a corporation doing the business of loaning money and discounting notes, and at the same time issuing their notes with which to exchange for the loans made and the notes discounted, is thus obviated, while the Government of England, through the issue department of the Bank of England, utters its notes not only to the banking department of the bank but to other banks, and receives bullion and issues its notes thereon, whether owned by the banking department or any of the provincial banks of the kingdom. So that when I propose that the Government shall issue all the credit circulation, which circulation shall be fixed in amount, and that the business of banking proper shall be divorced from note-issuing, I am fortified by the opinions of many of the wisest and most distinguished statesmen and practical and scientific financiers of the nineteenth century.

I am aware that the statement made that the issue department of the Bank of England is an office of the state, is controverted by many of the advocates of bank-issues and of the union of banking and bank-note issuing. I shall be pardoned, therefore, if I put to rest all doubt on this subject by referring to unquestioned authority on this point.

Professor Bonamy Price, in his late work on currency and banking, page 64, referring to the bank act of 1844, says:

The act divides the Bank of England into two departments: one the banking department, the other the issue department. The latter is exclusively concerned with the issue of notes. That operation is carried out, under fixed rules laid down in the statute, and the vital point to observe here is that the corporation called the Bank of England has no voice, discretion, or control over the issues. In the issue department the bank directors have no more authority or right to speak or act than any other person in the kingdom. The banking department is the Bank of England, pure and simple, as private a bank as any other bank in the country.

On the next page he says:

The Bank of England, the private bank so called, is authorized to receive from the issue department fourteen millions of notes, with a certain proportion of the lapsed issues as they lapse. The quantity stands now at about fifteen million pounds. These bank notes the bank receives from the issue department (which in reality is an office of the states) on condition it shall give gold for them to the public whenever they are presented for payment. Of course this fact may be regarded as meaning that the Bank of England is a direct issuer of notes to the extent of fifteen millions, but it is far simpler and truer to look upon the bank as a receiver for special reasons of so many notes from the sole issuer, the office of the state called the issue department.

Speaking of the gold in the bank, he says:

The gold stored and kept in the government office—the issue department—in no sense whatever belongs to the Bank of England; and he regards it as a great mistake that in the weekly reports of the bullion belonging to the state office and the bank they should be mixed together.

And after describing the operations of the two departments he says:

Two amendments would make the act complete. The office of issue ought to be placed in Somerset House or Whitehall. The world would then understand that the state was the real issuer; and, secondly, in the weekly reports the bullion which belongs to the issue department should be kept strictly apart from the bullion which belongs to the Bank of England as a private banker.

In the explanation and defense of the act of 1844 by Sir R. Torrens, he says:

The banking department of the Bank of England is a corporation liable like other banking corporations, to insolvency. The issue department is not a corporation. It is like the mint, a department of state.

Again, page 76, he says:

By the provisions of the act of 1844 the banking department of the Bank of England was placed upon the footing of an ordinary bank of deposit and discount. The directors of that establishment were as completely divested of all control and responsibility regarding the amount of the notes put out by the issue department as if the act had assimilated that department to the Bank of Hamburg, and had required that the whole of its issues should be represented by bullion in actual deposits.

The functions of the banking department were strictly confined to the operation of banking, properly so called; and it is manifest from the testimony of Lord Overstone before the currency committee of 1840, and his writings on the subject of the management of the currency, that the two ideas of a fixed issue of a credit circulation and a separation of the banking and issue departments were among the prominent reforms needed to give stability, steadiness, and security to banking operations. Hence we find him using this language on the subject of issue and banking:

The two things, the management of a paper currency and the management of banking deposits, cannot be blended together in one system and treated as subject to the same laws and to be governed on the same principle. The attempt to do so is like that of the unskillful chemist who attempts to unite together substances which have no affinity and will not combine, and therefore obtains only a confused and useless mixture where he looked for a perfect chemical compound.

I hope I have disposed of the objection commonly urged against the issue of a paper circulation directly by the Government, and with it the false and pernicious theory of an elastic credit circulation and the combination of banking, in its proper sense, with note-issuing. I repeat, this mischievous practice is confined to the United States almost exclusively, and has been repudiated by Great Britain after a trial of one hundred and fifty years, and after the whole subject of currency had undergone, through the press, by committees of Parliament, and by numberless publications, the most thorough and exhaustive discussion. The same may be said of Germany and Austria-Hungary as to the issue of paper circulation being fixed and rigid. Indeed, in the establishment of national banks and in giving them the right to issue their promises to pay many of the attributes of money, and compelling them to pay a royalty into the Treasury on their circulation, the sovereign right of the Government over the whole question is admitted. And the fact that the only redemption of the bank note now authorized by law is in the greenback is equally an admission that the credit of the Government is superior to that of the banks, and for this reason alone, if for no other, the Government should be the sole issuing authority.

The influence of the example of Great Britain and Germany in favor of a "fixed issue" of credit circulation cannot be impeached on the ground that they are governments of a more absolute type or less restrained in the extent of their respective powers, by constitutional restrictions, than that of the United States. No monarchy in Europe or elsewhere possesses more unrestricted control over its currency than the Constitution gives to Congress. It not only has by express grant the power "to coin money and regulate the value thereof, and of foreign coins," but the States are in terms prohibited from coining money, emitting bills of credit, "and from making anything but gold and silver coin a tender in the discharge of debts." The United States has exclusive sovereign power over the whole question of coinage and money, and necessarily, in my opinion, over everything that performs the functions of money. It is not because other

governments have taken direct charge of the credit circulation that they are more or less monarchical, or that there are more or less restraints upon the executive or legislative departments of these governments, but it is because by common consent and universal usage the world over, coinage and money are a part of the sovereignty of all governments, whether republican, monarchical, or imperial.

And I repeat that no government has more unrestricted power in this regard than the Constitution gives to the Government of the United States. It is supreme and omnipotent within the sphere of this power. It has the power to regulate commerce, and we build light-houses, improve harbors and rivers. It has power to establish post-offices and post-roads, and we provide for transmitting newspapers, letters, and books, to the remotest hamlet of the wilderness, and we cannot permit any State, community, or corporation, to throw obstacles in the way of the unrestricted exercise of these grants of power. Nor have we ever thought that we could or ought to delegate the execution of these powers to a corporation, partnership, or association of individuals. This Government executes its authority by its own officers and its own agents, with the exception of the sovereign power of issuing and giving to a promise to pay the functions of money. This power it has intrusted to a corporation, not because Congress is incompetent to the task of making proper rules for its issue and management, but for the reason that there are "millions in it" to the members of this corporation. We execute the power to coin money by establishing mints and fabricating eagles, double-eagles, and dollars. We have not called in a corporation to aid the Government in supplying metallic money, for no other reason than capital has never yet seen its way clear, by which it could rob the labor of the country, and satisfy its voracious maw by being incorporated to run the mints. Is it possible for any man to give a reason that will bear the least scrutiny why Congress cannot intrust the power to issue its promissory notes and to pay them out to an officer of the Government or to a board of officers, as it confides the management of the mints to the Director of the Mint and his subordinates? The Treasury Department has been performing this duty for nearly a generation, and the Government of England through the issue department of the Bank of England has been engaged in the performance of the same duty for nearly two generations, and neither on this side nor on the other side of the Atlantic is there any complaint, except from bank-issue advocates and those who delight to fatten on legislative robbery.

But it is said that the Government of the United States ought not to go into the banking business and that the exercise of the power that I claim for the General Government tends to centralization and the absorption by it of the reserved rights of the States and of the individual citizen. The power to borrow money on the credit of the United States is one of the expressly granted powers conferred upon Congress, and under that power the Government has issued its interest-bearing as well as its non-interest-bearing obligations. The Treasury note has been emitted since the foundation of the Government under this grant of power without question from any source and is as clearly within the terms of the power as any of the class of bonds of the United States now outstanding. Nor can it be predicated of any grant of constitutional power, that it tends to centralization or takes from the States the exercise of a power which, if exercised by them, defeats one or more of the great objects for which the union of the States was formed. Centralization is to be apprehended and avoided when by a strained construction of the Constitution the Federal Government obtains jurisdiction of such matters as have not been delegated to it by the States.

It may be conceded that all increase of patronage, and every additional bureau needed by the Government to perform its duties under the Constitution strengthens the Federal authority, but that is a centralization of legitimate and authorized power, and the necessary result of our development and growth. It is such centralization as was contemplated and provided for by the framers of the Constitution. Aside from the prohibition against the States to emit bills of credit, and yielding to the doubtful authority of the Supreme Court, (*Briscoe vs. Commonwealth Bank of Kentucky*, 11 Peters, 257,) that the notes of banks authorized by the States are not within the meaning of this prohibition, the experience of this country prior and subsequent to that decision leaves no room for doubt that the issue of credit money by banks tends to defeat the object of the mintage of coins. That object was primarily to provide a means of exchange and a measure of values. If the States can, as they have done, enter into competition with each other in the issue of credit money, they will inevitably expel from circulation all the metallic money that may be issued from the mints, and thus deprive the people of the media of exchange intended to be provided them by the Constitution. In vain may Congress provide mints and fabricate the coins authorized by law, if the printing and engraving of paper promises to pay is allowed to the States, and credit money issued according to what each State may deem necessary to supply the real or imaginary demands of trade.

Our own experience alike with the teachings of monetary science enforces the truth that whatever performs the office of money should be under the direct control of the authority that coins the money of the Constitution. Credit or paper money is a convenient labor-saving necessity in the advanced condition of the business methods of the world, and supplements the supply of metallic money. Its

increase or decrease of volume has the same effect on the prices of commodities as a like addition to or diminution of the stock of coin. As long as it is maintained to an equivalency with coin it practically performs the office of coin in all monetary and business transactions. It is a part of one whole and not an independent and distinct element of the national circulation, and the intimate and dependent relations between the two kinds of circulation demand that they should not be controlled by discordant and inharmonious authority. The power to coin money and regulate the value thereof and of foreign coins is a grant of power over whatever is current as money, and is not confined merely to the mintage of coined money. It must of necessity embrace the whole subject of currency in order to make the power of coinage effective and to prevent the depreciation and expulsion of metallic money. To allow national or State banks to issue their notes with the functions of money is to surrender the control of the entire circulating medium, both coin and paper, to them, and to defeat one of the great objects of the Constitution—a uniform and stable metallic circulation. The business of banking in its proper sense belongs exclusively to the jurisdiction of the States; and that is left to them to control and manage as the States may deem best for the interests of the people. Note-issue, or the right to convert debt into money, is an exercise of the sovereign power of the Government, and is no part of the business of banking. That consists in loaning money, receiving deposits, and dealing in exchange, and when combined with that of note-issuing makes a union of incompatible and incongruous functions. It is this mischievous union to which the people of this country have been so long habituated and in which they have been educated for a century that causes them always to associate note-issue as an inseparable part of the business of banking. Hence the objection that the issue of the credit circulation by the Government through the Treasury or by a commission expressly authorized for that purpose will make the Treasury a bank and convert the Government into a mammoth banking institution. If that were true or had the semblance of truth the Government has been engaged in the banking business for nearly twenty years, and if the issue of credit money constitutes a bank the issue of real money by the mints should *a fortiori* constitute a bank also; and, according to this logic, we have never been without a Government bank since its foundation.

Such objections are hardly worthy of the name of argument, especially in the face of the fact that one-half of our credit circulation is now issued directly by the Treasury Department, and no one can be found who entertains the faintest hope that we shall redeem it and substitute bank issues, State or national, for it. They are of a piece with the arguments that were urged against the establishment of the Independent Treasury nearly fifty years ago by the banks and their advocates. The simple proposition that the Government should be the custodian of its own revenues, and not intrust them to the keeping of banks, and thus increase their line of discounts and profits, was characterized as a union of the purse and sword—as a Government bank, and as making one currency for the Government and another for the people. Notwithstanding the false clamor raised against it, it received the assent of Congress, and no one of its opponents has ever dared to ask for its repeal, and is everywhere accepted as a useful and necessary part of the fiscal machinery of the Government. That act decreed a divorce of the Government from the banks in the custody of its revenues; the proposition I am advocating divorces note-issuing from banking in its proper sense, and secures to the Government the direct issue and control of the credit circulation, as it has ever had of the cash circulation, in the interest of the whole people, and not in the interest of bank owners alone.

Mr. Speaker, what shall I say to the objection so current among the bank organs, that Congress would be forever engaged in increasing the circulation, and thus disturb all values and derange all kinds of business? This in fact would be doing just what is considered the chief merit of the elastic bank-note system, and which is one of the most pernicious features of free banking. It is what the banks are now doing, and have been doing systematically for years. But, say the advocates of this bank privilege, this inflation of bank notes is to accommodate the trade and business of the country. I say it is to increase bank dividends, without reference to the wants and demands of trade. The real gist of this objection is that Congress is incapable of legislating on so important and intricate a question, and that it must be relegated to the directories of 2,000 banks. Congress is authorized to provide for coining money, and to regulate the value and quantity thereof. It has unlimited power over the whole subject of taxation, internal and external; it legislates as to foreign and domestic commerce; it declares war and makes peace, but to regulate the issue of the credit circulation for the best interest of the people involves so much financial wisdom and such disinterested patriotism, that Congress should turn it over to the exclusive jurisdiction of capitalists, money-mongers, merchants, and bankers! If there is any force in this argument it proves too much. It proves that our republican Government is built on a sandy foundation, and that the capacity of the people for self-government is a delusion and a cheat.

The British Parliament regulates by law and issues by officers under its control all of the credit circulation for the Kingdom of Great Britain, and has been issuing it for nearly two scores of years, and there has been no increase of this circulation during this period. Are our people less intelligent or less capable of grasping the mysteries of the science of money, or their representatives so destitute of correct information on this subject, that it must be turned over to

the exclusive jurisdiction of corporations? It has been announced in the public press that the distinguished statesman at the head of the British Government (Mr. Gladstone) is contemplating legislation which will deprive the Scotch and Irish banks of the privilege of issue, and placing the entire credit circulation of the United Kingdom under the direct control of Parliament. He was a member of the administration of Sir Robert Peel in 1844, and in the debate in the British Parliament in March, 1875, on the Goschen bill, to which I have before referred, (Parliamentary Debates, third series, volume 222, 1869-2030,) he said:

He (Sir Robert Peel) proceeded steadily upon the principle that when the law imposed restrictions upon banks in their business of banking these restrictions should be maintained, with reference to another principle, that the state was ultimately to resume into its own hands the entire business of issue, and that that course should be taken on the first favorable opportunity. I am one of those who firmly believe in the policy of the act of 1844, and to the principle that the issue is the privilege and prerogative of the state.

If my time permitted I could quote from this debate opinions from the most distinguished statesmen of both parties in England to the same effect, "that the emission of circulating notes," in the language of Mr. Lowe, formerly chancellor of the exchequer, "of right belonged to the sovereign power, and that it ought to be placed exclusively in the hands of the state."

England, after one hundred and fifty years of an elastic paper currency emitted by banking corporations, has repudiated the teachings which we are unfortunately still following, and is prepared to extend the principles of the act of 1844 to Scotland and Ireland on the first favorable opportunity, and thus emit the entire credit circulation for the whole United Kingdom directly by the government, while American legislators, unmindful of the principles underlying our republican institutions, are hesitating whether they will continue to pay a yearly tribute of twelve millions of dollars exacted from the labor of our people in order to maintain and perpetuate a system of bank issues that has been rejected and abandoned by statesmen and financiers in all the important countries of the world. How strange it is, Mr. Speaker, that the monarchy of Great Britain is legislating in the interest of the people and that the Republic of America is legislating in behalf of classes, of monopolies, and accumulated wealth!

I have shown that the principle of the propositions embodied in the substitute for the committee's bill is not an experiment. It has been tried in this country by the emission of the greenback, and in England by the enactment of Peel's bank bill, providing for a "fixed issue," uttered in fact by the state. Nor is the principle of a Treasury issue for circulation and a separation of note-issuing from banking without the indorsement of high authority in this country. Mr. Jefferson is on record as one of the earliest advocates of the issue by the Government of Treasury notes, which should take the place of bank-note circulation. During the war of 1812 he declared—

That bank paper must be suppressed and the circulating medium must be restored to the nation, to which it belongs. Let banks continue if they please, but let them discount for cash alone or for Treasury notes.

At another time he wrote:

The banks have discontinued themselves. We are now without any medium, and necessity, as well as patriotism, will make us eager to receive Treasury notes, if founded on specific taxes.

But among all the renowned statesmen who have adorned the history of America, Mr. Calhoun stands pre-eminent in exposing the injustice and anti-republican character of note-issue banking and its corrupting and demoralizing consequences. It is worthy of note that Mr. Calhoun several years before the passage of Peel's bank act of 1844, which separated the issue department of the Bank of England from the banking department, condemned the union of banking and note-issuing as a blending of incompatible and dangerous functions. On two different occasions in the Twenty-fifth Congress he advocated the issue of Treasury notes as a circulating medium in place of the issues of the banks. He had held in 1837 that it was the duty of the General Government to assume entire control of the paper circulation, if the effect of State issues was to deprive the people of the benefits of a metallic coinage, to depreciate it, or expel it from the country, or the channels of circulation, and his wonderfully sagacious and analytic mind did not fail to detect the mischiefs as well as the injustice of uniting the credit of the Government with that of individuals and giving the latter the entire benefit of such credit. I submit a short extract from his speech delivered in the Senate on 3d of October, 1837, (Appendix Congressional Globe, first session Twenty-fifth Congress, 124,) to show that the advocates of the issue of Treasury notes as a circulation are supported by the authority of his great name:

He who does not see that the credit system is on the eve of a great revolution has formed a very imperfect conception of the past and anticipation of the future. What changes it is destined to undergo and what new form it will ultimately assume are concealed in the womb of time and not given us to foresee. But we may perceive in the present many of the elements of the existing system which must be expelled and others which must enter it in its renewed form.

In looking at the elements at work, I hold it certain that in the process there will be a total and final separation of the credit of Government and that of individuals, which have been so long blended. The good of society and the interests of both imperiously demand it, and the growing intelligence of the age will enforce it. It is unfair, unjust, unequal, contrary to the spirit of free institutions, and corrupting in its consequences. How far the credit of Government may be used in a separate form with safety and convenience remains to be seen. To the extent of its fiscal action, limited strictly to the function of the collection and disbursement of its revenue and in the form I have suggested, I am of the impression it may be both safely and conveniently used, and with great incidental advantages to the whole community.

It is that separation of Government credit from the credit of individuals predicted by Mr. Calhoun, and in part already accomplished by the greenback, and which will necessarily separate the business of banking from note-issuing, I propose to accomplish in full by the adoption of the substitute.

Mr. Speaker, it has not been my purpose to make any other change in the existing status of the credit circulation than to substitute the emission of the Treasury note for that of the banks as their charters expire, and to forbid the creation of any new banks or the issue of any additional circulation. The substitute does not interfere with any other portion of the credit or metallic circulation, or with the representative circulation, (gold and silver certificates.) Nor does it offer any impediment to such banks as may elect to do so to continue the business of banking under the restrictions of the national banking act during the continuance of their charters, as many of the banks are now doing in the larger cities. It seeks to redress but one grievance at a time, and in doing this it destroys the "elastic" character of the whole credit circulation. That becomes "the fixed issue" of the Government to be paid out to the creditors of the Government and to be exchanged for specie at the pleasure of the holder. But in order to give elasticity, and elasticity not of credit money but of the money of the Constitution, I would modify the emission of gold and silver certificates by requiring them to be issued upon deposits of gold and silver bullion and redeemable in coin. Instead of giving elasticity to the credit circulation, a stable and uniform circulation will be more certainly secured by a circulation which denotes accumulations of wealth by labor, industry, and economy, and not by an increase of the instruments of credit.

It has been suggested that these certificates for bullion deposits could be used successfully in filling the place of the bank notes, as their charters expire or the banks go into liquidation. This is an equivalent proposition to diminish the circulation by the amount of the bank notes outstanding, because practically the deposit certificates are no more than so much gold and silver coin. If we had never issued any other credit money than the three hundred and forty-six millions of greenbacks the suggestion would be admissible, but I leave to those gentlemen who favor this proposition to consider what would be the effect of such a diminution of the circulation upon the prices of all commodities, and especially its influence upon the debtor and taxpayer. All other things being equal, the effect of a reduction of one-third of the circulation will reduce the prices of commodities one-third and add to the burdens of debt and taxation in the same ratio. I do not hesitate to express the opinion that our credit circulation is needlessly redundant, but having risen up to the present amount through the vices of the national-bank system in great part, the reduction of its volume, now that its bad influence has permeated the business of the country, presents a very different question from that of its original increase. Prosperity usually attends an enlargement of the circulation, whether credit or cash, and it may well coexist with a stationary circulation, but a diminution almost invariably produces pecuniary pressure more or less aggravated.

Mr. Speaker, I am not unmindful that the banks have given us a note circulation of uniform value in every part of the Union, and that the holder of the notes is secured beyond all reasonable contingencies. These are the chief, if not the only merits of the system, and they constitute the prominent features for which it meets the approval of the unthinking multitude and of those who seek to profit by its franchises. Its vices will only be manifest in a season of great commercial disaster and monetary pressure, to which every enterprising and credit-using people seem to be fated and against which no human foresight has ever made provision. Its capacity to expand or contract the credit circulation—the union in the same hands of the making of money with the loaning of that money—its sham convertibility, or rather its utter want of convertibility, and the powerful temptation which it offers to its owners to promote such legislation as will perpetuate the system by perpetuating the national debt, to say nothing of its anti-republican and aristocratic features, entitles it to no just claim to the extension of its privileges, even if we had an absolute assurance that the capacity of the banks for mischief would not be greatly aggravated by the rapid diminution of the public debt within the next few years. Unless we prove faithless to the traditions of our past history and to the principles of republican government, and are deaf to the demands of the producing classes of the country, we will discountenance every measure, of whatever character, which looks to such reduction of taxation as will detract from our power to reduce the public debt and extinguish the last dollar of it.

Already schemes are on foot and plans are laid, the covert if not avowed purpose of which is to perpetuate the twin sisters of class legislation—national banks and our prohibitory tariff. Far better will it be that the taxation on tobacco and whisky shall be undisturbed until every vestige of the internal-revenue system can be obliterated, than that it shall continue with diminished rates of taxation and with its regiments of collectors, assessors, spies, and detectives. Present rates of internal taxation mean payment of the public debt and the total repeal of internal taxation, with the disbandment of the internal-revenue army; reduced rates mean postponement of the payment of the public debt and the indefinite continuance both of the debt and of the service of the internal-revenue battalions. Let those who have so long suffered from the wrongs

and exactions of the internal-revenue system console themselves with the reflection that every million of surplus revenue is a knell of the departing power of the banks and a harbinger of the approach of the day when the omnipotent voice of the American people will demand that the millions of interest-bearing bonds held as security for the circulation of the banks shall be exchanged for the non-interest-bearing notes of the Treasury, to be forever used as currency by our growing population. And as that day is ushered into being the last vestige of internal taxation will be consigned to the grave, may we not hope, to rise no more forever?

APPENDIX A.

A bill to enable national banking associations to extend their corporate existence.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any national banking association organized under the acts of February 25, 1863, June 3, 1864, and February 14, 1868, or under sections 5133, 5134, 5135, 5136, and 5154 of the Revised Statutes of the United States, may, at any time within two years previous to the date of the expiration of its corporate existence under present law, and with the approval of the Comptroller of the Currency, to be granted as hereinafter provided, extend its period of succession by amending its articles of association for a term of not more than twenty years from the expiration of the period of succession named in said articles of association, and shall have succession for such extended period, unless sooner dissolved by the act of shareholders owning two-thirds of its stock, or unless its franchise becomes forfeited by some violation of law.

SEC. 2. That such amendment of said articles of association shall be authorized by the consent in writing of shareholders owning not less than two-thirds of the capital stock of the association; and the board of directors shall cause such consent to be certified over the seal of the association, by its president or cashier, to the Comptroller of the Currency, accompanied by an application made by the president or cashier for the approval of the amended articles of association by the Comptroller; and such amended articles of association shall not be valid until the Comptroller shall give to such association a certificate under his hand and seal that the association has complied with all the provisions required to be complied with, and is authorized to have succession for the extended period named in the amended articles of association.

SEC. 3. That upon the receipt of the application and certificate of the association provided for in the preceding section, the Comptroller of the Currency may, if he deems it necessary, cause a special examination to be made, at the expense of the association, to determine its condition; and if after such examination or otherwise it appears to him that said association is in a satisfactory condition, he shall grant his certificate of approval provided for in the preceding section, or if it appears that the condition of said association is not satisfactory, he shall withhold such certificate of approval.

SEC. 4. That any association so extending the period of its succession shall continue to enjoy all the rights and privileges and immunities granted and shall continue to be subject to all the duties, liabilities, and restrictions imposed by the Revised Statutes of the United States and other acts having reference to national banking associations, and it shall continue to be in all respects the identical association it was before the extension of its period of succession, with the same rights, immunities, and liabilities.

SEC. 5. That when any national banking association has amended its articles of association as provided in this act, and the Comptroller has granted his certificate of approval, any shareholder not assenting to such amendment may give notice in writing to the directors, within thirty days from the date of the certificate of approval, of his desire to withdraw from said association, in which case he shall be entitled to receive from said banking association the value of the shares so held by him, to be ascertained by an appraisal made by a committee of three persons, one to be selected by such shareholder, one by the directors, and the third by the first two; and in case the value so fixed shall not be satisfactory to any such shareholder, he may appeal to the Comptroller of the Currency, who shall cause a reappraisal to be made, which shall be final and binding; and if said reappraisal shall exceed the value fixed by said committee, the bank shall pay the expenses of said reappraisal, and otherwise the appellant shall pay said expenses; and the value so ascertained and determined shall be deemed to be a debt due to said shareholder from said bank until paid; and the shares so surrendered and appraised shall, after due notice, be sold at public sale, within thirty days after the final appraisal provided in this section.

SEC. 6. That the circulating notes of any association so extending the period of its succession which shall have been issued to it prior to such extension shall be redeemed at the Treasury of the United States, as provided in section 3 of the act of June 20, 1874, entitled "An act fixing the amount of United States notes, providing for redistribution of national bank currency, and for other purposes," and such notes when redeemed shall be forwarded to the Comptroller of the Currency, and destroyed, as now provided by law; and when the amount of such notes shall be reduced to 5 per cent. of the capital stock of the bank issuing the same, the association so extended shall deposit lawful money with the Treasurer of the United States sufficient to redeem all of its outstanding circulation, as provided in sections 5222, 5224, and 5225 of the Revised Statutes; and any gain that may arise from the failure to present such circulating notes for redemption shall inure to the benefit of the United States, and from time to time, as such notes are redeemed or lawful money deposited therefor, as provided by law, such notes shall be replaced by new circulating notes, bearing such devices, to be approved by the Comptroller of the Currency, as shall make them readily distinguishable from the circulating notes heretofore issued.

SEC. 7. That national banking associations whose corporate existence shall expire, and which do not avail themselves of the provisions of this act, shall be required to comply with the provisions of sections 5221 and 5222 of the Revised Statutes in the same manner as if the shareholders had voted to go into liquidation, as provided in section 5220 of the Revised Statutes; and the provisions of sections 5224 and 5225 of the Revised Statutes shall also be applicable to such associations.

APPENDIX B.

Mr. BUCKNER submitted the following proposed substitute for the bill (H. R. No. 4167) to enable national banking associations to extend their corporate existence:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever the charter of any national banking association is about to expire, or whenever any such association shall, by a vote of its shareholders owning two-thirds of its stock, determine to go into liquidation, and the bonds deposited by such bank to secure its circulation, or any part thereof, shall consist of 5 or 6 per cent. bonds now continued at $\frac{3}{4}$ per cent. interest, and redeemable at the pleasure of the United States, the Secretary of the Treasury is hereby authorized to exchange the notes hereinafter authorized for the bonds so held by said banking association at par and accrued interest, or he may exchange the notes aforesaid for standard gold or silver coin, and redeem said bonds with coin; and thereafter the circulating notes of said bank shall be redeemed at the Treasury of the United States, and when so redeemed said circulating notes shall be canceled and destroyed. And any national banking association whose circulation is secured by bonds of the United States other than those above described, and

whose charter is about to expire, or whose stockholders, by a vote of two-thirds thereof in amount, shall determine to go into liquidation, shall proceed, as provided in sections 5221, 5222, 5224, and 5225 of the Revised Statutes, by making a deposit of the notes hereinafter authorized; legal-tender notes, or gold or silver coin, and thereafter the circulating notes of such banking association shall be redeemed at the Treasury with the notes hereinafter authorized.

SEC. 2. That the Secretary of the Treasury is hereby authorized and directed to cause to be printed and engraved Treasury notes of the United States, to an amount not exceeding the present outstanding national-bank-note circulation, with such devices and inscriptions as he may direct and approve, in denominations of ten, twenty, fifty, one hundred, and one thousand dollars, and which shall be made payable on demand, at the office of the assistant treasurer in the city of New York, in standard gold or silver coin, when presented in sums of not less than \$100; and said notes shall be signed by the Treasurer and countersigned by the Register of the Treasury, or their signatures thereto engraved. Said Treasury notes shall be receivable by the United States for all taxes, customs dues, demands, and claims of the United States, and shall be received at par in all parts of the United States in payment for all salaries and other debts and demands owing by the United States to individuals, corporations, and associations within the United States, except where some other mode of payment is expressly provided by law.

SEC. 3. That no national banking association shall hereafter be organized; nor shall any circulating notes be hereafter issued by any bank now organized, except in redemption of mutilated, worn, and defaced notes issued by such banking institutions already organized and outstanding at the passage of this act; nor shall any existing banking association increase its circulation, or the amount of Treasury notes outstanding at the passage of this act. And for the purpose of the prompt redemption of said Treasury notes the Secretary of the Treasury shall maintain a redemption fund, in standard gold and silver coin, of not exceeding 25 and not less than 15 per cent. of the outstanding issue of said Treasury notes; and in order to obtain said coin-redemption fund he is hereby authorized to set aside from accruing surplus revenues, from time to time, such sums of standard gold and silver coin as with the redemption fund for the outstanding legal-tender notes now held in the Treasury will constitute the maximum percentage above stated on the outstanding legal-tender circulation and the Treasury-note circulation hereby authorized.

SEC. 4. That all taxes on bank checks now authorized by law are hereby abolished after the expiration of six months from the passage of this act; and section 5214 of the Revised Statutes, so far as it imposes taxes on the deposits and the capital stock of banking institutions and bankers, is hereby repealed as to all bankers and banks not issuing circulating notes.

Payment of the Morgan-Raid Claims.

SPEECH

OF

HON. STROTHER M. STOCKSLAGER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 22, 1882,

On the bill (H. R. No. 634) to afford assistance and relief to Congress and the Executive Departments in the investigation of claims and demands against the Government, together with the substitute submitted by Mr. HOUSE, of Tennessee, (H. R. 4467.)

Mr. STOCKSLAGER said:

Mr. SPEAKER: I believe every member of this House is in favor of some measure which will relieve Congress of the great mass of private bills which now find their way to our Calendars, and at the same time furnish honest claimants with a more speedy mode of enforcing their claims against the Government. All admit the great need of some such measure. And yet, Mr. Speaker, every thoughtful person must realize the extreme difficulty of so framing a law as to furnish the claimant a tribunal in which he may have speedy justice and not endanger the rights and interests of the Government. If the members of this House can be convinced that either of the measures now under consideration will relieve Congress of this immense amount of labor, which it has not time to properly perform, and furnish a remedy for every honest claimant of the Government without throwing down the bars and flood-gates which have been heretofore erected to protect the Treasury against that vast avalanche of claims growing out of the late war, which are now effectually barred, that measure, I doubt not, will receive the sanction of this House. But, Mr. Speaker, I propose to address myself to the amendment proposed by me to the substitute proposed by my friend from Tennessee, [Mr. HOUSE.] That amendment is as follows:

Amend section 4 of the substitute offered by Mr. HOUSE, from the Select Committee on Reform in the Civil Service, by adding to the end of said section the following words, to wit:

"Except claims for property taken during the Morgan raid in the States of Indiana and Ohio: And provided, That in said claims thus excepted it shall be the duty of the proper accounting officers of the Treasury Department, and they are hereby authorized and directed to receive, pass upon, and settle all claims for property taken and used by the Union forces engaged in opposing or pursuing the rebel forces under General John Morgan while making his raid into the States of Indiana and Ohio, in July, 1863; and said accounting officers are also directed to receive, settle, and pay for all horses taken from citizens of said States by said rebel forces which were afterward captured, retained, and used by the Union Army; and an appropriation is hereby made, out of any money in the Treasury not otherwise appropriated, to pay the same. And provided further, That the said accounting officers of the Treasury shall take and accept as sufficient proof, in all claims so disposed of, the adjudications made by the commissions appointed by said States, respectively, together with the accompanying proofs, which claims, adjudications, and proofs were filed in the offices of the adjutant-general of said States, respectively: Provided, That all claims not so adjudicated upon may be established as other claims and demands against the United States are now established: And

provided further, That upon the finding of said respective commissions, or other sufficient proof of the taking of horses or mules by the said rebel forces, their capture, retention, and use by the Union Army shall be presumed and admitted by said accounting officers, and adjudication and settlement made for the same in the same manner as if said property had been originally taken by the Union forces. And provided further, That the Quartermaster-General is hereby directed, upon the request of claimants or their attorneys, to turn over to the proper accounting officers of the Treasury all claims heretofore filed in his office for property taken from citizens of the States of Indiana and Ohio during the said Morgan raid."

It will be seen that this amendment excepts from the provisions of this bill claims for property taken during the Morgan raid in the States of Indiana and Ohio, and provides for their settlement by the accounting officers of the Treasury. Why should these claims be excepted from the provisions of this bill? Why should they not take the same course that all other claims are required to take? I will answer these questions briefly and then discuss the provisions of the amendment which direct the manner of their settlement. The reason why they should be excepted is because they stand upon a different footing from any other claims pending before this House or before the Executive Departments of the Government. They have all been investigated and passed upon by at least a quasi-judicial tribunal, and filed in the Quartermaster-General's Department under the act of July 4, 1864, and many of them have been again investigated by that department. Hence, there certainly can be no necessity for sending them to the Court of Claims to be again investigated and reported back to this House before they can be allowed and paid. Whatever may be the necessity for sending to the Court of Claims, or some other judicial tribunal, claims which have never been investigated and the facts found, there certainly can be none in these cases, all of which have undergone one thorough and searching investigation, and most of them a second investigation by the Quartermaster's Department.

The first clause of the amendment provides for the settlement by the accounting officers of the Treasury of all claims for property taken and used by the Union forces engaged in opposing or pursuing General John H. Morgan's forces in Indiana and Ohio in July, 1863, and also to settle and pay for all horses and mules taken from citizens of said States by said confederate forces which were afterward captured, retained, and used by the Union Army, and makes the necessary appropriation to pay the same. This is simply and solely what the act of July 4, 1864, authorizes, and includes no claims not fully covered by that act and which were not properly filed under and by virtue of its provisions.

The second clause provides a rule of evidence for the Treasury Department in passing upon and allowing these claims. Instead of requiring the Quartermaster's Department to retake the evidence and reinvestigate them, it provides for their payment upon the adjudication made by the Indiana and Ohio Morgan-raid commissions respectively, together with the proofs taken by said commissions. It further provides that upon the finding of said respective commissions or other sufficient proof of the taking of horses and mules by the confederate forces, their capture, retention, and use by the Union Army shall be presumed and admitted by said accounting officers, and adjudication and settlement made for the same in the same manner as if said property had been originally taken by the Union forces.

Mr. Speaker, these claims all belong to the class usually known as "4th of July claims," so called because they are all payable under that act of July 4, 1864. They belong to that class of war claims which the Government has always assumed to pay and has all along been paying. But, Mr. Speaker, as before remarked, they stand upon a little different footing from the claims ordinarily payable under that act, and in order that the House may know just what their standing is, and thus ascertain the reason why I so earnestly insist that my amendment is proper and should be adopted, I will briefly as I may give a history of them.

They are claims growing out of what is familiarly known as the "Morgan raid" in Indiana and Ohio in July, 1863.

On the 10th day of June, 1863, General Morgan with a large force of cavalry and artillery left Alexandria, Tennessee, for his famous raid. After rapid forced marches over a broken country and miserable roads, on the 8th day of July, 1863, he crossed the Ohio River at Brandenburg, about forty miles below Louisville, Kentucky, into Harrison County, Indiana. The horses of his command were badly jaded and worn out. Rapidity of marching being of the utmost importance to the safety of Morgan's command, his men lost no opportunity to gather up all the fresh horses which could be found within reach of their line of march, leaving with the farmers and others from whom they took horses their jaded and broken-down stock. The force passed on rapidly through Indiana and into and through Ohio, to a point on the Ohio River above the city of Cincinnati, when nearly the entire command, together with all the horses and mules in their possession, was captured by the Federal forces, and such of the horses and mules as were serviceable were taken and used by the Federal Army, and those not serviceable were condemned and sold and the proceeds of the sales paid into the Federal Treasury.

The next day after Morgan's forces crossed the Ohio River a large Federal force, under command of General Hobson, crossed the river at the same place in pursuit of Morgan's forces. This force was in the same condition, so far as horses were concerned, if not worse than General Morgan's forces, and the necessity for rapid marching

was greater than with the rebel forces. In this condition of affairs our people, loyal to their Government, turned out their horses, and when they could not be spared by the farmers they were taken by the Federal forces, the owners being assured that the Government would pay for them. In the few instances where regular quartermasters gave vouchers for horses the Government did pay for them promptly; but in the great mass of cases squads of men under command of non-commissioned officers gathered up the horses, sometimes miles away from the command, which was rapidly marching. The consequence was that very few of them got proper vouchers.

Had the Federal Government left the jaded and broken-down horses abandoned by both armies to the men from whom they received good horses, no complaint would ever have been made. But the Government not only sold the horses taken by Morgan's forces from our citizens, and which were all captured by the Federal forces and the horses given to General Hobson's Federal forces or impressed by him, but through the Quartermaster's Department, she gathered up all the horses which were left by both armies and sold them also. General W. H. Terrill, who was at that time adjutant-general of Indiana, in his report (volume 1, pages 198 and 199) thus refers to the action of the Federal Government in the premises:

The regulations of the United States Quartermaster's Department required that all animals abandoned by either Federals or rebels, whether branded "U. S." or "C. S.," or impressed into the United States service, should be collected together, and, if serviceable, turned into the Quartermaster's Department for issue; or, if not serviceable, they should be inspected, condemned, and sold for the benefit of the United States in accordance with the Army regulations. No animals were allowed to be returned to claimants even on proof of ownership; nor could payment be made, in the opinion of the Government officials, for any property impressed by the officers of the Federal troops, unless it was clearly shown that the officers who impressed the same were regularly mustered into the United States service. All claims for damages by our own troops, and for horses and other property stolen, destroyed, or damaged by the rebels, were entirely ignored. There were many cases where farmers lost horses by the rebels which were subsequently abandoned or recaptured, and upon being turned over to the United States authorities were put up and sold, and their former possessors, the real owners, to supply themselves with teams were compelled to purchase and pay for their own property. These hardships were augmented by the fact that large numbers of the horses not stolen by Morgan on his route were subsequently impressed by officers of the legion and minute-men, whose vouchers were repudiated at Washington. Thus it will be seen that between the thefts of the enemy and the impressments of our own forces those who suffered stood but a poor chance of being compensated for their losses from any source.

In answer to an inquiry made by me of the Treasury Department as to the amount received by the Federal Government from the sale of horses and mules which were condemned as unfit for service in Indiana, I received the following:

WASHINGTON, D. C., April 22, 1882.

To Hon. S. M. STOCKSLAGER:

In reply to your letter I have to inform you that Colonel Ekin takes upon his accounts-currents for August, September, and November, 1863, the sum of \$82,630.10 received from sales of property abandoned by the forces of General Hobson and John Morgan, in the raid and pursuit of the latter through Indiana in July, 1863. The above amount was realized from sales made in Indiana.

J. T. POWER, Chief Clerk.

This, of course, does not include such horses as were serviceable which were taken and used in the Union Army. Governor Morton, of Indiana, presented these claims to the Federal authorities immediately after the raid, but at that time they refused to recognize or pay them. In March, 1867, the Indiana Legislature passed a concurrent resolution providing for the appointment, by the governor, of three commissioners, whose duties were set forth, as follows:

To hear, determine, and adjust all claims for losses which have heretofore occurred by reason of the injury, destruction, loss, or impressment of property had or held by any inhabitants of this State by rebel forces under the command of John Morgan, in the year 1863, or caused by the State or national forces engaged in repelling said invasion.

An attorney to protect the interests of the State was provided for, and also a clerk. The claims were required to be separated into the following classes:

1. Claims for property taken or destroyed or injured by the Union forces under command of United States officers.
2. Claims for property taken or destroyed or injured by the Union forces under State officers.
3. Property taken or destroyed or injured by the rebels.
4. Property taken or destroyed or injured where claimant is unable to identify by which force the loss occurred.

In pursuance of these resolutions Governor Baker appointed Hon. Smith Vawter, Hon. John I. Morrison, and Hon. John McCrea, gentlemen eminent for their ability and integrity and probity, as commissioners. He also appointed my distinguished colleague, the able and eloquent General THOMAS M. BROWNE, attorney for the State. This commission sat as a court and took oral testimony in all the cases filed before them, requiring each claimant to clearly prove his loyalty as well as the loss of the property, by whom taken, and its cash value. All the claims were thoroughly investigated; some rejected, others reduced in amount, and only such claims as were clearly right and just were allowed. Their report was filed with the governor, setting forth clearly all the facts which I have stated. It, together with the record kept by them and all the claims, was afterward, by virtue of another concurrent resolution, filed with the adjutant-general of the State, and by that official it was transferred to the Quartermaster's Department of the United States and the claims duly filed within the time allowed by law therefor, where they are now pending.

In the State of Ohio similar steps were taken, a commission ap-

pointed, and the claims similarly investigated and passed upon, and they are now filed in the Quartermaster-General's Office, as are the Indiana claims, under the act of July 4, 1864.

The amount of each class of these claims allowed by the Indiana commission is as follows:

Class 1, (under orders of United States officers).....	\$58,017 51
Class 2, (under orders of State officers).....	24,262 80
Class 3, (under orders of rebels).....	331,288 17
Class 4, (under orders of unknown).....	35 00

Total amount allowed..... 413,609 48

The property in the State of Ohio taken and destroyed, as found by the State commission, is as follows:

By the United States forces.....	\$141,855
By the State militia.....	6,202
By the confederates.....	428,168

Total..... 576,225

Of the above amount taken by the confederates, the sum of \$20,552 worth was traced into the use of the Federal Army.

In Ohio there was allowed 2,732 claims for property taken and destroyed by the confederates, averaging to each claim \$156.72. For property taken by United States forces there were 1,504 claims allowed, averaging \$94.32. By the State forces there were 129 claims allowed, averaging \$48.38.

Of the property taken or destroyed by the confederates, a careful estimate shows that of the \$428,168 allowed fully \$300,000 was for property destroyed; that about \$30,000 was for quartermaster and commissary stores, and the remainder, about \$100,000, was for horses and mules taken.

I have not at hand the exact number of the claims of each class allowed by the Indiana commission, and therefore cannot give the average amount of each claim allowed or the proportion destroyed; but I presume it would be about the same as that in Ohio. Assuming the proportion to be the same, there would then be about sixty or seventy-five thousand dollars of the property taken by Morgan's forces for horses and mules; and the claims would probably average about \$95 each.

Now, Mr. Speaker, that these claims are just and honest and have been due and owing by the Government to her loyal citizens for nearly twenty years no one will dispute. That they have been fairly and honestly passed upon and the correct amounts ascertained I think can be hardly doubted. At the time the investigations were made by these commissions it was understood that the States respectively would pay the claimants and present the claim to the Federal Government for payment. There can be no question, then, I think, that these State tribunals, fully expecting that their respective States would have these claims to pay at least in the first instance, were just as careful in taking testimony and allowing the claims as the Court of Claims or any other court would have been.

What changes would this amendment make in the present mode of adjudicating these claims, and what reasons, if any, exist why a change should be made? As the law now stands the Treasury Department will not pay any of these claims until after the Quartermaster's Department has passed upon and allowed them, and that department will not allow a single claim—especially from Indiana—until after agents of that department have been sent out and evidence taken. This amendment directs the accounting officers of the Treasury to pay these claims, or such as are for property taken by the Federal forces, and such as are for horses and mules taken by the confederate forces which were afterward captured by the Federal forces, upon the findings of these commissions.

Now, Mr. Speaker, I will attempt to give the reasons why these changes should be made; and if they address themselves favorably to the judgment of the members of this House I shall expect the amendment to be adopted. It seems to me that no argument should be necessary to convince any one of the propriety and economy of the first. That the claims were thoroughly and carefully investigated and reasonable and proper amounts allowed by the respective commissions is shown by the fact that in hardly a single case where the Quartermaster-General has taken testimony and made an allowance has that allowance been either more or less than the amount allowed by the commissions. And in all cases so far investigated, so far as I am informed, the proof of claims has been made, except when witnesses have gone away or have died. Then, in the end, the Government will pay to claimants as much as it would pay upon the State adjudications, except here and there a case where a poor claimant has not been able to keep his witnesses alive until his Government gets ready to mete out to him that tardy justice which he should have received nearly twenty years ago. Certainly the United States Government should not seek to take advantage of its poor claimants in such cases.

But let us look at the matter from the stand-point of economy. I have already shown that the average amount of each claim for property taken by the United States forces in Ohio (and they are about the same in Indiana) amounted only to the sum of \$94.32. The Quartermaster-General's report for the year ending June 30, 1879, shows that the average expense to the Government in the investigation by that department of this class of claims was the enormous sum of \$33.

It will thus be seen that the Government is paying out to agents of the Quartermaster's Department more than one-third of the amount

of these claims for conducting an investigation which I have shown only here and there deprives an honest claimant of his just dues. By directing the accounting officers to pay these claims upon the allowance made by these respective commissions the Government would save large sums of money, and, instead of paying the money to an army of gentlemen of elegant leisure who spend much of their time in idleness, it would go to the persons to whom it is due, and to whom it has been due for twenty years. Again, it will greatly facilitate the payment of long due claims. It will take years to investigate them in the Quartermaster-General's Department or in the Court of Claims should they be referred to it, whereas under this amendment it can be done in a short time.

The Quartermaster-General, in a letter addressed to the Secretary of War on the 8th day of April, 1880, recommends such action, especially so far as the Indiana claims are concerned. He says:

QUARTERMASTER-GENERAL'S OFFICE,
Washington, D. C., April 8, 1880.

SIR: Under the act of 4th July, 1864, and the act of March 3, 1879, which bars all claims for quartermaster's stores taken by the Army if not presented before 1st January, 1880, a very large number of claims—about fifteen thousand—were filed in this office in the last six months of the year 1879.

Among these are about two thousand claims for property taken during the Morgan raid in Indiana.

These claims were examined and reported on by commissioners appointed by the State of Indiana, who in their final report classify them as follows:

Class 1, (under orders of United States officers,) allowed	\$58,017 51
Class 2, (under orders of State officers,) allowed	24,268 80
Class 3, (under order of rebels)	331,288 17
Class 4, (under orders of unknown)	35 00

Total amount allowed 413,609 48

The report of the commission is entitled to great respect and consideration, but as the duty of deciding whether to recommend settlement of such claims under United States laws is a personal duty imposed on the Quartermaster-General, made to depend upon his being convinced of the facts in the case, he is not at liberty to rest his report solely upon the opinion of the commissioners.

Their report does not give the evidence in the case. Taking a typical case, I find that claimant swears to the facts of ownership, and of taking a horse and to its value.

Neighbors swear to the ownership and value of the horse, and that from their knowledge of the claimant they believe the facts to be as stated by him.

All this is the belief only of the parties—witnesses and commissioners. The only sworn evidence to the appropriation is that of the claimant himself, who is to receive any allowance that may be made in the case.

I believe that if Congress will adopt the report of the commissioners, as above, for appropriation, and provide for payment of all the awards made by them in classes, or for such of these four classes as may be held to be subject of just reclamation against the United States, substantial though long-deferred justice will be done, and that the risks of paying some few unjust claims will not equal the certain injustice inflicted by requiring claimants to submit again full and detailed proof to this office. This will involve long delay in settlement of claims, all of which originated at least fifteen years ago.

There are now about twenty-five thousand claims on file in this office for investigation and settlement, and none can be finally disposed of without careful investigation and personal action of the Quartermaster-General in each. It is his conviction of loyalty of claimant and justice of claim which is to be reported by him in each case. I recommend that this subject of the Morgan-raid claims in Indiana be laid before Congress, and that their attention be called to the equity of making some legislative provision for more speedy payment of all the claims reported favorably by the Indiana State Morgan raid commissioners, than is possible through action of this office under existing laws.

The State of Ohio appointed commissioners to examine and audit similar claims in that State. The report of the Ohio commissioners gives the testimony taken in each case, names of witnesses, and testimony in detail.

Therefore it is possible for the Quartermaster-General, upon the facts and documents reported by the Ohio State commissioners, to take action upon the Morgan-raid claims in Ohio without sending out to the locality agents to make further investigation.

This cannot be done in the case of the Indiana claim for want of the legal evidence. Very respectfully, your obedient servant,

M. C. MEIGS,
Quartermaster-General, Brevet Major-General, United States Army.

Hon. SECRETARY OF WAR.

The Quartermaster-General in his typical case fails to observe that what he calls the only evidence on file is the original claim or complaint filed by the claimant before the State commissioners. The commissioners, however, heard oral proof in open court, and made their respective findings upon such proof, just as any other court does. It is true there is no bill of exceptions filed in each case. The claim sworn to and proved by two neighbors, as General Meigs says, is filed and is now on file in the Quartermaster-General's Office. In addition to this there is the finding of the commission, based upon proof introduced in open court by witnesses who submitted to a rigid and searching cross-examination, all before the department.

It is true, as before remarked, requiring another investigation twenty years after the occurrence, and seventeen years after the first investigation, after witnesses have scattered to the "four quarters of the globe," and many of them crossed the "silent river," may deprive some honest claimants from obtaining what the Government owes them, and giving the result in money to a lot of agents of the Quartermaster's Department, some of whom I would not like to characterize upon this floor in the manner which, as I have been informed, their conduct deserves. But is it just? Is it right? Is it honest? Will the citizen love his Government for swindling him out of the money which is justly due him in order that some one else may have employment in the Government service and live at his ease? I think not.

I have a case in my mind, to which I cannot refrain from calling the attention of the House, which illustrates the injustice of the course pursued by the Government. The claimant was a captain in the Fiftieth

Regiment of Indiana Infantry when Morgan made his raid, and was with his regiment at the front. Hobson's forces took a horse from his pasture field in Harrison County, Indiana. When the Morgan-raid commission sat he made his proof clearly by persons who then resided in the neighborhood, and the commission allowed him \$125, the fair cash value of the horse. Two years ago an agent of the Quartermaster's Department was in the county, and after months of inquiry he was unable to find a single witness to the taking of his horse. If this amendment does not pass this gallant soldier will lose the value of his horse. But if it passes he will be paid upon the finding of the commission. And again, in these cases I have shown that, in Indiana at least, the Government has received from these claimants and for property abandoned as much money as it will pay to them if it pays all their just claims.

Now for the second proposition, that the accounting officers should also pay upon the allowance made for horses and mules taken by the confederate forces. This is entirely upon the theory, which is true, that they were captured and used by the Federal forces. I have no doubt that ninety-nine hundredths of them were thus captured and used. But the citizens in my district and other places, who were hundreds of miles from where General Morgan's forces were captured, could not and now cannot make the proof of fact in each case: could not identify their particular horse or the actual mule. The fact that nearly all of them were taken by the Federal forces is a historic fact, and well known, but the accounting officers will not pay for a horse or mule unless witnesses can clearly identify the property in the hands of the Federal forces. This is certainly a great hardship. It certainly would not be unfair, where ownership and taking by Morgan's forces are clearly shown, recapture and use should be implied. That was almost universally the case, and the exceptions were so rare that the rule should apply.

When Morgan was captured every one knows the horses and mules were not turned loose and paroled. With a very few exceptions the United States recaptured and used what Morgan seized, and the few exceptions should not become the rule for the wholesale rejection of worthy claims. If this amendment should be adopted and the bill pass, all of these claims which should be paid will receive prompt payment, and they will cost the Government less money than it will cost to settle them in the way they are now being settled, and an army of agents of the Quartermaster's Department will not get what the honest, loyal, patriotic citizens of Indiana and Ohio are justly entitled to at the hands of the Government. The Government has received the money arising from the sale of the horses and mules. The money has been in the Treasury for nearly twenty years. Now, these claimants simply ask that it be refunded to them without interest. Is it not fair and just? Does not every principle of justice and equity demand that they should be paid without further delay and additional expense on their part? Economy, justice, equity, common honesty, and fair dealing all demand that it should be done, and I hope this Congress will not turn a deaf ear to their demands.

Tariff and Tax Commission.

SPEECH

OF

HON. WILLIAM S. SHALLENBERGER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 15, 1882.

The House, in Committee of the Whole House on the state of the Union, having under consideration the bill (H. R. No. 2315) to provide for the appointment of a commission to investigate the question of the tariff and internal-revenue laws—

Mr. SHALLENBERGER said:

Mr. CHAIRMAN: The district which I have the honor to represent is deeply interested in what is known as the protective system, and by reason of its varied industries and productions is well fitted to illustrate the beneficent effects of a protective tariff. I shall, therefore, earnestly favor by voice and vote, so long as I have a seat upon this floor, the extension of this system until it shall develop all sections of our great country and sufficiently protect every industry possible to America.

I am heartily in favor of the bill now before the committee creating a commission of nine men from civil life, who shall be charged with the duty of considering and thoroughly investigating "all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and industrial interests of the United States, so far as the same may be necessary to the establishment of a judicious tariff, or a revision of the existing tariff, upon a scale of justice to all interests," and making report of the same to Congress not later than the first Monday in January next. Time is so important at this stage of the session that I should willingly waive the privilege of speaking upon the subject if I could be persuaded that in doing so I should

materially hasten a vote upon the bill. The days and weeks in which the proposed commission should be actively at work are passing. Other business of vital importance to the country should be taken up. My conviction is that we should sit day and evening until we shall have exhausted debate and passed the bill. Were the commission promptly appointed and continuously at work, the time intervening between the date of such appointment and the convening of Congress in December would be ample, in my judgment, to complete the work intrusted to its hands. With such well-digested material as the commission may furnish, Congress can and should, even in the short session, by well-directed industry, prepare and pass a thoroughly revised tariff bill.

I do not hesitate to say, Mr. Chairman, that my purpose is to reach such a revision as will give us a tariff more complete in its protective features. Other gentlemen may have different purposes. The results obtained by the commission in the shape of facts will serve equally well those who oppose protection. I am a little surprised that any one should doubt my purpose or affect to be surprised that those who attend a tariff convention should be for protection, as was my honorable friend from Mississippi the other day. I quote:

Mr. MULBROW. Now, Mr. Chairman, after this interruption, in order to ascertain the spirit of that New York tariff convention, I will quote a little further from its proceedings.

Mr. SHALLENBERGER, in giving in his opinion, said: "I am glad that I came, and I expect to do all I can to have this commission of experts appointed; and then I expect to learn from that commission all I can in order to give this country a thorough, congruous, effective, and radically protective tariff."

He, too, throws off the mask and proposes legislation with an eye alone to protection.

If the gentleman means to say that I propose legislation which will not yield a revenue he is mistaken. The experience of the past abundantly proves that a protective tariff increases consumption, invites importation of luxuries and dutiable goods not produced in this country, and swells the revenue. No mask was ever worn, hence none thrown off.

THE PRESENT TARIFF UNJUSTLY ATTACKED.

I do not admit that the existing tariff, under which the country has so marvelously prospered, is half so bad as our Democratic friends would have the country believe. The objectionable features are the rare exceptions. I admit and enforce the necessity of comprehensive and intelligent revision, but I seriously protest against such radical changes as would disturb greatly the vast business interests of the country.

I do not think the passage of this bill will necessarily defeat all action upon the tariff at the present session. It possibly will, but not necessarily so. The intent of all protective legislation has been so manifestly, and yet, perhaps, so unavoidably violated by recent Treasury decisions and by the action of the courts that some legislation restoring to important industries now prostrate the protection evidently intended by the present tariff should be had without delay. Congress may, and should within a week after the passage of this bill, enact some measure affording immediate relief in the direction named.

BUSINESS TALENT NEEDED IN FRAMING A TARIFF.

The experience of a Democratic House in attempting to pass the abortion known as the Wood tariff bill in the Forty-fifth Congress should forever silence the objections of that party to a commission. Their willingness to trust the present Ways and Means Committee, organized by a Republican House, with a complete revision of the tariff after the experience named is certainly a compliment to the distinguished chairman of that committee.

The refusal of Mr. Wood, chairman of Ways and Means in the Forty-fifth Congress, to hear business men before his committee resulted in the production of a bill which violated the plainest principles of fairness and justice. The bill in many of its features positively discriminated against American manufactures. It laid a duty on the raw materials which the manufacturer was compelled to use and reduced or removed entirely the duty on a number of manufactured products. The Wood bill is fittingly described by Mr. A. H. Jones, of Philadelphia, when before the New York tariff convention he spoke so well in behalf of the chemical industry. He says:

The bill itself showed most lamentable ignorance. It was prepared without consultation with American manufacturers, was deservedly condemned alike by free-traders and protectionists, and was hustled out of existence by striking out the enacting clause.

In his speech supporting the bill, June 4, 1878, Mr. Wood said:

But I deny that a tariff cannot be properly drawn without the aid of manufacturers, &c.

In contrast, we as Republicans deny that a tariff can be properly drawn without the aid of those engaged in agriculture, commerce, manufacturing, mining and industrial occupations. It is just possible that all of these industries may be represented in the Ways and Means Committee, but if so, it is all the more likely that the valuable work of the commission will be respected. Besides, the Ways and Means Committee has enough of other public business when Congress is in session to disturb and distract, rendering it impossible to give time continuously to needful investigations, while during the recess of Congress members are engaged in the activities of the campaign. It is economy of time and money to intrust the work to a commission whose members give undivided attention and have practical knowledge.

PRESENT PROSPERITY.

The past ten years under the protective system have been years of unexampled prosperity. Labor is profitably employed; capital actively invested; productions of the soil unprecedented in abundance; credit at home and abroad firmly established; a currency that goes unchallenged in every hamlet of our wide domain and travels the equal of gold the world around; a debt that might well have staggered any nation at the close of a four years' war now melting rapidly away at the rate of \$150,000,000 in the past twelve months; at peace with all the world and peacefully inclined; consuming as a people vastly more of the products of field and factory than ever before, and yet a surplus for the nations around us, this country is to-day both the envy and the admiration of the world.

The present exceptionally prosperous times cannot, however, in all human probability, remain with us much longer. The experience of nations teaches us to expect a reverse. Capital is even now growing timid; speculative enterprises are checked. We should hesitate to launch out upon wasteful or extravagant expenditure. We should deal cautiously as business men with customs duties and internal taxation. We have large surplus revenues, it is true, but we have a large debt unpaid; we have sacred obligations in the matter of pensions which will require perhaps \$100,000,000 in the next year. The balance of trade is against us for February. Foreign demand for food crops, on which our exports are largely based, may fail us, so that it is not the part of wisdom for our Democratic friends to attack furiously our protective duties and at the same time strike down, as they attempt to do, our entire internal-revenue system, including tax on whisky and tobacco.

REDUCTION OF TAXES DEMANDED.

Some material reduction of internal taxes can and should be had at once. Petitions in countless numbers have been presented for the removal of all internal-revenue taxes except those on whisky and tobacco. The present Congress will, I believe, respond to this just demand, and thus reduce the revenues for the next fiscal year perhaps \$23,000,000, as reported from committees. I cannot think it safe to depend wholly on customs duties and am, therefore, in favor of retaining the tax on whisky and tobacco as yielding the largest revenue with the slightest possible hardship to the people. They are purely voluntary taxes on what are conceded to be unnecessary luxuries.

PROTECTED AND UNPROTECTED INDUSTRIES.

It has been very popular for Democratic members during this debate to speak of the protected industries as a privileged class against which should be arrayed the so-called unprotected industries. Now, Mr. Chairman, I affirm that the American protective system as expounded by its authors and true friends is a system which is designed to protect to the extent necessary every industry possible to America, and it is not true in fact or in effect that agriculture receives no protection. It does receive specific protection under the present tariff as shown by table submitted, which I find in the excellent speech of the honorable gentleman from Texas, [Mr. UPSON.]

Duties which wholly or in part benefit the farmers, stock-raisers, wool-growers, and other producers of raw materials collected in 1881:

On animals.....	\$783,564 09
On breadstuffs.....	2,762,128 48
On flax, and manufactures of.....	6,884,874 90
On fruits and nuts.....	3,841,848 66
On hemp, jute, and manufactures of.....	2,381,967 78
On potatoes.....	325,267 46
On provisions.....	244,089 19
On seeds.....	277,977 45
On tobacco, and manufactures of.....	4,655,591 67
On sugar.....	45,833,045 09
On vegetables.....	151,470 08
On wool.....	4,860,815 40
	72,582,110 85

Duties benefiting manufacturers:

On buttons.....	912,134 96
On cotton manufactures.....	10,825,115 21
On clock manufactures.....	647,657 14
On glass manufactures.....	3,296,541 42
On earthenwares and china.....	2,727,476 43
On iron manufactures.....	12,115,086 22
On steel manufactures.....	9,847,438 12
On paper manufactures.....	619,852 86
On tin manufactures.....	4,194,680 33
On wool manufactures.....	22,424,869 35
	67,110,792 04

Duties on luxuries:

On confectioneries.....	2,050,987 75
On diamonds.....	835,052 19
On embroideries.....	1,096,756 50
On fancy articles.....	2,934,850 75
On furs, and manufactures of.....	911,021 87
On champagne.....	1,369,763 60
On spirits and wines.....	6,471,641 54
	15,770,074 20

Duties on other articles:

On chemicals, drugs, dyes, &c.....	4,635,261 10
On coal.....	516,006 95
On salt.....	929,056 90
On spices.....	1,095,139 10
On woods, and manufactures of.....	1,538,024 59
	8,612,488 64

Excess of our exported over imported merchandise during the past six years, namely:

1876. Excess of exports.....	\$79,643,481
1877. Excess of exports.....	151,152,094
1878. Excess of exports.....	257,814,234
1879. Excess of exports.....	264,661,666
1880. Excess of exports.....	167,683,912
1881. Excess of exports.....	259,712,718

1,180,668,165

These figures are all suggestive as showing the direct and indirect benefit the farmer or agriculturist derives from the protective system. The benefit is of course indirectly to a much greater extent.

Mr. CARLISLE. Will the gentleman allow me a question on this point?

Mr. SHALLENBERGER. Certainly.

Mr. CARLISLE. I wish to know whether the gentleman considers the rates of duties imposed upon agricultural products as protective duties; because if he does he and I can get upon the same platform, I think, without much difficulty. In other words, if he is willing to accept as protective duties for the manufacturing interests of this country the same rates now imposed upon agricultural products, we can get together, I think, very easily.

Mr. SHALLENBERGER. I am very glad indeed to have this question put to me by my distinguished friend from Kentucky, because I think that we should get together on that very subject.

Mr. CARLISLE. Will the gentleman answer my question?

Mr. SHALLENBERGER. I say in answer to the gentleman that I do regard the present duties upon agricultural products as protective, not against European products, but against Canadian products in the main. We do not need more protection for our agricultural products against the products of Europe. If we did, I would ask the gentleman from Kentucky to join me in imposing a duty of 50 per cent., or if need be a greater per cent., so that we might prevent the markets of this country from becoming overrun by the great agricultural products of Southern Russia or Australia or East India or any other country. I want it understood distinctly that the American protective system does extend directly to every product of agriculture that needs it.

But with so fertile a soil as ours, with lands so cheap, and with our agricultural machinery at such a state of perfection that the labor once performed by ten or twenty men can be performed by one, we do not need the same protection for agricultural products, such as cereals, that we should have for those manufacturing industries which must compete with the pauper labor of Europe, just as eligibly located as the labor of this country.

Mr. CARLISLE. I beg the gentleman's pardon; but he has not answered my question. The question was whether he was willing to accept the same rates of duty upon manufactured articles as are now imposed by law upon agricultural products. That question the gentleman has not answered.

Mr. HERR. Will the gentleman from Pennsylvania permit me to put a question to the gentleman from Kentucky?

Mr. SHALLENBERGER. Will the gentleman from Kentucky please repeat his question?

Mr. CARLISLE. My question was whether the gentleman from Pennsylvania, having declared that the agricultural products of this country are protected, is willing now to accept the same rates of duty for the protection of manufactured articles that are imposed, as he says, for the protection of agricultural products.

Mr. SHALLENBERGER. By no means.

Mr. CARLISLE. So I supposed.

Mr. SHALLENBERGER. And the gentleman cannot expect it. We put a tariff on manufactured products to protect not only the labor expended in the factory upon those products but also the labor in mining and handling the raw material from the time it is sought in the bosom of "mother earth," through all its varied forms, up to the finished product.

Mr. CARLISLE. Is not the difference between the rates of wages paid for agricultural labor here and the rates paid in Europe greater than the difference between the rates paid to manufacturing laborers here and those paid to manufacturing laborers in Europe?

Mr. SHALLENBERGER. It perhaps is, for reasons I have in part named.

Mr. HERR. I would like to ask the gentleman from Kentucky if he thinks any horizontal rule can be adopted, which shall not make any distinction between different industries?

Mr. CARLISLE. Why, Mr. Chairman, I do not believe that any horizontal rule can be laid down or adhered to, because I believe there are some species of products which will bear a higher duty as a revenue duty than others will bear; and in imposing a duty for revenue no one expects, of course, that there shall be precisely the same rate of duty upon every class of articles.

Mr. SHALLENBERGER. Mr. Chairman, I ask the gentleman from Kentucky how he could expect, for instance, the same rate of duty upon woolen manufactures that could be adopted, if our raw materials were free as they are in foreign countries?

Mr. CARLISLE. I do not; but I would reduce the duty on wool as on the manufactures of wool.

Mr. SHALLENBERGER. To what extent, may I ask?

Mr. CARLISLE. To the revenue point, whatever that is ascertained to be after an examination by the proper committee of this House.

Mr. SHALLENBERGER. Do I understand the gentleman to say that he would reduce the duty on wool to that point which would admit foreign wool to be used in place of our own?

Mr. CARLISLE. I would reduce it to that point which would prevent the producers of wool in this country from fixing their own price on their article and excluding the products of foreign countries. In other words, I would give the manufacturers of woolen goods in this country an opportunity to purchase their raw material at a fair price wherever they could procure it, just as I would give to the consumers of their products the same right and privilege.

Mr. SHALLENBERGER. Does the gentleman say that foreign wool is not now imported in competition with the American product?

Mr. CARLISLE. Certain classes of foreign wool are.

Mr. SHALLENBERGER. How can the gentleman say then that the wool industry is a monopoly?

Mr. CARLISLE. I have not said so.

Mr. SHALLENBERGER. I understood the gentleman to say we fixed our own price on wool.

Mr. CARLISLE. I did not say so. I said I would reduce the duties to a point where it would be impossible for that to be done.

Mr. SHALLENBERGER. I claim that our duties on wool are reduced to the point indicated, for we are now largely importing foreign wool, and I can assure my friend that the production of wool in Australia and in other colonies of Great Britain, together with the South American production, is so largely increasing in recent years, that if we materially reduce the duty on wool we will have an influx equal to any demand for years to come.

I understand the position of the gentleman from Kentucky to be that he would reduce the duty on American wool to such a point as to admit wool from all these foreign countries, grown by servile labor in South America, or in the rich fields of Australia, where the climate permits the sheep to run every day in the year without food or shelter.

I ask the 400,000 growers of wool in this country, representing as they do an interest so grandly national that it plants itself in every State and in every Territory of the Union, to answer the gentleman with one voice for protection to an industry which has grown up under the present tariff until in round numbers it has given us probably 290,000,000 pounds of wool in 1881, as against 60,000,000 pounds in 1860, and which has also given us in that time cheap animal food, and which has had as one of its results the reclaiming and enriching of lands worn out by wheat and other crops. I ask these 400,000 farmers to answer the gentleman, and to answer him in tones not to be misunderstood, whether they will advise him to reduce duties to the revenue standard, as he proposes, or insist upon that protection which every man engaged in practical sheep husbandry knows is scarcely sufficient at present to keep out a vast influx of foreign wool which will surely come with the reduction of duty.

If any one questions the fact that we must insist upon the present rate of duty, at least upon fine wool, as against the demand of my learned friend from Kentucky, who advises a reduction, I beg to refer him to the report of Consul-General O. M. Spencer, dated Melbourne, Victoria, November 30, 1881, and published in the February number of Consular Reports. I quote statistics showing the number of sheep in Australian colonies for 1880-'81, with remarks appended:

	No. of sheep.
Victoria	10,355,282
New South Wales	32,399,547
Queensland	6,935,967
South Australia	6,463,897
Western Australia	1,231,717
Total	57,386,410
Tasmania	1,783,611
New Zealand	13,069,338
Grand total	72,239,359

The above figures sufficiently indicate the enormous pastoral wealth of Australia, while its capabilities for the multiplication of live stock is practically without limit. Such is the mildness of the climate and the adaptation of the country for grazing purposes that no provision is necessary for food and shelter during the winter season other than that provided by the bounty of nature. It is believed that Queensland alone "could easily" run from thirty to forty million head of cattle without cultivating an acre of ground for fodder or spending a sixpence in the improvement of the natural pasturage." (A Glance at Australia in 1880.)

The number of sheep in the United States in 1860 was 22,471,275 head. In 1870, under the protective-tariff rates established in 1867, sheep had increased in the United States to 28,477,951. During the next ten years of protection there was a gain of 43 per cent. in sheep husbandry against a gain of a little over 3 per cent. in the ten free trade years from 1850 to 1860, the number in 1880 having been 42,381,339 and the number in 1850 having been only 21,723,220 head.

And yet, after all this remarkable increase in the United States, the Australian colonies have over 72,000,000 sheep against our 42,000,000. It is absolutely impossible for us to compete with such a country if we strike down our tariff.

But can we reduce the duty as Mr. CARLISLE insists we may? I

say not, and I offer in proof the following table showing the wool imported in the fiscal year 1881. From these figures it appears that one-half of all wool imported under the present rate came from these same Australian colonies, and was of the finer grade, worth only 20 cents per pound average in 1880 and 18 cents in 1881, amounting to nearly 27,000,000 pounds. The total export of wool from Australasia for year ending September 30, 1880 was 876,923 bales. Only about 21,000 bales of this immense yield came to the United States, according to statement of Messrs. Goldsborough & Co., wool brokers of Melbourne; but if our tariff shall be reduced or abolished the destruction of our woolen industry is seriously threatened. Please note figures:

Imports of wool from foreign countries in fiscal year 1881.

Countries of shipment to United States.	Pounds.	Average cost per pound in 1881.	Average price per pound in 1880.
		Cents.	Cents.
England, chiefly Australian.....	24,556,110	18	20
Argentine Republic.....	6,163,223	16½	13½
Uruguay.....	4,823,562	18½	18
Russia.....	4,400,151	14½	11
France.....	3,311,775	12½	13
British Possessions in Africa, Cape of Good Hope.....	2,587,305	16½	15
Australia.....	2,199,065	24½	25
Chili.....	1,652,751	10	
Canada.....	1,670,305	30	
Mexico.....	1,009,376	10	
All other countries.....	3,390,613		
Total.....	55,964,236	17½	18½

In 1880 the average cost of wool at places of shipment was 18½ cents, or a little more than 1 cent per pound greater than the importations of 1881. E. YOUNG.

The Boston Commercial Bulletin, which is good authority on such subjects, estimates the total wool clip of 1881 at 290,000,000 pounds. Of this amount, the county of Washington in my district contributes over three million, perhaps over three and one-fourth million pounds. The census of 1870 shows that this same county owned more sheep and produced more wool than any other county in the United States, the number of sheep at that time being 426,621, and wool clip 1,862,752 pounds.

The importation of wool in 1880 was greater than I have stated for 1881. In order to show the rates of duty imposed upon the several grades of wool, the average cost of wool imported, amount of duty collected, &c., in 1880, I submit a table prepared by Mr. Young, author of Labor in Europe, &c.:

Statement showing the kinds, quantities, values, amount of duty, &c., of foreign wool that entered into consumption during the fiscal year 1880.

Kinds.	Pounds.	Value.	Average cost per pound.	Per cent. of quantity of each to the whole.	Amount of duty.	Equivalent ad valorem duty.
			Cents.			Pr. ct.
No. 1 clothing ..	26,785,171½	\$6,412,273	24	27	\$3,512,896 28	54.7
No. 2 combing ..	13,266,856½	3,801,730	28½	13½	1,783,361 46	47
No. 3 carpet	59,320,412	7,699,663	13	79½	2,077,950 04	27
Total	99,372,440	17,913,666	18½	100	7,374,217 00	*41

*Average.

This table shows that fine wool pays over 50 per cent. duty, and coarse carpet wool, which we do not specially care to raise in this country, pays 27 per cent.

HIGH DEMOCRATIC AUTHORITY SAYS ABOLISH DUTY ON WOOL.

Before passing from this subject, I must call attention to the remarkable speech of the gentleman from New York, [Mr. HEWITT,] delivered in this House a few days ago. It is justly regarded a very able presentation of the question from a Democratic standpoint. It is being circulated by tens of thousands, I am informed. And yet, when closely examined and compared with previous utterances of its distinguished author, it will be found one of the most inconsistent and unfortunate speeches the gentleman ever made or the party ever indorsed. First, it absolutely proposes to wipe out the great wool industry. I quote as follows, (in reply to question by Mr. RUSSELL:)

Mr. HEWITT, of New York. I am absolutely in favor of the abolition of the duty on wool, and I am confirmed in this view by the opinion of the largest wool manufacturer in the United States. If the wool-growers have removed from them the burdens of the extra price they pay on everything they consume they will receive ample indemnity for any sacrifice they may make in the reduction of the duty on wool.

Here we have Mr. HEWITT defending his proposed destruction of this great agricultural industry in deference to the opinion of a manufacturer whom alone he would protect.

I shall further on take occasion to show that the burdens of the extra price wool-growers pay on everything they consume are purely imaginary burdens. They do not deserve to be named as against the profits and benefits of protection. But we are told by others of our Democratic friends that the woolen manufacturers are receiving much greater protection than the wool-grower, and continual efforts are made to prejudice the wool-growing farmer against the manufacturer who buys his product by citing the high duties on manufactured goods. The truth is that the manufacturer did not ask and does not receive more than 25 per cent. net, while the wool-growers receive on the average on all wools 41 per cent. Besides the main principle governing the present tariff duties was mutually agreed upon by a joint committee of wool-growers and wool manufacturers, which formed the basis of the tariff of 1867, in these words:

All manufactures of wool or worsted shall be subjected to a duty equal to 25 per cent. net; that is to say, 25 per cent. after reimbursing the amount paid on account of duties on wool, dye-stuffs, or other imported materials used in such manufactures, and also the amount paid for the internal-revenue tax imposed on manufactures and upon the supplies and materials used therefor. (See joint report of wool growers and manufacturers, page 431 of Report of Revenue Commission.)

Here we have an illustration of the need of a commission of business men to show what amount of duty will reimburse the amount paid on account of duties on all materials used in manufacture. Even so able a member of the Ways and Means as Mr. TUCKER, of Virginia, proposed in his tariff bill of 1880 a duty of 35 per cent. on wool and only 40 per cent. on blankets, giving about 5 per cent. protection to the manufacture of blankets, an industry which supports about fifty thousand persons and has an annual production of \$7,000,000.

THE COST OF WOOLEN GOODS GREATLY EXAGGERATED.

The growth of the woolen industry has been marvelous under the present high tariff, but the charge is constantly made that a heavy burden is imposed on the consumer for the sake of thus benefiting the farmer and wool-grower. A special attack is made on blankets. Now, as a sufficient answer to all this, I will give the price of leading woolen goods in 1860, under a Democratic low tariff, and the prices in 1882, under a Republican high tariff, giving trade names of goods for accuracy.

Goods.	1882.	1860.
Fitchburgh cassimeres, per yard.....	\$0 85	\$0 95
Halle, Frost & Co. cashmerets.....	38½	46
Men's ribbed socks, per dozen pairs.....	4 50	8 00
Ladies' ribbed hose.....	3 00	4 25
Blankets, 9-4 Gonic.....	1 75	1 87½
Blankets, 10-4 Gonic.....	2 25	2 37½
Blankets, 11-4 Gonic.....	2 75	3 00
Blankets, 12-4 XX Rochdale.....	9 00	8 00
Moscow beavers, all wool.....	3 00	4 00
Moscow beavers, cotton warp.....	1 00	1 35

The woolen goods selected for comparison are such as are adapted to the wants of the poor.

The lightest duties are, as my friend from Kentucky [Mr. CARLISLE] has said, upon the more expensive fabrics, and the result is that while the cheaper grades of goods are now produced here at a lower cost than ever before, the higher classes, less thoroughly protected, are costing higher in some instances than in 1860.

Nor is it true, Mr. Chairman, that the high duties upon wool and manufactures of wool have extravagantly increased the cost of staple clothing in this country. Perhaps as fair an index of the cost of substantial clothing as I can present would be the price paid by the United States for Army clothing on July 1, 1881, as shown by General Orders No. 52, dated Headquarters of the Army, Adjutant-General's Office, Washington, D. C., June 14, 1881. A few articles I shall mention, taking that for ordnance sergeants as a sample: great coat, \$12.70; uniform coat, with chevrons, \$9.02; blouse, lined, \$3.41; trousers, (privates,) light or heavy quality, \$2.80; shirt, dark-blue flannel, \$2.54; knit undershirt, 76 cents; drawers, 62 cents; woolen stockings, 26 cents; blanket, (woolen,) \$3.93. Materials sold to officers for their personal use: dark-blue flannel, 6-4, \$1.10 per yard; dark-blue cloth, 6-4, \$2.67 per yard.

Thus it will be seen that the two industries, wool and woolen manufactures, which have been so grievously assailed by our Democratic friends, have given us cheap clothing and besides are contributing largely to the sources of national health and wealth.

But perhaps the most gratifying result of protection to these twin industries is found in a table herewith submitted showing the rapid increase in the consumption of woolen goods per capita in the last twenty years or more. Our people dress warmer and better. The price has not materially increased, but instead of each inhabitant having goods to the value of \$1.86 as in 1860 he has now wools to the value of \$5.32, an increase of 517 per cent., while population has only increased 116 per cent. in the same time.

Statement showing the increase in the production and consumption of woolen manufactures in the United States from 1850 to 1880, by decades, absolute and as compared with the increase of population.

Fiscal year—	Foreign wool imported.	Domestic and foreign wools used in manufactures.	Product of woolen goods.		Increase of woolen goods in each decade.	Increase of population during each decade.	Population.
			Total value.	Value per capita.			
	Pounds.	Pounds.	Dollars.	Dolls.	Per ct.	Per ct.	
1850 ..	18,869,849	70,862,829	143,207,545	1.86	36.	23,191,876
1860 ..	*28,781,100	95,452,159	173,454,231	2.33	70	35.	31,443,321
1870 ..	38,634,067	172,078,919	116,846,138	3.03	59	22.6	38,558,371
1880 ..	99,372,440	295,315,229	266,798,454	5.32	128	30.	50,155,783

Increase in 20 years: quantity, 209 per cent.; value, 263 per cent.

Increase in 30 years: quantity, 316 per cent.; value, 517 per cent.; value per capita, \$3.46; population, 116 per cent.

* Quantity estimated; value, \$4,317,165.

† Not including hosiery or wool hats.

‡ Gold value, reduced from currency value, \$155,405,358; currency price of gold, 133 per cent.

It will be observed from the above figures that the increase in the value of domestic woolen manufactures was far more rapid than the increase in the population, which augmented in the thirty years from 1850 to 1880, 116 per cent., while the value of manufactured woolen goods increased during the same period 517 per cent. The consumption per capita rose from \$1.86 in the census year 1850 to \$5.32 in 1880.

EDWARD YOUNG.

BUREAU OF INDUSTRY AND TRADE,
Washington, March 31, 1882.

PRESENT TARIFF SATISFACTORY AS TO WOOL.

In passing, Mr. Chairman, from the wool industry to which I have given so much attention, because it has been so seriously threatened by our Democratic friends, and because it is an industry so vital to the immediate constituency I have the honor to represent, I will call attention to the fact that wool-growers everywhere throughout the country have expressed themselves satisfied with the present duties on wool.

I spoke, by request, in behalf of the National Association of Wool Growers at the New York tariff convention for a few minutes to that effect, and was followed by the president of the Vermont Merino Sheep Breeders' Association, Mr. J. B. Mead, who used these words:

Mr. Chairman and gentlemen, I simply desire to say on behalf of our association that we indorse the good words spoken by the gentleman who preceded me, and that the sheep-breeding interest of Vermont to-day is as prosperous as it can be, and we are entirely satisfied with the tariff as it is.

He in turn was followed by Mr. J. C. Stephens, representing the Ohio wool-growers, who said:

As far as wool-growers are concerned, they need no meeting of this kind. All that we want, as far as the wool-growers of Ohio are concerned, (and I think I can speak of the entire Union,) is to be let severely alone. The great want of our policy of protection is stability in legislation. Frequent changes of tariffs unsettle values, unsettle prices, and put the wool-grower at a great disadvantage.

PROTECTION BENEFITS EVERY KNOWN OCCUPATION.

There seems to be a singular disposition to array some one occupation or more against the principle of a protective tariff. My friend from Tennessee [Mr. McMILLIN] who has just addressed the committee made reference to the blacksmith as surely one of the many who reap no benefit from protection. He tells us that the gentleman from Illinois [Mr. SPRINGER] proposed the question "How is the blacksmith benefited?" to the gentleman from Kansas [Mr. HASKELL] during his excellent speech the other day and it was not and cannot be answered. The gentleman tells us ironically the blacksmith pays a heavy per cent. tax on his tools and his iron and his clothes and that is how he is benefited. Let me illustrate by an item I clip from a local paper, published in my district, the practical effect of protection on one community.

The town of Beaver Falls, Pennsylvania, near my own home, serves me well as the illustration. This town has grown up within the memory of young men. It has natural advantages of water-power, but not better than a thousand places all over the land that wait to be touched by the same magic wand of enterprise and pluck. It has only between six and seven thousand people, but twenty-one different manufacturing establishments are named in the list referred to from the local paper, employing 1,466 hands. A rolling-mill, steel works, hinge works, cutlery works, car works, variety works, three planing mills, pottery company, shovel factory, file factory, ax works, saw works, glass works, knob works, two stove foundries, paper-box factory, brush works, bridge works, &c.—a hive of industry that might well be considered a tariff speech. Will my friend from Tennessee say that the blacksmiths of that community and of the county have not been benefited by the progress of that town, possible only under a protective tariff? Does he not suspect that blacksmiths to the number of a score at least have established themselves there as the most eligible point for business? More than this, every hundred dollars sent out from that town to the farmers and gardeners of the most remote sections of the country makes glad the heart of some local blacksmith who profits inevitably by the profits of the farmer.

What is true of the blacksmith is true of the wagon-maker, the cooper, the shoe-maker, the grocer, the doctor, the lawyer—true of every man who has a will to use head or hands in honorable toil. All are attracted to such a town and reap a benefit from every new industry that is planted. My friend in Tennessee should maintain the tariff and invite such industries. A State that has such stores of mineral wealth, of iron and coal, should not want for men to sustain rather than condemn the policy which makes possible these prosperous towns and these well-paid workmen. Build up your industries. Give employment to the coopers, the blacksmiths, the wagon-makers, that all men who now need employment may find it at remunerative wages.

Mr. McMILLIN. I will say to the gentleman that in my State the resources are so extensive and so admirably situated that the owner of an iron furnace can stand within its heat and see the point from which his coal and iron ore and limestone are taken, all within easy reach. And we can make iron and compete in price with any part of the world. It is not the blessing of protection that I speak against, but the curse.

Mr. SHALLENBERGER. May I ask the gentleman from Tennessee whether in that part of his State there are any blacksmiths?

Mr. McMILLIN. Yes, sir.

Mr. SHALLENBERGER. Are they in anywise injured by the industry that you refer to?

Mr. McMILLIN. The blacksmith in that part of the country, as is the case all over the United States, has the curse of the existence of a tariff upon him which enables our iron producers to raise their prices of the material to the blacksmith, and he pays the additional cost imposed upon the iron by this duty; so that the cheaply-made iron costs him as much as the imported iron. The fact is that while we can make iron in Tennessee at from five to seven dollars a ton cheaper than you can in Pennsylvania it sells as high as in Pennsylvania.

Mr. SHALLENBERGER. Will the gentleman from Tennessee state that the blacksmith is any worse off, admitting the fact that he has to pay a little higher price for his iron, if it be true that he gets ready sale for the product of his anvil?

Mr. McMILLIN. The iron foundries have not increased the number of horses that have to be shod.

Mr. SHALLENBERGER. Do they not increase employment?

Mr. McMILLIN. It increases certain kinds of employment.

Mr. SHALLENBERGER. Does not the iron industry give life to general business and freely distribute wages in the neighborhood?

Mr. McMILLIN. It increases certain kinds of labor; but the masses of the people are not benefited by it. The benefit derived goes to the manufacturer of the iron.

Mr. SHALLENBERGER. If my friend will allow me, I will touch the point to which he refers a little further on.

DEMOCRATIC PROTECTION.

It has been claimed that many of our Democratic friends are earnestly and intelligently in favor of protection. Especially in Pennsylvania do we hear the assertion boldly made that Democrats are as good tariff men as Republicans.

Now, let us see how this is. I presume if there be one man more than another to whom Pennsylvania protectionists have turned their ears for proofs of Democratic soundness on the tariff, it is the very able manufacturer from New York, Mr. HEWITT. If he cannot be trusted pray who in that party can?

We cannot forget that in 1870, in a letter to Jay Gould, Mr. HEWITT said:

Free trade will simply reduce the wages of labor to the foreign standard. * * * The only reason why a tariff is necessary is to supply the laborer with such wages as will enable him to travel and consume, not merely the necessities but some of the luxuries of modern civilization.

Now, hear him in a speech delivered the other day which I am informed is to be the great speech of the coming campaign, and already ordered by the ten thousand:

Wages in this country are therefore not regulated by the tariff, because whatever wages can be earned by men engaged in the production of agricultural products, the price of which is fixed abroad, must be the rate of wages which will be paid substantially in every other branch of business. If other branches pay better, labor will quit agriculture and take to manufacture; and vice versa, if agriculture pays better manufactures will decline and agriculture will progress. Wages, like water, seek a level. Thus we dispose of the first great fallacy of the protection system, which declares that a high tariff produces high wages.

Thus we present the latest fallacy of the gentleman from New York—refuted in his own words.

No one believes that all who are now engaged in manufactures, or half of them, could be profitably engaged in agriculture. We are largely exporting cereals now, after supplying an immense home demand for perishable crops which could not be exported, and which would not be consumed but for manufacturing industry. Mr. HEWITT knows this well, and speaks it forcibly in the letter to Jay Gould from which I have already quoted. Note his words:

Besides, if we have free trade we cannot expect to procure our supplies from abroad by increased shipment of grain, for already the European markets take from us all that they require, and no amount of purchase of goods from them will induce them to buy more food than they need and which they now take as a matter of necessity.

If Mr. HEWITT believed that in 1870 how can he think less of it now when our machinery has so simplified agriculture and so im-

mensely increased the returns for labor therein employed in the last ten years that we can more than supply any possible foreign demand. Why in the name of reason should Mr. HEWITT now strike down any one industry and send its well-paid labor into agriculture to produce rather than consume? Why does he demand that iron ore and coal and wool, and all raw materials that now employ capital and labor in mining and in farming, shall be admitted free of duty?

May I answer as I suspect the reason? It is that he may divide the army of protectionists by appealing to special manufacturing interests. The same tactics were resorted to in the Wood bill. Crumbs of comfort were thrown special leading industries in the hope that for special gains the leading spirits engaged in those industries might be silenced or seduced from the grand line of battle, which must be kept intact if we would protect the whole country and all its people. Mr. HEWITT can well afford in a business way to urge upon Congress free ore and coal and scrap iron. So can all manufacturers on the Atlantic seaboard. In defending this proposition to make free all raw materials he says in his late speech:

No injury will be done to any existing interest, because on these raw products the freight is always sufficient to compensate for the difference of the rate of wages prevailing in this country and in the countries from which these products are imported.

Not so, however. The transportation question is a vital one in this connection. Ocean freights would not compensate for difference in labor employed in mining and transporting raw materials to Mr. HEWITT'S establishment. Personally he would gain largely by free materials, while interior manufacturers would suffer and farmers be left out entirely in the cold.

This advantage in freight is nowhere better explained than by Mr. HEWITT himself in his report on depression of labor, Forty-fifth Congress. He says, in reply to Mr. Horace White, who was testifying:

I suppose you are aware that iron is brought over in ballast sometimes as low as two and six-pence a ton, which is less than I can have it carried in this country for ten miles, so that the item of transportation from England is merely nominal.

Thus speaks Mr. HEWITT. He would have the advantage of another manufacturer who happened to be even fifteen miles away by rail from his ore, coal, &c. The matter of transportation here alluded to must inevitably be considered in adjusting a tariff which will deal justly with American iron and steel industries. The difference in transportation and the difference in wages as well as in interest are all factors in estimating cost of production. I quote from report of J. M. Swank, tenth census:

With regard to the cost of transporting raw materials in the United States and Europe, the testimony of a distinguished iron-master will be sufficient to show the great disparity which exists in the distances over which they must be transported. Mr. I. Lowthian Bell, a commissioner from Great Britain to the Philadelphia exhibition of 1876, says in his official report: "The vast extent of the territory of the United States renders that possible which in Great Britain is physically impossible; thus it may and it does happen that in the former distances of nearly one thousand miles may intervene between the ore and the coal, whereas with ourselves it is difficult to find a situation in which the two are separated by even one hundred miles." From the ore mines of Lake Superior and Missouri to the coal of Pennsylvania is one thousand miles. Connellsville coke is taken six hundred miles to the blast-furnaces of Chicago and seven hundred and fifty miles to the blast-furnaces of Saint Louis. The average distance over which all the domestic iron ore which is consumed in the blast-furnaces of the United States is transported is not less than four hundred miles, and the average distance over which the fuel which is used to smelt it is transported is not less than two hundred miles.

The protection of the gentleman from New York [Mr. HEWITT] would benefit the few manufacturers at the expense of all the rest. But he is also in favor of a tariff for revenue only. I quote his words in his recent speech again:

I have thus established my fourth proposition, which is that a tariff designed to produce an adequate revenue on the average of years will give all the protection which American industry needs.

Again:

Thus it is apparent that "a tariff with incidental protection" and "a tariff for revenue only" are in effect identical, and are convertible phrases.

Mr. HEWITT, before closing the speech, adapts it to the average necessities of free-trade districts, which also have a right to know the Democratic position on the subject of the tariff from a standard authority. He says:

The primacy of industry will be transferred gradually but steadily from the Old World to the New, and free trade will give us the markets of the world which are now controlled by the mother country, and this without impairing our ability to pay the higher rate of wages due to cheaper food, lower taxes, and greater personal intelligence in work.

But let us reverse the picture, and see what is likely to happen in case we delay the reforms in the tariff, which are demanded by both political parties and by every consideration of public interest. If good harvests should be secured abroad we shall have a great surplus of food upon our hands and the price will fall; wages will go down with the fall in price; the reduction of wages will be resisted by strikes and lockouts; the conflicts between capital and labor will be reopened, and indeed have already begun; the prosperity of the country will be arrested; railroad transportation will fall off; new railroads will cease to be constructed; our shops will lack work; there will be a dearth of employment all over the country; the volume of immigration will fall off, and the career of expansion and general development will be brought to a disastrous conclusion; the sad experience of 1873-79 will be repeated until, through the gate of suffering, poverty, and want, we shall establish a lower rate of wages, and the products of the country, weighted as they are with obstructive taxes, which must be deducted from the wages of labor, will force their way into the open markets of the world in spite of the tariff. We shall then reach the era of free trade, but on conditions which will deprive this generation of workmen of all the benefits which they would have derived from it if the way had been properly prepared for its final triumph.

Note carefully these remarkable statements of the gentleman. He
